— The round trip from the United States to Paris and back on the Great Eastern, during the Exhibition, will be at the rate of $130 to $150 in gold.

Special Notices.

Fast Living. In this age of luxurious living, late suppers, and rich food, it is surprising that the stomach performs its functions as well as it does. Coe's Dyspepsia Cure will be found a valuable assistant to the Stomach; when loaded with late suppers, rich food, or any indulgence or excess, it will instantly relieve that feeling of heaviness after eating.

Itch. Salt Rheum.—Wheaton's Ointment will cure the itch in 48 hours,—also cures Salt Rheum, Ulcers, Chilblains and all Eruptions of the Skin. Price 50 cents. Free by mail by sending 60 cents to Weeks & Potter, Boston, Mass.

For sale by all druggists. 855-52t

Additions to Clubs are always in order, whether in ones, twos, fives, tens, twenties, or any other number. Subscriptions can commence with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless specially directed otherwise. Please note this.

FOREIGN NEWS BY TELEGRAPH.

BERLIN, FEB. 24.—The session of the first Parliament of the North German States was formally opened yesterday. The King of Prussia, the members of the royal family and Herr Von Bismarck were present.

The King in his speech from the throne said he was encircled as no German Prince had been for ages. All hopes for the future welfare of the nation now rested on the accomplished fact of a united Germany. He recommended the Parliament to form a new constitutional union which would be defensive in its character and give unity, liberty and power to the fatherland.

FLORENCE, Feb. 23.—Garibaldi is at present in this city. He will go to Venice in a day or two.

BERLIN, Feb. 25.—Dispatches have been received here which state that all the German members in the Austrian Diet have united.

QUEENSTOWN, Feb. 25—Noon.—The Cunard steamship Africa, from Boston 15th via Halifax, arrived here en route for Liverpool late Saturday afternoon.

LIVERPOOL, Feb. 25—Noon.—The Acadian, from Liverpool for Savannah, was lost on Tucker Rock, off the coast of Ireland, yesterday. No particulars have been received.

LIVERPOOL, Feb. 25—Noon.—The cotton market to-day opens quiet and steady and prices are unchanged. The sales will doubtless reach 7,000 bales. Middling upland are quoted at 13½d.

LONDON, Feb. 25—Noon.—Consols for money 91. The following are the opening rates:—Erie, 37¾; Illinois Central, ex. div., 77¾; U. S. 5-20 bonds, 75¾.

TANNING FUR SKINS & GLOVE LEATHER. The high price of manufactured furs has led to general inquiry for some method by which people who cannot afford to pay the extravagant demands of dealers for useful articles of apparel made of fur skins, might be enabled to dress fur skins at their homes and prepare them for manufacture. Furriers, as is well known, endeavor to keep the arts of their trade profoundly secret. The advertiser has for years been quite familiar with those secrets, and with other methods of dressing furs having served an apprenticeship with one of the most extensive and successful furriers in New York city, and for fifteen years subsequent thereto, been in the employ of the Hudson Bay Fur Company, purchasing furs in the British Provinces, and trading with the Indians west of the Rocky Mountains. At the continued solicitation of many persons, and prompted by the numerous inquiries made through the columns of various family and agricultural newspapers, I have now, for the first time, concluded so offer three receipts—two for tanning fur skins in the most perfect manner, and one for preparing Glove Leather according to the method practiced by most Indian tribes, producing that peculiarly soft, durable and smoky leather, so popular in "Indian tanned" buckskin gloves and mittens. One of these receipts is that generally in use by furriers, and the others were obtained from a chief of the "Black Feet" tribe of Indians. By the use of these methods, articles of wearing apparel and comfort, made of furs, may be had at but little more than one-fourth the price charged by dealers. Handsome robes may be made of the skins of domestic Cats, Opossums, Coons, etc., Caps, Gloves, Collars, Muffs, Cuffs, and Coat and Cloak Trimmings may be made of the skins of Mink, Otter, Muskrat, etc., etc. An excellent leather for gloves and many other purposes, may be manufactured from the hides of dogs, which, perhaps, are otherwise worthless. At the last annual fair of the State Agricultural Society, I exhibited several specimens of tanned fur skins and two dog skins converted into Glove Leather, for which I received the award of the Society's diploma, and the warmest commendation of the committee. The three receipts sent by mail, post-paid, for $1. Address SETH ROBINSON, Newton, Sussex Co., N. J.

NEW YORK PRIZE ASSOCIATION,
299 BROADWAY, N. Y.
EVERY TICKET DRAWS A PRIZE!

25 Rosewood Pianos	worth	$300 to 500 each.

Fanning, 71 23d St., N. Y., Piano $150; Mrs. G. Parker, Boston, Mass., Gold Watch, $100.

A Chance to draw any of the above Articles by purchasing a Sealed Ticket for 25 cents.

OPINIONS OF THE PRESS.

THE NEW YORK PRIZE ASSOCIATION advertise their scheme in our columns to-day. Their offers are tempting to those who have a weakness for lotteries. The original investment is but twenty-five cents, and this entitles every one to something. If, on ascertaining what that something is, the subscriber chooses to pay one dollar for expenses, he can obtain the article drawn. We have reason to believe that this association is one of substance and good faith. Much capital is behind it, and the plan upon which operations are conducted, is calculated to draw a large share of business. As an example of the good faith of those who manage it, we may state that a lady of our acquaintance last week drew a GOLD WATCH WHICH WAS PROMPTLY FORWARDED TO HER. The thing is worth trying at all events.—*Sunday Times*, Boston, Jan. 13, 1867.

This is not a "Lottery Swindle," offering "Houses and Lots," and "$10,000 in Greenbacks," as some do who never put such tickets in the wheel, and who do not give one prize in one thousand tickets. Messrs. Ray & Co. distribute thousands of prizes, varying in value from $100 to $500. They draw every day, and one ticket draws less than one dollar in value. YOU WILL KNOW WHAT YOUR PRIZE IS BEFORE YOU PAY FOR IT. We know the firm personally, and have witnessed their mode of doing business. Purchasers receive the article drawn without delay or postponement.—*Gazette*, N. Y., Dec. 8, 1866.

Entire Satisfaction Guaranteed to All.

☞ 6 Tickets for One Dollar, 13 for Two Dollars, 33 for Five Dollars. Great Inducements to Agents.

All Letters should be addressed

THE GREAT AMERICAN TEA COMPANY

Have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

All goods sold are warranted to give satisfaction.

PRICE LIST.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₩ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₩ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ₩ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ₩ lb.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.

Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

Great American Tea Company,
Nos. 31 and 33 VESEY-ST., cor. of CHURCH.
Post-Office Box, 5643 New York City.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by Post-office money orders, or by Express, as may suit the convenience of the club. Or, if the amount ordered exceed thirty dollars, we will, if desired, send the goods by Express, to "*collection delivery.*"

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the

GREAT AMERICAN TEA COMPANY,
31 & 33 Vesey-st., cor. of Church.
Post-Office Box, 5643 New York city.

[For manner of getting up Clubs see former editions of this paper.] 888-tf

JOHN GLENN & CO., 59 Second Street, Baltimore, Md. 886-tf

KEYES' EARLY PROLIFIC TOMATO.

HOVEY & CO. have the pleasure of announcing that they have secured the whole stock of this new Tomato, the most distinct, remarkable and valuable variety ever produced, being

30 Days Earlier than any Tomato.

Plants dwarf, compact and vigorous, producing immense crops. Tomatoes of medium size, brilliant red, quite smooth, and free from ribs, perfectly solid, and of excellent flavor; they are produced in large clusters, of 10 to 20 each, with from 7 to 20 clusters on each plant, and the tomatoes ripen up together, so that the main crop is ripe and ready for the market 30 days before the Tilden or any other variety, when they command the highest price. The foliage is very large, entire, and has no smell. The Early Prolific is the most valuable Tomato ever raised. Specimens exhibited by Mr. Keyes at the Show of the Massachusetts Horticultural Society in September last, attracted great attention, and the Vegetable Committee in their annual report pronounced it "a new and distinct variety, worthy of trial."

We cultivated the Early Prolific, the past year, and from our personal knowledge of its great merits, purchased the stock of Mr. Keyes, who raised it in 1866. We can confidently recommend it, after a trial of 3 years, as the greatest acquisition yet made to this popular and valuable fruit.

The seeds are put up in sealed packets, and only to be had genuine of us. SINGLE PACKETS 25 CENTS. The trade supplied by the 100 or 1,000 at liberal rates.

☞ Address HOVEY & CO., Importers and Dealers in Seeds, 53 North Market St., Boston, Mass. 891-3t

Seneca Falls, N. Y.

FARM FOR SALE.—The Subscriber offers for sale the farm known as the Chellborg property, situated about a mile west of the village of Geneva, N. Y. It contains 120 acres, 15 of which are wood-land—the balance in a high state of cultivation, thoroughly underdrained, and well adapted for nursery purposes. A never-failing brook turns a water-wheel of 1½ horse power. House large, two and a half story, brick, containing fourteen large rooms, commodious and in good repair. Barns, carriage house, ice house, and other out-buildings, all in good order. House and barn supplied with water from a never-failing spring.
For further particulars, terms, &c., address or apply to McDONALD & ROSE, No. 3 Seneca-st., Geneva, or to the subscriber on the premises. 890 C. F. CHELLBORG.

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce throughout the United States the GENUINE COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, bind, braid and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made.
Address SECOMB & CO., Cleveland, Ohio.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured. 890-4t

CANCERS CURED WITHOUT PAIN, use of the knife, or caustic burning. Circulars sent free of charge. Address
886-tf DRS. BABCOCK & SON, 709 Broadway, N. Y.

WHISKERS!!—We warrant a Heavy Beard in five weeks, to those who use RUSSELL'S ITALIAN COMPOUND. Contains nothing injurious to the skin. Sent, closely sealed, for 50 cents. M. RUSSELL & CO., Watertown, N. Y. 885-13t

BOOTH'S COMBINED SHAKER!

Agents wanted throughout the United States, to sell machine and territory. Machines furnished on application to [892-13t] W. C. QUIMBY, Rochester, N. Y.

PIPE WELLS.—The subscribers having purchased the right of the United States, will lease or sell territory for the same. Address,
889-5t PIERCE BROTHERS, Homer, N. Y.

SHEEP AND WOOL ARE GREAT AND paying institutions. If you wish to know all about the breeding, management and diseases of the former, and how best and cheapest to produce the latter, get and read **Randall's Practical Shepherd**, the best and latest work on American Sheep Husbandry. A DREAM WITHIN A DREAM.

BY EDGAR ALLAN POE.

I STAND amid the roar
Of a surf-tormented shore,
And I hold within my hand
Grains of the golden sand—
How few, yet how they creep
Through my fingers to the deep,
While I weep—while I weep—
O God! can I not grasp
Them with a tighter clasp?
O God! can I not save
One from the pitiless wave?
Is all that we see or seem
But a dream within a dream?

SCIENCE.

BY S. S. CUTTING.

EBB from the gloom of cycling night,
Earth woke and knew the blushing light,—
Ere from old chaos order sprung,
Or music through the ether rung,—
In Thee, O great Eternal Mind!
Dwelt laws which worlds in order bind,
All forms of beauty, love's delight,
All reason, all unchanging right.
Thy being on thy works impressed,
Thy will in all thy ways expressed,
Our minds with reverent thought explore,
That we may know Thee and adore.

The Story Teller.

Written for Moore's Rural New-Yorker.

THOSE OLD PICTURES.

BY FAIRFIELD EWING.

"How queer!" "Odd, isn't it?" "Do see that comb, rising so majestically above those puffs?" "Why, Grandma, that never was intended for you," were a few of the many exclamations from a merry group of girls who had gathered round an old picture in a worm-eaten frame, over which they were laughing and commenting as they turned it over and over, now one way, then another, while Grandma looked on with an amused smile.

It was a painting, somewhat defaced by time and dimmed by age, but from the canvas there looked out a sweet, girlish face, one which had the charm of beauty as well as youth. Not more than eighteen years had come and gone over the young heart when this had been painted. Glancing from the picture to grandma's face, I could trace but little resemblance between the embodiment of life and hope which almost spoke from the canvas and the living original, seated in the easy chair before me.

Full and plump, with soft brown eyes and hair, was the one; wrinkled the face and silvered the head of the other. She was telling the listeners round her about the old dresses, their short, narrow skirts, the cushions worn in the sleeves, making them look like half-bushels, and the puffs, rolls and curls she used to wear, years and years ago, when her form was unbent by age and her step as light as theirs.

"O, Grandma, why didn't you save some of those old costumes? It would have been such fun to have them to dress in sometimes," said LAURA HEYWOOD, leaning her head back and looking up into the old lady's face from her low seat on the carpet.

The withered hand was laid caressingly upon the curls, and after a moment she said:—"Well, my dear sister NANCY'S clothes are in that chest you could not open in the garret, and you may see them all if you handle them carefully, remembering they belong to the dead. Wait! here are the keys," as they were springing up the stairs, forgetting the portrait and some colored prints which had been resurrected from the depths of a large, old-fashioned trunk — found among some other antiquated furniture in an unused room.

Giving the keys to LAURA, she again enjoined them to be very careful, and, receiving the promise to put everything back as it was, she came slowly again into her cosy little room, and taking her knitting sat down to make up with double diligence the unwonted idleness of the past hour.

I had not gone with the girls, but was half reclining on a sofa near the window, reading one of SHAKESPEARE'S plays which the merry clatter had interrupted. Soon again I was forgetting all else in the perusal of it, and some time glided by—it might have been an hour — before I again looked up. When I did a strange sight met my startled gaze. Grandma's knitting-work had fallen from her lap, and she was standing in the middle of the room, her hands absently clasped together and her eyes bent upon three—could it be? — yes, three pictures instead of one which had been left there. They were ranged on a low shelf side by side.

The light fell full upon them, and from the sofa I could see them very plainly. Two of them were gentlemen. The one with light, wavy hair, thrown back so carelessly, and the clear, honest gray eyes, was my grandpa, I knew, for my mother had one just like it; but the other — who was he? Only the head and shoulders could be seen. The background was clouded, light, murky, out of which the well formed head and broad shoulders rose sharply defined. Not an outline was lost in the haze behind. It could not be called a handsome face; yet there was something irresistibly fascinating in it, and I involuntarily bent forward, though the whole picture could be plainly seen from where I was sitting.

Strange thoughts came to me as I looked. Who was the original of this dark picture, and did those eyes always look so black and glittering as now, when in life? And the hair—was it never twined by loving hands into little ringlets? Straight as arrow and dark as midnight; not a wave could be seen. Parted slightly to the left side and brushed smartly back, it left the square knobbed forehead and temples bare. A dusky mustache hid the mouth, but the lines of the chin showed that it was firmly closed, and every lineament bespoke power and strength of purpose. It was a dark, fierce looking face pictured there, and sent a slight chill through me as I gazed upon it. The style of dress, what little could be seen, was peculiar. And what an odd frame, too, there was around it! A large oval, of some dark foreign wood, it seemed formed of slender serpents twining themselves in knots above the head, below and at the sides.

A more perfect contrast could not have been formed than there existed between those old paintings. Grandpa had long been sleeping beneath the willow trees, just discernible from the windows, and nothing had I known of him except what the old picture told me of a happy youth—a fine looking man called away in his prime.

Grandma did not look much like the young face, full of smiles and dimples, a very striking likeness she said it had been pronounced of her many years ago; but then age had bent her form, Time's ruthless finger had left furrows on cheek and brow, and tears of sorrow had not brightened the once beautiful eyes.

But instead of the glowing anticipations of the past, there was in the present a placid look, as though the trials of life were almost over and she was only waiting in calm serenity till the angels should meet her at the river's side.

Was she thinking of this as she stood there? Her eyes were bent upon the pictures before her, but did not see them, I was sure, for her glance seemed penetrating beyond the vista of years which had melted away so noiselessly and left her an old woman. Those years held much for her. A husband and children were sleeping under the willows, and it may have been thoughts of those loved ones gone to the Golden City that cast the slight shade upon that dear good face now.

Perhaps the sight of these relics of the past was bringing to light many of the scenes which memory had stored away in her gallery, upon which the dust of years had fallen thick — days when she thought and cared for little else beyond the present and its enjoyment, and the future was a far off time which held dreams and visions yet to be realized. Now she stood upon the grave of many of those youthful anticipations. Some of them hid fair to prosper, to bring forth the promised fruit, but cruel blight fell upon them, and they withered away. Others did bring forth fruit, and made her heart glad, but how few they were? The sorrows overbalanced the joys of her life; but was she thinking of all this? I could not tell. Her face gave not forth the varying emotions sweeping through her soul. Only still and intent she stood there looking at that strange picture. Perhaps, *perhaps* it was the face of a lost lover. Why had I not thought of it before? Some one who had gathered the pearls of her woman's nature into his hands and held them there tenderly, it may be, until compelled by adverse fate to abandon all; or were they entirely thrown aside, or snatched by another?

But then that resolute face showed that he would be a formidable rival to any one who crossed his path unwarily. Was he a rejected man, failing in every endeavor to bring forth the low sweet symphonies from the yielding chords which vainly he tried to find and only produced harsh discords? Nothing came from the white lips to tell of the ruin of his life.

Now the eyes seemed to have lost their fierce look, and an expression of infinite tenderness took its place. The whole picture seemed larger and growing larger. The serpent frame was in motion. One untwined itself and glided out at the open window, and with dilated eyes I saw the others follow and heard their fall upon the rose-bushes below. The artist's clouds vanished, and from one picture a broad shouldered man stepped out.

Quickly my eyes sought Grandma's face, but it was changed. No longer old and wrinkled, it was the youthful bloom of maidenhood. White roses, half-blown, looped up the lace overskirt, showing the tiny pointed slipper, reposed in her bosom and nestled in those old-fasioned puffs of hair. Leaning forward with eager extended hands, she was meeting the odd visitant, the long gaze uninterrupted; but she was looking up into those magical eyes instead of down upon those of the picture. Too fascinated by the strange sight to observe, I did not notice the presence of a third person until a low sigh attracted my attention and Grandpa was standing where his portrait once stood, looking mournfully upon the two before him. A rather delicate figure, clear, earnest face and sad looking eyes, out of which the sunshine was gone forever, was what my eyes fell upon. Though there was contrast, strange and marked, between the two advancing to the girlish form that once was Grandma, nothing indicated an effeminate man in Grandpa's appearance.

But while one look took in all this, the unknown had taken the little white hands in one of his own, and, passing the other arm around her, they slowly rose from the floor upward.

"EDITH, O, EDITH!" came a low, plaintive wail from below.

"Never again to part," was the clear response back, and they were gone.

My strained eyes could not penetrate the mist which enveloped them and was filling the room till the air was thick with it, and darkness settled over me. I could not breathe. My head was lying back on some soft support, and I know my mouth opened vainly for air. A heavy weight was on my chest, and the remembrance of a tale I had read somewhere of the prince of darkness seating himself upon an unfortunate person's body came over me. Perhaps some of those weird phantoms had come back and discovered me; for bony, skeleton fingers seemed passing over my face, clutching my throat, their mouldy lips gibbering in my ears; with a horrible feeling of being entirely at their mercy.

Endless ages passed away. SHAKESPEARE'S witches danced in and out before me, and ensanguined beings came to tell me my fate with the terrible things yet to come.

I thought of my blessed home and my mother, and again struggled frantically for air, then exhausted sank back motionless. I heard a far off voice say, "Get water." Whatever I was resting on gave way, and I was falling I thought.

A chill sensation pervaded my whole being; every nerve thrilling with the shock. I opened my eyes upon a frightened group gathered round me, but dimly discerned at first. LAURA held a large basin of water, out of which I was being profusely sprinkled, and the pale faces of all the others indicated quite a fright. Grandma's gentle tones, however, brought my senses back, and, shaking the damp hair from my face, I sat up to tell her what was the matter. I had been asleep for almost an hour, and years seemed to have gone by in that space, and while lying there had taken fresh cold in addition to what I already possessed, making my sufferings apparent by low moans.

Grandma had tried to waken me; but the wild flutterings of my heart and gasps for breath made her think me dying, and in affright the whole household was summoned and water dashed upon my face to bring me to life, as they supposed.

It was quite a tableau—guests, domestics, the whole family, grouped promiscuously round the sofa. But the strangest part was yet to come. After order was restored and the room quiet again, I told Grandma of the pictured face I had seen. Putting her elbows upon the arm of the easy chair, in which she insisted upon my being placed, she leaned her head upon her hand and listened intensely to my description of it. When I ceased speaking, without a word she rose and unlocking the upper drawer of a curiously wrought bureau which I had never seen opened before took out something and laid it on my lap. *There* was the face which haunted my dreams, and I gazed upon it in unutterable astonishment. Everything just as I had seen it in another state an hour ago; and my wondering eyes, if my tongue did not, asked for an explanation.

"That is a picture of my brother DUNBAR, your uncle. It was sent to me before he died. He was lost on the ocean," said she, a dry sob stopping her utterance. "He was a very impetuous boy, inheriting all my father's resolute nature. As a man, he tried to control his temper, but often it broke forth in all its violence, and he could not forgive injustice. Our mother was taken away when I was but sixteen and he twenty. Then there was no one to make peace between father and son. One evening, after a sharp rebuke given in harshness and anger, he came and kissed me, saying, 'Good-bye, little EDITH! Some day I may come back for you,' and was gone. Four years passed drearily away, then came this picture to me. The next year he was shipwrecked. Clinging to a spar, he drifted over the wide ocean, and just as Nature was severing the ties between the spirit and the weary body he was picked up by a whaling vessel. He thought of his little EDITH in death, and told them his name, and to tell me 'good-bye'—then died."

The tears rained down the withered cheeks, and mine fell from sympathy.

"But 'tis very strange that your dream should be of him, as you say you do not remember ever seeing this," touching the twisted frame with her knitting needle. "And how could you have dreamed of it then?"

"I do not know, indeed," was my answer.

"For," continued she, "I never showed it to any one of late years, though every night I kiss him before I sleep. Many would think it a wicked face; but it is not. It is my own dear DUNBAR, my darling brother, who loved his sister with all the strength of his nature, and never forgot her, even in death."

"But," adding, as a sudden thought struck her, "you may have seen it when a child, and though forgetting it there may have been an impression left upon your mind which was just now reproduced with such startling vividness. Yes, it may have been so," was her musing comment; but her face soon became radiant as she half murmured to herself, "Some day—not far distant—our spirit hands will be united, and together we shall ascend to Our Father."

Lancaster, Ohio, 1867.

A NATURAL QUESTION.

MASTER GUS.—"Aunt ELIZA, does Captain VAN TULIP wear Rats in his Mustache? I think I see the Tails sticking out!"

Corner for the Young.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I AM composed of 21 letters.
My 4, 9, 6, 13, 8, 9 is a girl's name.
My 1, 14, 6, 3, 23 is a number.
My 2, 5, 6, 20, 15 is a very useful animal.
My 8, 9, 11 is an article of dress.
My 18, 2, 22, 12, 21 is a domestic animal.
My 16, 9, 19, 11 does not mean first.
My 7, 9, 13 is what we all do.
My 16, 17, 9, 21 is a mineral.
My 10, 9, 6, 9, 2 is a girl's name.
My whole is a proverb.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,

IS PUBLISHED EVERY SATURDAY

BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, In Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

Back Numbers of this Volume (from Jan. 5.) can still be supplied,—so that those who desire them may yet secure all the numbers of the RURAL for 1867, and thus have the whole volume, complete for binding and reference, at the close of the year. Tell your neighbors of this, and especially chronic borrowers of the RURAL.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

Keep a List!—If each agent will keep a list of all the names sent us, with dates and amounts of remittances, it will greatly facilitate the correction of any errors which may be made at either end of the line.

About Premiums, &c.—Agents and others who form clubs for our premiums will please be careful, in sending in their lists, to note which are the *new* subscribers and which are the *renewals*. This is essential that we may keep the accounts correctly.

READER, — Please act as Club Agent for the Rural, or induce your Post-Master or some other influential person to become a recruiting officer for the "Rural Brigade."

FRUIT FARM FOR SALE—25 ACRES. Address the subscriber, at Gaines, Orleans Co., N. Y. [om] D. J. B. HOYT

WANTED TO PURCHASE.—Apple, Pear, Peach, Anjers Quince, Paradise, Doucain, Plum, Mahaleb and Morello Cherry Seedlings; also, Grape Wood of desirable varieties for the West, especially Concord, Ives', Norton's Virginia, Hartford Prolific, Herbemont, Adirondack, Iona, Israella, &c., Anjers Quince and Currant cuttings; also Nursery Stock of all kinds which parties are disposed to sell at *low* rates.
Address at once, LEAVENWORTH NURSERY.
Box 272, Leavenworth, Kansas.

IONA VINES AND IONA WOOD FOR Sale at reduced prices. Address
887-4teo MOORE & RICHARDSON, Geneva, N. Y.

INGERSOLL'S COTTON AND WOOL PRESSES.

INGERSOLL'S HAY AND STRAW PRESSES.
INGERSOLL'S RAG AND PAPER PRESSES.
INGERSOLL'S HIDE AND HAIR PRESSES.
PRESSES, BOTH HAND AND HORSE-POWER,

For baling all kinds of material, on hand and made to order. Also, a practical machine for sawing down trees. Price $25. For price list and full information, call on or address the manufacturers. INGERSOLL & DOUGHERTY, Greenpoint, (Brooklyn,) N. Y. [869-12tom

MOORE'S RURAL NEW-YORKER.

AGRICULTURE HORTICULTURE RURAL LIFE EXCELSIOR LITERATURE SCIENCE ARTS NEWS

TERMS, $3.00 PER YEAR.] "PROGRESS AND IMPROVEMENT." [SINGLE NO. TEN CENTS.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HENRY S. RANDALL, LL. D.,

Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS,

Late Pres't N. Y. State Ag. Soc'y, Southern Cor. Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

LOCAL CLUB AGENTS.—We want a live, wide-awake agent for the RURAL in every town where there is none. Reader, if you cannot act as such, please induce your P. M. or some influential friend to do so.

NO TRAVELING AGENTS are employed by us, and we give no certificates of agency. Any person so disposed can act as Local Club Agent, on his or her own authority, and compete for premiums, etc.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

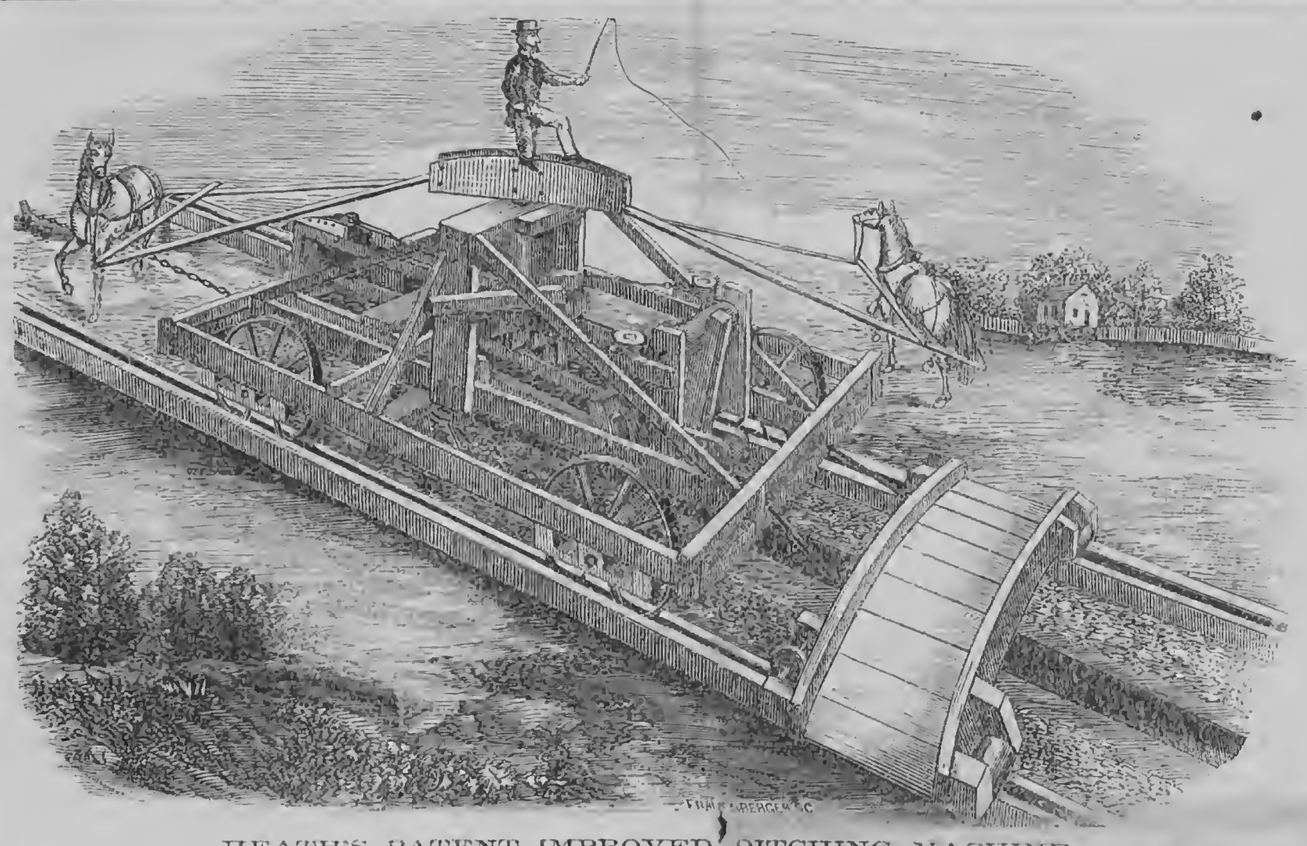
WAGES OF FARM LABORERS.

THE question of wages for farm hands is one of interest to the employer at this time when it is customary to contract for most of the ensuing season's work. The swelling tide of high prices in the first years of the war did not lift farm labor until nearly every other commodity was afloat; nor has it yet felt strongly the influence of the receding wave that is setting backward to its former level. This, perhaps, is strict justice, but considering the heavy decline of prices to which soil products have already been, and in the future are likely to be subjected, the question whether he can and must continue to pay these high wages, is one of serious import to the farmer. Yet we see no present prospect of wages for farm laborers falling much below the standard of the past few years. The demand for labor is greater than the supply, and so it will continue as long as we have cheap land, which offers great inducements to laborers to become proprietors. In laying their plans, farmers should estimate on the basis of dear labor, and turn their attention to growing those products which yield large profits, or to those which demand little labor or to that which can mostly be done by machinery.

From an article by J. R. DODGE, Esq., in the monthly report of the Agricultural Department for January on the rates of wages of farm laborers we make some extracts of statistical interest. These statistics were made up from 1,510 formal statements, each composed of several others, usually representing a defined territory or district, and are from all the States and Territories. Mr. DODGE observes "that in those States it which regular labor is most general among the inhabitants, and where it is prosecuted in greatest variety, the laborers receive the highest rate of wages. The rate of wages in the several States differs just in proportion to the multiplication of separate industries, modified in new States in process of settlement, by the increased demand for consumption occasioned by incoming settlers, or in the mining States and Territories by the employment of the majority in mining."

The following are average rates of wages per month (without board,) of farm laborers employed for the year in the different sections of the country:—Eastern States, $33.20; Middle States, $30.07; Western States, $28.91; Southern States, $16; Oregon, $35.75; California, $45.71.

The average for white labor at the present time is fairly stated at $28 per month, (without board,) and the difference in monthly pay on account of board averages $6.26 for the Southern States, and $12.51 for the other States. The rates of labor average higher when the engagement of the laborer is only for the season.



HEATH'S PATENT IMPROVED DITCHING MACHINE.

THE above engraving represents a ditching machine invented, and recently patented, (in October last,) by EDWARD HEATH of Fowlerville, Livingston Co., N. Y. This machine was exhibited on the grounds of the Monroe County Ag'l Society, near this city, at its last Fair, and was highly approved by experienced practical farmers, nurserymen and others. From what we then saw of it we formed a very favorable opinion in regard to its utility. Since then the machine has been materially improved and thoroughly tested, and we shall be surprised if it does not prove to be what progressive farmers have long wanted. The machine is thus described by its inventor:

This machine, when in operation, is placed upon a light movable track, for the purpose of keeping the bottom of the ditch smooth and level. The horses are attached to the sweeps, and move around the machine and over a small bridge in the rear, attached to the machine. The excavator and scraper derive their motion from the crank on the main shaft through the medium of a cross-head. The excavator or shovel, when digging, begins to cut at the bottom of the ditch, and throws the earth to the surface, where it is removed to either side of the ditch by the scraper. The feeding works also get their motion from the main shaft. The machine is moved forward by means of a chain anchored ahead of the machine by a stake; the chain, as the machine advances, winds over a toothed wheel into a box on the machine.

It is claimed that in ordinary ground this machine will cut a tile ditch at the rate of from four to six rods per hour. It requires one man, with a boy to drive, and two horses to operate it. The depth of the ditch can be varied from eighteen inches to three feet. The machine, by once passing over the ground, leaves the ditch complete and ready for the tile.

Persons who desire to obtain more particular information as to this valuable improvement, or secure territorial rights of the same, should address the patentee as above.

RURAL FARMERS' CLUB.

Lands and Localities in the South.

FROM some communications received on the lands and farming capabilities of various localities in the South, we extract and print the chief points of interest to our readers.

L. D. SALA, Fairfield, Va., writes: — "Aside from the Shenandoa Valley, the lands of Fauquier and Loudon counties are the most fertile and the best watered of any in this section. They are first-class grazing lands, prime corn and very good wheat lands. The average crop of wheat per acre is from fifteen to twenty bushels; of corn, thirty-five to forty bushels, and oats, from forty-five to fifty bushels. They can be purchased, according to improvements, for fifteen dollars per acre up to twenty-five dollars, and the best of lands, with what are called here good improvements, can be bought for forty and fifty dollars per acre. Before the war these lands were largely devoted to cattle grazing, but since its close, cattle being so scarce and high, many of the planters have gone entirely into sheep grazing.

"The natural sod is Kentucky blue grass; a piece planted to corn will, when the corn is gathered, run into a strong blue grass sod. Clover and timothy are rarely, if ever, used, except on meadow lands or wheat lands. Under our Nothern system of farming these lands, now so backward, but naturally kind, would grow luxuriantly all kinds of products. There is a fine opportunity for those at the North, who have capital, to invest in these cheaper lands and graze them with cattle or sheep. Sheep can be grazed, with rare exceptions, the whole year without being fed grain or fodder. These grazing lands can be bought for fifteen and twenty dollars per acre, and there can be grazed to a certainty three sheep to the acre, and some well posted farmers say eight sheep to the acre. There is also an opportunity for those who have capital to sell sheep on credit to responsible parties or let them on shares. I have seven hundred ewes let out for three years on shares. The gentleman taking the sheep furnishes all necessary food and shelter and stands half of all expenses, and half of all losses by dogs, and I give half of the wool and half the increase. Stock is being brought in rapidly, and it is calculated that in Fauquier and London counties there are upwards of thirty thousand Merino sheep.

"No Northern man need fear for his safety if he wishes to settle here. It would be injurious to the best interests of the people to disturb any one, and as far as my observation extends they have no disposition to do so. And while there may be one here and there who is ultra, the majority of the people want peace, and a lasting peace."

Poll Evil.

IN answer to a correspondent, inquiring on the above subject, Mr. E. MINK, Vet. Surgeon, Lyons, N. Y., sends us the following:—"Poll Evil is Fistula, which signifies a pipe or canal, of greater or less depth, having a narrow opening, &c. A fistula, or pipe, is lined in its entire course by a membrane similar to a mucous membrane. The disease is kept up by altered texture of the parts, which consequently are not disposed to heal, necrosis, caries or ulceration of bone, concrete or hardened matter, purulent cavities, extraneous bodies or substances, either of which irritate the parts and keep up the discharges.

Treatment.— While there is no diseased bone or concrete matter within, and the internal cavity is not larger than the external opening, the disease may be curable by injecting medicines that are stimulating, astringent and caustic in their action. On the other hand, if the bone is diseased, or there is concrete matter within, all medicines are worse than useless, until the diseased bone or hardened matter is removed by an operation. The horse should be cast and chloroform administered; a probe should be inserted into the canal or opening, and with a strong probe pointed bistoury follow up and slit the entire length and depth of the pipe or pipes, empty out all hardened matter, examine the bone, and if diseased scrape off the entire diseased portion. Then be sure and make a pendent outlet by means of a seton, or a free opening with the knife, for all matter that may form thereafter while the parts are healing. The only treatment required after an operation is to daily clean the parts, and dress or wet the sore with a solution of chloride of zinc, 1 scruple to a pint of rain water. In from three to six weeks the cure will be complete if the operation has been thoroughly performed."

Description of a Good Farm Gate.

"ONCE A YEAR" sends us this from Wisconsin:—"Take 2 by 4 scantling four feet long, nail on boards any length you wish, one on each side at the top and bottom, and two in the middle on one side; then take two-inch plank and saw out wheels twelve inches in diameter, (if smaller they will not turn easily,) bore a hole through the bottom boards at each end of the gate, put the wheels in between the bottom boards and insert pins though them and your gate is done. Set two posts for the gate to roll between, and one for it to strike against; it will roll very easily if a plank is laid down for it to run on. A nice gate can be made by mortising cross pieces into the ends and nailing pickets on them."

Smut in Wheat.

DAVID HILL, St. Lawrence Co., N. Y., sends us his method of preparing seed wheat to prevent its smutting, and gives an instructive experience. He says:—"Soaking the seed wheat in chamber-lie that has been kept several weeks and become quite offensive to smell, and afterwards coating with lime, will prove an unfailing remedy. My method of preparation is to clean a space on the barn floor and place the wheat to be sown in a pile thereon. Then pour the liquid on, being sure to wet every kernel. Then sift quick-lime over the pile and thoroughly mix with the shovel. Use quick-lime enough to dry all the dampness and the seed is ready to sow.

"In 1832 I sowed a field of nine acres. I prepared the seed in the above manner, and on sowing found that I had not quite seed enough, so I went to the granary and got a little unprepared wheat and sowed one "rigg" and a half with it. Not a particle of smut appeared in any other part of the field, but this portion, (which by the way lay directly in the middle of the field,) was considerably affected with it. I have known others to have a similar experience."

Spring vs. Fall Rolling of Wheat.

OUR correspondent from St. Lawrence Co., N. Y., also writes:—"I would like the opinion of the RURAL on the propriety of rolling winter wheat in the fall at the time of sowing or after it is up a little. I hold that this practice is entirely wrong, though I am aware that it is practiced to a considerable extent by those who are called good farmers. My experience has taught me that the proper time for rolling is in the spring. My reason for this is that the plant needs new nourishment at this season to start it into a vigorous growth, and rolling forces new particles of soil over and among the roots; and the soil which is pulverized and spread among the roots is that which has lain most exposed to the frosts of winter, and thereby become richer and fuller of nourishment."

REMARKS:—We have many times expressed our opinion that wheat should not be rolled in the fall, as a general thing, but should be in the spring. In many instances harrowing in the spring would also be highly beneficial.

HOW TO GROW A LARGE CROP OF CORN.

I HAVE often been asked why I always succeeded in raising a first-rate crop of corn. I will give my *modus operandi*, for the benefit of RURAL readers. Select your prospective corn field in summer, and clear it of all stumps, brush and large stones. Immediately after corn cutting, say Sept. 20th to Sept. 30th, haul on and spread all your *long manure*. Oct. 15th to 20th, put in a plow and turn it as deep as a strong team can do it—never less than eight inches. If there are places where water stands, drain them. The fall plowing will exterminate wire worms, grubs and cut worms. As soon as the snow disappears, haul on and spread *all your short manure*. In April, gather together all the leached and unleached ashes, and the droppings of the poultry house, and, under cover, mix and *thoroughly* incorporate, ready for use. About the 25th of April or 1st of May, drag the ground *all to pieces*, and then *drag it over again*. May 7th to 10th, *drag again*, and mark the rows four feet apart each way. May 10th to 14th, plant seven or nine grains in a hill. With two boys or girls to drop the seed at the intersection of the rows, one man can plant three to four acres per day. Cover *one inch deep*.

Immediately after planting, before the corn sprouts, out with your compost of ashes and home-made *guano*, and drop from two to four spoonfuls on each hill. As soon as you can follow the rows nicely, go in and cultivate both ways. All the *scare crow* you want in the field is—yourself. Thin out to five plants in a hill. When the corn is four to five inches high cultivate, and weed and hoe faithfully with hand hoes. Then cultivate as often as once in ten days until too large to drive a horse among.

Never hill your corn up. Its roots need all the heat of the sun to perfect its growth. As soon as it is in tassel, go through it with the corn knife, and cut all weeds close to the ground, so as to let in the air and sunshine to mature the crop. Sept. 10th to 20th, cut up, and put about twenty hills in a stook. Oct. 1st to 15th, husk and crib.

I have in this way raised 1,750 bushels of sound ears on 11¼ acres, and heavier crops per acre on smaller pieces. Try my method, and report progress in the RURAL.

A WESTERN PENNSYLVANIA FARMER.

GAIN BY FALL PLOWING A CLAYEY SOIL.

THERE is an advantage arising from plowing or ridging a clayey soil beyond the mechanical aid of winter freezing; the potash in the soil thus exposed to atmospheric action has power to decompose to a certain extent the nitrogen of the atmosphere, and to fix nitric acid in the soil. It is owing to this formation of nitric acid that old heaps of leached ashes are so rich in this element, whereas fresh leached ashes contain no nitrogenous matter. Although nitrogen composes so large a part of the atmosphere, the opposition of its chemical reactions is such that chemists have failed to combine it with hydrogen so as to form ammonia. But it has long been known that potash in the surface soil will to a certain extent collect nitric acid from the atmosphere; and BOUSINGAULT has learned from experiment that plants assimilate nitrogen as well from nitric acid as from ammonia. Here is a farmer from the prairies of South Wisconsin who has plowed 250 acres in fall and early winter for spring wheat to be sown in April. He is of the opinion that spring wheat would succeed better here if the land was fall-plowed and planted early in the spring.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

To Correspondents.—Mr. Randall's address is Cortland Village, Cortland Co., N. Y. All communications intended for this Department, and all inquiries relating to sheep, should be addressed to him as above.

HOW TO RAISE LAMBS AND TEGS.

NUMBER ONE.

We have during the past winter received many inquiries—especially from the remote South and West, where new beginners in sheep husbandry abound—in regard to the best mode of treating lambs when newly dropped, and at subsequent stages of growth up to their first shearing. This is the critical period of a sheep's life; and the annual enormous loss of lambs and tegs in the United States demonstrates the importance of a careful investigation of the best modes of management, not only for the benefit of young flock-masters, but for that of many who have had more experience, and who do not suspect themselves of any want of skill.

Thirty-five years experience has not, certainly, left us without pretty decided opinions of our own on the points to be considered, and we have published our opinions on the main points; but in reviewing the ground we have, for several reasons, chosen to call others into counsel. The world is progressive, and improvements or discoveries are liable at any time to be made in a wide circle of experimenters. Moreover, there are frequently several good ways of doing a thing; and he who can avail himself of the results of many experiences stands a better chance of learning modes which are adapted to his own peculiar circumstances. And the practices of well-known and successful men are always subjects of interest and laudable curiosity to those engaged in the same avocations. Finally, it is a real pleasure to place beside our own, in the investigation of an important matter of sheep husbandry, the names and opinions of old and faithful co-laborers in this favorite pursuit. Accordingly we sent out a list of questions to a number of such persons, and they were in most instances answered.

We originally intended to extend our inquiries much further—to persons in all the principal wool growing States; and with this view, *commenced* with New York and Vermont. But after getting partly over those States, ill health and the pressure of indispensable business interrupted further correspondence on the subject until it became too late to obtain answers in time to be used in a paper published before the lambing season of 1867 should open. But while we aver there are hosts of other shepherds in the same and other States whose opinions we should have been proud to copy, we may be permitted to express the opinion that they would have been found substantially to coincide, in almost every instance, with some of those which are herewith submitted to our readers.

To prevent an unnecessary repetition of full names and addresses we will, in advance, give a list of those persons who answered our inquiries; and to avoid all semblance of intimating a preference between opinions, where we do not distinctly express that preference, we shall in all cases use the names, as far as convenient, in alphabetical order. Our correspondents are A. Y. Baker, Hammondsport, N. Y.; E. E. Brown, New Hope, N. Y.; E. O. and A. H. Clapp, Manlius, N. Y.; P. Elitharp, Bridgeport, Vt.; John Gregory, Northfield, Vt.; Edwin Hammond, Middlebury, Vt.; Carl Heyne, Red Hook, N. Y.; O. F. and F. J. Marshall, Wheeler, N. Y.; W. R. Pitts, Honeoye, N. Y.; E. B. Pottle, Naples, N. Y.; Virtulan Rich, Richville, Vt.; Wm. R. Sanford, Orwell, Vt.; N. A. Saxton, Vergennes, Vt.; A. F. Wilcox, Fayetteville, N. Y., and Victor Wright, Middlebury, Vt. It should be borne in mind that all these are breeders of Merinos; and that their opinins on some of the heads—particularly the first—may not be applicable to other breeds of sheep.

AGE AT WHICH EWES SHOULD COMMENCE BREEDING.

All our correspondents, except the Messrs. Clapp, agree that under ordinary circumstances ewes should not breed until three years old. Elitharp succinctly states the reasons; that the tendency of earlier breeding "is to diminish the size of the the sheep and reduce the constitution of the flock." Brown, Elitharp, Gregory, Hammond, Heyne, Marshall, Sanford and Saxton, express the opinion, in which probably all would concur, that very large and forward two-year-olds may safely have lambs. In that case, however, Brown, Hammond and Sanford, think the lamb should be taken from its dam and put on a foster mother. Gregory and Marshall have the lambs of two-year-olds come late—after grass has started. Hammond has them come as early as March and takes them from their dams at five or six days old, so that the wool which is apt to shed from the heads and legs on drying their milk, will start again before shearing sufficiently to be clipped — and thus give the succeeding fleece its proper appearance. Early lambing, too, enables the ewe to be dried off more readily, and to attain nearly the size and condition she would have done if dry. And besides this the ram lambs are now large enough for fall sale.

E. O. and A. H. Clapp believe that breeding generally at two makes ewes better milkers and mothers subsequently; and that they yean with more safety to themselves and to their offspring than when in the usually higher condition of three.

Our own opinion is that in high-priced "breeding"* flocks, where it is desirable to gain a year's growth on lambs, and where the ewes are so fed that they are quite as large at two as ordinary fair kept ones are at three — and where they can receive extra care and skill—and have their lambs taken off, it will "pay" to breed from two-year-olds; but that under other circumstances it is wholly inexpedient.

TIME FOR LAMBS TO DROP.

Baker prefers April and first part of May; Brown, A. H. Clapp, Elitharp, Gregory, Pitts, Sanford and Wright, April; E. O. Clapp, to commence dropping April 20th; Hammond, for stock rams to be used the ensuing fall, February or March — otherwise, April 20th; Heyne, November and December; the Marshalls, from March 15th to May 1st.; Pottle, with proper shelters, March and April — without them, May; Rich, from March 25th to April 10th; Saxton, from March 20th to April 20th; Wilcox, May 1st. In "breeding" flocks, having close stables to yean in and skillful management, we should prefer March—in other cases, in the climate of New York and Vermont, April 20th.

FEED OF PREGNANT EWES.

Baker, besides hay, feeds oats, corn and buckwheat mixed and ground, or oats and corn whole; prefers oats if fed alone; has fed carrots and red beets, and considers them very heathy for the ewe and lamb, but has abandoned them on account of expense in storing and feeding, and because he considers clean oats nearly as good; thinks housed breeding ewes in good condition should be fed no dry grain until two or three weeks before lambing, and then in very moderate quantities. Brown feeds early cut clover and timothy hay, and no grain except to *old* ewes, until ten days before lambing — then a bushel of yellow sugar beets and six quarts of grain (corn meal, oats and shorts in equal parts,) to fifty ewes; after lambing doubles the grain feed; has tried carrots and Swedes, but prefers beets. E. O. Clapp feeds some early cut cornstalks and straw, but no grain until a week before lambing, and then continues it until the ewes are turned entirely to grass; perfers oats, buckwheat and wheat in equal parts; has tried carrots one season without good results, but says he doubtless fed too liberally. A. H. Clapp feeds June clover twice a day and straw once, with corn, beans or peas; has fed carrots and "had extra luck raising lambs. Elitharp considers early cut red clover and timothy hay, cured without being wet, sufficient—but any deficiency in these conditions is to be made up with clear, bright oats; has tried all kinds of grain, but succeeds best with oats; has not tried roots because his ground is not adapted to their easy production. Gregory finds that early cut, bright hay, fed with regularity three times a day and without requiring the orts to be eaten, will keep ewes improving which enter the winter in good condition; has had the best success in not feeding grain until four weeks before lambing, and then a "chowder," consisting of corn, oats and course shorts, mixed with carrots and Swedes. Hammond thinks the best feed through the winter and prior to lambing is ground oats and wheat shorts, mixed in equal quantities by weight, and sugar beets as often as every other day; has used corn, peas, beans and coarse wheat flour, but thinks they are more likely to render the milk thick and not so good for lambs. Heyne feeds through the winter hay that is not marshy or burnt, corn-stalks, and straw of all kinds; feeds beets, but says they make more work; prefers oats among grains; considers other grains good, but not so safe. The Marshalls give early cut, fine timothy hay twice a day, and oat, pea, or other good straw once, and also half a bushel of oats to seventy-five ewes; recommend mixing oil meal with the oats, if attainable; have never fed roots to any amount. Pitts feeds hay (prefering clover,) and cornstalks; and for grain, corn, oats and shorts in equal parts; has never fed roots. Pottle prefers oats, "or other grain that makes muscle," and roots once a day; has also tried corn, buckwheat, peas, poor wheat or screenings, beans, barley and rye. Rich prefers oats and peas, with a bushel of beets or potatoes, the latter given once a week to one hundred sheep; has tried oats and corn (three parts of oats to one of corn,) with carrots, with good success. Sanford feeds corn and oats prior to lambing, afterwards oats—which he considers "first rate for milk,"— with millfeed, if conveniently attainable, and roots; prefers sugar beets to carrots to make milk. Saxton feeds "a variety of grains and bran mixed with carrots." Wilcox feeds hay, composed of clover and timothy in equal parts, cut and cured green, with corn-stalks and straw "for a change," and a daily feed of roots; prefers shorts to other grain, and sugar beets among roots; has tried oats, corn, peas and, beans and pumpkins; and among roots, carrots, parsneps, turnips and potatoes. Wright, if breeding ewes are fat in the fall, thinks they require nothing but fine old meadow or clover hay, cut early, until six weeks before lambing; then that they should be fed oats, wheat bran and a little corn mixed together, with a small quantity of sugar beets or turnips; after lambing, and "after the bag is cleaned out," oil meal instead of corn, one quart per day; he pronounces oats and peas in equal parts, ground and made into slop with water, "a splendid feed" for the production of milk,— and he thinks much depends, in the same particular, on the quality of the hay.

It will be understood, of course, that where hay is not mentioned in the above modes of feeding, it is always given; and that where timothy or meadow hay is mentioned, it probably invariably includes some portion of June grass, white clover, &c., and not unfrequently a small amount of red-top. We consider all the above systems of feeding substantially good ones. Our own mode, apart from grain and root feed, has generally been the same as that given by Wilcox, until a month or six weeks before lambing, according to the condition of the flock, when our ewes have received oats, ground or ungrounnd, generally a gill a head per day, and the amount increased after lambing, until the sheep are turned out to grass. Our old or thin ewes receive grain during the winter, and for them we have sometimes added say a fourth of corn to the oats; but should have preferred peas had they been equally attainable. We have fed ewes slop, made of shorts and oat meal, during lambing, with good results; but without special conveniences it costs a good deal of trouble to prepare and feed it to a large flock. We regard shorts and bran as good mixtures for any kind of sheep feed, but find some difficulty in getting them, and think that oat-meal and roots leave little to be desired for breeding ewes. Among roots, we grow Swedes, or a turnip resembling them in size and form, but smoother and freer from roots, white within, rather tenderer and sweeter, and keeping as well. It is known here locally as the "Sweet Turnip." We have generally fed it, cut by a machine, daily to *all* our sheep through the winter. The large beet does not succeed as well on our land, and it would cost too much labor to grow a sufficient supply of smaller roots. We do not require our breeding ewes to eat all the orts of their hay, but feed these to colts and horses. Though this fact is not mentioned by our correspondents, (no question being put to them in respect to it,) there is not probably one of them that compels his ewes to consume orts. Ewes before and after lambing should have constant and ready access to water.

ATTENTION TO LAMBING EWES.

It is scarcely necessary to specify separately the practices of each of our correspondents in this particular. Those having the most valuable sheep visit lambing ewes constantly during the day, late in the evening and early in the morning. Some visit them once in two hours during the night, and if a ewe is found about to yean, watch her until she has done so and the lamb is taken care of. The amount of attention required depends much on the state of the weather. Unless sheep are very tame and accustomed to see the shepherd and his light, it is much better for him to keep away from them in the night. Otherwise the lambs will be run over or separated from their dams in the resulting confusion, and young ewes will sometimes take no pains to look them up again; and young ewes frightened away or disturbed, soon after yeaning, are much more likely to disown their lambs.

CONDITION OF THE UDDER.

All our correspondents but two express themselves in favor of examining the ewe's udder, at the time of lambing, to see what is its condition, and that the milk flows freely. The teat is often stopped at the lower end and requires considerable pressure by the fingers, wetted with milk or spittle, to force out what some of our farmers term the "plug." Pitts does not examine the udder if the lamb is strong enough to suck. Wilcox omits the examination for a few hours to avoid unnecessarily disturbing or exciting the ewe. These differences are probably rather apparent than real. If the lamb helps itself from the outset, sucking and obviously obtaining milk from both sides of the udder, and obtaining enough of it, no one would feel called on to interfere; if not, and especially if the weather is cold and the lamb betrays weakness, the examination would not be long deferred by any one. Our own views on the subject are fully given at p. 146 of the Practical Shepherd, and it is not worth while to take up room to repeat them here. We consider the objection to disturbing ewes *unnecessarily*, especially *young* ones, worthy of attention; for we have repeatedly seen a ewe with her first lamb, run away from and betray great indifference to it for some time afterwards, if disturbed while licking it dry. We would meddle with *no* ewe while licking her lamb dry, and while the latter was vigorously making its first efforts to suck, if in anything like a comfortable temperature.

FIRST MILK.

Our question to our correspondents was: —"If the milk is thick and gummy do you milk it out on the ground, or let the lamb take it?" Baker, A. H. Clapp, Gregory, Heyne, Pitts and Pottle have the lamb take it. Brown and Wright milk a little on the ground and then have the lamb take it. E. O. Clapp milks it on the ground if in abundance, if not, lets the lamb take it if it can. Elitharp milks it on the ground if very thick and gummy, so as to be difficult to draw, but if it comes easy lets the lambs take it. Hammond milks it on the ground and suckles the lamb on another ewe "until the milk becomes good." The Marshalls let the lamb draw it if he can. Rich milks it out once. Sanford, if it is quite thick, milks it out, but likes to have the lamb take it as soon as he can. Saxton first lets the lamb draw a little, and then milks out the bag clean on the ground. Wilcox lets the lamb take it if he will, but if not, after a few hours milks it out. Our practice has conformed to that of the Marshalls, which is substantially the same with that of Elitharp, Sanford and all those who say they let the lamb take it; for we suppose none of them mean to be understood that they draw it by hand from the udder and feed it from a spoon, or the like, to the lamb, if, as sometimes occurs, the milk has that thick, gluey consistency which renders it impossible to be drawn by the lamb. We do not think it well, however, for a weak lamb at least, to have a continued surfeit of this thick, first milk, if it physics it too freely. It is, as Mr. Pottle remarks, "Nature's cathartic." Few ewes continue to give it too long, but we have seen instances of the kind.

* Here, and elsewhere in this article, we shall use this term in its technical sense, i. e., as applicable to flocks which are kept mainly neither for wool nor mutton, but to raise lambs from to be sold at extra prices for breeding purposes.

MICHIGAN WOOL GROWERS' ASSOCIATION.

This State Association met at Ann Arbor, Feb. 14-16, the President, Hon. C. E. Stuart, in the Chair. The Wool Buyers' Association, by invitation, also attended—Thomas McGraw of Detroit, President. A committee of the latter body recommended that the following rules be adopted by the farmers of the State:

1st. That sheep should not be allowed access to straw stacks, especially of barley or bearded wheat.

2d. All sheep, except perhaps bucks, should be well washed if practicable in a running stream, and as early in the season as the weather will permit.

3d. That the sheep should be shorn, weather permitting, within six to ten days after washing.

4th. At the time of shearing the fleeces should be carefully rolled up as snugly as practicable, without the use of boxes, be wound with light colored strong twine brought twice each way around the fleece, carefully excluding all dead wool and unwashed tags.

The Committee also recommended the concurrence of the Wool Growers in the following rules "adopted by the Wool Buyers of the State:"

1st. A deduction of one-half on unwashed bucks.

2d. A deduction of one-third on washed bucks.

3d. A deduction of one-third on all other fleeces, unwashed or excessively gummy or heavy, or other unconditioned wool, or that made unmerchantable by an excessive use of twine, or by stuffing with unwashed tags or dead wool.

4th. In purchasing wool thus prepared for market, to pay a price proportionate to its relative worth as to texture, strength and other desirable qualities.

At the evening session the first four rules recommended by the wool buyers were adopted without discussion or amendment, except the substitution of the words "not too tightly pressed" for "without the use of boxes."

After a spirited discussion, Hon. C. E. Stuart offered, in place of the first three of the second series of rules presented, the following:

"Reasonable deduction should be made on account of unwashed or otherwise unmerchantable condition, this deduction to be determined, however, according to the quality and condition in each case, and not by any arbitrary rule of deduction to be applied indiscriminately to all cases."

This was unanimously adopted by the Growers. Mr. Stuart offered the following resolution, which was adopted with little discussion:

Resolved, That in any tariff bill which Congress may pass at its present session, the duties on wool ought to be equal to those proposed in the House bill of last session.

The following gentlemen were elected officers of the State Wool Growers' Association for the following year:

President—Charles E. Stuart of Kalamazoo. *Vice President*—Sanford Howard of Lansing. *Secretary*—W. Baxter of Jonesville. *Treasurer*—W. G. Beckwith of Cassapolis. *Executive Com.*—C. W. Green of Oakland; J. R. Hendryks of Calhoun; L. S. Wood of Washtenaw; Chas. Rich of Lapeer; N. Pugsley of Van Buren.

After various other proceedings — including a recommendation that a State "Sheep Shearing Festival" be held on the first Tuesday in May, the Association adjourned.

We record with great satisfaction the unanimous refusal of the Association to adopt the arbitrary and unequally operating rule of wool shrinkage proposed by the buyers. But we should regret its assent to much contained in the 2d, 3d and 4th of the first series of "rules," if it was to be construed as founded on considerations and circumstances of general instead of local prevalence—in other words, if those "rules" were believed to be applicable to all the other wool growing States as well as Michigan. But we have no right or disposition to draw such an inference. We shall allude to this subject hereafter.

The Tariff Bill has finally passed and been signed by the President, as noted in our Commercial Department. It is understood that the bill as passed is substantially the same as that of last season, but the telegraph reports on the subject are so mixed that we cannot yet safely affirm such to be the fact.—M.

Winter in Minnesota.—E. W. C. writes us from Richfield, Hennepin Co., Minn., under date of Feb. 11th, denying a statement in the Rural in reference to the severity of the winter out there. He closes jubilantly by saying:—"We have in all not a depth of more than twelve inches of snow, barely enough to make goood sledding, and are having an unusually mild and delightful winter. We pity those poor fellows South, buried to their necks in snow."

Rural Spirit of the Press.

Raising Horses.

P. M. Jefferds of Piscataquis Co., Maine, closes a long article in the Maine Farmer, on the subject of raising horses, with the subjoined general observations, which we commend to the consideration of those interested. The writer says:—"The breeder should have a well defined object in view at the start, and select animals to breed from whose ancestors and themselves possess the qualities most desired in the progeny. That to improve our roadsters and trotters we should select medium and good sized mares, and cross them with medium sized and compact stallions, using no large, over-grown sires thinking to improve the breed. I know of no objection to 'in-and-in' breeding unless the family are deficient in some important particular, then to breed 'in-and-in' would be folly. We should not rely much upon any one point, however excellent, but should take into account purity of blood, size, form, family or hereditary qualities, both valuable and defective, and unite as many good points as possible. It will cost the farmer who raises a colt occasionally, no more to raise a good one than an ordinary one, while with him who makes it a specialty there is all the difference between a success and a failure. Our horses are bred too much on the hap-hazard principle, without aim or general rule. Let us have thoroughbred trotters and thoroughbred draft horses instead of the mongrels we now produce."

Old Sows for Breeding.

Some very successful hog-raisers use only young sows to breed from, thinking this course better than to keep them through the winter. A correspondent of the Boston Advertiser gives the following reasons for thinking the contrary course the better way:—"In rearing swine and making pork there is a universal mistake among American farmers in breeding from young sows, before their physical system is developed. Until this time arrives, most of the food goes to the support of the animal's growth, therefore she cannot be as good a milker, or impart the same vigor of constitution to her offspring. We know by accurate experiment that an old sow's pigs are worth twenty-five per cent. more than a young sow's. They have more vigor of constitution, and make the largest and most profitable hogs. The reason why our breeds of hogs so soon run out and disappear arises mainly from the erroneous practice of breeding from young sows. Therefore, instead of killing their best sows this fall, farmers should keep them over for breeders, and make pork of their young ones. In Europe, no farmer of any reputation thinks of raising pigs from young mothers, any more than of keeping a dry cow for milk; but old sows are kept for breeders until they are too old to be profitable in this respect."

Down with the Crows.

An old subscriber to the Maine Farmer has the anti-crow fever, in its most intense form, and asks the Legislature of the State to pass a law compelling every man in it to spend two days in each year—one in the fall and the other in the spring—in hunting and killing crows! The particular sin, charged to the crows, and for which the penalty of death is invoked upon them, is for rifling the nests of the smaller birds, and thus diminishing their numbers. Some people regard the crow as a friend in this instance, rather than as an enemy. But whether friend or foe, we doubt if this compulsory mode of destroying the crow would result in any considerable diminution of the numbers of the black rascals. They are shy birds, and won't stand fire.

Peat Swamp Land — Cultivation.

A. B. Day, Lunenburg, Mass., writes the Boston Cultivator concerning his management of a section of his farm—a peat swamp interspersed with bogs. These were bogged and burned on the ground, and 400 loads of gravel spread upon an acre. The ground was then lightly dressed with stable manure and planted to corn, with super-phosphate in each hill. The yield was good, as was a succeeding one of the same kind the following year. In '65 the ground was used for cabbages and produced 25 tons of trimmed heads per acre, which sold for $1,000. Last year the same ground was sown to onions, and produced 1,320 bushels to the acre. This is doing well, on peat bog, and though the gravel cost something, it was evidently a paying investment.

Five Pigs Killed and Weighed.

Our friend of the Attica Atlas, having done justice to some forest trees, turns his attention to a lot of five pigs, a cross of Suffolk and Chester, raised by John Skaats near that village. The pigs were ten months old when slaughtered and weighed, aggregately, 2,040 pounds, or an average of 408 pounds. The breeder of these porkers is said to have these points in his system of breeding:—A cross of some small, quick-maturing variety with a larger; regular and frequent feeding of just so much as will be eaten up; clean lodgings and close quarters; cooked feed, milk and vegetables or apples forming a large share, and shorts in preference to corn meal.

Spring Rye.

A subscriber, Heltonville, Ind., wants to know if there is such a grain as "Spring Rye" and, if so, where it can be obtained. We do not know whether any of it is grown in this State or not, but it was common in Massachusetts some years since. It was grown less as an article of commerce than for family consumption, as the flour from it was deemed more delicate and better suited to pastry purposes than that of winter rye, then in common use. It produces well, and is as easily grown as any other grain, though it requires a stronger soil than does the winter variety.

Rural Notes and Items.

Agents of the Rural, and all wishing to do good and benefit themselves by becoming such, will please read notice of Spring Campaign, on page 82.

The N. Y. State Agricultural Society.—"A Life Member" writes a somewhat critical and caustic letter relative to this Society, its officers and organs, which we must decline publishing, although the allusion to the Rural's "independence and squareness in discussing men and societies that do not always possess the virtues they assume," is duly appreciated. The official organ of the Society should be addressed, as it can probably best answer such queries as this—"Is the newly-elected President a breeder of Short-Horns, or even the owner or cultivator of a farm?—and if not why should he be placed in the elevated and exemplary position of 'head center' of the farmers of the Empire State?" And this?—"How long is it since the Society had a real, practical farmer for its President, and how many each, if any, has it ever honored with the position?" We believe the Hon. T. C. Peters, President in 1865, was and is a practical and somewhat extensive farmer, and that the same may be said of several of his predecessors, though the number who were bred to the occupation, and made it a business for life—or ever *paid for a farm by farming*—must be exceedingly limited. The criticism of "A Life Member," in regard to selecting professional and military men as "unjust to the intelligent, enterprising and producing farmers of the State," certainly has some force,—yet we suspect that the fault lies with the "real, practical farmers" themselves, as but few of them attend the annual meetings of the Society and take part in controling its action. It is hardly "on the square" for members to complain of what might have been avoided by their own voices and votes at the proper time, but we trust our correspondent is not (as too many are) amenable to this criticism.

An Extensive Reaper and Mower Establishment.—While in Auburn, recently, we passed an hour or two in visiting the head-quarters of the Dodge & Stevenson Manf'g Co., and were surprised at the extent of the establishment and the business it is doing. The Company (of which Col. J. A. Dodge is President) has a capital of $250,000 employed in the manufacture of the Dodge Harvester (Ohio and Buckeye Patents, with Dodge's Improvements,) a machine which has attained a good and wide reputation. Its popularity is demonstrated by the fact that the Company is making four thousand machines for the coming harvest, two thousand of which are already completed. The manufacturing buildings, shops, store-houses, &c., are quite extensive—the main one being 330 feet long, and most of it four stories, the foundry 45 by 170 feet, the blacksmith shop 150 feet long, etc. There are three store-houses, each about 50 by 150 feet. Two hundred men are employed, and the establishment is now finishing about 100 machines each week. The machinery used is very perfect, and each part of the Harvester is apparently made with great care. The whole establishment is creditable to the Company and its originator and manager, Col. Dodge.

The Condition of the South.—Under date of Washington, D. C., March 1st, the Hon. Theodore C. Peters, Southern Corresponding Editor of this Journal, has written for publication an interesting and patriotic letter to Gen. Grant, entitled "A Report upon the Condition of the South with regard to its needs of a Cotton Crop, and its Financial Wants in connection therewith, as well as the safety of Temporary Loans." Mr. P. gives the results of his observations during a recent visit to all the commercial and business centers of Virginia, North and South Carolina and Georgia. We hope to find room for the letter in a week or two, but lest we may not, now give its conclusion, as follows:

"I have endeavored to place the true condition of the people of the South, and the condition of their resources and their urgent needs, so plainly before the people of the North, that they might be willing to assist them in this their hour of greatest need. They have all the appliances to make a bountiful harvest, and to recuperate their almost paralyzed industries, but a comparative small amount of money, which they do not ask as charity, but as a short loan, for which they are willing, and will be able, to pay an extra rate of interest. They have everything but money—land, labor, implements—but faint for lack of bread. The earth but awaits their labor to yield up its treasures in bountiful profusion, and like a gentle nursing mother bares her bosom, but her needy, famishing children, without the aid of friendly hands, are unable to draw sustenance from her overflowing breasts."

To Advertisers.—Persons wishing advertisements inserted in the Rural New-Yorker should send us fair, readable copy, specifying as to the amount of space to be occupied if they wish display, the number of insertions desired, and whether they are for the outside (last page) or inside of the paper—remembering the difference in price. Pray don't ask us to copy advertisements from this or that paper, as we *do not* receive or preserve files of quite all the journals extant. Another thing.—Don't "forget to remember" that advertisements for last page should reach us at least nine days ahead of the date of the issue in which they are to appear, and for inside six days in advance. Our outside form goes to press on Friday morning of the week *preceding* date, and the inside on Tuesday morning of the week of date. Attention to these matters on the part of our advertising friends will avoid delay and superfluous complaints. We refuse many advertisements, and are frequently obliged to defer others for want of space, but with all appropriate ones our rule is *first come, first published*.

Grain for the Paris Exhibition.—The Commissioner of Agriculture has issued a circular in reference to sending samples of our cereals to the Paris Exhibition. A joint resolution was passed by Congress, early in January, authorizing the Commissioner to receive and forward to the Agent in New York small packages of wheat, corn, &c., designed for the Fair at Paris. These packages, not exceeding two pounds in weight, may be forwarded to the Commissioner of Agriculture, Washington, D. C., free of postage, from any post-office in the United States. The packages should be distinctly marked with the name of the grain and donor, and also of the town, county and State in which it was grown. No provision is made for sending these packages by express, they being free only through the mail.

Maple Sugar.—L. D. Mitchell, Esq. of Pittsford, has favored us with a sample of maple sugar of very fine quality. It is evident that a due regard to cleanliness was exercised in its manufacture. Though presented in the cake form, it has the light and lively look characteristic of the article when made as it should be.

Dressing Calf Skins.—"A Farmer" asks:—"Will some of the readers of the Rural inform me how to dress calf skins in the manner buffalo robes are dressed, giving the amount of materials required, according to weight of skin?"

HORTICULTURAL.

FARMERS' GARDENS—No. II.

THE means used to start plants and seeds in advance of the season are various in form, application and cost, and range from the elaborate greenhouse, in which a tropical climate may be kept up through the coldest weather, down to the simple hand glass that is used to protect a hill of melons or cucumbers from a cold April wind. The main thing is to secure and maintain the proper temperature, moisture and light necessary to the germination of seeds and the growth of plants. These conditions may be obtained on a small scale in the house, and on this point we introduce some very practical hints furnished us by WM. WEBSTER of this city. He writes:

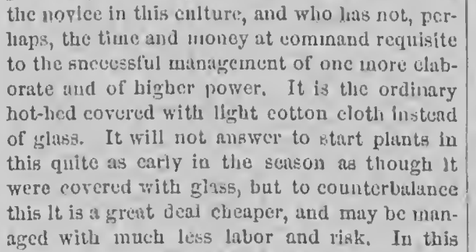
"As the time is fast approaching when all who wish to raise early vegetables or flowers from seed should be thinking of the means at hand by which they can accomplish this purpose, a few hints thrown out to the uninitiated as to the best mode of bringing forward young plants indoors, may not be out of place.

"To insure success in the germination of seeds and in rearing the young plants after they commence to vegetate, there are one or two points to be observed which are of vital consequence, and a neglect of which is sure to end in failure. First, to secure a proper medium for starting the seeds. In this, care must be taken to have a loose soil, so that the young and tender roots may easily penetrate and water pass readily through it. Second, heat and moisture are also essential, as they are the great promoters of all vegetable life, and without which it would be impossible for any seeds either to germinate or grow. Third, covering the seeds so as to secure certain and speedy growth; these agencies, however, must be used in moderation,—for an excess of either heat or moisture would as certainly destroy the young plants as covering the seeds too deeply in the soil would cause them to rot. Any good garden soil, if sufficiently porous to allow water to percolate easily, will answer for starting most seeds in, providing that a heat of 50° or 60° can be kept up in it and the temperature surrounding it can be maintained at 65° or 70°.

"Those who have hot-beds will experience but little difficulty in doing this, but those that cannot afford the expense or trouble of one may provide the means indoors, if they will but observe the rules which I have laid down in regard to heat, moisture, soil, &c.

"Any room where the temperature can be maintained at 65° or 70°, if sufficient light can be admitted, will answer the purpose; but as the air in all dwelling houses at this season of the year is too dry for the vegetation of young plants, an artificial atmosphere, suited to the wants of vegetable life, must be created. This can be done by using boxes of earth, covered with glass, to prevent a too rapid escape of moisture. Although it is necessary to surround the young plants with a humid atmosphere, for a part of the time, yet sufficient air must be admitted during a portion of every day to dry the plants thoroughly, otherwise they would damp off and die from an excess of moisture."

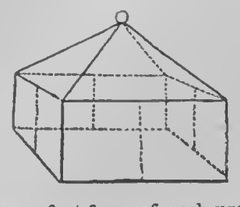
But every farmer's garden should have a hot-bed, and we illustrate one, the style of which is peculiarly well adapted to the wants and use of the novice in this culture, and who has not, perhaps, the time and money at command requisite to the successful management of one more elaborate and of higher power. It is the ordinary hot-bed covered with light cotton cloth instead of glass. It will not answer to start plants in this quite as early in the season as though it were covered with glass, but to counterbalance this it is a great deal cheaper, and may be managed with much less labor and risk. In this latitude the middle of March is sufficiently early to make this bed, and it will then bring forward the plants in satisfactory season. The advantages of cloth, as a covering for the bed, over glass are, first, the cost is hardly one-fourth; second, the bed does not require as much attention, as there is no danger of the plants being burned by the sun. The temperature is also more even, and the plants grow more stocky and bear transplanting better to the open ground. Ordinary white cotton cloth of close texture should be used and treated in the following manner:—Take two ounces of lime water, four ounces of linseed oil, one of white of eggs, two ounces of yolk of eggs; mix the lime and oil with a very gentle heat; beat the eggs separately and mix them with the former; spread this mixture with a paint brush over the cloth, allowing each coat to dry before applying another, until it becomes water proof.



The engraving of the hot-bed represents the proper mode of construction. The cloth is nailed to light frames 3x6 feet, which are placed side by side on a box, the back of which should be about 20 inches high and the front 12 or 15. This box is placed on a bed of horse manure 2½ feet thick, mixed evenly, and well moistened and lightly patted down with a fork to make it of uniform solidity. On the manure spread first an inch or two of loam, then a layer of inverted sod, having three or four inches of rich soil above it. Cover this close with the box and sash, and at the end of three or four days plant seed. When the weather is mild enough, give the plants air by tilting the cloth frames, as shown in the engraving.

Hand-glasses, or small cold frames, should also be provided by every one who aims to have an early garden. Their use comes after that of the hot-bed, for plants are only to be started

and partially grown in the latter, and must perfect their fruit in the open ground to which they are transplanted. At this period they will not require bottom heat from the manure, but may need the light and warm atmosphere and protection from cold winds which the hand-glass will furnish. The smaller engraving illus-



trates a very perfect form of such protection for hills of melons, cucumbers, tomatoes, &c. A cheaper method of construction would be a box of pine with a couple of panes of glass set in the top. The long hand-glass is used for covering peas, flowers, or rows of any kind of plants. One side of it should be set with panes of glass; the reverse may be prepared cotton cloth.

OHIO GRAPE GROWERS' MEETING.

WE condense, from notes furnished us by our correspondent, M. B. BATEHAM, an account of the proceedings of the annual meeting of the Lake Shore Grape Growers' Association, held at Cleveland, Feb. 20th and 21st, 1867:

There was a very good attendance, about one hundred being present, besides a number of visitors. Among them were quite a number of veterans in the cause of grape culture and pomology, including Drs. J. P. KIRTLAND and J. A. WARDER of Ohio; C. W. GRANT, S. B. PARSONS and A. MERRILL of New York; WM. GRIFFITH of Penna., and C. W. SPALDING of St. Louis. The meeting was called to order at 10 o'clock A. M. on Wednesday, Dr. J. P. DAKE, the President of the Association, in the chair, and M. B. BATEHAM, Secretary. The President delivered a brief address, giving the history and objects of the Association, and its operations for the past, and congratulating the members on the benefits that had already been derived from the organization, and still greater results to be expected in the future. The Secretary gave a verbal report of the doings of the Committee of the Society during the season, and especially of their observations in visiting the vineyards along the Lake Shore, after the excursion of the Association to the Islands last summer. This report, together with an account of the excursion, will be published in the forthcoming Report of the Association.

The following gentlemen were elected officers of the Association for the ensuing year:

President—Dr. J. W. DUNHAM, Collamer, O. *Vice-President*—Capt. John Brown, Jr., Put-in-Bay. *Secretary*—M. B. Bateham, Painesville, O. *Treasurer*—Rev. R. H. Leonard, Cleveland. *Directors*—L. D. Griswold, Elyria; S. B. Marshall, Cleveland; J. E. Mottier, North East, Pa.; J. H. Tryon, Willoughby; G. E. Ryckman, Brockton, N. Y.; M. H. Lewis, Sandusky; Addison Kelley, Kelley's Island.

ON SOILS AND THEIR PREPARATION.

At a former meeting Rev. N. P. BAILEY of Painesville was requested to prepare a report on "The soil and its preparation for vineyard planting." He indicated a few things for the purpose of eliciting discussion:

I. The kind or kinds of soil for vineyards. These we name in the order of our preference. 1st, light clay; 2d, loam; 3d, sandy or gravelly loam; 4th, stiff clay; 5th, sand.

II. Preparation of Soil—1st, No matter what kind of soil, if it retains moisture enough to cause it to collect in the bottom of a hole three feet deep, it should be underdrained, but not otherwise; 2d, any soil having a hard or adhesive subsoil should be worked with the subsoil plow, but not otherwise.

When these sub-surface preparations have been made, then we would prepare the surface soil for planting by, 1st, giving it a good dressing of ashes, plaster, bone dust and salt, and 2d, by plowing one foot deep. He used the term "light clay" to designate what is commonly called *clayey loam*—a mixture of sand and clay, but the clay predominating; and if gravelly or shaley, all the better. Such soil was much easier to manage than stiff clay, and he thought quite as good for grapes. By "loam" he meant what might be regarded as midway between clay and sand; and by "sandy loam," such as he had, a preponderance of sand. Each of these he counted preferable to stiff clay or to sand. Several gentlemen from the western parts of the Lake Shore expressed decided preference for clay soil, even "stiff clay" for vineyards, especially for the Catawba grape, and wine was the principal object.

Mr. GRIFFITH of North East, said he had before expressed his conviction that very satisfactory results can be realized in grape culture on nearly all classes of soils, not too wet, along the range of our favored Lake Shore; that the grand cause of our success was more in the air than in the soil.

Mr. PARSONS, Flushing, N. Y., had planted a large Delaware vineyard on the sea shore in New Jersey; soil white sand, and no manure applied. Thus far it was very promising; no marl had been discovered within ten or twelve feet of the surface. Thought the nearness of a large body of water a prime requisite in grape growing.

REPORT ON MUST.

In the discussion which followed this, it was stated that the must of Iona grapes picked Sept. 14th, 1866, and furnished for testing by Dr. GRANT, yielded 12 5-10 per cent. alcohol; those picked Oct. 1st, 14 per cent., and must made from the grapes 30 days after picking yielded 15 6-10 per cent. alcohol. Information being called for about the must from the Ives and Concord grapes, Mr. LEWIS of Sandusky said Col. WARING had told him that Ives must the past season gave 82 to 86 degrees. Dr. GRANT said that Mr. MOTTIER told him he was at Cincinnati recently, and Mr. WERK, Jr., who is making wine of the Ives grape, informed him the strength of the must was too low, the average being only about 65 to 70. Dr. SPAULDING said that the Concord grown in Missouri, yielded must weighing about 80, and making wine with 8 to 10 per cent. of alcohol, but this was above the usual average, especially when grown further north. Dr. DAKE said he found a good sample of Concord wine at Put-in-Bay, last fall, made by Mr. BEATTY, without the addition of any sugar, and on trial he found it contained 8 per cent. of alcohol.

In regard to the acid of must, Mr. GRIFFITH said it may be malic acid, or tartaric, or partly of each, but the latter is the acid desired for making wholesome wine, and is distinctively the acid of the grape, while the former is the acid of the apple and various other fruits, and tends to make vinegar. In the immature state of the grape, and as too often used for wine, the malic acid prevails, and no addition of sugar or other materials can remove this defect, though the alcohol may prevent acetous fermentation. Dr. DAKE believed that the tartaric acid in pure wines tended to neutralize the intoxicating effect of the alcohol on the nervous system, as well as to give an agreeable flavor and a wholesome acid quality.

ON DRAINAGE AND PREPARATION OF SOIL.

Dr. KIRTLAND said, in his opinion, clay soil, well underdrained, was the best for the grape growers. He had used tile for draining, and found no difficulty from filling up with the roots. A heavy clay soil became changed to a pliable loam in a few years after being well underdrained.

The Convention as a body were in favor of deep draining on heavy clay soils, and the opinions and practice of the majority were also in favor of simply plowing and subsoiling to the depth of 18 or 20 inches with teams, instead of trenching by hand.

ON THE USE OF MANURE.

Dr. SPAULDING said they found it advantageous to enrich old vineyards occasionally in Missouri,—say 15 to 20 years planted. Dr. KIRTLAND said our clay soils contain a good percentage of potash, and although seemingly poor, are improved by tillage so that their fertility is not likely to be exhausted for many years. On sandy soils he advised the occasional application of ashes or plaster, to bearing vineyards. Several persons spoke of having injured Catawba and Isabella vines by making the soil too rich.

Mr. BATEHAM said he had never seen any benefit result from manuring bearing vineyards, but often damage; however, he was convinced that it was an advantage in planting vines on ordinary or poor soils to apply a shovelful of compost or rich earth to each vine, mixing it with the soil about the roots, to give the vines a good start for the first year or two.

ON THE DEPTH OF PLANTING.

Mr. BATEHAM said there was need of setting the roots deeper in the ground than was sometimes done, to avoid the danger of heaving out or killing by the winter. There had been very heavy losses by the winter killing of choice young vines at various points along the Lake Shore the past winter, not so much by heaving out, on clay soils, as by the freezing of the roots in gravelly and sandy soils. He would set the roots as deep as could well be done and not have them deprived of the advantages of sun and air. Dr. SPAULDING said the practice in Missouri was to set the plant so that the upper roots would be about ten inches below the surface of the mellow ground, then when the earth has settled firmly, the roots will be found about six inches beneath the surface; perhaps a little less depth would be better in this cooler climate. It was desirable to keep the roots of the vines down out of the reach of the cultivator; hence many of the German vine dressers are in the habit of examining their young vines annually and cutting away the roots that may come out within six inches of the surface of the ground.

THE BEST STYLE OF PLANTS,

Dr. SPAULDING said, were such as had plenty of healthy roots, and a stem of new wood not less than ten inches long, so as to allow setting that depth in the ground without crowding the top. He preferred plants grown from short cuttings or single eyes, if they had sufficient length of tops. Other speakers preferred long cutting plants, then removing the upper tier of roots; but it was thought this practice must injure the health and vigor of the plants. The plan of setting the plants in furrows or shallow basins and gradually leveling up the soil after the vines have made growth, was recommended, especially if the soil is heavy or the plants are different in length of tops.

Remarks on Pruning and Training, and on Stakes and Trellises are deferred till next week.

TREES GIRDLED BY MICE.

A CORRESPONDENT from Boone Co., Mo., writes us in this wise:—"On examining my orchard a few days ago, I found a large proportion of the trees girdled by the mice. They confined their depredations mostly to the younger portion, which has been bearing for several years. Quite a number of trees from six to ten inches in diameter were completely girdled at the surface, while some are entirely stripped of the bark for several inches down the largest roots. Can you suggest anything that will benefit trees in such a condition?"

We cannot help suggesting, in the first place, that "an ounce of prevention is worth a pound of cure." If the hints we gave in the autumn had been heeded by our correspondent, he need not now have complained of the condition of his trees. We will now, however, do our best to help him and others who may be in a like predicament over their troubles, though we fear that many trees must be lost in spite of the best treatment. There is no mere application that will take the place of the lost bark, so we will try and restore the bark to the tree. If the

tree is small, and only a small portion girdled, cut the bark even at the edges, and then take the bark from some limbs, and fit it as nicely as possible into the place girdled, thus restoring the bark taken from the trunk by by that taken from the limb. It may be in one or more pieces, and secured in its place by grafting wax, over which a bandage may be tied. The small engraving shows the principle.

If this proves too difficult, perhaps the one illustrated in the next engraving may be resorted to with success. Smooth the edges of the injured bark, and connect the upper and lower portions by scions. These must be made wedge-shaped at the ends, and inserted in a cut made with a chisel about an inch above and below the gnawed edges of the bark, and well secured in their places.

Horticultural Notes and Queries.

CATALOGUES, &c., RECEIVED.—Fourteenth Report of the Ohio Pomological Society, embracing the Report of the Ad-Interim Committee, for the year 1866.—This is a very instructive pamphlet (illustrated) to fruit growers; about 60 pages.——Descriptive Catalogues of the Washington-st. Nurseries of BRONSON, GRAVES & SELOVER, Geneva, N. Y.; No. 1, fruit department, No. 2, ornamental department.—— Catalogue of Reading Nursery, Reading, Mass; J. W. MANNING, proprietor.—— Montclair Small Fruit Nursery; Catalogue of Plants, with a full description of the Kittatinny Blackberry; E. WILLIAMS, Montclair, N. J.—— C. L. HOAG & Co's Trade List for the Spring of 1867, Lockport, N. Y.——Catalogue of Moorestown Small Fruit and Plant Farm, Burlington Co., N. J.; THOMAS C. ANDREWS proprietor.

THE PEACH BUDS.—A correspondent writes us from Niagara Co., Western N. Y., that the cold in that vicinity has not at any time this winter been so intense as to destroy all the peach buds. He says—"I find in my orchard plenty of buds alive on the 'Honest Johns,' 'Jacques Rareripe,' and the natural fruit, a few on 'Crawford's Early,' enough on 'George the Fourth' and 'Sweetwater,' but scarcely any on 'Old Mixon Free.'" More attention ought to be given to the relative hardiness of the varieties of the peach. Fruit growers should make observations this season and they will have something to guide them in future planting. From Ohio we have reports that the peach buds are uninjured.

BOOK ON GRAPE CULTURE.—(J. J. A., Henry Co., Iowa.) "Fuller's Grape Culturist," or "Grapes and Wine," by Husmann, will give you the information you seek. See advertisement of books for sale at this office in some of the back numbers of the RURAL for prices, &c.

SATISFIED.—Many housewives who have been using Soda for years, have become satisfied that D. B. De Land & Co.'s *Best Chemical Saleratus* is better for all purposes than Soda, and therefore cannot be induced to use Soda, or any other brand of Saleratus.

PYLE'S SALERATUS AND CREAM TARTAR.—Pure articles, always full weight, and reliable in every way. Sold by grocers generally.

New Advertisements.

40 BUSHELS PEACH PITS FOR SALE, by HUSTED & WINEGAR, Lowell, Kent Co., Michigan.

IONA GRAPE VINES—2 years old.—Transplanted, and grown in open air, of *extra* size and quality. Samples, at wholesale rates, (single vines by mail,) $1,10 each. A. HAMMOND, Nurseryman, 891-tf Geneva, N. Y.

FRUIT and ORNAMENTAL TREES FOR THE SPRING OF 1867.

ELLWANGER & BARRY have the pleasure of offering for Spring planting their usual large and well grown stock of

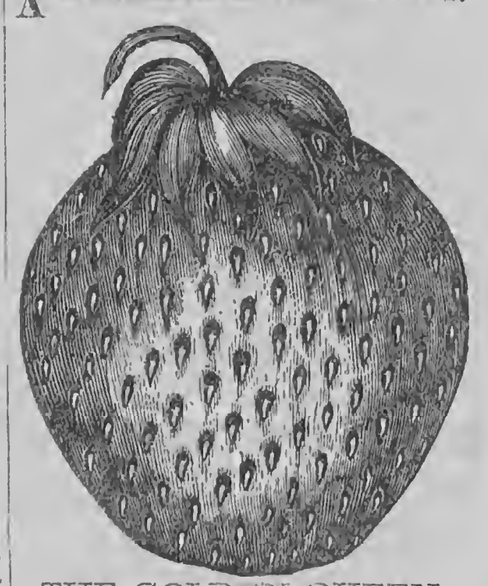
Standard and Dwarf Fruit Trees,
Ornamental Trees, Shrubs and Plants,
Green-House and Hot-House Plants.

Bedding Plants—including the splendid large-leaved Cannas, Colocasia, etc.
Pear, Quince and Cherry Stocks.
Each of these Departments contain all of real value, old and new.
The following Catalogues, which give full particulars, will be sent, pre-paid, upon the receipt of postage stamps, as follows:
No. 1—A Descriptive and Illustrated Catalogue of Fruits, 10 cents.
No. 2.—A Descriptive and Illustrated Catalogue of Ornamental Trees, Shrubs, Roses, &c., &c., 10 cents.
No. 3.—A Catalogue of Dahlias, Verbenas, Petunias, and select new Green-House and Bedding Plants, published every Spring, 5 cents.
No. 4.—A Wholesale Catalogue or Trade List, 3 cents.
894-3teo ELLWANGER & BARRY, Mount Hope Nurseries, Rochester, N. Y.

SPLENDID NEW PEARS, RASPBERRIES & STRAWBERRIES.

Dana's Hovey—The best Winter Pear known, lasting like a sweetmeat.
Dana's Augustus—This Seedling is quite equal to the Hovey, in quality, fruit large, cinnamon russet, ripening in September, extra.
Dana's America—A splendid early Winter Pear, as large as the Beurre Diel.
American Beauty, or Dunmore—A fine new Pear, ripening in July; size medium, the handsomest Pear grown, nearly covered with scarlet.
Clapp's Favorite—An American Seedling of great beauty and excellence, as large as the Bartlett and much better. 4 grafts of either of the above, $1; 2 grafts of each variety, $3; 5 of each, $5; 2 grafts of Bartlett, Sheldon and Seckel will be added, free of charge, if wanted, and sent free by mail.
Scarlet Seedling Raspberry, a new seedling of fine quality, fruit large and bright scarlet, perfectly hardy as far north as Canada; much better than the Philadelphia, 12 plants $3; 100, $15. The following 7 varieties of Strawberries, Agriculturist, Ripawam, Golden Queen, Jucunda, or Knox 700, Lending's White, Mead's Seedling and New Jersey Scarlet, the earliest of all berries, have been selected from over 100 kinds, and tested in my garden, the most of them produce berries over one ounce each. I will send free, by mail, one dozen of either variety, for $1; the 7 varieties, one dozen each, $5; 50 of each, $11; 100 of each, $21. Address either
F. W. CARPENTER, Rye, Westchester Co., N. Y., Or, WM. S. CARPENTER, 156 Reade St., N. Y.

A REMARKABLE STRAWBERRY.



THE GOLDEN QUEEN.

The above shows a fair average sample of berries of this new variety exhibited July 5th. It is of a beautiful bright scarlet color, of very high flavor, and enormously productive—many berries measuring *six inches in circumference*. It ripens fifteen days after the Wilson, and is thus most valuable as a late berry for family use or marketing. I carried samples of this berry nine days, and sold within that time nineteen thousand plants. Golden Queen, $1 ₰ doz.; $5 ₰ 100; $30 @ 1,000. Great Agriculturist, $1 ₰ doz.; $5 ₰ 100. Green Prolific, $1 ₰ doz.; $5 ₰ 100. Knox's Jucunda, No. 700, $1 ₰ doz.; $5 ₰ 100. The Southern Ruralist, printed at Amity City, La., speaking of THE GOLDEN QUEEN STRAWBERRY, says:—"Those who desire to raise a fruit of Tomato size and Strawberry flavor, will find just what they are looking for, in the Golden Queen."
Grape Vines, Ontario, $1,50 each; Concord, Delaware, Hartford Prolific, and Creveling—three-year old bearing vines—$2 each. ☞ Cash orders filled in rotation. Address J. B. CLINE, Rochester, N. Y.

KNOX FRUIT FARM AND NURSERIES.

ONE HUNDRED AND FIFTY ACRES IN GRAPES, STRAWBERRIES, BLACKBERRIES, RASPBERRIES, CURRANTS, GOOSEBERRIES, &c., &c.

Send for our Catalogue, which is a valuable Treatise on their Cultivation.

We were among the very first to engage in growing **SMALL FRUITS**, on a large scale, and for many years have been making a collection, which is unsurpassed if equaled anywhere.

GRAPES.

The Concord is decidedly the most popular grape in the country. It is now more generally planted, and gives greater satisfaction than any other. The

GREELEY PRIZE

has lately been awarded it as the grape of the greatest value. For full description SEE CATALOGUE.

Hartford Prolific and **Creveling**, are the best *very* early grapes yet thoroughly tested, and are very profitable.

Ives is destined to be, if it is not now, the leading wine grape of the country. For full description of this invaluable grape, SEE CATALOGUE.

Rentz is nearly of the same value, and is a most vigorous grower.

Martha is a **White Concord**, and is destined to be among White grapes, what its parent, the Concord is among the colored varieties.

Black Hawk promises to be a grape of very great merit—perhaps the earliest of all.

For description of above, and **Iona, Israella, Adirondac**, and all other desirable kinds, as well as much valuable information on Grape Culture, send **10 Cents for Catalogue.**

Our vines are grown in the open air, from bearing wood taken from our extensive Vineyards.

STRAWBERRIES.

For many years we have given earnest attention to the cultivation of Strawberries. Our long and varied experience gives us great advantages, in the selection of such varieties as will give the best satisfaction to the grower, whether for home or market purposes; our collection, in variety, quality, and quantity, is unsurpassed, if equaled anywhere. We call special attention to the

JUCUNDA—OUR NO. 700.

After thoroughly testing this variety for seven years, we unhesitatingly say, that *for uniform and large size, beauty of form and color, enormous yield, long continuance in bearing, great profit, health and vigor of plant*, and other desirable qualities, it is the most valuable Strawberry of which we have any knowledge. All who have seen it on our grounds, prize it alike highly.

Our present stock of plants of **Jucunda**, and all other valuable varieties, is the largest and best we have ever offered.

Send 10 Cents for Catalogue, which is a complete Manual on the Strawberry.

CURRANTS.

The demand for this valuable fruit is greatly increasing every year. We have taken special pains to make the best possible collection, and our stock is, perhaps, much the largest in the country.

We offer very superior plants of
Versaillaise.—The best of all.
Fertile de Angers.—Very similar to the above.
Cherry.—Excellent for Jelly.
Victoria.—Very late and good.
White Grape.—Superior for Wine.
La Hatine.—Vigorous grower and very good.
Black Naples.—Good for Jams and Jellies.

We can furnish any other desirable kind.

Also,

Raspberries, Blackberries, Gooseberries, &c., &c.

Send 10 cents for our **Descriptive and Illustrated Catalogue** with **Supplement.**

It contains **Descriptions** and **Illustrations** of the leading varieties of

Grapes, Strawberries, Raspberries, Blackberries, Gooseberries, Currants, &c.—Select Lists of Fruits, made up with great care.

Letters from Eminent Fruit Growers, and **Reports of Various Committees**, who have visited our grounds, including the **Report of the Ad Interim Committee** of the **Ohio Pomological Society, 1865**, written by the President, Dr. JOHN A. WARDER, from which we extract:

"Four things struck all the visitors as especially worthy of note:—The modes of propagation and culture of the soil, the varieties under culture and trial, the wonderfully abundant product of magnificent berries, and the excellent and successful mode of harvesting and marketing the fruit, all of which may properly be introduced into this Report for the benefit of our fellow members."

Much valuable information, on each of these points, is contained in this Report, and other parts of the Catalogue.

Ladies' Department.

Written for Moore's Rural New-Yorker.

AFTER.

BY ADELAIDE STOUT.

The lips are cold and white.
That oft in ire
Seemed dropping on my soul
In liquid fire.

They cannot sway my heart
To love, and yet
They waken something like
A sad regret.

The grace of silence oft
I might have worn
Upon my lips; at least
Not dropped in scorn

Proud answer—clashing thus
Bright steel with steel,
And I more tender grow,
As thus I feel

Such deep thoughts stir within
Mine inmost soul.
O Love, speak softly thou,
My life control,

With all its secret springs,
That they may flow
Unbroken from clear depths,
Reflecting so

The heaven of God's own peace,
O, sweet and clear,
Speak thou above all strife
"Forgive, forbear."

For Moore's Rural New-Yorker.

MR. SMITH'S ADVICE.

As I was stepping into my buggy to drive home from town one day last summer, I heard a familiar voice calling "Mr. SMITH!" and on turning, was agreeably surprised to see my next neighbor, SILAS BERWICK, who had just come from Oil City,

"With the scent of kerosene upon his clothes and shoes,
And his pockets stuffed with papers, containing wondrous news,
Of flowing wells and fortunes made on every passing day,
Along the streams and in the glens of fair Petrolia,"

whither he had gone some months previous, with the hope of engaging in business less laborious and more lucrative than farming.

"Right glad to welcome you back again, BERWICK. Your wife came out, as I passed your house, and asked me to call at the post-office, as a letter from you was due. Instead of a letter I shall have the pleasure of bringing you bodily to her. So jump in, and I'll drive onward."

"Why, SMITH, I'm not quite ready yet. I've been running around among the stores, hunting a nice dress for my wife. Always make a practice of giving her a present on returning from a journey. Just step in here with me a minute," and he pointed to a well-stocked establishment near us.

"So you didn't invest all your funds in the 'diggings?'"

"No, indeed; it takes money to make a successful 'strike' down there; and having but a moderate supply, and no prospect of adding to it by remaining, I concluded to return and try farming again. I'd like farming well, if I could see that I was getting ahead any. But come in here. I've been looking at a stylish piece of silk which MARVIN says will 'out-wear merino.' He will sell me a dress for thirty dollars. There's enough for a couple of dresses in the piece, and he says he could afford to sell at a lower figure if I would take the whole. Supposing you buy half of it for your wife, SMITH."

"My wife likes to select her own dresses, sir. Don't wish to look at the article; so let's be going."

Giving a signal to Lightfoot, we rattled off and soon left the noisy streets in the distance. Then a slower pace suited us and we resumed our conversation.

"Give the money to your wife, BERWICK, and she will buy what is needed most, and that will afford her more pleasure than a score of stylish silks, I'll warrant. I used to be famous for surprising Mrs. SMITH with new dresses and that sort of thing. When I returned from that trip to Minnesota, some years since, I went into a store to purchase something to present to her. The 'something' turned out to be a delicate silk, which the merchant held up in lustrous folds to my admiring gaze. After a joyous welcome from all, I tossed the parcel into my wife's lap. Opening it, she turned a look of astonishment toward me and said, 'KATE is only eleven years of age, and will not know how to take care of such a fancy dress, Mr. SMITH. What induced you to buy it for her?'

"'It is not for KATE, it is for you, SUSAN. There will be parties and so forth, and this will be just the thing for you.'

"'You have forgotten my good black silk, Mr. SMITH. I'm so sorry you brought this home, instead of a substantial roll of calico or flannel to make school-dresses for the children. There's that poor, leaky cistern too, that gets worse every washing-day, and I'd like to know where the money can be obtained to have it repaired?' Soon after we sold the beautiful dress to a lady whose daughter fancied it, to be worn at her wedding.'

"Summer came, and Mrs. SMITH talked of buying a new bonnet. Passing along the streets, I saw a gay one in a shop window, and at once stepped in and purchased it. True, it cost more than I expected; but 'Madame' soothed me by saying, 'It was an exquisite article and would please the most fastidious lady.' I took it home; but it did not suit Mrs. SMITH at all. She declared she could have bought five suitable bonnets for the price paid for this medley of French flowers, laces and ribbons. Soon after she called on 'Madame,' and exchanged the 'exquisite article' for a suitable bonnet for herself and a hat for each child besides.

"But this did not cure me of trafficking in dry goods. Several months after the bonnet affair I happened to go into an auction-room in town, just as the auctioneer was extolling the merits of a grand shawl. Mrs. SMITH thought of purchasing a cloak; and the idea struck me that a shawl would be just the thing for her, as it would not get out of fashion as soon as a cloak. The auctioneer was fluent with expressions respecting the value of the article. 'Elegant cashmere shawl! Just agoing! Going! Who says thirty-six dollars for this magnificent shawl?' I named that amount, when a foreigner called out, 'I gif dirty-six dollar and one-half for him!' 'Thirty-seven,' cried a man at the door. I shouted, 'Thirty-eight.' My opponent said, 'Thirty-nine,' after which we contested it hotly until it was suddenly knocked off to me for forty-five dollars. On paying for it, I remembered a grocer's bill, due that day, which I designed paying with that very money. Well, I called on the grocer, made an apology for my delinquency, and went home. The 'elegant cashmere' was duly handed to Mrs. SMITH, who glanced vexatiously at it, exclaiming, 'How provoking you are, Mr. SMITH! Why, broché shawls of this style were old-fashioned twenty years ago!' However, she wore it heroically. One day a neighbor visited us, whose handsome, comfortable cloak quickly attracted my wife's attention. The lady paid fifteen dollars for the materials, and made it herself. That Mrs. SMITH admired it was evident, although she was silent. Perhaps the thought that her shawl cost the price of three such cloaks was uppermost in her mind. It certainly was in mine, and the lesson was a salutary one. Since then I have let such speculations entirely alone. Mrs. SMITH attends to the purchase of all dry goods necessary for the family, and proves to be perfectly competent for the task. Now, neighbor BERWICK, please hand the money you thought of spending for that silk to Mrs. BERWICK, and it will lend an additional charm to the joy of your return. I have missed you from the neighborhood, and gladly welcome you back to the noble pursuit of agriculture. The experience of the past few years has convinced me of the utility of keeping an exact account of my income and my expenditures each year, and I find myself steadily getting ahead. Yes, BERWICK, you and I can flourish on our farms if we mind our own business. Oil speculations are too slippery for men of our calibre. But here we are at your house. Good-day, sir! Get up, Lightfoot!" M. N.

A FEW WORDS ON SQUEEZING.

While the ladies are growing very sensible indeed in the matter of dress, so far as boots, balmoral skirts, warm stockings and high-necked dresses are concerned, they are degenerating in a great many other matters quite as important. The corset is not a necessary part of a woman's wardrobe, and alas, when a woman begins to wear corsets she will wear them too small, and will tug at the laces until her breath becomes short and she feels it necessary to abstain from everything like a comfortable meal. We say nothing against a well shaped corset, worn loosely, but there lies the difficulty. A loose corset injures the appearance instead of improving it, and people wear corsets that they may have small waists. All we can say is, don't squeeze, whatever you do. You may have a small waist, but you are exposing yourself to a dozen misfortunes which are as bad as a large waist. First, you'll surely have dyspepsia and grow yellow and cross and unhappy; secondly, your hands will grow red; thirdly, your nose; fourthly, you will be unable to walk a mile at once; fifthly, dinner will be a misery; sixthly, your shoulder blades will increase in size and altitude; seventhly, your eyes will grow weak; eightly, you will break down at thirty or thereabouts, and be a sickly old woman from that time forth. If these truths do not frighten women from tight corsets, perhaps the information that gentlemen generally do not admire what dressmakers call a "pretty figure," so much as a natural one, may have some influence.

A NOVEL WEDDING.—A lady in one of our Vermont towns, says the Bellows Falls Times, a few days ago, wishing to get married, and to have people *know* that she *was married*, invited the people to her father's house to an evening prayer meeting, as the custom was in their neighborhood, and gave the parson an invitation and "the hint." He arrived at the hour appointed and found some seventy or more persons there assembled, no one knowing what was to take place. He chose to address his congregation upon the marriage at Cana, in Galilee. Having finished his discourse the said lady and her affianced arose to their feet without any "bluster," but among many bewildered countenances, and said amen. Taking his hat he left them wondering, and for aught I know they are wondering yet.

A NEW FASHION IN GLOVES.—A Paris correspondent writes that the latest fashion for ladies in that city is "to wear dog skin gloves, and to wear them till—to use a Gypsy-like, perhaps, but still expressive simile—they are 'as black as a tinker's pot.' The more like they are to that engine of the *batterie de cuisine* of the domestic repairer the more they are admired. At last, then, *ces petites dames* have found a cheap fashion; but no, perhaps they will buy up fine old dry and dirty gloves at a fancy price. However, nobody now enters a certain society with clean hands if they wish to be that which an echo from the continent calls '*chique.*'"

A MRS. WHITE is "local" of the Stark County (Mo.) News. The paper is said to be very gossippy.

TO CONTRIBUTORS.

The following contributions are respectfully declined for the reasons annexed:—"Bemis Heights," W. D. E. Re-model your second and fifth stanzas. Other article accepted.—"Thou art gone and left me Weeping," M. E. Not specific enough to interest strangers to its subject. Other accepted.—"The Heroes of America," S. E. V. Take a subject on which it is not impossible to say anything new. Your style is good.—"Stray Thinking," E. Not new.—"Memory of the Dead," E. Try a newer subject; Irving has left nothing to be written on that one.—"Scandal on the Brain." Not new.—Problem, A. M. W. The truth of your proposition depends on the form of the shot, of which you say nothing.—"The Fleetness of Time," A. W. Not new.—"Astronomical Questions," J. M. S. They are *not* astronomical.—Riddle, H. E. E. Of your three answers, the first is incorrect and the second irreverent.—"A Partner Wanted," S. Subject exhausted.

Choice Miscellany.

GOOD NIGHT.

FROM THE GERMAN OF KOERNER, BY A. C. KENDRICK.

Good night!
Let it on the weary light!
Now the day in silence closes,
Labor's toil-worn frame reposes.
Till awakes the morning light.
Good night!

Go to rest!
Weary eyes in sleep be prest.
Silence on the wide streets falleth,
Save where lone the watchman calleth:
Whispers night to each worn breast,
Go to rest!

Sweetly sleep!
Heavenly dews your senses steep!
Feels your breast love's bitter pleasure,
Let the form your bosom treasures
Brightly imaged round you sweep.
Sweetly sleep!

So good night!
Slumber till the daylight breaketh;
Slumber till another morrow
Brings another weight of sorrow.
Fear ye not—your Father waketh!
So good night!

Written for Moore's Rural New-Yorker.

COUNTRY SKETCHES.

NUMBER ONE.

Out in the country, where the winter wind drifts the snow all up around us, where the din and hurry and bustle of the great world never come near enough to disturb the quietness, where away out of our windows slope wide views of monotonous snow-clad meadows, and the grey net-work of forest boughs seems woven against the horizon—

Somebody peers over my shoulder and says: "Ah, what a dismal picture you are painting. City people already have terrible ideas of how lonesome it is in the country; and I thought you were going to give them a different view of it."

"Well, well, if you will only wait and not be in such a hurry. I'm only painting the background. Painters don't make their back-grounds bright crimson, or yellow, do they? Just sit down and go on with your knitting, please, and when it's done you may see it and pass criticism on it to your heart's content—or discontent, perhaps."

Of the farm-houses scattered here and there, in valley or on hillside, each one forms a little nucleus around which cluster the hopes and fears of those hearts that call it home. How little those hearts may remain, or how great and deep and wide the developing finger of Time may mould them, who can truly prophesy? The broad fields of the country hold rich treasures of beauty and fragrance and fruitage, in the glad summer. But oh! does it repay the long, dreary dearth of the winter?—for then the country is lonely and desolate, always, everywhere. Is it? Just peep into our kitchen and see. I've finished my back-ground, now I'll sketch the picture. You see our family room *is* the kitchen; for when it was built we found we could have two small, tucked-up rooms, or one great one; and all but JANE voted for the great one. So it was carried for one room. I think that JANE has held a little ill-will ever since, because she could not be the majority.

First in the group are the father and mother. He is a great hale and hearty man of fifty, his dark hair, now flecked with silver threads, soft, brown eyes, full of genial kindliness, with a little sly twinkle settling itself down in their corners, telling of the sparkling vein of mirthfulness indigenous to his nature. He was just such a man as one would apply to in time of trouble or perplexity, and not be afraid of his straightening himself up to the resemblance of an iceberg. His wife was a blue-eyed, auburn-haired woman, with order the first natural principle of her existence. A fair, good woman was she, not more selfish than ordinary, not over generous.

Next come the young folks of the group. ROBERT, the eldest, is somewat after the type of his mother, but his nature is wider, stronger and more generous. He lives from home, coming in to join the home circle only late on Saturday. MARY, or "MOLLIE," the oldest girl, is a tall, fine-faced brunette, rather stately in her ways, too apt to rule if she can, but with a true heart full of native goodness. SUSAN is dark-eyed, too, and bears the reputation at home of being the family "blue." JANE is pretty, the fairest one of the sisters in features, a trifle vain, may be, and with a brain as full of fanciful air-castles as any one I know. ALBERT, or "BERT," is the nine-year old baby, full of fun and go ahead, a good child for one who is the pet of the family. And then there lives with them a cripple cousin, who seems to have gained in the head what he has lost in the feet. He is RUFUS. And then myself, who belong there because I want to and am wanted, and not by any tie of kinship. The lamp is on the table, father reading the paper, mother mending socks, MOLLIE knitting soft, bright meshes out of crimson wool, SUSAN reading history, JANE putting up her hair *a la crimp*, and ROBERT helping BERT mend his broken sled. After awhile MOLLIE stops her netting and comes around to talk with ROBERT, and as they talk out loud I suppose we may listen.

Robert—I've had some serious thoughts lately, MOLLIE, and the result of them is I have concluded to give up going to college, and buy JOHN ANSON'S farm, and make a good farmer. I know some people will laugh, and I see your eyes are full of disapproving wonder; but I think it will be all for the best in the end, MOLLIE.

Mollie—Why, ROBERT, surely that is new and strange. I thought you had reckoned so much on going, and had worked so hard to earn enough to go.

Robert—Yes, it's true. I had made reckon on going to college. I would like to now; but, all things considered, will it be best? After I go all through the depths and mysteries, and come out penniless, shall I have the talent for a professional man? It is doubtful if I could make anything but a very ordinary one, at best. As the world is full of just such ones now, waiting, striving for, grasping, a mere pittance, illy fitting the positions they occupy, like pigmies in giants' garb. I can never enter that field and gain the victory, honestly, conscientiously; and I will never gain it otherwise. I know the estimation in which farming is held by many, some of them beggars in the professions, but I think all just and great minds hold it a high and honorable calling. In fact, I would not blame sensible men for condemning such farming as we witness, year after year, all about us. The broad, fertile acres blush for the ignorance and shiftlessness of their owners.

Mollie—Well, if you are thus determined, I suppose we shall have to endure you for a neighbor, even if you eclipse us all with your model farming.

Father—For my part, I think ROBERT'S choice is sensible.

Mother—Yes, I suppose we must all try to think so, though I cannot help reflecting he would have graced some profession much better than he will believe.

Susan—looking up from her book—O ROBERT, I had made such great calculation upon coming in town to see you, and having so many new books to read; and now that will all be spoiled.

Jane—Brother BOB, I'll tell you what, I guess you will get tired of plowing, and sowing, and reaping and mowing, and I don't believe you will make any better farmer than old 'Squire GRUBB, you poke so much fun at. Be nothing but a farmer, BOB? I declare it's a shame.

Bert—I'm real glad, brother BOB, you are to be a farmer. I'll come to be your boy every summer, if you'll only help fix my sled, and help me in arithmetic winters. Yes I will, sure and true.

And RUFUS said, "Be a noble, upright man, ROBERT, and GOD will bless you, if your calling be never so humble in the estimation of the world.

And then we all said good night until we met again.

As I was going up stairs, somebody said he guessed my canvas was not large enough to hold all of my picture; I had put in too many figures. Well, maybe I'll paint them again on a new canvas, and have another scene sometime. ERIE.

Home, Feb. 5, 1867.

A LUCID DIRECTION.

The late Dr. Henry Ware, when once asked by a parent to draw up a set of rules for the government of children, replied by an anecdote:

"Dr. Hitchcock," he said, "was settled in Sandwich; and when he made his first exchange with the Plymouth minister, he must needs pass through the Plymouth Woods—a nine miles' wilderness, where the travelers almost always got lost, and frequently came out at the point they started from. Dr. H., on entering this much dreaded labyrinth, met an old woman, and asked her to give him some directions for getting through the woods so as to fetch up at Plymouth rather than Sandwich.

"'Certainly,' she said, 'I will tell you all about it, with the greatest pleasure. You will just keep right on till you get some ways into the woods, and you will come to a place where several roads branch off. Then you must stop and consider, and take the one *that seems to you most likely* to bring you out right.'

"He did so, and came out right." Dr. Ware added, "I have followed the worthy and sensible old lady's advice in bringing up my children. do not think anybody can do better; at any rate, I cannot." Good common sense, doubtless, is often better than all set rules; but the thing is to *have it.*

BEING SURETY.—If any desire thee to be his surety, give him a part of what thou hast to spare; if he press thee further, he is not thy friend at all, for friendship rather chooseth harm to itself than offereth it. If thou be bound for a stranger thou art a fool; if for a merchant, thou puttest thy estate to learn to swim; if for a lawyer, he will find an evasion by a syllable or word to abuse thee; if for a poor man, thou must pay it thyself; if for a rich man, he needs it not; therefore from suretyship, as from a man-slayer or enchanter, bless thyself; for the best profit and return will be this—that if thou force him for whom thou art bound to pay, he will become thy enemy; if thou choose to pay it thyself, thou wilt become a beggar.

Sabbath Reading.

PEACE—BE STILL!

BY MRS. M. S. B. DANA SHINDLER.

Once upon the heaving ocean,
Rode a bark at evening tide,
While the waves, in wild commotion,
Dashed against the vessel's side.
Jesus, sleeping on a pillow,
Heeded not the raging billow;
While the winds were all abroad,
Calmly slept the son of GOD.

In that dark and stormy hour,
Fearful ones awaked their Lord,
Jesus, by his sovereign power,
Calmed the tempest with a word,
On life's dark and restless ocean,
Mid the billow's mild commotion,
Trembling soul, your Lord is there;
He will make you still his care.

Jesus knows your silent weeping,
When before his throne you bow;
Never, never is he sleeping,
Where he reigns in glory now.
If the world is dark before thee,
If the billows, rolling o'er thee,
All thy soul with terror fill,—
Hear him saying—"Peace! be still!"

Written for Moore's Rural New-Yorker.

LIFE.

Life is ours and we must use it; our Maker's gift we dare not cast away, and though our feet are weary and our timid hearts are sorely tried by the perils of the thorny road, still we must journey on—on to the haven of eternal rest, or on to the endless death.

The hopes that sustained us in youth break, as broke the bubbles from our childhood's pipe; the aspirations of our riper years depart as suddenly; and every earthly thing is doomed to decay. We may quarrel if we will, and stand before the world as harsh and cynical; we may think how short our fleshly pleasures, and fret and fume the years away, because forsooth we must adapt ourselves to the world, and cannot adapt the world to us. Our duty to GOD and to ourselves stands clearly out before us, and why evade the burden? What will all our discontent avail? It will not lighten the wearying weight upon our shrinking shoulders, but add instead its own heavy load.

Be thoughtful; it is the power of thought that raises man above the beasts of the field, makes him the heir of immortality and heaven, or sinks him to the depths of infamy and hell. To whom much is given, of him much shall be demanded. Think how great a charge is the care of an immortal soul. To but one master is our allegiance given. "Whom serve we in this life we serve in that which is to come," and all must know whose cause they have espoused.

Be true—true to yourself and true unto your God. Deal not falsely with your own heart, but study well its darkest depths. Be true to the Christ who died that you might live, true to the hope He won for your sin-freighted soul. The faculties GOD gave to you, use them not for the advancement of selfish ends nor to appease the lust for gold, which is but dross to purchase earthly pleasures that fade away. GOD is true and He alone is steadfast. Sully not you immortal soul with the corruption of unholy thoughts, nor yield your life to the vile work of the evil one.

Be brave; trial may compass all your way, it may be hard to stand and fight the evils that assail, but when has not evil tried to withstand the good? When has man found the way of duty easy? Here are the battles fought, further on is the victor crowned, crowned not with the laurels of transient glory, but with the starry crown that never fades.

Be patient; "the web of our life is of a mingled yarn," and in the loom of time it is laid to a pattern that man does not see. Sorrow and joy, the beating heart weaveth swiftly in, as GOD sees that it is needed; and when at last the work of patience is complete, and the weaving is all done, in heaven's clearer light we all shall see the finished beauty that the changing colors wrought. ANNA PARKER.

PROFANITY.

The whole argument on the subject of profanity is summed up thus briefly by Prof. D. T. AMES, in his recent New Year's address to the students of Syracuse Mercantile College:—"Of all bad habits that can attach themselves to man, swearing,—merely from a business point of view, appears to me to be most foolish and inexcusable. It is a habit from which there is no *possible good*, but always probable evil. The tippler, in his mirth, finds an apology; the thief steals for gain; the gambler plays to win; the murderer, in common with all other criminals, finds some excuse to mitigate his guilt, but who ever heard a man even attempt a justification or excuse for profanity? Unlike kindred bad habits, it is wicked and useless without an apology; it injures you, without recompense, even in the eyes of your own profane associates, while all moral and respectable people condemn and despise you. Why, then, swear?"

"I AM A MISSIONARY, TOO."—It was said when the late Commodore Foote was in Siam, he had, upon one occasion, the King on board his vessel as a guest. Like a Christian man, as he was, he did not hesitate in the royal presence to ask a blessing, as the guests took their places at the table.

"Why, that is just as the missionaries do."

"Yes," answered the heroic sailor; "and I am a missionary, too."

There is a most important lesson of Christian devotion and consistency in such an example.

Educational.

Written for Moore's Rural New-Yorker.

EDUCATION IN RURAL DISTRICTS.

"TRAIN up a child in the way he should go, and when he is old he will not depart from it."

A strange world is this, and strange are the mortals who walk over its earth-trodden paths, and strange it is that only the few ever learn what is for their real good; and, although the world is calling loudly for intellect, for knowledge, it is only the few who respond to the cry, who learn that "there is no royal road to intellectual eminence." Education is needed not only in our rural school districts, but in the breadth and length of this wide earth; still, that it is neglected in our rural districts is a truth which is as evident as that "as soon as the sun rises it begins to shine." True, the farmers must till the soil, sow the wheat and gather it into the garner; yet they forget the living wheat which gathers around the family hearth and is dependent upon them for the support not only of the physical but of the mental. Parents, don't starve your children, don't wind your soul all up in a few acres of land, concentrate all your faculties and energy on the one object, "the almighty dollar," in order that you may be able to hand a little corrupted dust down to the next generation. We do not want this; as a people, as a nation, as a world, we are rich enough; it is an age of action, and we want intellect as well as acres, dollars and muscular strength.

Again, you build houses, hire teachers just as cheap as you can and give them the consolation that they will have a difficult school to manage. Sometimes they are told that there must be no corporeal punishment, for the district will not like that; or, on the other side, they must thrash everything out of the children and beat everything into them. School is commenced, and the trustee is not seen again until after it is closed. If it was a failure, the teacher "wasn't much." Then, too, it is the duty of the teacher to visit the parents; but the rule does not work the other way. In the school-room the teacher reigns supreme, that is if he have a good amount of muscular strength. Now, in the name of all that is good (I appeal to the mind and not to the pocket,) is this the right course to be taken? Must the land be tilled and the live stock be tenderly cared for and watched over at the expense of immortal posterity?

Parents, it is your duty to educate your child, to watch its progress from day to day. The child needs the education; the home fireside needs it; your country needs it; the world needs it; and GOD demands it. Perhaps some may excuse themselves for the reason that they are poor; but, even though you are poor, and all that you have of this world's riches is earned by the sweat of the brow and the hand which is blackened and hardened by the toils of this life, even then raise yourself from the dust of the earth; for you are the honest poor, the nobility of this world; and while you toil on you are carrying out the great work which GOD himself commenced. Six thousand years ago this world was hurled into indefinite space by an Almighty hand; and here it was left in its rough and natural state for the hand of man to hew down its mountains, chisel off its corners, bring forth from the rough, unhewn block of marble the life-like statues and erect everywhere its towering steeples which proclaim the belief in a Supreme Being.

In conclusion, don't grasp your money too closely, or consider your time too precious to spend a little in visiting schools; for, if you do, there will be a call ere long from the Empire State for your dust, and it will have to come. If there is not a reformation in some of our schools, we shall be compelled to have another State prison and lunatic asylum built on a large plan and a wing added to our new idiot asylum. Let not poverty or the glittering dust of the earth keep your child from the school-room; and, of all things that you will to posterity, will them an education, and with GOD's help teach them how to live, so that when nature dissolves, when 'tis said "dust thou art, and to dust must return," then the soul, the educated part, will be prepared for the great change, prepared to meet its Creator, prepared for the world beyond the river.

LIBBIE.

Geddes, Feb. 2, 1867.

SENDING CHILDREN TO FREE SCHOOL.

THE Waterloo Woolen Company has discharged over twenty boys and girls under twelve years of age, as the only way they can induce the children's parents to send them to school. Hereafter no children are to be employed in the mill, who do not bring a schoolmaster's certificate that they have had at least one quarter's schooling within the current year.

Strange as it appears, when the villages are so severely taxed to build large school houses, and to pay high salaried teachers, male and female, the poorer classes of the people, for whose free schooling the law was made, are least benefited by it; because, with that false logic which keeps them forever poor, they think that which costs nothing is worth nothing. I know one very small freeholder who grumbled at paying a school tax because he kept his own children from school.

*

A MEMBER of Congress once said: — "What the honorable gentleman has just asserted I consider as catamount to a denial." "I presume," replied his opponent, "that the honorable gentleman means tantamount. I am not so ignorant of our language as not to be aware that catamount and tantamount are not anonymous."

OUR most intimate friend is not he to whom we show the worst, but the best of our nature.

ROSCOE CONKLING.

ROSCOE CONKLING, the original of the portrait above, was born in Albany in 1828. He received a liberal education, adopted the profession of law, settled in Utica in 1846, and in 1849 was appointed District Attorney for Oneida county. In 1858 he was elected to Congress, and has been retained in his seat by re-elections ever since. His record there has been an uncommonly clear one, and he is recognized as the leader of the New York delegation. He has been prominent as a member of the Committee of Fifteen, to which was chiefly intrusted the work of reconstruction, and has shown himself not only brilliant in the more showy parts of legislative business but thoroughly conversant with all the details of its every-day work. Seldom has any contest of the kind attracted more attention or elicited more comment than did that which resulted, on the 15th of January last, in Mr. CONKLING'S election to represent the State of New York in the United States Senate for six years from the 4th of March instant. The universal testimony of the journals of the country, of both parties, was that his eminent abilities fitted him for, and his faithful services in the House entitled him to, the high honor. And in addition to his other qualifications, one of the many correspondents who commented on his election assures the public that he "knows how to 'strike from the shoulder'"— which is said to be an important accomplishment to a legislator. It is not often that so young a man is called to so high a position with such flattering and complete omens of success.

Various Topics.

A NEW ELEMENT IN ART.

A PAINTER of miniatures recently exhibited a collection of portraits, with labels attached, one of which read thus:—"Countess ORLOFF of Russia, whose income is $25,000 per day." What particular connection there was between the roubles of the fair Russian and the skill of the artist, we were unable to determine. Has modern art criticism established such a rule as —the greater the "pile" the greater the painting? Or is the announcement intended to be of similar effect as if it were stated that a landscape had been drawn by a man standing poised on one foot on top of a church spire?—the painter being expected to tremble in the awful presence of twenty-five thousand dollars a day. Are we to take it for granted that a lady with nine million dollars a year for pin money will be so elaborate in her "make up" that only the sublimest genius and the subtlest art are equal to the task of portraying her with accuracy?

In truth, this use of financial statements as personal characteristics is a vulgar absurdity to which Americans are too much addicted. And the publication of income lists, whatever may be its use in the way of correcting errors, intentional or otherwise, is to be deplored for encouraging a reprehensible curiosity and giving factitious importance to that which is already too powerful. Where a man has made it his ambition to amass wealth, and has met with notable success, though the object is not the most elevated, it may be well enough to mention it, just as we would mention any other successful achievement. For making money is proof of a certain amount of ability. But to give one prominence for accidental or inherited wealth is like making a hero of a man because he has crossed the ocean in the Great Eastern, or received a message through the cable, or because he has had a cow struck by lightning. An artist, of all men, should be above such nonsense.

SOCIAL LIFE IN NORTH CAROLINA.

A SCHOOLMISTRESS for colored children, employed by the Society of Friends Freedmen's Aid, writes from the interior of the "Old North State," that she accepted an invitation to dine with a family who sent a wagon and mules for her and her friend. "The ride was four circuitous miles, through woods part of the way, which the raw-boned team accomplished much better than was expected with such a primitive wagon. I found our destination a very old house with plenty of rubbish and dilapidated, tumble-down buildings around it. The house was unplastered and almost windowless; but shawls were put up to keep out the wind; and the large fireplace, filled with blazing pitch-pine logs, sent forth warmth and comfort that was hospitable in its homeliness; while the warm, hearty welcome we received compensated for all. Here is the very ample and truly luxurious bill of fare:—Roast spare rib and turnip; chicken and potatoes; sausages; a back-bone pie, made of a pig's back-bone; beets and pickles. In true Southern style all were desired to lay hold and help themselves to that they liked best. Dessert—pumpkin pie, tarts, cakes, honey, preserves, and very nice boiled custards in tumblers. How much better this than the more dainty hospitality of the North, where you are often placed in a cold, musty room that has not been warmed for a month or more; the bright, unused carpet seems to demur to your clay-stained boots; even the gilded spittoon beside you seems to say, 'I am only to look at, not to spit in.' Then every movement of maid or matron proclaims their uneasiness, and how much trouble you have made them; fidgety fear lest she should violate conventional rules frightens away the self-possession of your hostess; and you feel so ill at ease that you long for the true homespun hospitality and primitive comforts of the Old North State kitchen."

The schoolmistress says of her friends that, although they live in such dilapidated quarters, without either wood house, cook stove, or conveniences by us considered indispensable, they are not poor whites, but, in the vernacular of the country, "mighty nice people that raise *craps*." In point of information and culture, the whites were below her expectation; but the blacks were above it. Over one hundred families of freedmen have already purchased homes in that region; and she thinks they are much better off there than they would be at the North, where they would come into unpleasant competition with the Irish, their natural enemies. If you want to provoke a freed black, call him a smoked Irishman.

WHAT IS SHODDY?

TWENTY-FIVE years ago woolen rags in England sold at $20 the ton and only for manure. Now they are sold there at $200 the ton, to be made into cloth. There is but one factory in the United States where shoddy is made into cloth; but in Leeds and its vicinity cloth to the value of $15,000,000 is annually manufactured from shoddy; and it is supposed if the supply was stopped in England, as our Senate have lately prohibited it by tariff enactment from the United States, it would close one-third of the woolen mills in the United Kingdom. It would seem that our grave Senators are horrified at the idea of wearing a shoddy coat of home manufacture, while they daily wear unwittingly one whose components, in part at least, come from the foreign Jew's rag-bag. It was disclosed at the great London Exhibition, in 1862, that sixty-five million pounds of shoddy was annually consumed in England.

W.

THE lawyer's motto—Be brief.

FOREIGN BIRDS IN NEW YORK.

A NEW YORK letter says:—"The importation of foreign birds, as a means of preventing the horrible worm nuisance, has become a question of great importance and interest here. To some extent, the importation of English sparrows has been a success, especially in a neighboring city of New Jersey. Six years ago there were none of these useful and pretty little creatures in the country, but now they fly in large flocks through the streets of that city, and have spread inland as far as Newark and Elizabeth. We find them occasionally in Brooklyn and in the upper part of New York. In New Jersey special laws have been made to protect them against sportsmen. Their utility is everywhere acknowledged. Last summer they materially decreased the worm-nuisance in Brooklyn, and delighted that city with the prospect of having shade trees that grow leaves instead of caterpillars. A correspondent of the Evening Post suggests that other birds besides sparrows might be imported and naturalized here, such as the robin redbreast of England, the skylark, the linnet, the goldfinch, and the nightingale. The same correspondent suggests that architects should encourage these useful creatures to become permanent settlers among us by providing refuges and nesting places for them in the ornamentation of buildings. This is done in every European city. In Berlin and Paris the public buildings and parks afford refuge to thousands of these little creatures, and the consequence is that those cities are never troubled with caterpillars in the trees."

FACTS ABOUT RAILROAD SPEED.—A railroad car moves about seventy-four feet, or nearly twice its own length, in a second. At this velocity the locomotive driving wheel, six feet in diameter, makes four revolutions in a second, the piston rod thus traversing the cylinder eight times. If a horse and carriage should approach and cross a track at the rate of six miles an hour, an express train approaching at the moment would move toward it two hundred and fifty-seven feet while it was in the act of crossing; if the horse moved no faster than a walk, the train would move toward it more than five hundred feet, which fact accounts for the many accidents at such points. When the locomotive whistle is opened at the post eighty rods from the crossing, the train will advance near one hundred feet before the sound of the whistle traverses the distance to, and is heard at, the crossing.

Corner for the Young.

SHEEP ENIGMA.

I AM composed of 20 letters.
My 1, 15, 18, 8, 17 are very useful to sheep.
My 2, 6, 9, 19 is what sheep do not have.
My 4, 19, 6, 9, 5, 9, 15 is a fine place for sheep to feed.
My 13, 11, 12, 8 sheep are very fond of.
My 20, 9, 16 is what shepherds often do to sheep in a decoction of tobacco.
My 7, 14, 6, 19, 11, 10, 8, 3, 5 is what I wish every sheep dealer possessed.
My whole is an excellent sheep book.

Alabama, N. Y. ALBERT.

A CHARADE.

My first is seen in ocean's depths,
If one a little pains will take.
My second, though both deaf and dumb,
Is valued for the noise it makes.
My whole I greatly do admire,
And often seek through bush and brake.

Mystic, Ct. MARY WALEY.

☞ Answer in two weeks.

For Moore's Rural New-Yorker.

ARITHMETICAL PROBLEM.

A TRACT of land is to be laid out in form of an equal square, and to be enclosed with a post and rail fence 5 rails high so that each rod of fence shall contain ten rails. How large must this noble square be to contain just as many acres, as there are rails in the fence that encloses it, so that every rail shall fence an acre?

Red House, N. Y. T. W. C.

☞ Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN No. 892.

Answer to Enigma:

NOTE.—We have received several solutions of the enigma published two weeks ago, none of which are quite correct. The following is the author's:

If to solve me you're inclined,
The following process you will find
Direct and easy, short and plain,
And sure to unravel the tangled skein.

First let my parts be duly scanned
And left in order as they stand;
And when to you the meaning's clear,
The following distich will appear:

"The cock crows at morn
To herald the dawn,
Then descends from his roost
To search for his toast."

You've got the clue—my parts are found;
Yet still the whole is in mystery bound.
But the final figures for letters exchanged,
Will show you how the whole is arranged:

"Alternation of letters will rend the fetters."

To apply the suggestion, you will now proceed
The *odd* numbers first, then the *even* to read,
All mystery vanishes—there's nothing occult,
While the long-sought couplet proclaims the result:

"He is cornered at last
And now make him fast."

Answer to Anagram:

Our flag on the land, our flag on the ocean,
An angel of peace wherever it goes,
Nobly sustained by Columbia's devotion,
The angel of death it shall be to our foes.
True to its native sky
Still shall our eagle fly
Casting his sentinel glances afar;
Tho' bearing the olive branch,
Still in six talons staunch
Grasping the bolts of the thunders of war.

Reading for the Young.

AT HOME FOREVER.

CAN I forget my father's hearth,
My mither by the ingle spinnin'?
Their well-pleased look to see the mirth
O' a' their bairnies round them rinnin'?

It was a waefu' hour to me
When I frae them and love departed;
The tear was in my mither's e'e—
My father blest me, broken-hearted.

Forget—no, though the foamin' sea,
High hills, and many a sweeping river,
May lie between their hearth and me,
My heart shall be at hame forever.

ORIGIN AND SEALS OF THE STATES.

NUMBER ONE.

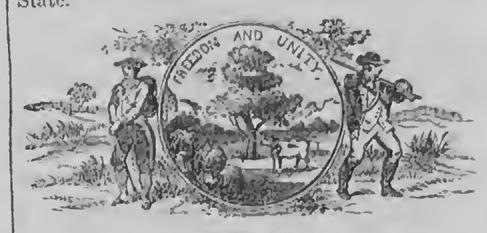
WE propose to publish for our young readers a series of articles giving a brief history of the origin of each of the United States and an engraving representing its seal or coat of arms.

MAINE.

Maine lies farthest east and north of any of the States, and is generally placed first in enumerations of them, and occupies one extreme of every patriotic antithesis, balanced by Texas or California at the other. It contains 35,000 square miles, one-sixth being water. Its most noticeable geographical feature is its deeply indented coast, which forms a continuous series of good harbors. In case of a foreign war, these harbors, which all the navies of the world could not blockade, would be of the utmost importance to the country. The first settlement was made in 1630, the State was admitted into the Union in 1820, and the present population numbers 628,000. The motto on the seal, "*Dirigo*," signifies "I direct." Maine is sometimes called "The Pine-Tree State."

NEW HAMPSHIRE.

New Hampshire was one of the original thirteen States. The first settlements were made at Dover and Portsmouth in 1623. It was made a province separate from Massachusetts in 1679, and adopted the Federal Constitution June 21st, 1788. The State lies between latitudes 41° 42' and 45° 11' N., and longitudes 70° 40' and 72° 30' W., containing 9,280 square miles. Its present population is 326,000. The chief occupations of the inhabitants are indicated on the coat-of-arms, given above. It is known as "The Granite State."



VERMONT.

Vermont, lying between the Connecticut river and Lake Champlain, has an area of 10,212 square miles. The surface is hilly, and some peaks of the Green Mountain range, which traverses the State from north to south, rise over 7,000 feet above the sea. Wool is the staple production; but great numbers of horses and cattle are raised also. It was admitted into the Union in 1791. The present population is 315,000. Its poetical name is "The Green Mountain State."

FIFTEEN YOUNG MEN.

AT a respectable boarding-house in New York, a number of years ago, were fifteen young men. Six of them uniformly appeared at the breakfast-table on Sabbath morning, shaved, dressed, and prepared for public worship, which they attended both forenoon and afternoon. All became highly respected and useful citizens. The other nine were ordinarily absent from the breakfast-table on Sabbath morning. At noon they appeared at the dinner-table, shaved and dressed in a decent manner. In the afternoon they went out, but not ordinarily to church; nor were they usually seen in the place of worship. One of them is now living and in a reputable employment; the other eight became openly vicious. All these failed in business, and are now dead. Some of them came to an untimely and awfully tragic end. Many a man may say, as did a worthy and wealthy citizen, "The keeping of the Sabbath saved me." It will, if duly observed, save all. In the language of its author, "They shall ride upon the high places of earth."

OUR passions never wholly die; but in the last cantos of life's romantic epic, they rise up again and do battle, like some of Ariosto's heroes, who have already been quietly interred and ought to be turned to dust.

LET us give ill-humor and anger ample room *within*, to be hunted and run dead against the inner walls of brain and heart; for it is easy, if the *wolf in the heart* is killed, to be outwardly like lambs.

NOW IS THE TIME TO ENTER UPON THE

SPRING CAMPAIGN

OF THE

RURAL BRIGADE!

Liberal Prizes or Commissions for

5,000 NEW RECRUITS!

AFTER cordially thanking the Recruiting Officers of the RURAL BRIGADE for the efficiency of their service for the past three months—during which period they have added tens of thousands to the gallant corps—the Commanding Officer announces the opening of the Spring Campaign, and trusts every veteran, as well as scores of new officers, will *go forward* during *March*, and keep up the march all summer if necessary to render this the "Excelsior" Brigade of America. In recognition of the gallant victories achieved by the Captains of Companies (Clubs) we have distributed among them numerous Rewards of Merit, in the shape of Books, Union Gold Pens, Photograph Albums, Webster's Illustrated Dictionaries, Libraries, Silver Plated Casters, Gold and Silver Watches, Sewing Machines, &c., &c., and also placed the name of each thus distinguished on the Brigade's list of Heroes and Public Benefactors—the Ladies having their *rights* equally with the Gentlemen. Thus much of the recent past. As to the present and future, please note that

A NEW QUARTER OF THE RURAL

Begins April 6,—a good time for new clubs or additions to old ones to commence, though we can still furnish back numbers from Jan., or subscriptions may date from Feb. or March 1st. March is a good month in which to fill up Premium Clubs already begun, and also to form new ones. There are hundreds of localities in which clubs may yet be organized and Rewards of Merit secured. Our former Premiums are continued, and several new ones added this week (see some below and others in Supplement)—and all will remain in force until May or June, in order to give every one an opportunity to secure a Valuable Prize. Any one wanting a good Reaper and Mower, Melodeon, Organ, Sewing Machine, Watch, Library, Dictionary, Album, or Book, can secure the same by making PROPER and TIMELY effort.

NEW PREMIUMS.

☞ For 200 Subscribers (100 of them being NEW) at club rate, we will give one of DODGE'S HARVESTERS (Ohio and Buckeye Patents, with Dodge's Improvements,) No. 1, Sickle Attachment with Self-Rake—cash price, **$210**; or, if preferred, the Harvester with Mowing Bar Attachment, Self-Rake—price **$200**.

[The above Harvester was awarded the Special Diploma and Grand Medal of Honor as the best Combined Mower, Hand-Raking Reaper and Self-Raking Reaper at the Fair of the St. Louis Ag. and Mech'l Association in Oct. last.]

☞ For 175 Subscribers (half of them being NEW) at club rate, either a Dodge Harvester with Sickle Attachment and Hand-Rake, price **$180**, or the Harvester with Mowing Bar Attachment and Hand-Rake, price **$170**, as preferred.

☞ For 140 Subscribers (half of them being NEW) at club rate, a No. 1 DODGE MOWER, price **$140**.

☞ For 125 Subscribers (half of them being NEW) at club rate, a No. 2 DODGE MOWER, Wood or Iron Frame, price **$125**.

PREMIUMS CONTINUED.

☞ For a list of Ten NEW Subscribers, at club rate, ($2.50 each,) or Seven at $3 each, you can have either a *Photograph Album* or a *Union Gold Pen*, price $5.

☞ For Fifteen NEW Subscribers, at club rate, two bound volumes of the RURAL (cash price $3,) or $7 in books from our list, published in the RURAL.

☞ For Twenty NEW Subscribers at club rate, (or ten new at $3 each,) a copy of *Webster's Illustrated Unabridged Dictionary*, lowest cash price $12.

☞ For Thirty Subscribers (20 of them being NEW,) at club rate, a heavy *Silver Plated Castor*, cash price $15; *or*, a *Field Croquet Set*, price $15—*or*, a *Library* worth $15

☞ For Forty Subscribers (30 of them being NEW,) at club rate, a *Silver Watch*—Hunting-cased, Full-jeweled and Warranted—cash price at least $25.

☞ For Fifty Subscribers (forty being NEW) at club rate, a WHEELER & WILSON SEWING MACHINE, Cash Price $55—or, the same premium for only Thirty Subscribers (20 of them being new) at $3 each!

*** Complete Premium Lists, Show Bills, Specimen Numbers, &c., sent free to all applicants.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., MARCH 9, 1867.

NEWS OF THE WEEK.

From Washington.

THE Committee on Agriculture has, in accordance with the suggestion of the Secretary of the Interior, recommended the erection of a building for the exclusive use of the Agricultural Department. Judiciary Square is spoken of and recommended by the Department as a suitable site for the building.

The matter for the Annual Report of Agriculture for 1866 has been presented to Congress and referred to the Committee on Printing. It embraces, in addition to the work of the Department, papers from some of the best agricultural writers of the country, including Judge French, S. Edwards Todd and X. A. Willard, from the editorial ranks, and others well known in agricultural literature.

The Freedmen's Bureau has received a letter from Grayson county, Texas, saying the Government must do something to protect negroes who have been most brutally murdered within the past few days. Ruffians are continually maltreating the blacks. Within a circle of twenty miles a dozen have been murdered.

The President has issued a proclamation declaring and proclaiming the fact that the fundamental conditions imposed by Congress on the State of Nebraska, to entitle that State to admission into the Union, have been ratified and accepted, and that the admission of said State into the Union is now complete.

Two circulars have been widely circulated, one having in view an armed expedition to develop the mineral resources of Sonora in Mexico. The other is signed by Gen. H. Clay Crawford, his object being to organize a liberating army of Mexico. These movements do not receive the sanction of the republican government of Mexico, which regards them as injurious to the interest of the country.

The War Department has published another roll of honor of two hundred and fifty-four pages, containing the names of about fourteen thousand soldiers who died in defence of the American Union, interred in New Hampshire, Massachusetts, Connecticut, New Jersey, Ohio, Indiana, Wisconsin, Oregon, Maryland, South Carolina, Florida, Louisiana, Mississippi, Texas, Missouri.

On Saturday, 2d, the President sent in to Congress his veto of the Tenure of Office bill. He takes the ground that the bill is clearly in violation of the Constitution, which is explicit in vesting the appointing power in the President in the very cases where the bill seeks to vest it elsewhere. He reviews the unsuccessful attempts of Congress in the early history of the Government to pass similar bills; thinks the reason for difference between the success of the American Union and that of our sister republics is due to the perpetuation of these constitutional prerogatives of the Executive, Legislative and Judicial departments. The bill was passed over the veto—in the Senate by 35 to 11, and in the House by 131 to 37—and is therefore a law.

On the same day President sent in a message vetoing the Reconstruction bill. His objections are that the bill allows blacks to vote and excludes disloyal whites, and that military governments are always oppressive and injurious. The message would fill about seven columns of the RURAL. The bill was passed over the veto—in the Senate by 38 to 10, and in the House by 135 to 47.

The bill allowing contract price for artificial limbs for disabled soldiers, to be paid to soldiers in lieu of such limbs, has passed.

The President has approved the consular and diplomatic bill, and the Military Academy bill; also, the bill directing the Secretary of War to refund to each person drafted under the calls of February and March, 1864, who paid commutation or was required to enter the service or furnish a substitute, the sum of $300, that being the amount of money so paid by him, it being the meaning of the amendatory act to exempt persons thus paying commutation from further draft until that quota should be filled, not exceeding one year.

WASHINGTON, March 4.—All important appropriation bills have been passed, and all business on the tables of the Speaker and President of the Senate transacted.

Mr. Sherman's bill making the act increasing the duty on wool take effect in ten days, was amended by substituting five for ten, and passed.

The majority of the Impeachment Committee reported that they had examined a large number of witnesses and collected a large number of documents, but they have been unable to conclude their labors. Mr. Roberts, a minority of the Committee, reported that there was not a particle of evidence to sustain the charges.

The President and his Cabinet have been at the Capitol this morning attending to public business. He has approved the Bankrupt bill, the appropriation bills, the Wool Tariff bill, the Tax bill and the bill to make valid the Presidential proclamations.

On the re-organization of the Senate, Mr. Wade of Ohio, was elected President pro tem.

The Kingdom of Canada.

THE new confederation of the Canadas, Nova Scotia and New Brunswick is to be called "The Kingdom of Canada." The Governor General will retain his title and receive a salary of $50,000 per annum.

The advisers of the Crown, forming the Federal Executive, are to be styled Privy Councillors, and the whole body the Privy Council. The advisers of the Crown in the Provincial Governments are to retain the old name of Executive Councillors.

The Parliament will consist of a Senate and a House of Commons. The Speaker of the Senate is to be appointed by the Crown. The power of the Crown, in the event of a necessity to create Senators beyond the number of seventy-two, is limited to six creations. Senators are to be appointed by the Crown, and hold their positions for life, subject to the provisions of the act.

The local legislatures are known as the Provincial legislatures of Ontario, Quebec, Nova Scotia and New Brunswick, respectively. Upper Canada is to have but one legislative chamber, and it is to be known as the Legislative Assembly of Ontario. The three other provinces are each to have a legislative council and a house of assembly.

The Executive Government of Ontario district is to consist of five members, namely:—An Attorney-General, a Provincial Secretary, a Treasurer, a Commissioner of Crown Lands and a Commissioner of Public Works.

Provision is made for the admission hereafter into the Union, of Newfoundland, Prince Edward Island, Rupert's Land, the Northwest Territory, and British Columbia—"on such terms and conditions as the Parliament of Canada shall deem equitable, and as shall receive the assent of the Queen; and in the case of Newfoundland, Prince Edward Island and British Columbia as shall be agreed upon by their respective legislatures."

From the South.

NASHVILLE, Feb. 28.—The Legislature has adopted a resolution calling on the Federal Government, through Gen. Thomas, for a sufficient military force to keep the peace and restore order and quiet in the State. The preamble alleges that in several counties violence prevails over law, and riot and murder go unpunished.

Gov. Pierpont is making considerable stir in Virginia in favor of action upon the new reconstruction act by calling a convention under its provisions. He is said to have a majority of the General Assembly with him, but leading secessionists are bitterly opposed. The first is very doubtful, and the other probably true.

A fire has been raging in the woods, in Jones county, Georgia, for several days. It commenced on Thursday morning, and on that evening presented a beautiful appearance, lighting up the horizon for miles. The tract of country burned over is six or seven miles in extent. Considerable fencing has been destroyed, but no houses.

Senator Sumner has received the following telegram from Atlanta, Ga.:—"Our morning papers contain the most urgent recommendations from ex-Gov. Joseph E. Brown to the people to accept the late action of Congress in regard to reconstruction. There is a magic power at work. You will be astonished at the change of public sentiment."

From Canada.

A LARGE meeting was held in Toronto on the 28th ult., to consider the Huron and Ontario ship canal scheme. The Mayor, who presided, stated that it was the intention to ask of the Legislature a free grant of ten million acres of the public land, and municipal aid would be asked from Toronto to the extent of $500,000. One or two speeches were made against the project. The resolution in favor of the canal was carried by a large majority.

TORONTO, Feb. 27.—It is rumored in military circles that a large body of volunteers will be called out in active service early next month. The officers attending military school are instructed to report at their respective headquarters not later than March 8th. Instructions have also been received by captains of companies throughout the country to see that they have full complements of men, and to have arms, accoutrements, &c., in good order.

From Japan.

LATE advices from Japan state that great activity prevailed at Yokohama in the rebuilding of the burnt district of the town.

A Japanese embassy consisting of five persons and their suite will proceed to Washington on the return trip of the Pacific Mail steamship Colorado, to inspect the navy yards, vessels and implements of war, etc.

The United States ship Wyoming while passing through the Inland sea was everywhere cordially received.

From Albany.

THE constitutional convention question is being discussed daily. The Senate has struck out from its bill the provision for delegates at large, and adopted an amendment allowing all citizens, without distinction of sex or color, to vote on the question of adopting the constitution. The Assembly has rejected an amendment allowing negroes to vote.

NEWS PARAGRAPHS.

THE Supreme Court of Alabama has decided that the emancipation proclamation of President Lincoln did not take effect in that State until May, 1865.

A RESOLUTION to strike out the word "white" from the Constitution of Ohio was lost in the lower house, last week, by a vote of 26 ayes to 50 nays.

AN epidemic is prevailing to a considerable extent among children in Springfield, Mass. It usually leads into lung fever or quick consumption, and often proves fatal.

THE Indians in Arizona and New Mexico are behaving badly. A number of settlers have been killed—eight at one point. Large numbers of cattle and sheep have been stolen.

A VIRULENT outbreak of the cattle plague has taken place at Islington, London. A considerable number of animals have been destroyed, and vigorous measures adopted to prevent the spreading of the disease.

FOR the past ten or twelve days an extensive fire has been burning under the enormous coal heaps belonging to the Cunard Steamship Company, on the wharf in Jersey City. All efforts to quench the fire have been in vain, and the unconsumed coal is being removed.

IT is now stated that Stephens, Chief Organizer of the Irish Republic, is not and has not been in Ireland. It is reported that he has recently been seen in Paris. The national troops are posted at various places in Kerry and Cork counties in such numbers as to prevent any further outbreak.

A FENIAN from Ireland says the rebellion there is not ended; that the organization is stronger than ever; that 400 officers from America are drilling the Fenian army; and that the British troops (Irishmen) are largely in sympathy—one American officer having enlisted 8,000 of them since Christmas.

SEVERAL large European capitalists are now traveling quietly through Texas and Louisiana with a view of making future purchases where they think the agricultural prospects most promising. The best plantations can be bought for cash, a short distance from New Orleans, for less than one-third of their former value.

THE Legislature of Illinois is devising means to prevent the sale of intoxicating drinks. It has a bill before it of a purely original character. It provides that no recovery shall be had, either at law or in equity, for any claim or upon any contract, express or implied, or for the rent of premises in which such spirits may be sold or kept.

AN alarm of fire in a public school in Jersey city Thursday caused great consternation among the children, some two or three hundred in number. Several of the children jumped out of windows and were severely injured; others, with one or two of the teachers, were trampled beneath the feet of the panic-stricken mass, and fatally injured.

Married.

IN San Francisco, Jan. 15th, by Rev. ORANGE CLARK, D. D., GEORGE NORTH, merchant of Marysville, and JENNIE E. W. HYATT, daughter of Hon. T. HART HYATT, late U. S. Consul to China.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, March 5, 1867.

MONEY is gradually growing easier, and there is an improved feeling in business circles. There is a good supply of capital in New York, and rates of interest are lower. The Boston market is decidedly easier than it was ten days since. Business matters have a better look at Cincinnati, Chicago, and other western towns.

The Bankrupt bill passed both Houses of Congress, and has received the signature of the President.

The Tariff bill, as it finally passed, is understood to be substantially the bill of last season. The telegraph reports the duty on wool at 12 cts. per lb. on best grades, and 10 cts. on lower grades, with an *ad valorem* duty. The reports by telegraph are so mixed that it is impossible at the present writing to be accurate. The bill has been signed by the President.

We have received a communication, for which we have not room, from "A Farmer," in reference to the Internal Revenue laws. He is for paying every dollar of our national indebtedness, principal and interest, as soon as shall be deemed consistent. "But," he says, "tax us in some other shape." Our correspondent is particularly opposed, as we understand him, to the income tax, as interfering with private affairs, "inquisitorial," &c. We have heretofore given our views in reference to the income tax. With the people it is growing more and more unpopular every day. We must submit to it, however, until our lawmakers can be induced to take a different view of the subject from what they do at present. In the bill before the last Congress it was proposed to exempt $1,000 instead of $600, which we regard as some improvement.

WOOL.—The anticipated failure of the tariff bill has for the last few days rather depressed the eastern market for the better grade of fleeces—or rather it has been used by buyers as a pretense for offering lower rates. Prices were not put up in anticipation of increased tariff. Receipts at Boston the last week were more liberal than for some weeks previous. Manufacturers are turning their attention more to the lower grades of wool than heretofore. About three-quarter blood staple, the Commercial Bulletin says, is most in demand. The sales in Boston last week foot up 625,000 lbs., at 45@70c. for fleece, and 30@63c. for the various grades of pulled. There is an improved demand for pulled wool.

A Rio de Janeiro letter says that the average rate of sales of sheep was not in 1866 more than half what it was in 1861. Wool can be grown here for $45 currency per aroba, (250 lbs.)—that is, just $2 in U. S. gold for each twenty-five pounds, or 8 cents per pound. This year the average of sales will not be over $28 currency per aroba, or about 12 cents per pound. The letter adds that the farmer cannot afford to raise wool for 4 cts. profit, hence the diminished sales for new flocks.

Some of the Lowell woolen mills will stop a part of their machinery as soon as their present stock of wool is worked up.

COAL.—The last sales of coal at New York show rather lower prices. There is more activity in the mining regions, and the shipments are increasing.

WHEAT AND FLOUR.—There is great activity in wheat and flour, and prices continue without much change. The best brands of flour at the East, particularly in the Boston market, are firmer, and an advance is anticipated. The price in the future will depend very much upon the supply to come from the West, about which accounts differ.

CORN.—Corn has declined in the European market, and is dull and lower at the East.

DRY GOODS TRADE.—The dry goods trade in Boston and New York is improving. The Boston Bulletin says "in some departments of the merchandise markets there has been a fair degree of activity." A "fair business" was reported in New York last week.

Rochester Wholesale Prices Current.

The Practical Shepherd—D D T Moore.
Coe's Cough Balsam.
O. K. B. B.

The News Condenser.

— Capital punishment is abolished in Illinois.

— King William of Prussia will be the Emperor of Germany.

— Fresh strawberries are now offered for sale in New York.

— There are now 306 miles of railroad in operation in Minnesota.

— Lake water has been let into the Chicago tunnel for the first time.

— Habeas corpus has been suspended in Ireland for three months longer.

— Among the new devices for the day are paper pantalettes for ladies.

— Egypt has this year produced a cotton crop estimated at $100,000,000.

— In Boston $16,000 has been subscribed for the destitute at the South.

— The sons of General Garibaldi have gone to Candia to help the Cretans.

— The Turkish garrisons are to be withdrawn from the ports in the principality of Servia.

— Chas. F. Browne—"Artemus Ward"—is lying seriously ill at Southampton, England.

— The Indian Bureau cost $81,000,000 last year, and the result was the killing of 80 Indians.

— The Nebraska House of Representatives was enlivened by a free fight on the 18th ultimo.

— It is estimated that New York capitalists have $200,000,000 invested in different railroads.

— Queen Victoria wore the Kohinoor diamond in her necklace at the opening of Parliament.

— Five magistrates of Norfolk, Va., have been arrested for refusing to receive negro testimony.

— The bill to admit Colorado as a State has failed to pass in the Senate over the President's veto.

— There is every indication that we shall have an unprecedented influx of German emigrants this year.

— Two new Lutheran churches, one costing $15,000 and the other $20,000 have been opened in Milwaukee.

— A German iron master will send to the Paris Exhibition a house made entirely of iron at a cost of $5,000.

— A swindle by which New York banks were relieved of $600,000 in gold in May, 1865, has just come to light.

Special Notices.

RANDALL'S GREAT SHEEP BOOK.

THE PRACTICAL SHEPHERD,
A COMPLETE TREATISE ON THE BREEDING, MANAGEMENT AND DISEASES OF SHEEP.
By Hon. HENRY S. RANDALL, LL. D.,
Author of "Sheep Husbandry in the South," "Fine-Wool Sheep Husbandry," &c., &c.
PUBLISHED BY D. D. T. MOORE, ROCHESTER, N. Y.

Twenty-Five Thousand Copies of this valuable work have already been issued, and the demand for it is now greater than a year ago. To meet this demand a large edition is now in the hands of the binders and will be ready for agents in a few days.

The Practical Shepherd is unquestionably *the best and most complete Treatise on Sheep Husbandry now obtainable.* It is the *latest* of Dr. Randall's works on the subject, and combines the results of a life-long experience and observation as a sheep breeder and wool grower. Every flock-master in the land should have the work. It is indispensable,—and no work on any branch of husbandry ever gave better satisfaction. The work is highly approved by both Press and People, as extracts from letters and notices (heretofore published) abundantly testify.

☞ The Practical Shepherd comprises 451 large duodecimo pages, and is printed, illustrated and bound in superior style. Sold only by Agents and the Publisher. The canvassers for Todd's Patent Stamp for Marking Sheep are authorized Agents for the sale of the Practical Shepherd. Price, $3. Sample copies mailed, post-paid, on receipt of price.

Address **D. D. T MOORE,**
Editor Rural New-Yorker, Rochester, N. Y.

Croup. A lady in New Haven, speaking of Coe's Cough Balsam, says she lost two darling children with Croup, and was in despair when the third and last was attacked, but his life was spared through Coe's Cough Balsam. She advises all mothers to keep it on hand in case of emergency.

Itch. Salt Rheum.—Wheaton's Ointment will cure the itch in 48 hours,—also cures Salt Rheum, Ulcers, Chilblains and all Eruptions of the Skin. Price 50 cents. Free by mail by sending 60 cents to Weeks & Potter, Boston, Mass.
For sale by all druggists. 855-52t

Additions to Clubs are always in order, whether in ones, twos, fives, tens, twenties, or any other number. Subscriptions can commence with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless specially directed otherwise. Please note this.

FOREIGN NEWS BY TELEGRAPH.

London, March 4—Noon.—Consols for money steady at 91. American securities opened as follows:—Erie shares, 36¼; Ill. Central, ex. div., 76½; 5-20 U. S. bonds, 73¾. The bonds opened before official hours at 73⅝ for the issue of 1862, and 72 asked for the issue of 1865.

Liverpool, March 4—Noon.—The sales of cotton to-day will probably reach 10,000 bales. Prices have declined ⅛d. since last report. Middling Uplands, 13⅛d.; Middling Orleans, 14d.

Market for breadstuffs quiet. California wheat firm at 13s. 3d. per cental. Corn has declined to 36s. 3d. per quarter for mixed Western.

The market for provisions is quiet. Lard 50s. 6d. per cwt. for American. Pork and bacon unchanged.

Petroleum, refined, 1s. 6d. Spirits petroleum, 1d. per gallon. Spirits turpentine, 37s. 6d. per cwt. for Carolina. Ashes unchanged.

London, March 4—Noon.—Dispatches have been received here from Dublin which announce the capture of the famous Col. O'Connor, the leader of the late Fenian revolt in Ireland. He was overhauled by the authorities at Athlone, Westmeath Co., 200 miles from the scene of the insurrection.

Paris, March 4.—Strikes for higher wages among the operatives of France are very frequent. The cause is traceable to the increased price of food.

891-4t RUSSELL & TREMAIN, Manlius, N. Y.

TODD'S PATENT STAMP FOR MARKING SHEEP.

The above cuts illustrate one of a set of Figures and a Sheep numbered with the stamp. The figures and letters are manufactured from the first quality of iron, the handles being so constructed that wooden handles may be driven down over the iron ones by such as may desire it.

This plan of numbering is now generally understood and practiced by the best shepherds. Visitors attending the State Sheep Fairs at Canandaigua and Rochester, must have observed that most of the sheep on exhibition were numbered by side marks. Those comprising many of the best sheep from this and adjoining States, shows clearly with what favor the stamps have been received by practical shepherds.

At shearing time I carefully examine every sheep as to form, (before and after shearing,) length of staple, quality of wool, weight of fleece, &c., all of which is noted for future reference; and there is no time when so thorough an examination can be made as at shearing. It is almost impossible to select from a flock of sheared sheep, without numbering and registering, such as should be disposed of, or kept for stock. Refer to the register, and you can readily select the ewes having the finest quality of wool, the longest staple, the heaviest fleeces, &c. Using such ewes for stock, as like begets like, it is evident a flock can be very rapidly improved. Sheep numbered as shown in the cut above, save much time at yeanling; as, for instance, No. 25 may refuse to own her lambs. If the sheep are in the field, the lamb may be taken to the house, and at night, when the sheep are yarded, one can readily select No. 25 from the flock. If a sheep is lame, drooping, or from any other cause requires special attention, it can at any time be selected from the flock, though the flock may or shall consist of hundreds.

An Illustrated Circular accompanies each set of stamps, showing plainly how to register, and the composition to be used in marking. Stamps sent by express, (charges paid, to all parts of the country, except the Southern States,) at the following prices:—one set of figures, $2.25; two do., $4; four do., $7; six do., $9. Initials 25 cents per set, additional.

☞ Good Canvassing Agents wanted in all parts of the country, to whom the exclusive sale will be given so long as they are actively employed. Send for Circular to Agents. Address A. TODD, Jr.,
Pultneyville, Wayne Co., N. Y.

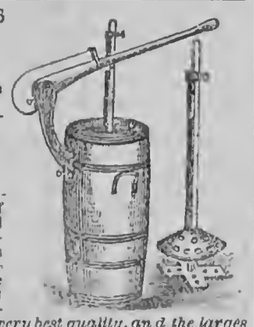
H. P. WESTCOTT'S ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.



This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (20 gal.,) $16; No. 2, (¼ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¾ bbl.,) $10; No. 5, (1 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN
Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. Moore, *Editor Rural New-Yorker.*
"The best form of Churn ever invented."—Solon Robinson, *Ag't Ed. N. Y. Tribune.*
Mr. Robinson also named it first and commended it highest of all the Churns on exhibition at the New York State Fair.
"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*
"The most important improvement recently brought out."—S. Edwards Todd, *Ag'l Ed. N. Y. Times.*
"The very best Churn extant."—*Prairie Farmer.*
"It is perfectly common sense in its structure."—*Ohio Farmer.*
"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The Seneca Falls Churn Manufacturing Co. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the patented fixtures. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. Moore, Editor Rural New-Yorker.

THE
GREAT AMERICAN
TEA COMPANY

Have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.
All goods sold are warranted to give satisfaction.

PRICE LIST.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₱ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ₱ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ₱ lb.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.
Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the
Great American Tea Company,
Nos. 31 and 33 VESEY-ST., cor. of CHURCH.
Post-Office Box, 5643 New York City.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by Post-office money orders, or by Express, as may suit the convenience of the club. Or, if the amount ordered exceed thirty dollars, we will, if desired, send the goods by Express, to "*collection delivery.*"

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $20.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the
GREAT AMERICAN TEA COMPANY,
31 & 33 Vesey-st., cor. of Church.
Post-Office Box, 5643 New York city.
[For manner of getting up Clubs see former editions of this paper.] 893-tf

Agents wanted throughout the United States, to sell machine and territory. Machines furnished on application to [886-13t] W. C. QUIMBY, Rochester, N. Y.

FARM FOR SALE—CONSISTING OF 560 acres of rich tillable land, situated in the town of York, Livingston Co., N. Y., in a high state of cultivation. A large and commodious house, with all necessary outbuildings; orchard and garden, well stocked with fine variety of fruits. A large part of the purchase money may remain on bond and mortgage. Apply to or address DAVID PIFFARD on the premises.

FARM FOR SALE.—The Subscriber offers for sale the farm known as the Chellborg property, situated about a mile west of the village of Geneva, N. Y. It contains 130 acres, 15 of which are wood-land—the balance in a high state of cultivation, thoroughly underdrained, and well adapted for nursery purposes. A never-failing brook turns a water-wheel of 1½ horse power. House large, two and a half story, brick, containing fourteen large rooms, commodious and in good repair. Barns, carriage house, ice house, and other out-buildings, all in good order. House and barn supplied with water from a never-failing spring.
For further particulars, terms, &c., address or apply to McDONALD & ROSE, No. 3 Seneca-st., Geneva, or to the subscriber on the premises. 890 C. F. CHELLBORG.

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce throughout the United States the Genuine Common Sense Family Sewing Machine. This machine will stitch, hem, fell, tuck, quilt, bind, braid and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made.
Address SECOMB & CO., Cleveland, Ohio.
CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured. 890-4t

CANCERS CURED WITHOUT PAIN, use of the knife, or caustic burning. Circulars sent free of charge. Address
886-tf Drs. BABCOCK & SON, 700 Broadway, N. Y.

50 MAKE YOUR OWN SOAP PER-CENT SAVED BY
USING B. T. BABBITT'S PURE CONCENTRATED POTASH or READY SOAP MAKER.—Warranted double the strength of common Potash, and superior to any other saponifier or ley in the market. Put up in cans of 1 pound, 2 pounds, 3 pounds, 6 pounds and 12 pounds, with full directions in English and German for making hard and soft soap. One pound will make 15 gallons of soft soap. No lime is required. Consumers will find this the cheapest Potash in market. B. T. BABBITT, Nos. 64, 65, 66, 67, 68, 69, 70, 72 & 74 Washington St., New York. 885-13t

MEMORY AND HOPE.

BY MICHAEL O'CONNOR.

Back through the mist and film of years,
Through a cloud of blinding tears,
O'er a pile of silent biers
We look with sighs,
And see, ranged on Memory's shrine,
Lights of love and pleasure shine,
With the lustre of red wine
And brilliant eyes.

Still the farther back we gaze
The more purely bright they blaze
And the steadier shed their rays
Forever more:
While, as on through life we go,
Those lights that backward glow
Dark and dreary shadows throw
On all before.

The Story Teller.

Written for Moore's Rural New-Yorker.

HIC, HÆC, HOC.

BY W. H. A.

It was one of the pleasantest days of early summer. The sun was shining in a cloudless sky and the birds were singing merrily in the trees. A rill was laughing and sparkling along, winding through green meadows and shady groves. There was one spot embowered by the stateliest and most graceful trees; where the shade seemed the coolest of all, the rustling of the rivulet the merriest, and the choral voice of birds the most joyous. There was a bank of the softest and most fragrant moss by which the water murmured and sang, and over which the boughs and dense foliage of the oak and wild apple tree waved, and played with the gentle summer breeze.

A young girl was reclining on the velvety bank looking up through the long, dark fringes which shaded her eyes, into the foliage of the trees above her. There came now and again through the vista of leaves and branches a glimpse of the unfathomable blue of the fleckless sky. Her eyes were as unfathomable a blue, and the calm which brooded above had its reflex in their quiet and unmoved depths. Her hair of an ever-changing golden hue nestled in long, silken ringlets, around the snowiest of necks, seeming as though it were coy of the stranger sunbeam which at times stole its way through the labyrinth of leaves, and sought protection where it wound itself around and clung. The upturned face was classically beautiful, and though a cloud would fly across and darken for a moment its openness; yet one could easily read its pages. It was the natural seat of ingenuousness and intellect.

Purl, purl, splash! went the brook. Her tiny feet were in its waves, and they danced and leaped about them and kissed their dimples and caressed their marble whiteness. No whiter or more sparkling pebbles in the bosom of the stream, one may dare be sworn, did those wavelets kiss that day.

What was she, this fair girl, looking so pensive and so spiritual? Was there any real romance about her? Was she alone? Was she sorrowful? Had she been deserted by some cruel and forsworn lover, and had she wandered here all by herself to pour her complaints on the passing breeze, to sigh with the trees, and to murmur with the gliding stream, turning the jocund melody of its waters into strains of sadness and despair? Or, if it is permitted to navigate thus far the sea of conjecture, why not sail a little farther? Was she of the daughters of earth, earthy? Was she a semi-terrestrial? That lithe and airy form, which stretched itself out thus on the green moss, might well have been taken for some naiad disporting herself in her native stream, or wood-nymph at her mysterious and secret ablutions, a dryad looking into the arms of her fated oak. Was she an out and out celestial? She was fair enough, and good enough, who can doubt; but now and again there was a load of care on her brow. Angels do not carry troubled countenances—nay, not even for a moment, we are led to believe. Therefore, how could she be an angel? They wear crowns of gold on their heads, our grandmothers tell us, and are clad in robes of dazzling white, forever and ever. They never cease singing, and, if pictures are painted true, they are ever on the grin and carry pigeons' wings attached to their backs in a manner which must be exceedingly awkward to say the least.

Well, she could not really have been an orthodox angel, of course. She bore no crown pressing down the freedom of her tresses, she was neither singing nor grinning, and if she had wings they were hidden beneath her; as to robes, sooth to say, hers were not at all of the "snowy and spotless white" description. They were murky of hue, a little the worse for wear and not a bit "flowing." Her lips part, the shade returns and clouds the brightness of her face. A low murmur like the music of the birds, or the tinkle of silver bells, or the soft sighing of zephyrs, or the liquid melody of falling fountains, or any other fine simile you please, comes forth. The murmur forms itself into vocal sounds, and says as plainly as the Grecian contour of feature and exquisite symmetry of form before you—"*Hic, hæc, hoc*—*hic, hæc, hoc*, oh! I can never learn it! Why, oh, why, will they persist in my learning this horrid nonsense! I never can do it, I know I cannot. *hic, hæc, hoc, hic, hæc, hoc.* What comes next I cannot say, I cannot remember, though to repeat another syllable of this disgusting rigmarole were to pour into my lap the riches of the world. *Hic, hæc, hoc*, oh!"

And though the music of the lips was like the voice of the bulbul, so clear and soft and sweet, and though it were hard to understand how anything animate or inanimate could resist the mournful persuasiveness of its tone; yet the obdurate Latin would not come. If the Greek of Orpheus could charm the stones and trees and floods into harmony, why could not the Latin of this fair girl inspire some stone or tree with life to whisper to her even another triplet of this pronominal cabala?

But the rest came not. "*Hic, hæc, hoc*," she utters disconsolately, and the purl, purl, splash! of the brook, as her feet dash up and down in its limpid waters, seems to laugh derisively back—"*Hic, hæc, hoc.*"

Surely, surely, this is nothing even semi-terrestrial. 'Tis in truth a thing of clay unalloyed. Naiads and fairies and dryads have no need of a smattering of Latin; their ambition doesn't run in that direction. They are indigenous where they dwell and have to do only with indigenous things. They are, therefore, only what they seem. Theirs are no false embellishments. The riddle is then easily solved. She who idles and muses and dreams in the day with her eyes open, thus being neither of the heaven above nor of the waters under the earth, nor of the subterranean world, must, it is left to infer, be naught after all but a molecule of vivified mortality. She knows what? *Hic, hæc, hoc*, and in all probability her knowledge in the future will not reach even (*wala wa!*) *hanc, hanc, hoc.*

Yet, O enlightened and hypercultivated society, when this beauteous and ingenuous being is received into thine idolizing bosom, will she not be greeted by thy votaries and by hers as a young lady of classical attainments? Why should she not? Prithee answer. Her claims, are they not as well founded as are those of her contemporaries, elegant and fair and gushing? Few young ladies in these days of intellectual Jack-and-the beanstalkism carry their learned acquirements in reality beyond *hic, hæc, hoc.* And nathless they are classically educated!

She was sighing—the fair girl—and her Lilliputian pedals kept splashing and flashing and sparkling, evermore, in the stream. She would have wept, but she feared the tears might quench the flash of her eyes, or discompose their dreamy langnor. Those eyes were of that peculiar kind that when they flashed they pierced the most callous pericardium, and when they melted into softness, by the mysterious magnetism of sympathy the pericardium melted also, and the heart, disarmed, surrendered at discretion.

She knew this, did the sweet child, and knowing, she refrained. Her father received the world in his mansion the coming eve; and the dear innocent wished to keep her eyes in good ogling order for the occasion. So her dainty feet splashed and the brook went purl, purl!

"Oh dear," she cried, "I can never learn it. I cannot ever remember it! *Hic, hæc, hoc.* It is growing late. *Hic, hæc, hoc.* It is time that I should begin my toilet. I wonder will that horrid Miss Smuggs be here. *Hic, hæc, hoc.* I perfectly detest that same piece. She has red hair, and a squint, and a humpy shoulder, and a game—*Hic, hæc, hoc*—I shall never know it, I know. And Ma says she has only a common English education and knows nothing of French or Latin. Oh! she is such a disgusting old creature. She wears false—*Hic, hæc, hoc*, I know. Oh for somebody to understand me, some faithful breast to lean upon, some tender sympathetic heart! *Hic, hæc, hoc*, I shall never"—

"*Hujus, hujus, hujus*" came low and deep and melancholy, like the love breathing coo of the wood-pigeon responsive to his tender mate, from a neighboring copse. "*Hujus, hujus, hujus*," and echo sent back tremulously, "*Hujus, hujus, hujus!*"

Clarinda, for indeed that was the maiden's name, lay spell-bound; the purl, purl! of those twinkling little feet at last was stilled. Did she hear aright? Was it a dream? was it a fantasy of an over-wrought brain? or was it a real, a living voice? So sweetly erotic and erotically sweet was the strain, as it stole upon her ear, surely it could not be real. She would test it. Then, in tones measured and clear but somewhat shaken by strong emotion, she cried "*Hic, hæc, hoc.*"

"*Hujus, hujus, hujus*" came back in strains lower, deeper, more erotically sweet, and more sweetly erotic.

The voice died away; but the silence which followed was not long. There was a rustling of leaves, a crackling of dry twigs, and a blowing of the nose in gentle and mournful cadence; then a step,—and a youth, tall, slight, but compactly and symmetrically built, and of elegant and easy presence, dazzled the vision of Clarinda.

There was a long and speechless gaze. Eye met eye and read it, and melted. Heart throbbed to heart, and soul answered to soul. In this moment the bliss was so ineffable and supreme that to each it seemed years. They knew that they loved. They knew each the other's secret.

Shall I say that with a common and ungovernable impulse, with a simultaneous, ecstatic shriek of "my own, my adored!" they flew into each other's arms and sobbed upon each other's irrepressible bosom? No, I will not say it. Such a statement would be as devoid of truth as of literary decorum. Besides, we are recounting a true history. They did nothing of the kind; but if, overpowed by their surcharged feelings, they had in a moment of forgetfulness taken this mode of mutual relief, who could have the heart to censure?

He was from head to foot such a form as ladies love to look upon; and she, what man could withstand for a moment the witchery of her charms? Ladies dote on dark, curling locks floating in wavy luxuriance down broad and manly shoulders. He had exactly such locks, down precisely such shoulders. Dark and mysterious eyes they adore. He had two such eyes, black as Erebus, and as mysterious. Let a mustache of ebon hue (dyed? *n'importe*) come, and it has only to be seen to conquer. He had just such a mustache, and it was dyed. In short, ladies love everything graceful, gallant, divine. Who will deny that he was everything graceful, gallant and divine? Be sure, Clarinda will not.

Oh, there's nothing so inclines young hearts to love and brings them to know the mutual flame more truly and more quickly than a meeting or a tryst beneath the shade of the trees in the greenwood, where the birds sing blithely and the fragrance of rich blossoms ascends in the air; where fountains play and streams run freely and where the sky looks down calm and pure and silent and benignant, through the leafy boughs. Here nature sways, and here her voice speaks in everything, and to everything the kindest and most infallible of words. Happy, thrice happy! they who, surrounded by her, yield to her mysterious promptings, and permit to thaw away and break in pieces the superficial trammels of the world.

If a youth and a maiden love, why should it be a secret and kept from each other? Let them take pattern by the birds, and love as innocently and as well. So loved our heroine and her *Hujus* (she persisted in calling him *Hujus*.) Their affection, though sudden in its growth, was tried by the test of years, and was never found wanting. After the strange and unexpected meeting in the grove, but a few short months had flown, and they were married.

Many years are now gone by, and they are blest and happy in the affections of a flourishing family. The eldest child, a girl, a perfect picture of her father all say, received at the baptismal font the name of Hujusia Clarinda; the eldest son (also remarkably like his father) rejoices in the euphemism of Hichocus James. He is a promising young man. Beside those there are five other children, (all of whom bear a striking resemblance to their progenitor,) who are the happiest, the handsomest and smartest young beggars in the world.

And now, reader, I will tell you a secret. When you have heard it, I know you will think me, for certain reasons, the most confounded egotist in the world. However your opinion may be, here goes. I'll out with it. Then, dear reader, know that I who recount this little tale—yes, I—am the identical *Hujus* himself, who won his Clarinda in so peculiar a way. And this family of seven children, the finest children in the land, call me father when I am at home. So farewell! and farewell the mossy bank where the maples grow with their thick foliage, and the birds sing so merrily and the water in the brook ever glides murmuringly along with its purl, purl, splash! and its beaming over the white pebbles and its flashing through the green sedges.

WHAT IS A SEWING MACHINE?

It is a machine for making clothing and doing Sewing of all kinds.

Does it make the same kind of stitch that a lady makes with her needle?

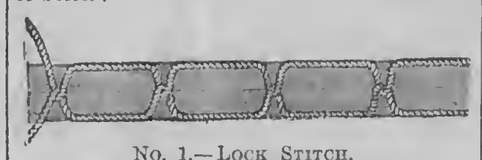
No; it makes other kinds.

What are they called?

"Lock Stitch." "Chain Stitch," and "Double Chain Stich."

What is the difference?

Here is a picture of the Lock Stitch, as the thread looks when stitched into the cloth, only this is made larger and coarser that you may see it better:



No. 1.—Lock Stitch.

It is made with two threads, one on each side of the cloth, and "locked" together in the center. Hence it is called the "Lock Stitch." It cannot be pulled out, nor raveled, and there is only a single line of thread on each side of the seam.

Is the seam strong and firm?

Yes; just as firm as the cloth when properly made. It is the principal stitch made by sewing machines since their first invention.

How much thread does it take for a yard of seam?

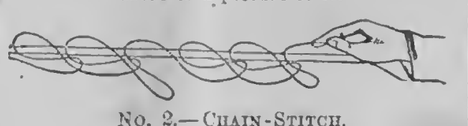
About two yards and one half.

What is the principal machine that makes the Lock Stitch?

THE WHEELER & WILSON MACHINE.

What is the "Chain Stitch?"

Here is a picture of it.



No. 2.—Chain-Stitch.

It is such a stitch as the ladies make in knitting and crocheting, and it can be raveled in the same way.

Is it much used in Sewing?

No; because the seams made with it pull out so easily. Think of garments coming apart when one is in the street.

How much thread does it take for a yard of seam?

About four and a half yards; or nearly twice as much as the "Lock-Stitch."

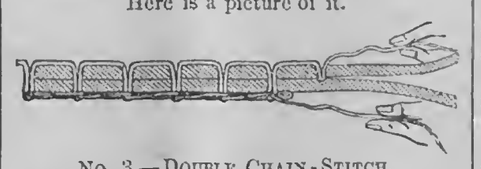
What is the principal machine making this stitch?

The Wilcox & Gibbs.

What is the "Double Chain-Stitch?"

It is very much like the Single Chain-Stitch, but it is made with two threads.

Here is a picture of it.



No. 3.—Double Chain-Stitch.

Can it be raveled?

Yes; and shows a ridge on one side.

What makes that ridge on the under side of the seam.

It is the looping and knotting of the two threads used.

Does that do any harm?

Yes; it wears off when garments are washed and ironed. It does not look well unless as embroidery. No one would like a handerchief hemmed with it, or any seam made that shows. A handsome stitch, you know, only shows a single line of thread.

How much thread does it take for a yard of seam?

About six and one-half (6½) yards. The most of any machine.

What machine makes this stitch?

The Grover and Baker.

Who use Sewing Machines?

The Wheeler & Wilson are used by Seamstresses, Dress Makers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Boots and Shoes, Linen Goods, Umbrellas, Parasols, etc. They work equally well upon silk, linen, woolen and cotton goods, with silk, cotton, or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the article sewed.

How many Wheeler & Wilson machines have been sold?

Nearly 300,000.

How fast can the machine work?

The Wheeler & Wilson Company has prepared tables showing, by actual experiments of four different workers, the time required to stitch each part of a garment by hand, and with the Wheeler & Wilson Sewing Machine. Subjoined is a summary of several of the tables:

	By Machine. Hours.	Minutes.	By Hand. Hours.	Minutes.
Gentlemen's Shirts	1	16	14	28
Frock Coats	2	38	16	33
Satin Vests	1	14	7	19
Linen Vests	0	48	5	14
Cloth Pants	0	51	5	10
Summer Pants	0	38	2	50
Silk Dress	1	13	8	27
Merino Dress	1	4	8	27
Calico Dress	0	57	6	37
Chemise	1	1	10	31
Moreen Skirt	0	35	7	28
Muslin Skirt	0	20	7	1
Drawers	0	22	4	6
Night Dress	1	7	10	2
Silk Apron	0	15	4	16
Plain Apron	0	9	1	26

NUMBER OF STITCHES MADE PER MINUTE.

	By Hand.	With Machine.	Ratio.
Stitching fine Linen	23	640	28
Stitching Satin	24	520	22
Stitching Silk	30	550	18
Seaming fine Cloth	18	594	15
Patent Leather, fine Stitch'g	7	175	25
Fitting Ladies' Gaiters	28	510	18
Stitching Shoe Vamps	10	216	21
Binding Hats	33	374	11

When the machines are driven by power, the ratio is much higher—1,500 and 2,000 stitches per minute not being an unusual average.

Think how much time is saved by using the machines.

MATHEMATICAL PROBLEMS.

The proportion of thread used in making the various stitches is as follows:

"Lock Stitch" 1 "Chain Stitch," 1 8-10ths; "Double Chain Stitch," 2 5-10ths.

Prob. 1. If a "Lock Stitch" machine uses 10 cents worth of thread and silk in a day, how much would it use in a year of 300 working days? Answer, $30.

Prob. 2. How much would a "Chain Stitch" machine use in doing the same amount of sewing? Ans. $54 worth.

Prob. 3. How much would a "Double Chain Stitch" machine use in doing the same amount of sewing? Ans. $75 worth.

Prob. 4. There will be ultimately at least a million of sewing machines used in the country; at the above rate, what value of thread and silk would be used annually if all of one kind were used? Ans. "Lock Stitch," $30,000,000; "Chain Stitch," $54,000,000; "Double Chain Stitch," $75,000,000.

Prob. 5. What value of thread would be wasted by the "Chain Stitch?" Ans. $24,000,000.

Prob. 6. What value would be wasted by the "Double Chain Stitch?" Ans. $45,000,000.

Prob. 7. If there be 6,000,000 of families in the United States, how much would it cost to send each a weekly newspaper at $1.50? Ans. $9,000,000.

Prob. 8, How much to send a monthly magazine at $2.00? Ans. $12,000,000.

Prob. 9. How much would remain of the $45,000,000 of waste, for Missionary, Educational and Charitable purposes? Ans. $24,000.

Is it wicked to waste things? Yes.

Then what sewing machine should be used? Ans. "Wheeler and Wilson's Lock Stitch Sewing Machine."

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,

IS PUBLISHED EVERY SATURDAY

BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless directed otherwise. Please note.

The Best Way to obtain subscribers for the Rural is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

READER,—Please act as Club Agent for the Rural, or induce your Post-Master or some other influential person to become a recruiting officer for the "Rural Brigade."

RESTORE YOUR SIGHT!
USE

DR. J. STEPHENS & CO.'S PATENT
CORNEA RESTORERS,
OR RESTORERS OF THE EYESIGHT.
They will Restore Impaired Sight, and Preserve it to the Latest Period of Life!
SPECTACLES RENDERED USELESS.

The most eminent Physicians, Oculists, Divines, and the most prominent men of the country, recommend the use of the CORNEA RESTORERS for Presbyopia, or Far or Long-sightedness, or every person who wears spectacles from old age; Dimness of Vision, or Blurring; Overworked Eyes; Asthenopia, or Weak Eyes; Ephiphora, or Watery Eyes; Pain in the Eyeball; Amaurosis, or Obscurity of Vision; Photophobia, or Intolerance of Sight; Weakness of the Retina and Optic Nerve; Myodesopia, or Specks or Moving Bodies before the Eyes; Ophthalmia, or Inflammation of the Eye or Eyelids; Cataract Eyes; Hemiopia, or Partial Blindness; Sinking of the Eyeball, etc.

They can be used by any one with a certainty of success, and without the least fear of injury to the Eye. More than 5,000 certificates of cures are exhibited at our office. Cure guaranteed in every case when applied according to the directions inclosed in each box, or the money will be refunded. Write for a Circular—sent gratis. Address DR. J. STEPHENS & CO., Oculists, PRINCIPAL OFFICE, No. 840 Broadway, New York.

P. S.—Dr. J. Stephens & Co., have invented and patented, *MYOPIA*, or *CORNEA FLATTENER*, for the cure of Near-Sightedness, which has proved a great success. Write for a Circular. 852-261eo,

PERUVIAN GUANO SUBSTITUTE!
BAUCH'S RAW BONE
SUPER-PHOSPHATE OF LIME.

BAUGH & SONS,
Sole Proprietors & Manufacturers,
DELAWARE RIVER CHEMICAL WORKS, Philadelphia, U. S. A.

For Wheat, Rye, Barley, Corn, Oats, Potatoes, Tobacco, Buckwheat, Sorghum, Turnips, Hops, Garden Vegetables, and every Crop and Plant.

Especially recommended to the Growers of
STRAWBERRIES, RASPBERRIES, BLACKBERRIES, AND
ALL SMALL FURITS.

BAUGH'S RAW BONE
SUPER-PHOSPHATE OF LIME,

Is eminently a success as a Substitute for Peruvian Guano and Stable Manure—and is offered to the Agriculturists of the Northern and Eastern States as a fertilizer that will cheaply restore to the Soil, those essentials which have been drained from it by constant cropping and light manuring.

IT is very prompt in its action—is lasting in effect to a degree unattained by any commercial manure in the market, and is afforded at a much less cost than *bought* Stable Manure, or Peruvian Guano. The Labor involved in its use is far less than that of applying stable manure, while there is no risk from the introduction of noxious weeds.

Our NEW PAMPHLET, "How to Maintain the Fertility of American Farms."—90 pages, giving full information in regard to the use of manure, &c., will be furnished gratis, on application.

BAUGH BROTHERS & CO.,
GENERAL WHOLESALE AGENTS,
No. 191 Pearl St. and 4 Cedar St., New York.

☞ For sale by Local Dealers in all parts of the United States and British Provinces. 852-61eo

EMPLOYMENT.—The Auburn Publishing Company offer the Best History of the Rebellion. *Latest, Cheapest, most Complete.*
The Best Illustrated Natural History.
The Best Work on the Domestic Animals.
The Best Work on the Farm and Gardens.
The Best Family Receipt Book, &c., &c.
The best *Terms*, and the *most reliable Instructions* to Agents. Address E. G. STORKE,
889-6t Publishing Agent, Auburn, N. Y.

The LAMB KNITTING MACHINE.

SETS UP ITS OWN WORK, KNITS all sizes, widens and narrows, knits the heel into the stocking, and narrows off the toe complete. Knits the single, double, ribbed and fancy flat web, producing all varieties of knit goods, from an infant's stocking, mitten or glove to a lady's shawl or hood. It is *Simple, Durable, and Easily Operated*. Women are earning from $15 to $20 per week knitting Hosiery, Staple and Fancy Worsted Articles on this Machine.

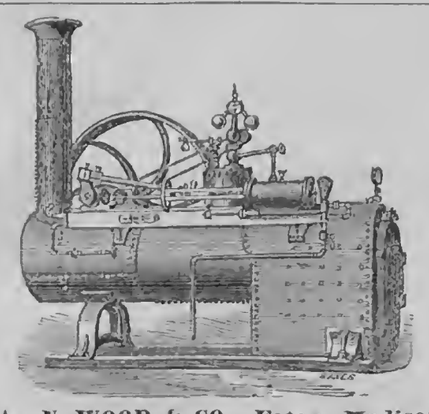
☞ For further information send for Circular and Testimonials. Address, enclosing stamp,
LAMB KNITTING MACHINE MANUF'G CO.,
860-13teow Office 176 State-st., Rochester, N. Y.

A VALUABLE MEDICINE.—Dr. POLAND'S White Pine Compound, advertised in our columns is a successful attempt to combine and apply the medical virtues of the White Pine bark. It has been thoroughly tested by people in this city and vicinity, and the proprietor has testimonials to its value from persons well known to our citizens. We recommend its trial in all those cases of disease to which it is adapted. It is for sale by all our druggists.—*Independent.*

THE GREAT NEW ENGLAND REMEDY!
DR. J. W. POLAND'S
WHITE PINE COMPOUND

Is now offered to the afflicted throughout the country, after having been proved by the test of eleven years, in the New England States, where its merits have become as well known as the tree from which, in part, it derives its virtues.

THE WHITE PINE COMPOUND cures Sore Throat, Colds, Coughs, Diphtheria, Bronchitis, Spitting of Blood, and Pulmonary Affections generally. It is a remarkable remedy for Kidney Complaints, Diabetes, Difficulty of Voiding Urine, Bleeding from the Kidneys and Bladder, Gravel, and other complaints. For Piles and Scurvy, it will be found very valuable. Give it a trial if you would learn the value of a good and tried Medicine. It is pleasant, safe and sure. Sold by Druggists and Dealers in Medicine generally. [886
GEO. W. SWETT, M. D., Proprietor, Boston, Mass.



A. N. WOOD & CO., Eaton, Madison County, N. Y., continue to manufacture their
Improved Portable Engines,
From 4 to 35 horse-power, for Farm and Mechanical purposes. They are particularly adapted to driving Threshing Machines, Circular Saws, Mills of all kinds, Printing Presses, Wood or Iron Lathes, Machinery in Cabinet or Wagon Shops, Boring Artesian Wells, Pumping Water, Corn-Shellers, &c., &c. We warrant our Engines to be what we represent them, and to give unqualified satisfaction in all respects. A. N. WOOD & CO.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

HENRY S. RANDALL, LL. D.,
Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS,
Late Pres't N. Y. State Ag. Soc'y, Southern Cor. Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business o. those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other Journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

RURAL FARMERS' CLUB.

"Black-leg" in Cattle.

IN response to a correspondent's inquiry, E. MINK, Vet. Surgeon, Lyons, N. Y., sends us the following article:—"'Black-leg,' or more properly 'Interstitial Hemorrhage,' is the result of venous congestion. The extravasation usually takes place in textures that are loose and soft and do not firmly support the blood vessels, as 'amongst the cellular tissues on the loins, or underneath the shoulder, in the *lungs*, and occasionally in the train, suddenly producing when appearing *externally* soft diffused swellings which crackle with gas evolved from decomposing blood.' Young animals rapidly thriving, with their blood vessels *thin*, *weak* and *uncondensed*, are usually its subjects. The great pressure caused by the speedy formation of blood, either ruptures the blood vessels, or produces effusion into the cellular tissues.

"*Treatment.*—When the disease is completely established; when crackling swellings are apparent externally or distressed breathing indicates extravasation into the lungs, or comatose or apoplectic symptoms indicate effusion on the brain, treatment is well nigh hopeless. If the animal is noticed while the premonitory symptoms merely are apparent, there is some hope of success. While the only symptoms exhibited are dullness and stiffness, bleed freely. Next administer a purgative, consisting of 1 lb. of epsom salts, 1 oz. oil turpentine and 10 drops of croton oil. This will be about the proper dose for an animal between one and two years old. Dissolve the croton oil in the turpentine and beat them up with the yolks of two or three eggs, then mix with the salts previously dissolved in one quart of hot water. After administering this dose, give half an ounce of oil of turpentine and one-half an ounce of muriate of ammonia every three or four hours, until the animal appears convalescent. To prevent the disease, whenever a case appears amongst a herd, give the remainder under two years old a laxative dose of salts weekly, shy ¾ lb. epsom salts and ½ oz. of ginger in one quart of warm water; insert a seton of black hellebore in the dew-lap; give small quantities of boiled linseed or oil-cake until all fear of the malady is past."

Lands and Localities in the South.

W. W. POWELL, writing us from Crossville, Cumberland Co., Tenn., says:—"On the eastern border of Middle Tennessee lies the Cumberland range of mountains, very appropriately called the Table Lands of Tennessee. Their elevation above the ocean is about 3,000 feet. They are unlike mountains, such as are found in New England, New York and Pennsylvania, with their rugged and almost inaccessible peaks and difficult approaches, being quite easy of access and really a great table. Hence their very appropriate name, 'Table Lands of Tennessee.' The soil is a rather heavy, sandy loam, with a yellow clay subsoil, is easily tilled and, with good farming, largely productive of all crops which are appropriate to a temperate climate. Probably no portion of the United States will excel this in the production of the cultivated grasses. Wherever Clover, Red-top, Timothy and Kentucky Blue Grass, have been sown the result has been all that a reasonable man could expect.

"Fruit and vegetables succeed well. Sandstone is the rock on the Table Lands; limestone is found on the slopes of the mountains in great quantities. Burr-stone, marble, coal and iron also abound. There is an abundance of soft, clear water. The timber is White, Red, Post and Spanish Oak, Poplar, Black Walnut, Hickory, White and Yellow Pine, Yellow Locust, Chestnut, Soft and Hard Maple, etc. Much of it is large and very fine. The winters are short and mild; summers long and delightful. The highest point reached by the mercury in 1866 was 83°. Land can be purchased at prices ranging from one dollar and a half to ten dollars per acre."

Bitting and Checking Colts.

GEO. M. JACKSON, Livonia, N. Y., sends us some sensible hints on this subject. He endorses the thorough bitting and the reasonable use of the check-rein on colts. He says:—"The only way the horse can be made available and safe as a roadster is to subject him in some way to the practice of bitting, and to the check-rein, not only when breaking him, but when driving him on the road. If unchecked by the bearing rein, a colt is sure to kick, and can easily do so, on the slightest inclination. If the head is checked up, they cannot bring themselves in position to kick so easily as otherwise. A young horse should also be accustomed to severe pressure of the bit, so if he becomes frightened he will obey the driver's force on the rein. If not trained to observe this pressure he is apt to spring ahead on feeling the bit severely."

California Farming.

ON a spare page of a business letter, under date of Jan. 30th, 1867, O. N. CADWELL of Lake Co., California, jots down for us the following items: "The winter here has been very wet, with but very little cold weather. Grass is growing finely, and stock doing well. Bees are also beginning to make honey. But very little grain is sown yet, and it will be late before it is got in, but the large amount of rain already fallen will make good crops in many places. The RURAL is a month old when it arrives here, but it don't spoil by being a few weeks, months, or even *years* old."

How to Fill the Ice House Cheaply.

ALTHOUGH past the season for doing this work we give the gist of a correspondent's communication on this subject, that our readers may thereby profit in the future:—"A great improvement upon drawing ice from two to four miles, I found, is my method of making it in the ice-house. I bring water in a pipe into the house, and make it fall in spray before a window on the north side during the coldest weather. I have succeeded in making a solid cake of ice 10 by 10 feet and four to six feet thick.

RENOVATING OLD COTTON LANDS.—No. V.

Wood Ashes.—A friend, with whom I was conversing upon this subject, remarked that he had not the least doubt but with proper management old lands could be restored. He had hauled to the fields several loads of leached ashes which had accumulated around the ash hopper. It was surprising, he remarked, to see how the cotton grew, squared and yielded, where those ashes were put. Had he known that the cotton plant draws very heavily on the soil for potash, and that wood ashes would return this salt to the soil, there would have been no surprise. He would not have hauled the ashes to the field for the simple purpose of removing them out of the way, but for the express purpose of furnishing food for his plants.

Professor JACKSON analyzed a whole cotton plant, weighing three pounds, from Savannah River, Georgia. On burning, the plant yielded 960 grains of ash. One-fourth of this ash was potash. A bale of 500 lbs. contains about 2 lbs. of potash, and 1,200 lbs. of seed that came from this bale contains about 16 lbs. If the cotton seed is retained on the farm and again applied to the land, the soil whence the cotton was gathered requires but a very small portion of potash returned in the way of compensation. But small as this portion may be it must be returned to keep up the fertility of the soil. "The perfect development of a plant," says LIEBIG, (Organic Chemistry, p. 104,) "is dependent on the presence of alkalies, or alkaline earths, for when these substances are totally wanting, its growth will be arrested, and when they are only deficient it must be impeded." To enable the renovator to act intelligently when applying wood ashes to the soil, we give a table of the quantity of potashes furnished by the combination of various common vegetable substances, taken from DAVY, (Lieb., p. 113:)

An excellent way of applying ashes for immediate effect is to roll the seed in them. I always apply as many ashes as will adhere to the seed, and prefer rolling at least one day before planting. This process requires less seed for planting, which leaves more to feed the cows with, or to manure the corn. GEO. F. A. SPILLER.

West Tennessee, 1867.

LEACHING OF SANDY SOILS.

Do sandy soils leach out the dissolved elements of manure? Even in this age of progress there are some practical farmers who contend that a sandy soil leaches out the strength of the manure applied to it. But this theory of leaching will apply only to pure leach sand, entirely destitute of aluminous matter. All soils containing as much as ten per cent. of alumina, have power by chemical affinity to separate ammonia salts from its incumbent water, and to retain it ready to be taken up by the roots of growing plants? If it escapes it must be in the form of gas upwards into the air, but never downwards beyond the reach of the roots of growing plants; and it is owing to this gaseous escape from a soil too sandy to form a crust after a shower that gives the erroneous impression that the manurial elements have been leached out. VOELCKER found from experiment that in a sandy soil, with the exception of a pure sand, liquid manure has the greater proportion of all its fertilizing matter held from leaching. He also found that liquid manure, passing through a sandy soil very deficient in lime, left its lime in the soil, thus proving that the property of soils of storing up food for plants extends to lime and other inorganic elements of plant food. The reason why nitrogenous manures are so much more lasting in an adhesive loam than in a sandy loam is, that they are more active in an open, loose soil, and are much sooner dissolved into a state to be assimilated by the growing crop.

LXXVI.

BARLEY—VARIETIES AND CULTURE.

OF all the cereals barley has the widest range, and succeeds in the most diversified climates. It comes to maturity in the heat of the tropics, and thrives in regions where the mean and constant temperature is scarcely 52°. It is susceptible of a rapid and vigorous growth without injury to the perfect development and maturity of seed. Its antiquity is great, being spoken of in the earliest agricultural records as an article of food of extensive use. From the sowing of its seed to the maturity of its grain the period of time required is shorter than with any other cereal. In the British Islands this period will average in length from 100 to 115 days; in the chief barley growing districts of this country from 80 to 95 days; in Bogota, South America, where the mean temperature is 58° or 59°, about 120 days are required, and on the river Nile in Egypt with the mean temperature at 70° during the growth of the crop, 90 days only are wanted.

While in some countries barley is used as an article of food for both man and beast, in this it is yet mainly turned into malt for the purpose of producing beer and spirituous liquors. This, doubtless, will continue to be its principal use; as an article of food it can hardly compete with other cereals. Barley meal is reputed to have a soothing effect on the animal system, preventing cutaneous irritation, which makes it a valuable adjunct to the food for fattening stock. Boiled barley is valuable as a mash for horses after a hard day's work; it acts gently as an aperient, opening the system and softening the skin.

In England, where this grain is of more importance to the farmer than with us, there are several kinds, or sub-varieties of the two-rowed and four-rowed, cultivated; but American farmers are little acquainted with these, knowing generally but three kinds of barley—viz., two-rowed, four or six-rowed, and winter barley, a variety of

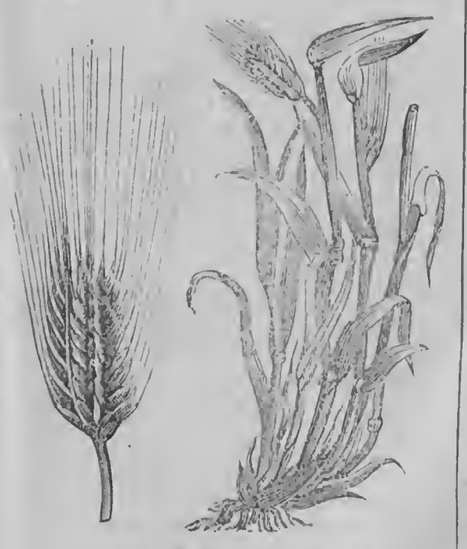
TWO-ROWED BARLEY—PLANT AND HEAD.

the latter. These three kinds we have illustrated, and we will consider briefly their relative qualities. American maltsters generally prefer the four-rowed spring barley, for the reason, we suppose, that it is easier to get up a stock for malting because it has been most extensively grown. The different kinds require to be malted separately. But we consider the two-rowed the most profitable variety for farmers. It ripens later in the season than the other kinds, and does not interfere with the haying and harvesting of other crops; it usually yields better, the

FOUR-ROWED BARLEY—PLANT AND HEAD.

grain being plumper and heavier. Winter barley is too tender for these latitudes unless in well protected spots; in more genial climates it might be profitably substituted for other winter grains; it yields largely, the grain is heavy and plump, and it ripens in June, before the period of haying.

We have not space in this article to more than hint at the method of cultivation. Barley is sensitive to the variations of heat and moisture. It should be sown as early in the spring as the land can be got into proper condition. The soil, to a depth of at least five or six inches, should



WINTER BARLEY—PLANT AND HEAD.

be *thoroughly pulverized*. This is important. Stiff clays and light, sandy soils, should be avoided. It is risky to sow on a freshly turned sod; the crop generally follows corn or potatoes. Harrow thoroughly and roll after sowing.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

HOW TO RAISE LAMBS AND TEGS.

NUMBER TWO.

ARTIFICIAL FEED—COWS' MILK.

ARTIFICIAL feed for lambs, which—among the farmers of New York and Vermont, includes only cows' milk, with or without the addition of other substances—is conceded on all hands to be less suitable and safe than ewes' milk. It is indeed somewhat difficult to raise them on it alone. The milk of a cow that has recently calved is pronounced by all our correspondents by far the best, and by some absolutely necessary, but SANFORD says he has raised lambs on farrow cows' milk, and we know that many other persons have done so. Great care should be taken not to scald it in warming; and it should be fed at about its natural temperature. All our correspondents but BROWN, A. H. CLAPP, GREGORY, and RICH, do not habitually mix anything with *new* milk. BROWN "mixes in just enough molasses to give it a yellow tinge," but says there is danger of putting in too much. If he has to feed much to young lambs, he stirs in yolk of eggs—proportions not given. A. H. CLAPP often beats in eggs—say half an egg to a feed. GREGORY and RICH thin with a little water and add molasses—GREGORY a spoonful to a half pint. RICH, amount not stated. To *farrow cows' milk* ELITHARP adds a tablespoonful of molasses to a pint; HAMMOND enough to color the milk a very little; SANFORD a little water and molasses, amounts not specified. The molasses alluded to by all, throughout this paper, is the West India article, manufactured from the cane.

The milk is kept warm in various modes, generally by placing the vessel containing it in a pail of warm water. Some place it on a hot stove, carried to the sheep barn for that and other purposes presently to be described.

FEEDING VESSELS.

For feeding young lambs, nursing bottles, common bottles, tea or coffee-pots, cans, flasks, and various shaped vessels constructed specially for the purpose, are employed—all being so prepared that an India rubber nipple can be attached to the neck or spout. A vessel having a vent discharges more freely than a bottle. A very small quill, wound with rags and inserted in the spout, answers as a make-shift for a nipple. HEYNE prefers a silver tube, wound with a rag; PITTS, a lead nipple which will allow the milk to run slowly into the mouth, as lambs will generally swallow under such circumstances, even though they refuse to suck; and WRIGHT, a solder or pewter nipple, for the same object. For twenty or thirty fed lambs, HAMMOND recommends a vessel holding six or eight quarts, with several tubes and nipples. For older lambs, BROWN has used a tube made of a small stem of sweet elder four inches long, dipped in a basin of milk, through which the milk is drawn rapidly. All these modes we consider good for the several objects in view.

FREQUENCY AND AMOUNT OF FEEDING.

BAKER feeds young lambs which do not obtain milk from their dams once in two hours nearly as much as they will take. BROWN, A. H. CLAPP, POTTLE and SANFORD, "often and in small quantities;" E. O. CLAPP, all the lamb relishes five or six times a day—if it is weak, less and oftener; ELITHARP, if lamb is quite feeble, once in ten or fifteen minutes at first, and "only one or two draws from the can,"—if stronger, feeds more freely, and, after about the third time, all it will take; GREGORY, at first, six times a day and once at night—subsequently reducing to three times and finally twice; HAMMOND, if lamb gets partly enough from dam, feeds oftener at first, but afterwards nearly a gill and a-half in the morning and afternoon, and twice that amount at a month old—but at four or five weeks old, would gradually reduce amount of milk and substitute oats, as equally good and more convenient; HEYNE, has fed a pint and a-half a day in three or six feeds, according to circumstances. (We do not understand from this that he feeds so much to new-dropped lambs.) The MARSHALLS, once in three hours, and oftener if lamb is weak and requires it; PITTS, as often as is necessary, judging from appearance and actions of lamb; RICH, once in two or three hours, giving the lamb all it will take the first time, and rather less subsequently;

Saxton, if any milk is obtained from the dam, two or three spoonfulls twice a day to a young lamb, increasing the amount as it grows older; Wilcox, five to eight times a day for first two or three days, afterwards four times — after first day or two, allows it to take all it wants; Wright, at first at intervals of one to two hours, the quantity depending on strength of lamb—considers "feeding cow's milk a delicate point, and that judgment must be used."

Our own views, on all the preceding heads of this chapter, are given in the Practical Shepherd, pp. 146-148.

HOW SOON THE LAMB SHOULD RECEIVE MILK—FEEBLE LAMBS.

All our correspondents concur that it is best for a lamb to receive food as soon after birth as the appetite demands it, though, as some of them state, a strong lamb can go several hours without it in mild weather, A feeble lamb, or one rendered dull and stupid by cold, may have to be fed before it manifests any desire to suck. The treatment recommended in case of a lamb too feeble to help itself, or of the ewe and lamb in case the udder does not immediately yield milk, does not differ in any essential particular from the directions contained in the Practical Shepherd. If a feeble lamb is dropped in cold, or even chilly weather, its *first* need is warmth, and to secure this it must be dry. If not too feeble and the ewe licks it rapidly it may be left to become dry in this way; otherwise, it should at once be wrapped in a blanket, and if the blanket is heated, as hereinafter described, it will be vastly more effectual. Drying and warming should precede feeding.

CHILLED LAMBS.

All our correspondents but three employ the modes for restoring chilled lambs mentioned in the last named book, viz., the warm bath, the heated oven, or fire, together with friction, rubbing the lamb entirely dry, wrapping it in woolen blankets, and, when sufficiently restored, feeding it with milk. Most agree that the milk should be mixed with from half to a full teaspoonful of spirits, in proportion to the size, strength and apparent necessity of the case. In the place of spirits, however, a few substitute red or black pepper; and E. O. Clapp sometimes gives an egg beat up, with a few drops of camphor; a large majority use the bath, and generally heat the water as hot as it can be borne by the hand: Baker says, "the water should be so warm as almost to take off the wool." We think we should prefer the ordinary degree of heat.

Brown, Hammond and Saxton use hot stones, and as this mode will be novel to many of our readers, we shall give the substance of Hammond's description of it at length. He says, if a lamb gets badly chilled it should not be carried to the house to warm, as it may die on the way. A hot stone should always be kept in the kitchen stove, so as to be in readiness at a moment's notice. It should be about twelve inches square and two and a half thick. Marble will do, but soap-stone holds heat longer. It should be wrapped with two or three thicknesses of blankets. By the time it gets to the barn these will be very warm — warmer than they could very well be got by holding them to a stove or fire. These blankets, smoking hot, are immediately wrapped round the lamb, and another set of blankets are wrapped round the stone, and they are thus changed as often as is necessary. The stone soon also makes the straw very warm underneath it. It is then moved and the wrapped up lamb laid on this hot bed. It can thus, in a very short time, be as thoroughly heated through as if in an oven or warm bath, and rapidly revives. We have used hot bricks in blankets, or in hay or straw without blankets, but the stone is obviously preferable, as more conveniently bringing a larger heated surface in contact with the blankets or straw. We think it a better mode than the oven, as the lamb can all the time get fresh and highly heated air, and remains where it can conveniently receive proper attention in other respects. The warm bath requires far fewer accessories and is therefore cheaper; and it can be immediately brought into use for a number of lambs at once, if the exigency requires it; but where subsequent friction is, as it ought always to be, resorted to, it requires at least equal time and labor, and we are inclined to think the *dry* heat of the blankets leaves the lamb stronger and in a better condition to withstand subsequent cold. The friction employed after the bath, too, requires care, especially if the poor little subject of it is covered all over with those big "wrinkles" which the Merino *fast* men so highly appreciate! It should be thorough, but so gentle as not to press too heavily on the tender skin and subjacent structures of the newly born animal.

Heyne places chilled lambs in the manure of the sheep barn, "with their heads out." He says if there is a good bed under the sheep the lambs "will soon get right," — and he justly remarks that if ewes are good mothers and properly lick their lambs there is little danger of chilling under suitable shelter. This process does not strike us as equally effective and safe with the preceding ones — particularly when the lamb is chilled nearly to death and requires speedy assistance. But we place great confidence in the skill of this thoroughly trained and successful German shepherd, and we can conceive of circumstances where his mode might be more available than any other we have given; viz., in the great flocks of the West or Southwest, which are penned nightly, but which have no shelters. In one of these, a sudden cold storm in the yeaning time often kills more lambs than two dozen shepherds could save by warm baths, hot stones, &c., even if they had (what they have not) the proper articles and some of the conveniences for using them. But it seems to us that an active shepherd might, with a proper instrument — say one shaped like a cooper's adz or paver's tool—for rapidly digging up and pulverizing small spots of manure in the sheep yard, bury, as Heyne describes, and thus possibly save many newly dropped lambs, already or soon to become chilled by the storm. If, in anticipation of such contingencies manure heaps were thrown up from time to time in the pen, light and well pulverized and protected from the trampling of the sheep by small pens of rails, the manure would, however previously bleached, frodden and free from straw, soon ferment and heat up, and thus a warm bed would be always ready for the lambs, into the soft mass of which each could be thrust in less than half a minute's time; and if the pen was roofed with boards or poles covered with sods or brush, a great desideratum would be obtained by the exclusion of rain and snow. We can see no reason why this plan is not perfectly feasible under all such circumstances; and the labor of throwing up a fresh pile as fast as the preceding one began to get "burnt out" is not worth talking about. Lambs could even be *fed* in that situation, with a bottle and nipple—or taken out, fed and replaced — long enough to *ride out* the worst part of an ordinary storm. Once well *dried* and *heated*, they would not afterwards as readily succumb to cold, as when first delivered, wet and weak from the womb; but they should be confined long enough to insure their safety.* It would be "funny," doubtless, to see a manure-heap stuck over with lambs' heads, like a Christmas ham with cloves, while a wild Texas "Norther" was bowling away above,— but it would be somewhat better than *funny* thus to save the lives of a few scores of lambs annually in compensation for so very small an outlay of labor, energy and (as it would be pronounced if *successful*) common sense.

But our theoretical rose, it must be confessed, has its thorn! After so early a separation, continued through a number of hours, a portion of the dams, especially the young ones, would not be likely to look up, and some would positively disown, their lambs if fetched to them; and if the cases were numerous, no shepherd could identify the dam of each lamb where he had separated them rapidly, perhaps at night, in the confusion of a storm. It might, indeed, be difficult in a large flock to pick out the ewes which had thus yeaned if the bloody traces were not visible and they had ceased to bleat for their lambs.* But experienced and *good* mothers would at intervals call for, and on being driven close by a group of unclaimed lambs, would eagerly search for and promptly recognize their offspring. Thus a considerable portion would, at worst, be saved; and every newly lambed ewe which could be discovered and which did not recognize her lamb might be compelled to adopt one. But enough, and perhaps more than enough, on this subject.

CONSTIPATION—PURGING.

Lambs, especially those fed cow's milk, are subject to constipation and diarrhœa, the former of which frequently, and the latter sometimes, proves fatal. Farrow cow's milk, or even that of a cow which has calved three or four months previously, is much more likely than new-milch cows to produce these results. Constipation or costiveness is far more common than diarrhœa, or as it is usually termed, purging. We have seen that but four of our correspondents habitually add anything of a cathartic character to *new* milk—probably all of them would do so if compelled to feed *old* milk. There are visible signs of costiveness, apart from the stools or want of stools, which direct attention to the malady. The lamb becomes dull, drooping, disinclined to move about, and lies down much of the time. Its belly or sides usually appear a little more distended than usual. It becomes torpid—sleeps most of the time—and if not relieved speedily dies. The symptoms of diarrhœa need no description.

For costiveness in fed lambs Baker gives a little brown sugar; Brown, a little more molasses than common—in extreme cases, boneset tea and an injection of warm water, milk and molasses: E. O. Clapp, cow's first milk or a well beaten hen's egg; A. H. Clapp, an egg—has sometimes given three whole eggs to a lamb in forty-eight hours — sometimes gives half a teaspoonful of lard; Elitharp, molasses, and if that is not sufficient a moderate dose of castor oil—dislikes to give medicine if it can be avoided, as leading to a loss of appetite; Gregory, molasses and milk with a little suet; Hammond, an injection of two or three ounces of molasses and milk, and repeats if necessary; and, as it often happens, if there is an accompanying retention or stoppage of urine, administers three tablespoonfuls of strong pumpkin seed tea. As he also puts a particular case, where few have had experience, we give it entire. He says when a lamb is taken from its dam and is put on and allowed to suck at will a foster mother which has just lambed and has an abundant flow of milk, purging or costiveness frequently ensues, the latter accompanied with urinary retention; that this presents a difficult case; that the syringe should be employed, and if the difficulty is not thereby removed, two tablespoonfuls of castor oil should be administered to a lamb three weeks old, the belly be wet as often as it dries with a strong solution of salt and water, and the lamb kept warm, but allowed to exercise at will; that an hour after giving the oil four or five tablespoonfuls of strong pumpkin seed tea should be administered and repeated after a proper interval if found necessary; that after the medicine has operated a little boneset tea may be given to stimulate the appetite; that at this stage the lamb must be allowed to take only a small quantity of milk, but take it rather often from a nearly empty udder; that the ewe should be kept thoroughly milked during the illness of the lamb; that costiveness does not yield as readily to injections in lambs several weeks old as in quite young ones—that in addition to injections large doses of castor oil or Epsom salts are frequently necessary to move the bowels in time. The Marshalls administer warm water injections; Pitts, castor oil in small doses, and injections of new milk, molasses and lard; Pottle, molasses or lard in slight cases, in others injections of warm water and tobacco; Rich, milk and water injections, taking up the lamb by its fore legs across his knee and rubbing it; Sanford pursues "same course as that recommended in Practical Shepherd;" Saxton gives molasses or castor oil; Wilcox feeds laxative food, like roots, to the dam and not much grain; Wright gives lard and injections.

For purging, Brown gives black pepper and milk; E. O. Clapp, chalk in farrow cow's milk; A. H. Clapp, black pepper and scalded milk; Elitharp, scalded milk; Hammond, porridge made of scorched wheat flour; Heyne, nothing, if the month is warm and the evacuations yellow—if the nose is cold gives a little sulphur — if the dung is white, considers it a dangerous symptom, and changes the feed of the dam; and if that does not avail, puts the lamb on another ewe or gives it other milk; the Marshalls, castor oil in moderate quantities; Pitts, if the case is bad, a small dose of laudanum; Pottle, mild anodynes—thinks Mrs. Winslow's Soothing Syrup as good as any; Rich, scalded milk; Sanford, paregoric; Saxton, a teaspoonful of rennet, repeated in a few hours; Wilcox, less laxative food to the dam; Wright, bitter-weed tea, or scalded milk and black pepper.

We esteem all the above remedies good, as far as they go, in stages of both diseases. A word as to the manner of administering injections, which we have heretofore so strongly urged for costiveness in young lambs. The animal is held up by the hind legs, the nose of the syringe *very carefully* inserted, and when the syringe has been discharged the lamb should be laid down and the parts pressed together, so that the fluid shall be retained *as long as possible*. This renders it far more effective. The lamb cannot properly be held up by the hind legs long enough for this purpose.

* A little sheltered cabin, for this purpose, might be a profitable investment.

* If the ewes were marked with large, visible numbers, and the lambs when taken away numbered the same with a finger end dipped in dry Venetian red, this difficulty would be avoided. This can be done by daylight, or even by a lantern, as we know from abundant experience.

THE TARIFF ON WOOL.

We give the clauses of the new General Tariff bill which prescribe the rates of duties on foreign wool, as we find them in the newspapers — and presume they are correctly copied. We shall publish the tariff on woolens next week. For the want of space, comments on the subject are reserved until our articles on Lamb raising are completed:

A bill to provide increased revenue from imported wools, and for other purposes:

Be it enacted, By the Senate and House of Representatives of the United States of America, in Congress assembled; That from and after the passage of this act, in lieu of the duties now imposed by law, on the articles mentioned and embraced in this section, there shall be levied, collected, and paid, on all unmanufactured wool, hair of the alpaca goat and other like animals imported from foreign countries, the duties hereinafter provided. All wools, hair of the alpaca goat, and other like animals, as aforesaid, shall be divided for the purpose of fixing the duties to be charged thereon, into three classes, to wit: that is to say, merino, mestiza, metz, or mestiza wools, or other wools of merino blood, immediate or remote; down clothing wools and wools of like character with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Cape of Good Hope, Russia, Great Britain, Canada and elsewhere, and also including all wools not hereinafter described or designated in two or three class combing wools—that is to say, Leicester, Cotswold, Lincolnshire, down combing wools, Canada long wools, and other like combing wools of English blood, and usually known by the terms herein used and also all hair of the alpaca goat, and other like animals.

Class 3.—Carpet wools and other similar wools, such as Donskol, native South American, Cordova, Valparaiso, native Smyrna, and including all such wools of like character as have been heretofore usually imported into the United from Turkey, Greece, Egypt, Syria and elsewhere, for the purpose of carrying into effect the classification herein provided, a sufficient number of distinctive samples of the various kinds of wool or hair embraced in each of the three classes above named, selected, and prepared under the direction of the Secretary of the Treasury, and duly verified by him. The standard samples being retained in the Treasury department shall be deposited in the Custom-houses and elsewhere, as he may direct, which samples shall be used by the proper officers of the Customs to determine the class above specified, to which all imported wools belong, and upon wools of the first class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port shall be thirty-two cents or less per pound, the duty shall be ten cents per pound, and in addition thereto eleven per centum *ad valorem*. Upon wools of the same class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed thirty-two cents per pound, the duty shall be twelve cents per pound, and in addition thereto ten per cent. *ad valorem*. Upon wools of the second class, and upon all hair of the alpaca goat and other like animals, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall be thirty-two cents or less per pound, the duty shall be ten cents per pound, and in addition thereto eleven per centum *ad valorem*. Upon wools of the same class, the value whereof, at the last port or place whence exported to the United States, excluding charges in such ports, shall exceed thirty-two cents per pound, the duty shall be twelve cents per pound, and in addition thereto ten per centum *ad valorem*.

Upon wools of the third class, the value whereof at the last port or place whence exported into the United States, excluding charges in such port, shall be twelve cents or less per pound, the duty shall be three cents per pound; upon wools of the same class, the value whereof at the last port or place whence exported to the United States, excluding charges for such ports, shall exceed twelve cents pound, the duty shall be six cents per pound; provided that any wool of the sheep or hair of the alpaca goat and other like animals, which shall be imported in any other than the ordinary condition, as now and heretofore practiced, or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, shall be subject to twice the amount of duty to which it would otherwise be subjected, anything in this act to the contrary notwithstanding; provided further, that when wool of different qualities is imported in the same bale, bag or package, it shall be appraised by the appraiser, to determine the ratio of duty to which it shall be subjected at the average aggregate value of the contents of the bale, bag or package, and when bales of different qualities are embraced in the same, invoiced at the same price whereby the average price shall be reduced more than ten per centum below the value of the bale of the best quality, the value of the whole shall be appraised according to the value of the bale of the best quality, and no bale, bag or package shall be liable to a less rate of duty in consequence of being involved with wool of lower value, and provided further that the duty upon wool of the first class which shall be imported washed, shall be twice the amount of duty to which it would be subjected if imported unwashed, and that the duty upon wool of all classes which shall be imported scoured shall be three times the amount of the duty to which it would be subjected if imported unwashed; on sheepskins and Angora goatskins, raw or unmanufactured, imported with the wool on washed or unwashed, the duty shall be 30 per cent. *ad valorem*, and on woolen rags, shoddy, mungo, waste and flocks the duty shall be 12c. per pound.

Communications, Etc.

SPICY LETTER FROM MINNESOTA.

Dear Old Rural: — "Westward the Star of Empire takes its way," and I, following so lofty an example, find myself in Minnesota—way in the south-western part, in the land of Homesteads and Gophers. Far away from our winter's course of lectures and from father's apple cellar, and where the prairies are so wide and so long they give one the feeling of "lost at sea." And I have come out here to farm. Not exactly to hold the plow or handle the hoe myself, but to take care of — not the linen — but the wardrobe and cook the cakes and bacon for the masculine half of the firm. What a thing it is to be poor! Had we been worth a "million of money," my masculine half and I, we would have staid and fared sumptuously nearer the rising sun, and near our friends who have already arisen. The fates have ordered it otherwise, and so a few months ago we pitched our tent in the country where land is but fourteen dollars for a quarter section, i. e., if you live on it for five years. Our friends East nearly had a chill every time we spoke of Minnesota as our future home. We were told we would freeze to death—that the cattle froze standing in their stables—the chickens on the roost—the children going to school—the dinner over the fire, and all animate life congealed generally, for at least thirteen months in the year.

Well, we have lived here until the middle of January. Dryer, nicer weather one could not wish for. Through the months of November and December there were no storms of any kind; bright, beautiful, sunny weather. No rains this fall, or since the freshets in the summer. To be sure, it has been cold, but not severely so. The ice on the lakes is frozen to the depth of eighteen inches. On the eve of the 3d inst. it commenced snowing, and in the course of two days snow fell to the depth of six or seven inches. This is the first snow we have had that would make a track. It has not drifted any to speak of, yet there is nothing to hinder should we have high winds. We expect to get our pay in storm-currency yet. It was last February, in this county — Martin county — that a load of seven children got lost, going home from singing school one stormy night, and lay out in the storm two nights and one day. When they reached home the three girls were frozen to death, and of the four boys all lost their limbs but one, and he part of one foot. We do not write that down against the climate of the State. With the same lack of judgment and the same storm they would have frozen anywhere — in your State as well, if you had as large fields as we have here. Their team was oxen.

Talk of cattle freezing to death! Farmers get out here and see so great a chance for stock raising they get too greedy. Many of them invest their all in cattle and have nothing left to hire with. Consequently their work all drags behind. Frost spoils the hay before they get half enough cut, and stable building is not commenced until long after they should be all completed. Thank you, Mr. Editor, for reminding me that I am getting beyond woman's depth. But I like to see comfort and economy in one place as well as another. I can detect a kind of beauty among horns and hoofs as quick as among bonnet silks and high-heeled gaiters. And I love to see good breeding at the stable as well as in the parlor. When I go out to pet and make friends with *my* cows I don't want to find them munsing over whitish reed-like sticks, which look more like stove kindlings than like the hay in father's meadow, around the small cocks of which I used to play by the hour at hide and seek with my young mates. By the way, there is nothing that brings up the days of childhood in all their brightness so quickly as will the scent of new-mown hay. Then, too, it is not very good as a relish for stock to keep some half a dozen calves in the stack-yard, romping on the hay that is to furnish their next meal. No wonder Minnesota cattle starve to death — freeze I mean; it amounts to one and the same thing.

Well, Mr. Editor, I suppose if I don't hush up soon you will think that Farmer Garrulous has a daughter out West. Then, too, my other half, who sits on the opposite side of the cook-stove fixing tools for next summer's work, says that there is a hole in the thumb of his mitten that ought to be fixed to-night. But first let me say I must have the Rural. I have not seen one since I left my father's—three months since—where you would always find the latest paper on the shelf with the Bible. I want it for help in my Domestic Economy and for company. "Shall auld acquaintance be forgot?" Nay! Then send me a specimen paper and I will try and raise a small club. Farmer's Wife.

Will "Farmer's Wife" send us her address—the note containing it, sent with above, having been mislaid?

POULTRY RAISING.

In answer to the question so often asked, "Can fowls be profitably kept on a large scale?" we find an affirmative answer in the N. H. Mirror and Farmer, by John S. Ives of Salem, Mass. In theory it would seem easy enough to manage large numbers of fowls successfully, in a given space, but in practice the results, hitherto, have not been of an auspicious or assuring character. Mr. Ives, however, is of opinion that no real impediment to success exists on a scale of considerable magnitude provided proper attention is given to certain conditions. For the accommodation of one hundred fowls he proposes one acre of grass land on which are five small shelter coops, as remote from each other as possible — assigning twenty fowls to each tenement. During the day they can run together, and with a little attention, at the outset, they can be trained to seek their own domicils with unvarying regularity. A wall or fence five feet high is deemed an ample enclosure if the Brahma variety is selected, as they are of a less roving character than most others, while they are regarded as superior to all others in the way of profit. In selecting the stock the medium sized fowls should be preferred, as they mature early, and, with high feeding, will be ready for market in from ten to twelve weeks from the hatching. Fowls should never be wintered more than once, and never be allowed to moult. The eggs, intended for hatching, should be fresh laid and not allowed to get chilled by frost. The thick shelled eggs should be preferred, and not be placed under the hen until she has set one or two days and become accustomed to and satisfied with the place selected for the process of incubation. The location should be warm, dry and fully sheltered from air currents. They should be fed corn for about ten days, and thereafter scalded meal mixed with boiled and mashed potatoes. When the chicks are first heard to chirp the hen should be confined to the nest for twenty-four hours and the place darkened. At the expiration of this time the hen should be removed to a coop and the chicks with the hen. At two days of age they should be fed with a mixture of bran and mashed potatoes for a couple of weeks, when they will be out of danger and may be allowed greater freedom of range. The conclusion of Mr. Ives is that fowls, in large numbers, will pay if properly managed, but if not cared for they become an expense to the owner and a nuisance about his premises.

RAISE YOUR OWN COWS.

This is the advice of S. Ryder, Jr., Geauga Co., Ohio, through the columns of the Ohio Farmer. He renders several reasons, all good ones, why farmers, especially those who pay attention to the dairy, should exercise more care in the selection of cows than it is customary with them to do. Purchasing dairy stock at random, because of its cheapness, is the poorest kind of policy, as the expense of keeping the poor kind is equal to that of the best, while the results, in the shape of butter and cheese, are scarcely more than one-half of those produced by good stock. To be certain of having good cows, the farmer should raise them himself, and keep trying till he is successful. The advice is good and, if generally acted upon, a few years would suffice to raise the dairy stock of the country much above its present condition.

Latakia Tobacco.—We are indebted to E. J. Evans & Co., York, Pa., for a package of seed of this variety of tobacco.

Rural Notes and Items.

Wheat and Chess—*The Transmutation Question Again.*—Some years ago we made the following statement in the Rural:

Wheat and chess sometimes become so entangled and united as to lead people to suppose that both grow on one stalk. A case in point. On Monday last, George Wright, Esq., of Irondequoit, brought to us a head of wheat having on one side a small branch of genuine chess. The chess protruded from the stalk between the wheat kernels, and certainly had the appearance of having grown there. Mr. W. stated that the apparent anomoly had been shown to several farmers and others, (including one or two city editors,) who admitted that the wheat and chess must have grown on the same stalk. At the first sight, we confess that we were a little surprised, the whole thing looked so natural — as though the wheat and chess actually grew together. But in less than two minutes we "disclosed the disclosure." On slightly separating the kernels of wheat on the opposite side of the stem, we discovered the *end of the chess stem*, protruding from the *head* of wheat (in an opposite direction from the chess kernels,) but not *united* with the wheat stalk] The chess stem was held between the stem and kernel of the wheat,—and it was at once apparent that, instead of growing on the wheat stalk, the branch of chess had either been caught in the wheat head and its stem been broken by the waving of the grain, or become entangled in some other manner. We presume many people have been deceived by similar apparent unions of wheat and chess, and therefore chronicle this instance of the utter unreliability of appearances.

Since the publication of the above we have been shown several heads like the one described, and in each instance demonstrated that those presenting them were mistaken in supposing—as they firmly did —that the wheat and chess grew on the same stalk. For example, this morning (March 11,) Austin Crittenden, Esq., of Brighton, near this city, showed us a head of wheat (grown last summer in a forty acre field on the farm of Mr. J. Mann of Rush) which had a spur of chess protruding from its side, as though it had grown there. We stated to Mr. C. that it was not, in our opinion, genuine, and cited the case of Judge Wright, but he seemed positive, and we submitted the specimen to Prof. Dewey and L. B. Langworthy, Esq., for examination and decision—in the presence of Mr. Crittenden, B. M. Baker, Esq., President of our County Ag. Society, and others. On critical examination the chess was found (as we at first believed) to be attached to the wheat head in a manner very similar to that above described. On removing some of the wheat kernels it was evident that the wheat and chess did not grow on the same stalk. Mr. C. and another firm believer in transmutation who was present, at once "gave it up." As one result of the investigation, the President aforesaid owes the Editor hereof a beaver, which shall, on receipt, be duly handed over to Dr. Dewey, one of the umpires.

A Superior Iron-Beam Plow.—Last season we received for trial a cast iron-beam plow manufactured by Z. T. Newcomb, Waterloo, N. Y., which he calls the "Champion." Mr. N. claims to have attained a form of point and mould-board of such concurrence with well known mathematical and mechanical principles as to render the draft the lightest possible in comparison with the depth of furrow lifted and turned over. The wedge of the plow is most perfect in form, and subtends an angle of only three degrees to the plane of the earth, and presents a very perfect combination of the two great mathematical forces, the wedge and screw. After giving the plow a thorough trial in both sod and stubble ground, we came to the conclusion that it was one of the best of its class. Moreover we have seen it in the hands of several practical farmers, and all speak in the highest terms of its merits. Not the least to be said in its praise is its good workmanship; this latter point is one of much importance, and one wherein manufacturers frequently fail. None of the plows of Mr. N's make which we have seen are amenable to censure in this particular.

Dairymen's Association.—The dairymen of Ohio held their annual meeting at Cleveland, Ohio, commencing on the 20th ult. After the organization of the Society the necessary committees were appointed. The following were some of the topics under consideration:—The advantages of connecting butter and cheese manufacturing. What are the requisites of purity of flavor in cheese? How can it be secured? Is the branch factory system practicable, and is its adoption advised? The preservation and preparation of rennets. Taxing cheese factories. Best breed of cows for the dairy. The best grasses for a dairy farm. Election of officers, &c. All which subjects were successively brought before the Society for discussion. In the evening Mr. Anson Bartlett of Drake county, delivered a highly interesting address, in which he illuminated, illustrated and explained in a very happy manner many topics of the deepest interest to the dairymen of the country.

Winter Wearing Out.—The past, or more correctly perhaps, the present winter has been somewhat remarkable for the number of snow storms it has furnished and the protractedness of the sleighing season. Commencing early in December, we have had sleighing most of the time up to the advent of March. Owing, however, to the comparative mildness of the temperature during the month of February, the general average for the winter season has varied little from that of several preceding ones, though the run of sleighing has been more protracted here than during any winter for the last dozen years. The weather-wise infer from the length of the snow season, now nearly ended, an early spring and a fruitful summer. The long reign of snow has been favorable to winter wheat, and already the prophets are predicting a bountiful harvest the ensuing summer.

Our Premiums Appreciated.—The following acknowledgment from a Recruiting Officer for the Rural Brigade tells its own story. We have "more of the same sort" of watches to give to Club Agents, (or other premiums if preferred,) and, as Mr. C. says, any young person "can easily earn one by getting up a club for the Rural;"

Coal Valley, Ill., March 7, 1867.

D. D. T. Moore — *Dear Sir:* This morning I received, by U. S. Express, a Ladies' Gold Hunting-Cased Watch, for which I am much obliged. It is a very nice one, and a valuable present. Any young person wishing a watch can easily earn one by getting up a club for the Rural. If they can't get a club large enough for a Gold Watch there are other valuable presents offered. I remain, Dear Sir,

Respectfully yours, Thomas Cone.

Silver Pheasant Fowls.—Those of our readers who are desirous of obtaining eggs from pure bred fowls of this variety are referred to the advertisements of G. M. Curtis and G. W. Cone. The correspondence of these gentlemen, published in the Rural a few weeks since, brought them a "grist" of letters of inquiry, which they have properly answered in our advertising columns.

The Northern Farmer — devoted to Agricultural, Science, Arts and Manufactures, and published monthly at Fond du Lac, Wis.,— has been enlarged to 16 quarto pages. It is well conducted, and merits a good circulation. Published by Jones & Bro., at $1.

HORTICULTURAL.

FARMERS' GARDENS—NO. III.

The farmer can afford to use a quantity of manure in his hot-bed to produce heat sufficient to warm properly a layer of six or seven inches of soil above it. In our last article we advised the use of inverted sod, covered with several inches of the best garden soil and resting on a thin layer of earth. Care should be taken to have this sod free from roots of strong growing, pernicious weeds. Sod is not essential, but its use will aid in the matter of transplanting, and it generally follows that a rich soil for the growth of seeds lies immediately under an old, compact turf. The surface of the earth in the hot-bed should be raked thoroughly, and if the soil is rather heavy, sand may be sifted over and incorporated with it; leaf mold is also excellent.

Having the hot-bed prepared for the reception of the seed, put on the frames of cloth, to cover it tight, and wait three or four days before putting in the seed. This delay is necessary, because too much heat will be evolved at first from the manure; the first fermentation is rapid and energetic, and the thermometer will frequently mark over 100° at this period in the hot-bed, but in two or three days it cools off, and when at a temperature of 70° or 80° the seeds may be sown.

The farmer will use his hot-bed to start various plants. Lettuce will be freely sown, as it comes forward rapidly, and may be used directly from the bed for the table as well as started for open air culture. Early cabbage, cauliflower, pepper, egg, tomato and celery plants will demand space in the hot-bed. The ladies will require room to start their flower seeds. Cucumbers and melons should be forwarded in hills, so that the entire hill may be removed to the open ground at the proper time. No more plants should be grown in each hill in the hot-bed than are destined to remain and bear fruit. Tomato plants may be put in large pots or wooden boxes and left in the bed until they flower and the fruit is partially grown. If there is sufficient room, potatoes may be forwarded very profitably by planting single eyes three inches apart each way. When the plants are three or four inches high, remove them to the open ground with the trowel; they will stand a high degree of cold uninjured. For growing sweet potatoes, a hot-bed is essential.

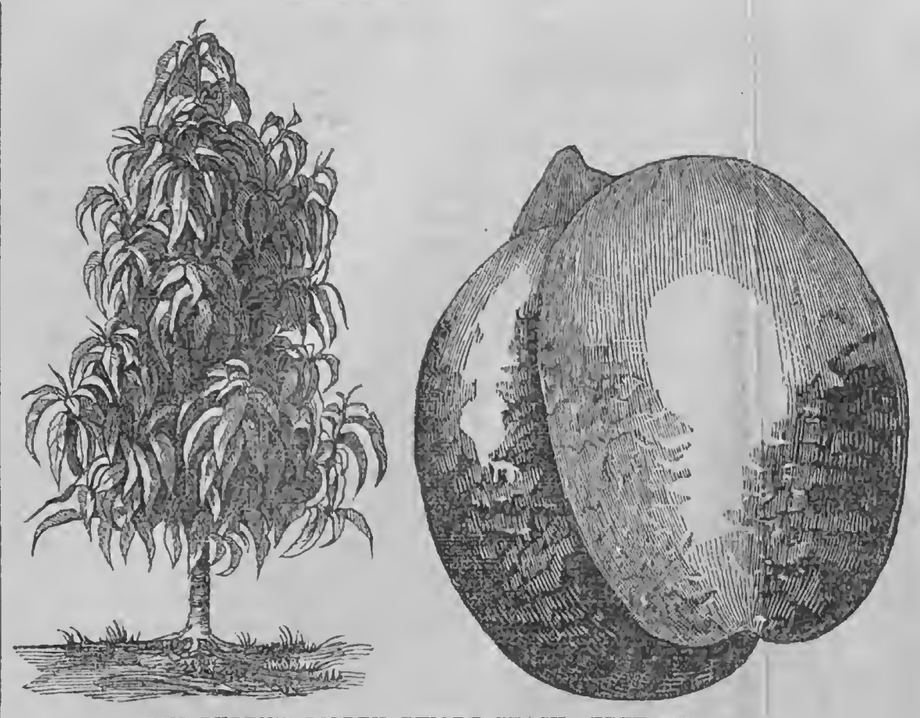
There is no part of the garden that will give the farmer more pleasure and profit, if well managed, than his hot-bed. By its aid he is enabled to furnish his table with vegetables and fruits in advance of the season, turning by this use the most common products into luxuries and greatly prolonging the season of their enjoyment. The care becomes a source of pleasure, in which all the family have a share, and the most essential points in this are to give the plants air when the outside temperature is right, keep them well covered when it is too cold, and maintain constantly the proper degree of moisture.

VINELAND, N. J.

I am indebted to a friend for a Vineland Weekly, from which I learn one of the principal secrets of the great success of a Mr. Landis in settling his extensive tract of thin pine and shrub oak plains in that region. Instead of selling to speculators those parts of his tract which contain large deposits of swamp muck and vegetable mould, he wisely holds them as manurial deposits for the general good—giving to each settler the privilege of digging all the muck he pleases for the amendment of his land, free gratis. One of the new settlers writes to the editor that he has so far availed himself of the generous privilege that, by the aid of muck alone, he has grown seventy-five bushels of Dent corn to the acre. Green-sand marl, which is brought there by the car load direct from the deposits, is also a capital amendment for that light, sandy soil; and both the muck and the marl are also invaluable agents in economising the stall manures, as both substances have great affinity for the salts of the manure. Altho' the muck itself, if made of deciduous vegetation, is still richer in nitrogen than ordinary farm-yard manure, yet it contains so much carbon that when dry it is a good absorbent of the salts of ammonia.

There is no doubt that the pine and shrub oak plains of Long Island might be made as productive as these cognate plains of Vineland with the aid of the same amendments. But, altho' the surface soil there is sufficiently adhesive to be made into adobe bricks, it needs organic manure, and there are no muck deposits or calcareous clays in that region to compensate for the scarcity of stall manures. But the great value of commercial manure, Peruvian guano, superphosphate and poudrette, are beginning to be better understood and appreciated, both at Vineland and on Long Island, and the day is fast approaching when the great designs of Providence will be fulfilled, and the festering animal and vegetable corruptions which now send ship fever and cholera to decimate the great cities, will be daily removed and utilized *a la Chine*, as the great means of increasing and perpetuating vegetable life in these sterile plains, which have lain waste ever since the subsidence of the waters of the great drift period of the world's formation. *

Mulching Small Fruits.—The Horticultural Association of Western Michigan recommends the mulching of small fruits for the following reasons:—1st, it affords protection against winter killing; 2nd, it serves as an artificial retainer of moisture, which in most seasons is advantageous to the growth and perfection of fruit; 3d, it may be useful as a fertilizer; 4th, it assists in keeping down grass and weeds; 5th, fruit well mulched is always clean.



VAN BUREN'S GOLDEN DWARF PEACH—TREE AND FRUIT.

This peach originated in the year 1856 with J. Van Buren, Esq., an eminent pomologist of the State of Georgia, and is supposed to be an accidental cross between the Italian Dwarf and Van Zandt's Superb. The rebellion interfered with Mr. Van Buren's arrangements for propagating it extensively, but a supply of buds having been furnished to Miller & Co., of Chester Co., Pa., by Dr. J. V. Evans, who received some trees directly from Mr. Van Buren, this firm are now introducing it to notice. From them we received the following description—and an advertisement which appears elsewhere.

The original tree when four years old was but 28 inches high, but being worked now on strong roots the trees attain a height of four or five feet. The illustration of the tree was taken from one forming its first year's growth, and the fruit is an average specimen in size. It ripens in September, and is described as of good flavor, golden-yellow color, with a rich carmine cheek. The foliage of the tree is large, dark-green in color, and extremely dense. The buds are thickly set, shooting strong and vigorous, and it bears large crops. It may prove a decided acquisition for the garden and orchard house.

WINE AND GRAPES.—NO. I.

To enable us to judge of the advancement and present condition of grape growing and wine making in this country, let us take a brief glance at its history, noting as we pass some of the impositions to which we have been exposed.

The first native wine of which we have any account was made in what is now the State of Florida in 1564, by emigrants from Spain, of grapes growing wild and uncultivated in Nature's vineyard, the primitive forest. Of its quality or quantity we know little or nothing, and it may be presumed, as a business undertaking, it was neither long continued nor very successful, or it would have attracted attention enough to have given it greater notoriety. We find, in the early history of this country, mention made of similar attempts to manufacture wine from native wild grapes by emigrants from France, in Delaware, in 1648. The cultivation of *foreign* varieties of vines for wine purposes was commenced as long ago as 1663 in several of the British North American colonies, but failed, in a few years, to be renewed only after these efforts were forgotten, with the same result. Efforts of this kind were made at other and different times and places up to the commencement of the present century, when some Swiss settlers undertook the cultivation of a *native* grape, called Cape, or Schuylkill Muscadel, at Vevay, Ind., and made wine with better and more encouraging success than had been previously attained. But they, like their predecessors in the manufacture of wines in this country, had to acknowledge, or did by its abandonment, their failure of satisfactory success.

Such a succession of efforts and failures by parties at widely different points, with climate, soil, and cultivation as various as can be imagined, reaching through a period of over two hundred years, naturally brought the public mind to the settled conclusion that our soil and climate were unsuited to foreign vines, and that none existed here from which grapes could be obtained to make a wine suitable to satisfy reasonable expectations, or fill the place of that imported. We were, and had been, therefore, reliable customers, from necessity, of foreign wine merchants. Those of Germany supplied us with the smaller quantity and better quality, as a whole, while France furnished some excellent, but a large proportion of inferior quality, as is generally believed. The frauds and impositions to which we were thus subjected can be judged of to some extent by what M. De Szemere, a Frenchman, says of wine fabricating in his own country. I give his own words:—"The marvelous discoveries of chemical science are continually and skillfully applied, not only to improve, but to adulterate wines. This trade of spurious wines is carried on in France on a large scale. All is false in the wines; the color, the strength, the flavor, the age, and even the name under which they are sold. There are wines which do not contain a drop of grape juice. Even science is impotent to distinguish the true from the false, so complete is the imitation. Certainly, one-half of the Parisian population drink, under the name of wine, a mixture in which there is not one drop of grape juice."

The same gentleman gives interesting statements showing the amount of real wine produced in France to be less than she annually consumes, judging from the productions of 1854-55-56 and '57. We received from there last year, in casks only, to say nothing of bottled wines, 6,885,360 gallons. How much of this was pure I leave for others to determine, or judge from the statements here made. I believe that a large portion of the cheap wines brought and consumed here as French, are mere fabrications. I would not undertake to say that all foreign wines are of this character by any means. We have, without doubt, the really pure, genuine European wines in this country, which are our standard of quality and excellence; but they are held in such high esteem by connoisseurs at home, and produced in such small quantities that they seldom find their way here, and then only at extravagant prices on individual or private orders. One pipe of the Steinberg vintage was sold in the year 1822 for the sum of 5,000 florins, or $7.14 per gallon, and in 1831 the same kind of wine for a no less sum than 10,000 guilders the pipe, or $14.28 the gallon, if we can believe Johann Carl Leuch's statements, which we have no reason to doubt. What must be the quality, in view of these assumed facts, of the wines imported on which a duty of 20 cts. was paid by the importer per gallon, and sold at 90 cts. per gallon, and some even as low as 75 cts., of which there has been no inconsiderable quantity brought to this country within the past year?

I cannot deny myself the privilege of this opportunity of saying it is ardently to be hoped that Congress will give the infant enterprise of wine making in this country the benefit of the proposed addition of 30 cts. a gallon duty on foreign wines, if they cannot guard or protect us against fraud and imposition.

About the year 1825, Major Adlum of Georgetown, D. C., brought prominently before the public a native grape from North Carolina, the Catawba, of such great excellence for wine purposes, in his judgment, that it has been reported he said that by so doing he had rendered his country greater service than he would have done had he paid off the national debt; in which Mr. Longworth, the pioneer of successful wine making in America, publicly professed concurrence after giving to its cultivation and wine making qualities the attention, energy, skill and practical judgment for which he was distinguished, and which added such weight to his opinion. A new era dawned upon the country with the advent of this noble fruit to public attention. It was believed a wine could be made from it to take the place of the pure and impure from abroad. Expectancy ran high above realization, but no final disappointment overtook its friends in the belief that it was far superior to any hitherto known.

So rapid did it grow in favor, and so extensive its cultivation, that a few years only elapsed before gentlemen of sagacity discovered that an opportunity offered for profitable investment in establishing wine cellars and press houses, for the manufacture of Catawba still and sparkling wine. The impetus thus given, and the success and reward attending these efforts, soon attracted the attention of the lovers of good fruit and pure wine in other localities, and it was not long before the whole country was awakened on wine making and grape growing. Other varieties, as the Isabella and old Cape, were used to a limited extent, but soon had to give place to the nation's favorite, the Catawba. Wine began to be made at various places by individuals for private use; new grapes came forward, and in a short time discussions arose as to their merits, and the defects of each, as well as their excellencies, became more generally known. Mr. Longworth, to whose large experience and extended knowledge of wine making all looked with respectful attention, was neither blind nor indifferent to the defects in the native grapes then known. The rough acidity and strong foxiness that characterize our wines were justly estimated by him, when in 1849, in an article published in the Cincinnati Gazette, he said:—"A native grape of different aroma and flavor, and in all other respects equal to the Catawba, would be worth a million of dollars to the nation."

Pleasant Valley, N. Y. C. D. Champlin.

The Castor Bean—Information Wanted.—"G. M. J.," Columbia, Texas, sends us the following query:—"Can any of your readers give an account of the mode of cultivating, gathering, preparing for market and yield of the Castor Bean? What is it worth in the market now? It will grow in the greatest exuberance here, and if cultivation is profitable anywhere it surely would be here." Will some of our experienced cultivators answer?

PRUNING WHEN TRANSPLANTING.

We consider it important to shorten back all fruit trees, shrubs and vines when transplanting. It lessens, by reducing the number of buds, the demand for supply on the roots as soon as that laid-up in the bud is exhausted, and it gives increased vitality and vigor to the remaining buds, by giving to them the supply that would have been devoted to those removed, had they been left to remain. There is, however, room for study in the practice of heading-in, because of the vigor of growth and power of producing strong, new shoots being much greater in some sorts than others. The peach, for instance, may be cut back to within two feet of the crown, leaving not a limb or twig, and yet the tree in the ensuing fall will be found, under good cultivation, to have made four or five strong shoots, each as many feet long, and with abundant lateral branches. Pursue the same course with the apple, and nine times out of ten the result will be only a few feeble shoots of four to six inches, with a dead tree the following spring. The pear when worked on the quince will bear much more severe pruning back than when on the pear stock; and further, some varieties will endure more severe pruning than others. The grape, when cut back two or three buds, grows vigorously; but if left unpruned, it struggles a year or two, produces a few imperfect bunches, and is dead. These are some of the many variations that an observing horticulturist will notice on short practice, and which will soon cause him to feel confidence in transplanting trees at any age, provided he be allowed to prune them back according to their age and habits.—*Horticulturist.*

LAWNS.

From the nature of our climate we can not, as a rule, have as perfect lawns, green, velvety, and fresh, as they do in England; but with due care in preparing the soil, and by using seed in abundance, we can create the foundation of a lawn equal to theirs, and that by proper care and attention to mowing, rolling, etc., will present an equally good appearance eight months out of the nine that we expect to enjoy it.

No complete lawn, no durable lawn, no lawn that will bear extremes of heat in summer and preserve the roots of grass from cold in winter, can be created without forming for it a soil of the best quality, light, loose, and friable, at least sixteen inches deep. And further, no good lawn, no perfect mat of grass can be obtained in one, two, or three years, without an abundance of seed. All spaces not occupied by seeds of grass sown must and will be filled with a growth of weeds that, as they grow, absorb the elements of plant-life in the soil, and choke the young and more tender growth of grass. For an acre, use two bushels of Blue Grass, two bushels of Red Top, and twenty pounds of white clover, and sow as early as possible in spring,—*Hort.*

Horticultural Notes and Queries.

Grape Growers' Excursion.—At the late meeting of the Lake Shore Grape Growers' Association it was resolved to continue the practice of having a summer excursion, and for this year it is to be on a grander scale than ever before. A large steamboat is to be chartered if possible to accommodate as many of the members as wish to go, with their families or friends, say 200 or 300 in all, with hotel conveniencies aboard, for a cruise of four or five days, starting perhaps from Dunkirk or Erie, and stopping at Cleveland, Sandusky, &c., then visiting the Islands and having a grand picnic at Put-in-Bay, and afterwards taking a pleasure trip to Detroit and back to Sandusky or Cleveland. Capt. J. Spaulding was appointed to look up a suitable boat and report to the officers of the Association.

The Fruit Region of St. Joseph, Mich.—Henry W. Gustin writes us from St. Joseph, Mich., that the prospect in that region for a full crop of fruit is at present very flattering. Last season was very favorable for maturing the wood of fruit trees, and experience has taught fruit growers there that it is only from severe cold in the winter, acting on immature wood, that they have to fear serious failure. This danger is now past. The following statistics relative to the fruit region are believed to be accurate:—Of peach trees there are 320,000, or 2,000 acres; pear trees, 30,000, or 500 acres; cherry trees, 5,000, or 50 acres; strawberries, 300 acres; raspberries, 200 acres; blackberries, 200; apple trees, in the fruit region proper, there are believed to be enough to yield 20,000 barrels.

Catalogues, &c., Received.—Transactions of the Massachusetts Horticultural Society for the year 1866, containing the Reports of various Committees, Address of the President, &c.—Catalogue of Rare and Valuable Seed Potatoes; Smith, Jones, & Co., Erie county, Ohio.

Sawdust for Mulching Strawberries—Berry Boxes.—(M. L. McC., Benton Harbor, Mich.) Sawdust is a good material for mulching Strawberries; if it is fresh put it on early in the season. For the best style of berry boxes see advertisement in Rural of January 5th.

Grafting Wax.—A correspondent sends us this recipe for making grafting wax:—"Six pounds rosin, one pound beeswax, one pint linseed oil; melt and work till it will swim in water. The oil resists cold, water and heat better than tallow."

The Apple Tree Borer.—(W. J. B., Grassland, Mo.) You must search carefully each tree for the borer and destroy him by running a sharp wire into his hole. It is some work, but the only effectual remedy. Eternal vigilance is the price of fruit.

English Hawthorn.—A correspondent desires information about the English Hawthorn; when to plant, how to grow it, its hardiness and practicability for hedges, &c. Who will answer?

Barberry Seed.—J. B. C., Clinton Co., Iowa, asks for information respecting the barberry for hedging; also where the seed may be procured, and how to grow the plants.

Cranberry Plants.—T. G., Kenosha, Wis., asks where cranberry plants or sets can be obtained.

Domestic Economy.

A KNITTING MACHINE PREMIUM!

Several ladies having asked us to offer the Lamb Family Knitting Machine as a premium to Club Agents, we have finally made such an arrangement that we can do so to their advantage, if not ours. We will give the $65 machine to every person remitting at club rate, $2.50 per copy, for Sixty-Five Yearly Subscribers to the Rural New-Yorker previous to the first of July next. Subscriptions to count for this premium may begin with the Year and Volume (January 5, 1867,) or at any time not later than July 6, and club papers will be sent to as many different Post-Offices, Counties or States as desired. All papers will be addressed to individual subscribers, so that Agents or Post-Masters will have no trouble. It is not necessary to have all the members of a Club commence at the same time; those wishing them can have back numbers, and others begin at any date desired.

Now, Ladies, if you wish to secure a machine that will save you many times its cost, "fly round" and get up a club for the favorite Rural!

WASHING DAY.

I always read everything that comes in my way that looks towards ameliorating the severities of washing day. That was why I read what Peter Hathaway had to say in the Rural New-Yorker of Jan. 19th. Like him, "I have from boyhood sympathized with delicate women who weekly labor at the wash tub," and I think the facts presented by him are worthy of being tested. Rubbing clothes by hand certainly involves a great deal of labor and exposure to hot steam, &c.; and *rubbing*, by either hand or machinery, subjects the garments to a great deal of wear, and sometimes tear.

Within a few years I have tested several kinds of *squeezing* machines. One of these I have used for several years. For efficiency and saving the wear of clothes, I find but little difference in them. They are all superior, in my opinion, to any of the *rubbing* machines. But for ease of working, efficiency, and several other practical points, some of which I will mention, Doty's machine is ahead of any that I have ever seen used. In fact, I can hardly see how or where improvement is needed. Ease of working is already mentioned. A child large enough to reach the handle, can use its strength to good advantage. A child of average strength, twelve years old, can do a washing for a common family. The machine has a nice fitting cover which answers at least three purposes:—It keeps the water hot; it keeps the steam out of the face of the operator; it keeps the filthy suds from spattering out upon the floor, and upon the person of the operator. This last is quite an item, for you can do your washing in a parlor, or with a little care you can keep your wash-room as dry as a parlor. One more use of this useful cover. The machine, being light and portable, can be carried out of the way, but need not be, for the cover comes again to your relief and converts it into a quiet water bench or table. If your water pail leaks, no matter,—you will find no water on the floor. Any family that is perfectly happy every day in the week but one, should get Doty's washer, and see if its bliss is not consummated. In order that each family can test these machines, those having them on sale allow any responsible family to use them three weeks before deciding the purchase. This ought to be a sufficient guaranty against humbug. Yours, for the public.

Henry A. Trench.

VARIOUS ORIGINAL RECIPES, &c.

Buckwheat Cakes.—Seeing an inquiry in your paper for making buckwheat cakes, I send you my recipe, which I think a little extra. I take two quarts of sweet milk and stir in flour enough to make a thin batter; as it thickens by raising, add one teacup of yeast; let it stand where it is warm enough to raise; just before baking put in one half teaspoonful of soda and two tablespoonfuls of thick cream, or one of melted butter. The cream and soda I put in every morning, and I think my cakes good enough for any one.—A Farmer's Wife, *Windham Station.*

White Potato Pudding.—A quarter of a pound of butter, ¼ pound of sugar, 4 or 5 eggs, 1 pound of potatoes mashed exceedingly fine, with a little cream and salt through a colander; 2 tablespoonsful of brandy, 1 grated nutmeg with ⅓ a teaspoonful of cinnamon. Beat the butter and sugar to a cream, then add the potato, eggs, brandy and spice. Line your plates with paste and bake in a quick oven. When done and cool, slip into plates suitable for the table, and sift white sugar over them.

Mending Broken Vessels—Cement.—To half a pint of milk put a sufficient quantity of vinegar in order to curdle it; separate the curd from the whey, and mix the whey with the whites of four eggs, beating the whole well together; when mixed, add a little quick-lime through a sieve until it acquires the consistency of a paste. With this cement broken vessels or cracks can be repaired; it dries quickly, and resists the action of fire and water.

An Inquirer, J. S. R., wishing a method of washing flannel, I will give you my way, which I have tried for some years and have not found it to fail:—Put them in water as hot as you can possibly wash them in, and rinse them in hot water also. Wash woolen stockings the same. —Mrs. Emily S.

Economy.—It is truly economy to use D. B. De Land & Co.'s *Best Chemical Saleratus*, because, for the same money you get *more* and *better Saleratus.*

Ladies' Department.

Written for Moore's Rural New-Yorker.

MATRIMONIAL COGITATIONS.

When I contemplate the social future of the young men of the farming community, my heart is saddened with anxious forebodings. Many of them have accumulated considerable property, have arrived at a marriageable age, and in the opinion of all the old ladies of their vicinity, ought to "get married and settle down;" but still they procrastinate, and in the arduous prosecution of their labors seek to divert their minds entirely from the subject. Although they are invariably prompt in accompanying young ladies to singing school, pic-nics, sleigh rides, and the various entertainments of the country, and kind, considerate and interesting in their conversation and attentions, still the undisguised pleasure experienced by their fair companions is miserably marred by the sorrowful conviction that "nothing serious is intended."

My young lady friend, denizen of the country, who is responsible for this unnatural state of affairs? Pardon the insinuation, but I candidly think that much of the blame rests on your own pretty shoulders. With burdensome sorrow and regret I daily witness the gradual encroachments of city notions and ideas upon the wholesome customs and habits of the country; and the "country girls" are among the first to yield to these pernicious influences. They demand more "style," and manifest a dislike for home duties which every visit to the city, and every improved opportunity for having a "good talk" with their city associates, only serves to strengthen. Mothers, in many cases, are reprehensible, in that, forgetting the sensible precept and practical discipline administered to them in in youth, they encourage their daughters in the manifestation of fashionable and literally idle whims; so that, instead of performing household duties with pleasure, they seem to consider them beneath their notice, and nothing perturbs them more than to be "caught" doing housework. This fastidious squeamishness often creates considerable excitement in the household. For instance, JANE, while per force mopping the floor, spies through the window a young man for whom she entertains at least a friendly feeling coming through the gate. The mop is instantly abandoned; and, leaving mother to rid her hands of the dough and welcome the visitor, JANE rushes up stairs to change her dress and "fix up." The young man must be entertained; and mother "visits" to the best of her ability, frequently casting hurried, anxious glances first toward the bread-pan on the kitchen table, and then at the stair-door, her uneasiness increasing as she reflects that the fate of the week's baking trembles in the balance. The visitor notices her abstraction, mistrusts the cause, and returns home ruminating moodily on the vanity and frivolity of the fair sex.

Were I a "squire," clergyman, or other official having authority to solemnize the rite of matrimony, I would supply myself with a new catechism containing comprehensive practical questions on domestic economy; and as the fair bride stood before me and the hymeneal altar, or desk, as the case might be, I would endeavor to give additional interest to the ceremony by satisfying myself in regard to her house-keeping qualifications; and unless a certain per cent. of the questions were properly answered, I could not conscientiously say anything about the "twain being one." F. S. J.

Oakfield, Wis., 1867.

A BEAUTIFUL TRIBUTE TO A WIFE.

I was guided in my choice only by the blind affections of my youth. I found an intelligent companion and a tender friend, a prudent monitress, the most faithful of wives, and a mother as tender as children ever had the misfortune to lose. I met a woman who, by tender management of my weaknesses, gradually corrected the most pernicious of them. She became prudent from affection, and though of the most generous nature, she was taught frugality and economy by her love of me. During the most critical period of my life, she relieved me. She gently reclaimed me from dissipation; she propped my weak and irresolute nature; she urged my indolence to all the exertions that have been useful and creditable to me, and she was always at hand to admonish my heedlessness or improvidence. To her I owe whatever I am; to her whatever I shall be. In her solicitude for my interest she never for a moment forgot my feeling or character. Even in her occasional resentment, for which I too often gave her cause, (I would to God I could recall those moments!) she had no sullenness or acrimony. Her feelings were warm, nay impetuous; but she was placable, tender and constant. Such was she whom I have lost, when her excellent, natural sense was rapidly improving, after eight years' struggle and distress had bound us fast together, and molded our tempers to each other; when a knowledge of her worth had refined my youthful love into friendship, and before age had deprived it of much of its original ardor. I lost her, alas! the choice of my youth, the partner of my misfortunes, at a moment when I had the prospect of her sharing my better days.—*Sir James Macintosh.*

A PRETTY girl, in a teasing mood, asked a gentleman if he possessed the picture of the one whom he loved; and on his replying "Yes," begged he would show it to her. He immediately took a small mirror from his pocket and presented it to her.

ROSSEAU says:—Men will argue more forcibly about the human heart, but woman will read the heart much better. Women have most wit; men the most genius. Women observe; men reason. The world is the book of woman.

THE BLACKSMITH'S WIFE.

BY AUGUSTUS COMSTOCK.

She has a figure trim and neat,
And full of health and life,
With nimble hands and nimble feet,
The blacksmith's little wife.

Her hair is dark, her eyes are blue,
And though her cheek is browned,
An anchorite would smile to view
A face so smooth and round.

All day she labors like the bee,
The blacksmith's little wife,
While round her play her children three,
Bright-haired and full of life.

And all day long, her cheery song
Comes through the cottage door,
While tap, tap, tap, her gaiters rap
The neatly sanded floor.

Her swarthy husband, from the town,
Comes home when day is dim;
For kisses he must stoop 'way down,
Or she climb up to him.

He's just the man that women crave
To shield them from "the wrong,"
For he's as kind as he is brave,
And brave as he is strong.

"You're tired out with work," she sighs;
"You lead a weary life."
"No, no," quoth he, "'tis Paradise,
With such a little wife."

The gleeful fire with ardent rays
Peeps slyly from the hearth,
The tea-pot blushes in the blaze,
The kettle shakes with mirth.

The sleek "grimalkin" purs and mews,
The dog whines at the door,
The pattering of little shoes
Is heard along the floor.

About the smith his children play
When evening's meal is through,
They love to see his pipe of clay
Send forth its clouds of blue.

They clamber on his shoulders broad,
They clamber on his knee,
While wife looks on with smile and nod;
And all are full of glee.

I'd sooner be this blacksmith bold,
With such a little wife,
Than have the wealth of yellow gold
That gilds an aimless life.

TO CONTRIBUTORS.

The following contributions are respectfully declined for the reasons annexed:—"The Magic Purse," G. B. Not interesting or novel enough to make it worth the labor required to put it into proper shape. Such spelling as "flew" and "phisition" is inexcusable.——"Floribelle," L. I. D. Your plot is certainly exciting, but neither natural nor consistent. The act which the heroine was only by an accident prevented from committing would have been monstrous. Is it customary for young ladies in long dresses to sit on their fathers' knees and recount their *affaires de cœur?*——"My Winter at Uncle John's," M. M. You have not drawn your characters with any distinctness, and have introduced no description; the interest therefore must depend on the plot, which under those circumstances is too simple.——"What he Need n't, and what he Must be." T. P. Metres badly mixed.——"Problems," B. F. B. Too long. "Woman's Rights," C. T. L. If you will think of the tone of your closing paragraphs, you will see why we cannot publish the article. Other accepted.——"A Dream," A. Prettily rhymed, but the meaning is incomprehensible. Allegory is the most dangerous of all rhetorical figures.——"Mysteries Explained," B. F. B. Not well versified. The discoveries of Capt. M'Clintock spoil your allusions to Sir John Franklin.——"The Old Year," G. M. K. Out of date.——"Homesickness," Z. X. You read Nasby too much, or study your grammar too little.

Choice Miscellany.

NOVEL READING AND WRITING.

The common objection to novel-reading is that it carries us into an unreal and fanciful world and creates a distaste for the duties of common daily life. If this is all—that it lifts from the real into the possible, from the acted into the imagined—then is it truly ennobling; for there is no life more base and soulless than that which consists simply of the present and the actual, which has no out-looking and on-looking toward the unacted and unspoken life of thought and feeling, and dream. But in reality there are few, if any, such lives. To all there is an ideal future, or a sun-clad might-have-been. It may be only the realization of some contemptible dream of worldly ambition, some petty triumph, but it is something aside from and beyond the passing events.

The question is not whether the ideal shall be cherished, but what kind of an ideal it shall be. And we do not realize how strong and how constant is its influence over us, how thought, released, flies away to it, and fancy roams over it and dwells contentedly in it; and so we do not enough realize the necessity of cultivating and educating it aright. It is only by training the power of passing from present reality to future possibility that spiritual truth can be made to permeate and transform the life. Reason may say—This is the way of truth and purity and peace; but it is only when imagination lifts such a path into the ideal of the soul that the feet can tread it unfalteringly. Faith is but imagination spiritualized.

It is comparatively not difficult to estimate the consequences of acted deeds, their immediate results and remote influences, their open example and subtle impressions. And in the direct imparting of the principles of moral rectitude we can work with that strong faith, which is the trust and hope of religious instruction, that truth left with the soul will surely triumph; that, however unpromising the soil, seed-time and harvest are inseparably connected, if it be real truth that is sown.

But when we leave the didactic and direct, and pass from the education of reason into the more dimly-defined, but not less real field of the imagination, our notions of the influence of idea and impression become vague and beclouded. Yet none the less should these subtle influences of association and fancy, of whose workings the individual himself may be unconscious, be laid hold of and trained to aid in making this our common life more worthy to blend with the ideal into which we enter with unsandaled feet when most the spiritual and the distant seem to draw near and close around us.

It is not an indiscriminate prohibition of all fiction that is needed; the imagination will play along untraveled paths; nor is it desirable, even if it were possible, to keep it down to occurrence and fact. Neither is it wise, in choosing for others, even if it were practicable, to discriminate between those which truly represent character and life, and those which are entirely devoid of probability and naturalness. We cannot always stand over the half-formed mind with recommendation and prohibition. We must in a great measure leave this to its own tastes and cravings. Here, as in all education, the power of choosing rightly must be trained, and the choice left to itself.

It is useless to speak of that class of novels which are designedly "moral," which have no more life than a dry twig that you might set in the earth and call by courtesy a tree, in which the good way and the bad way are marked in direct opposition, with none of those continual intersections with which our human life blends and confuses the right with the wrong. It is becoming generally understood that such works have no influence whatever.

The fault with the current novels is not so much that they lead away from the real into the ideal, as that it is not an ideal of exalted character and heroic act, but a miserable, worldly ideal of circumstance and accident. It is a new worship of the old gods of chance and fate. The fortunate consummation is not the triumph of virtue and goodness because it is virtue and goodness; but circumstances having no connection with the truth and rectitude which are the invariable characteristics of the heroes and heroines of our "good moral tone" novels are made by happy chances to work out the reward of virtue. The patient endurance of purity and integrity may indeed be portrayed; but it is not through them that final happiness is attained, nor in them that interest and excitement center. They would be as well out of the story as in it—it is not on them that its issues hang. What wonder, then, if the dreaming boy or girl fancies similar fortunes and like happy accidents to himself, without the patient suffering or heroic doing that may make him worthy of them? If the deserving heroes are invariably left in a Paradise of wealth and outward luxury as their reward, can we wonder that the impressible reader learns to look on these as the greatest good of life?

The fiction whose interest turns on the tying and solution of the knots of accident and circumstance is the first which awakens our interest, but it is the product of ingenuity rather than of genius, and its power to interest passes away, on the acquirement of nicer tastes. The finer art of novel-writing is that in which the interest depends on the working out of character, the strong and subtle threads of influence, the invisible links which join one destiny to others by virtue of soul-qualities, the deeds and the results which are the logical outworking of the moral and intellectual traits of the actors. Such works, read and felt, are the true education of the imagination; but the taste must first be trained to appreciate them. This cannot be done by simply presenting and securing the reading of them. They will be seized on only for the sake of plot and incident; and the high ideals of character and the finer lines of thought will be overlooked. The taste must first be trained by works in which more depends on the style of thought and expression and there is no interest of mystery and story to share the attention. If this is done, all trashy and flashy novels, will, of themselves, fall from the hands, and the higher ideals of character and life will be admired for their own nobleness and imitated in the genuine love of truth and beauty.

Walnut Hills, O., Feb., 1867. E. M. J.

APHORISMS AMENDED.

There are many persons who cannot speak in sensible, common-place terms—they are always on stilts, and aim to carve out their language in blank verse. Instead of saying, for example, "*He acknowledges the corn*," they would render it about thus:

He doth by troth, with most ingenious humor,
Confess th' impeachment common fame hath bruited,
That with it carries conviction of the maize.

While on the subject, we will enumerate a few other trite sayings, accompanied with renderings after the manner of these dignified bores:

It's a long lane that has no turn"—
The way that deviates nor right nor left,
But onward leads through space interminable,
May be, by fair construction, deemed of length
Somewhat respectable.

"*The longest pole knocks down the persimmons*"—
It is an axiom well received, I ween,
That, of the slender scions of the forest,
The one which in a longitudinal sense
Eclipses the pretensions of its fellows,
May oscillate, until their fall,
The staple fruit of Carolina State.

"*A fine stand for a grocery*"—
A most commodious site,
Where all the multitudinous fruits of earth,
That nourish and regale the inner man,
Are held to barter.

"*Old hoss, I'll see you in the fall*"—
When 'neath a canopy of golden leaves,
'Mid all the purple glories of the state,
Summer, in fragrance, breathes her life away,
And sober autumn is enthroned instead,
I'll meet thee, antiquated steed.

WIT AND WISDOM.

A person asked an Irishman why he wore his stockings wrong side outward. "Because," said he, there's a hole on the other side."

What air does the young mouse sing to the old mouse, when biting his way through the scenery at the opera? "Hear me gnaw, ma."

Nearly all the post-offices in Texas are in charge of females. It works so well that the males now arrive and depart every hour in the day.

"I'm afraid you'll come to want," said an old lady to a young gentleman. "I have come to want already," was the reply; "I want your daughter."

"Do you think that raw oysters are healthy?" asked a lady of her physician. "Yes," he replied, "I never knew one to complain of being out of health in my life."

Words, so innocent and powerless as they are, as standing in a dictionary, how potent for good and evil they become, in the hands of one who knows how to combine them.

An old bachelor being laughed at by a party of pretty girls told them—"You are small potatoes." "We may be small potatoes," cried one of them, "but we are sweet ones."

A counsel being questioned by a judge to know "for whom he was concerned," replied, "I am concerned, my lord, for the plaintiff, but I am employed by the defendant."

"Now papa, what is humbug?" said a little four-year-old Johnny. "It is," replied papa, "when mamma pretends to be very fond of me, and puts no buttons on my under-garments."

A Frenchman cannot pronounce "ship." The word is "sheep" in his mouth. Seeing an iron-clad, he said to a boy, "Ish dish a war sheep?" "No," answered the boy, "it's a ram."

"If you had avoided rum," said a rumseller to a customer, "you could now ride in your carriage. "And if you had never sold rum," said the bacchanal, "you would have been my driver."

LIFE STORMS.

BY JENNIE W. J——.

There are storms on life's dark waters,
Hope's frail barks are tempest-tossed,
And oft our fondly cherished dreams
'Neath its angry waves are lost;
But we'll trust the Heavenly pilot
To find a haven blest,
"Where the wicked cease from troubling
And the weary are at rest."

When tempests gather round us,
And the star of Hope grows dim,
When the storm-cloud lowers darkly,
Let us put our trust in Him;
He can guide us to a resting place
For bleeding hearts distressed,
"Where the wicked cease from troubling
And the weary are at rest.

Though the burden of our sorrow
Groweth heavier, day by day,
And though alone we bear it,
Let us still keep on our way;
Even though the path be thorny,
And we by trials pressed,
Let us hope to gain a respite
"Where the weary are at rest."

Honeoye Falls, March, 1867.

Written for Moore's Rural New-Yorker.

CHILDHOOD.

"As the twig bends, so the tree inclines."

The world rolls on, humanity rolls on, everything rolls on, on forever. O man, thou art immortal! This we know, although the world is shaded o'er with mystery, although we see as through a glass darkly now, yet we do know that man is, to-day and forever. The question is, with us of the present age, as it should have been with those that were from ADAM, and ought to be with those that shall march down the foot-path of time to the Millenium—Is there enough done for childhood? When we review the world's history, when we look out upon it as it stands to-day, we are forcibly impressed to ask, do we work earnestly, work as Christians around the family altar, in the day school, in the Sabbath school, in the closet of prayer for childhood? True, we have schools, and, although we have not Germany's school laws, although we are proud of American institutions and American literature, yet there are men all around us who cannot read one letter out of the twenty-six, who will make a mark for their name every time, and will come up to the election poll and vote for a draught of poison.

Again, a large majority of the young ladies of the present day receive too fashionable an education and if they were to be asked who was the first king of Israel, or how DEMOSTHENES, CICERO, POMPEY and ANTONY came to their death, or who CONFUCIUS was, they would answer, "I never heard of these men." But ask them what the fashions are to be for the coming month, and they will tell you. Very well, who is to blame for these misguided minds? We have Sabbath schools, noble institutions, where a few who belong to the church of Christ are laboring for childhood, for humanity, for GOD. Suppose it were possible for those few to sacrifice a little time, a little labor, and meet one night during the week as teachers, as heads of the Sabbath school to "Buy the truth, get wisdom, instruction and understanding," that they may be better prepared when they come before the youthful mind to teach the truth, impart wisdom, instruction and understanding.

As a teacher, there is a great responsibility resting upon you. The molding and fashioning of the child's intellect is as much within your power as in that of the parents; and the impressions that you make upon these young minds do not fall upon stony ground. No, your good works will live in them, will go down to the grave with them, will go up to the judgment seat with them, will go on, on forever. Therefore if we sacrifice a little time and labor, remember that we are not only sacrificing to childhood, not only sacrificing to humanity, but to GOD. LIBBIE.

Geddes, Feb., 1867.

Written for Moore's Rural New-Yorker.

HAPPINESS.

Happiness is not local, and more depends upon that which is within than upon that which is without. A man may be miserable in the company of those who are exceedingly happy. If an evil spirit could escape from the pit and stand beside the glorified in Heaven, he would still be miserable, for there would be no application of the principle of truth and goodness. A bad man who had done much to corrupt his neighbors found himself unhappy and resolved to reform and move to a good neigborhood and live amidst a virtuous people. He did move and found his neighbors happy and content, but the demon who had troubled him before still ruled his heart, and he found no peace. Water puts out fire if applied. The Crystal Palace in New York stood in a park close beside the great reservoir of water, yet it availed not, for it was burned. So a ship at sea burns as fiercely as a cottage on the land. Thus it is with the soul of man—a full redemption has been purchased, and the Saviour is now ready to save all who come. The remedy must be applied—we must put on the righteousness of Christ or we shall still be unclothed and we must accept the salvation provided, or we shall perish. It avails not that Christ knocks at the door of our hearts, we must open to him if we would have life.

Syracuse, Feb., 1867. FITCH.

Have courage to obey your Maker at the risk of being ridiculed by man.

The Traveler.

Written for Moore's Rural New-Yorker.

HOME SCENERY.

BY L. HALSEY.

On one of those pleasant days, so unusual in November, but the more agreeable to the traveler because unexpected, I embarked at Geneva on Capt. Dey's handsome and staunch little steamer, the "D. S. Magee," for a trip over the almost classic waters of the beautiful Seneca.

It would be well worth the labor, for one who is skilled in the investigation of legendary lore, to collect, before it is too late, the many interesting legends which are connected with our charming inland lakes, and which invest them with an unwonted, and (as we learn more of their history,) deepening interest. There is, perhaps, no other lake, among the many in Central New York, more beautiful than that of which Percival sang:

"On thy fair bosom, silver lake,
The white swan spreads her snowy sail."

And there is none around whose history cluster more of those mysterious legends which have been handed down to us by that race whose scattered remnants have been driven far away towards the setting sun. It is strange that more attention has not been bestowed upon the collection and preservation of these curious legends. Soon they will be forgotten; and the information they contain, concerning the early history of our country and its aboriginal inhabitants, will be lost forever.

The lands about the lakes, Cayuga and Seneca, seem to have been favored haunts of the red men, as is shown by many remains of ancient fortifications and Indian villages. Some of the "turnpike roads" of the present day follow the course of the Indian war trails which formed the only means of communication for the early settlers. Trails led from the headwaters of the Delaware River, and from the forks of the Susquehanna, and formed a junction at Catherine's Town, (now Havana,) and thence running north through Peach Orchard, (an Indian plantation,) passed along the eastern shore of Seneca Lake, until, at the outlet, it reached Canadesaga, (now Geneva.)

Our first "port," after leaving Geneva, is Dey's Landing, so named, I believe, in honor of Capt. D. P. Dey, the genial commander of the "Magee," who, more than almost any other person, is interested in all that concerns the history of the beautiful Seneca. He is familiar with its legends, and with the half-hidden beauties of its picturesque shores. Near Dey's Landing is a small but deeply-cut ravine, and a little way "inland" is the hamlet of Romulusville.

Crossing to Dresden, and re-crossing to Ovid Landing, we come in sight of the State Agricultural College building, once under the control of Major (now General) Patrick,—one of those unfortunate public institutions which seem doomed by fate to a masterly inactivity. The College farm of several hundred acres has been purchased by the State, and now other large buildings are going up on the lake shore, not far from the steamboat landing, designed for a State Lunatic Asylum. The village of Ovid is celebrated for its seminary building, a handsome brick edifice, four stories high and one hundred and fifty feet in length.

A short distance up the lake is Lodi Landing, which is not far from the beautiful Lodi Falls. At some seasons of the year this is a spot of surpassing beauty. The falls are nearly two hundred feet in height, but not perpendicular. They will compare favorably with the far-famed Trenton Falls.

Our next stopping place is North Hector, a pretty little village, perched on the steep ascending lake bank, and a favorite resort for pleasure excursionists. At this part the lake is of great depth, and at Starkey Point, about half way between Lodi and Ovid, the depth is 630 feet. Crossing to the other shore, we see, at Big Stream, a beautiful little fall of considerable height, and in full view from the steamer. The whole country here is intersected by ravines worn in the soft shales, some of which are just becoming known to the tourist. Cascades and waterfalls are frequent; and when the streams are swelled by the spring or autumnal rains, some of these falls are of exquisite beauty.

Near the head of the lake is Havana, where Catherine's Town, (so called from its being the residence of Catherine Montour,) an important Indian village, once stood. The history of the strange woman to whom we have alluded was full of romance. It is supposed that Catherine Montour was the daughter of Count Frontenac, one of the French Governors of Canada. She was captured when a child by the Seneca Indians, and carried to their territory, where she became the wife of a chief. Her extraordinary beauty, energy and courage gained for her the admiration—almost veneration—of her adopted people. It has been stated, but also denied, that Catherine Montour took an active part in some of the bloody battles between the red and the white men. After the expedition of General Sullivan, which dispersed the already weakened Senecas, Catherine Montour and her warrior sons resided at Niagara. When on a visit to Philadelphia, she is said to have been the guest of the most aristocratic families, and to have participated with ease and grace in their entertainments.

The present lake road, on the western shore, with slight deviations, follows the Indian trail and offers beautiful and diversified scenery to interest and delight the traveler. At the head of the lake is situated Freer's (or Watkins) Glen, which is becoming a favorite resort for pleasure seekers, and has been skillfully exhibited to the readers of the Rural in a description by one who visited it in 1865.

The scenery here is wild and picturesque in the extreme, and Mr. Ells, the proprietor of the Glen, and also member of the editorial fraternity, is yearly making it easier of access, and opening hitherto concealed beauties to the admiration of the visitor. During the past season, Capt. Dey has carried thousands of visitors to this romantic spot. The excursion, as I made it, requires but little time, and the exploration of this wonderful glen, added to the pleasures of the trip up the lake, renders the journey a most delightful one.

SCENE ON SENECA LAKE.

Useful, Scientific, &c.

EXTRACT OF HEMLOCK BARK.

Thomas W. Johnson, Boston, through the columns of the Maine Farmer, assumes that the State of Maine has within its borders a source of great wealth which has hitherto attracted but little attention. This neglected mine is found in the hemlock forests which cover a large section of the State, comprising about five millions of acres. It is assumed, and no doubt correctly, that this land will produce twenty cords of bark to the acre, or one hundred millions in all. Were this to be removed to market in bulk, the process would be very expensive, diminishing very materially the net product of cash from this source. But, by a well-known process for extracting the strength of the bark and preserving it in a liquid form, the value of this forest product has been appreciated many fold. A fair test of the cost of procuring and getting it to market showed it to be a very profitable business. A cord of bark will produce about 27 gallons of extract, costing, delivered at some point of shipment, from five to six dollars. A gallon weighs ten pounds, or 270 pounds to a cord of bark. This sells readily for six cents per pound, giving $16.20 per cord of bark, or about $11 clear profit.

Owing to the excellent tanning properties of this extract, it will always find a ready market, both domestic and foreign, and, on the supposition that the yield will equal, per cord, the estimate of Mr. Johnson, which we have no reason to question, we have an aggregate of money value in the hemlock bark of the wilds of Maine of *eleven hundred millions of dollars!* This leaves out of account the lumber value of the trees felled for the bark, which must be considerable as the country becomes cleared up and the means of access to it improved. With this reserve fund to draw upon, the people of Maine and other States producing hemlock timber, exercising proper industry, may grow rich as certainly and as rapidly as those States lying in more genial latitudes and blessed with a more prolific soil.

NEW TEXTILE IN NEVADA.

The last discovery which comes to us from Nevada is agricultural rather than mineral, but very important. It is of a new textile, such as was eagerly but unsuccessfully sought when the late rebellion broke out. The plant now discovered has its home in the Humboldt Valley, where it grows in large quantities, and can of course be made to grow more thriftily by cultivation, while, if it has the values that are ascribed to it, it will soon be removed to other fields and propagated among regular crops. This plant is said by the discoverers to be superior to any textile now in use. Though styled "hemp," it is so called on account of its closer similarity to that than to any other growth. It has a stronger and a finer fibre than the proper hemp, and a much longer staple. In proportion to the wood, too, the fibre is much more abundant. It can be more easily separated than flax or hemp, and can be stripped clean from the stalk without preparation.

Nevada lies between 37 deg. and 42 deg. north. This corresponds with the latitude of Northern California, of San Francisco, Salt Lake City, Indianapolis, Columbus and Philadelphia. The Humboldt river, along which the new hemp grows, runs from the mountains of that name westward through a mountainous country. If, therefore, experiment proves what is now claimed for this textile, it can be prolonged in its cultivation from its original habitat to our own doors, and will enhance the value of the hemp harvest in those States where it is now an important feature.

The Sultan of Turkey has officially informed the leading powers of Europe that he has decided to call together an assembly of the representatives of all different religious creeds in the Ottoman Empire for the purpose of deliberating upon and adopting measures for the more effectual execution of the provisions of the firman of 1856.

Various Topics.

SUBSIDENCE OF SPECULATION.

Not long ago a gentleman of this city, who has had some experience in speculative enterprises, received a letter from a cool-headed, intelligent friend in Virginia, asking him what was the chance of selling a gold mine here. It had just been discovered; it adjoined one of the most famous mines in the State; it had five well-defined lodes; not to put too fine a point upon it, it was a hill full of gold, mixed with just enough baser earth to impart to the working of it a tantalizing but delicious speculative interest. The title was perfect and the most thorough examination desired. Of course the owners of the property placed an enormous value on it. They always do. But it could be had cheap for cash, say $50,000. This, too, is generally the case. What could the New York party do with a "solid, demonstrable thing like that" among the wealthy capitalists, of whom he was supposed to have the private ear? He put the letter in his pocket and started out. Entirely skeptical himself as to the possibility of raising another hundred dollars in this city for a new mine, he determined to try for his friend. He called upon five or six well-to-do people, whom he regarded as most likely, all things considered, to interest themselves in the explorations of a gold mine so near home as Virginia, and these were about the results of his inquiries:

One gentleman—a shrewd, successful old merchant, after hearing a statement of the fact crammed into the space of three minutes, said with a grin, "One half of the purchase money goes to you 'as promoter,' I'spose, ha! ha!" His visitor took the hit good-naturedly, but asserted most emphatically—which was true—that he had not a dollar's interest present or prospective, in the concern. On the contrary, such was his confidence in the judgment of his Virginia friend, that he would be willing to subscribe, according to his means, on the same basis as all the other gentlemen. "I was only joking," said the veteran merchant, "about your interest in the sale. But I got stuck once for $15,000 by a man that talked just as you do, and *I guess I won't put a dollar in the mine on any terms.*" This closed the case, and our friend left.

Another individual, a man commonly supposed not to have dabbled in speculation, was called upon. Here, if anywhere, confidence could be found. After a patient audience, which promised well, this unsophisticated person said, "You can keep a secret, Mr. ——?" "As sacredly as the grave," was the response. "Then I will show you a few things not generally known." So saying he unlocked a drawer of his desk, produced a large sealed envelope, and from that extracted a good sized bunch of gold and silver mining stocks. His visitor glanced over them and recognized names of companies that had filled columns in the newspapers a few years ago. "My partners never saw these," said the owner." "They are worthless, as you well know, except to show to men like you, *who want me to go into more of them.*" Our friend discovered the playful imputation conveyed in the latter words, and cut short his visit. He was beginning to feel discouraged.

A third capitalist answered but one word to the presentation of the case. But that word was "Petroleum," and it terminated the colloquy. A fourth was disposed to regard the proposition in the light of a personal insult; a fifth wondered that our friend did not get back into respectable business, and so on.

Next day's mail took a letter to his correspondent in Virginia, stating that the "times were not favorable for doing anything with a gold mine in New York."

The above is substantially a recital of facts. The deduction from our friend's experience may be applied to speculations generally. The questions involved are not of the value of mines in Virginia, North Carolina, Georgia, or the judiciousness of investments in these States. The same skepticism prevails with reference to new mining claims in Colorado, Idaho, Montana, California and Canada, offered here for sale, or the disposal of working interests. People no longer believe in them, and whether their incredulity is well founded or not, is a point of no consequence. There is a want of faith, and, therefore, a complete subsidence of speculation in things which do not have a real, proved value. This is as true of new machines, new processes, and new ideas of any kind, whether patented or not, as of gold and silver mines. The people, as a whole, have settled down to the "bed-rock" or "hard-pan" of legitimate business again, and a man who is still trying to speculate on the exploded basis of 1864-5, is no more touching ground than Baron Munchausen's horse when he was tied to the top of a steeple.

A knowledge of human nature is more important to a speculator than a knowledge of the thing speculated in. Instead of analyzing gold and silver ores, he should analyze the condition of public sentiment. If he finds no appreciable percentage of faith there, it matters not how much of the precious metals exist in a ton of his ore, or how certainly a fortune could be made by the manufacture of some patented article in universal demand. To state this is to state an axiom. But there are men whose misfortune it is never to see things as they are, but as they wish them to be, and of such is the class composed who are now trying to make a living by expedients which ceased to be successful soon after the close of the war. It is the ability to discover, and the good sense to follow indications of a change of feeling on the part of the public, which makes all the difference between the few speculators who achieve and retain success and the thousands whose lives are a perfect failure. From their fate, and not from that of the lucky few, may the true lesson of speculation be learned without the painful necessity of experience.—*N. Y. Journal of Commerce.*

AN UNFORTUNATE PRIZE-HOLDER.

A man who lives in one of the rural counties of Ohio drew the prize of "20,000 acres of land in Pike county, Kentucky," in a recent gift enterprise scheme in that vicinity. He called upon the managers of the enterprise and told them he didn't want the land, and they might keep it by giving him $20,000. They declined the offer, generous as it was, and then he dropped to $15,000, and finally to $10,000, declaring that he "hoped never to see his wife and children if he would take a cent less." The gift men didn't want the land. It was worth double the price he offered to take for it, of course, but they had other uses for the money and couldn't invest. He took the deed for the land—would gladly have taken the will for the deed, that is, if they had willed to give him the money—and went to Pike county to view his possessions. He found twenty thousand acres of barren rock and mountain, that would hardly afford subsistence for a rattlesnake. He couldn't find a level spot of ground that afforded sufficient space for the most economical garden patch, but he could instead

—— "See rudely swell
Crag o'er crag, and fell o'er fell."

And nothing else. He wended his way back again—"all the way from Pike"—and offered to let the gift managers have the land for $800—hoped to die if he'd fall another cent. They declined the offer, singular as it may appear, but finally agreed to take it off his hands and pay him $500. This he indignantly refused, and so he still remains one of the great "land monopolists" of the day, the owner of an exceedingly picturesque and undulating farm of twenty thousand acres.

KNIFE AND PITCHFORK.

Saxhausen is one of the suburbs of Frankfort, and is partly occupied by gardeners, who are considered, rightly or wrongly, to be a clownish lot. When the Prussian troops entered the city, every house was obliged to billet one or two soldiers. The inhabitants of Saxhausen acquitted themselves of this duty with a very bad grace, and one of them showed such manifest signs of ill-will towards his guest that the latter, when he sat down to dinner, placed his sword on the table by his side, with a very significant gesture. The countryman said nothing, but left the room and returned in a moment with an enormous pitchfork, which he laid down beside the sword. The soldier flushed up with anger, but the other quietly observed, "I tho't that for so big a knife a big fork was required. If you like, we can each make use of our own implement." This was all the satisfaction the son of Mars could obtain, so he thought fit to put his sword away in a corner of the kitchen, whilst the other withdrew the pitchfork.

How to Take Cold.—As the thaw has come, the doctors are looking for an increase of business, and, as every trade must live, we offer a few hints upon the readiest methods of gratifying the fraternity. Persons who are partial to rheumatism should wear thin boots and be careful to keep them well soaked in snow water. A quick fever can be secured by leaving off overcoats. Neuralgia complaints are open to all who walk till they become heated, and then stop at the corner of a street and cool off by a genial chat with some good fellow. Coughs are free to all who will insist upon throwing open their coats in order to catch the gentle south breeze which prevails. The ladies are such thorough experts in this art that we need not offer them any suggestion, but by abandoning their cloaks and rubbers and resorting to their boots and shawls, they will reach a gruel diet by a short cut.

Cordial.—The following, from the Mobile Times, is evidently to be understood not sarcastically, but heartily, and is one of the most cheering messages that has yet reached us from the South:—"We ask Yankees, particularly, to come, and we repeat it, we want no better men, once their interest shall become wedded to us and our soil. We tell the hardy lumberman of Maine to quit his frozen region, and with his muscles of steel to come and till a grateful soil, which returns a thousand fold the seed entrusted to it. Their prejudices will soon wear out, and so shall ours, by constant daily friction."

Amber—of a milky color—is taking the place of jet for ladies's ornaments in Paris.

Reading for the Young.

LOVE ONE ANOTHER.

Children, do you love each other?
Are you always kind and true?
Do you always do to others
As you'd have them do to you?
Are you gentle to each other?
Are you careful, day by day,
Not to give offence by actions
In your work or in your play?

Little children, love each other;
Never give another pain:
If your brother speaks in anger,
Answer not in wrath again.
Be not selfish to each other,
Never mar another's rest,
Strive to make each other happy,
And you'll find yourselves are blest.

CHILDREN'S PRATTLE.

BY HANS ANDERSEN.

At the merchant's house there was a large party of children—rich people's children and great people's children. The merchant was a man of good standing in society, and a learned man. He had taken, in his youth, a college examination. He had been kept to his studies by his worthy father, who had not gone very deep into learning himself, but was honest and active. He had made money, and the merchant had increased the fortune left to him. He had intellect, and heart too; but less was said of these good qualities than of his money.

There visited at his house several distinguished persons, both people of birth, as it is called, and people of talents, as it is called—people who came under both of these heads, and people who came under neither of these heads. The meeting now in question was a children's party, where there was childish talk; and children generally speak like parrots.

There was one little girl so excessively proud. She had been flattered into her foolish pride by the servants, not by her parents—they were too sensible to have done that. Her father was *Kammerjunker** and she thought this was monstrously grand.

"I am a court child," she said.

She might as well have been a cellar child, as far as she was herself concerned; and she informed the other children that she was "born" (*well born*, she meant); that when people were not "born," they could never be anybody; and that, however much they might read, however clever and industrious they might be, if they were not "born" they could never become great.

"And those whose names end in '*sen*,'" she continued, "are all low people, and can never be of any consequence in the world. Ladies and gentlemen would put their hands on their sides, and keep them at a distance, these 'sen—sens'!" And she threw herself into the attitude she had described, and stuck her pretty little arms akimbo, to show how people of her grade would carry themselves in the presence of such common creatures. She really looked very pretty.

But the merchant's little daughter became extremely angry. Her father was called "Madsen," and that name, she knew, ended in "sen;" so she said, as proudly as she could,—

"But my father can buy hundreds of rix dollars' worth of sugar-plums, and think nothing of it. Can your father do that?"

"That's all very well," said the little daughter of a popular journalist; "but my father can put both of your fathers and all 'fathers' into the newspaper. Every one is afraid of him, my mother says; for it is my father who rules everything through the newspaper." And the little girl tossed her head and strutted about as if she thought herself a princess.

But on the outside of the half-open door stood a poor little boy peeping in. It was, of course, out of the question that so poor a child should enter the drawing-room; but he had been turning the spit for the cook, and he had obtained permission to look in behind the door at the splendidly dressed children who were amusing themselves, and that was a treat to him.

He would have liked to be one of them, he thought; but at that moment he heard what had been said, and it was enough to make him very sad. Not one shilling had his parents at home to spare. They were not able to set up a newspaper, to say nothing of writing for one. And the worst was yet to come; for his father's name, and of course also his own name, certainly ended in "sen." He, therefore, could never become anybody in this world. This was very disheartening. Though he felt assured that he was *born*, it was impossible to think otherwise.

This was what passed that evening.

Several years had elapsed, and during their course the children had grown up to be men and women.

There stood in the town a handsome house, which was filled with magnificent objects of art. Every one went to see it. Even people who lived at a distance came to town to see it. Which prodigy, among the children we have spoken of, could call that edifice his or hers? It is easy to tell that. No; it is not so easy, after all. That house belonged to the poor little boy, who became somebody, although his name *did* end in "sen."—Thorwaldsen!

And the three other children—the children of high birth, money, and literary arrogance? Yes; there is nothing to be said about them. They are all alike. They grew up to be all very respectable, comfortable, and commonplace. They were well-meaning people. What they had formerly said and thought was only—CHILDREN'S PRATTLE.

SPRING CAMPAIGN
OF THE
RURAL BRIGADE!

A NEW QUARTER OF THE RURAL

Begins April 6,—a good time for new clubs or additions to old ones to commence, though we can still furnish back numbers from Jan., or subscriptions may date from Feb. or March 1st. March is a good month in which to fill up Premium Clubs already begun, and also to form new ones. There are hundreds of localities in which clubs may yet be organized and Rewards of Merit secured. Our former Premiums are continued, and several new ones added,—(see some in last RURAL, and full list in Supplement.)

ANOTHER SPLENDID PREMIUM!—By request we have added LAMB'S FAMILY KNITTING MACHINE to our list of Premiums. For 65 Yearly Subscribers (at least 50 of them being *new*) at club rate, $2.50 per copy, we will give a Lamb Knitting Machine, the Cash Price of which is $65.00.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., MARCH 16, 1867.

NEWS OF THE WEEK.

From Washington.

MR. WILSON, Chairman of the Impeachment Committee of the House, just before the close of the last session of Congress, submitted a brief report on the question, without, however, coming to any conclusion. The Committee say that, not having fully investigated all the charges against the President of the United States, it is deemed inexpedient to submit any conclusion beyond the statement that sufficient testimony has been brought to its notice to justify and demand a further prosecution of the investigation. The testimony which the Committee has taken will pass into the custody of the Clerk of the House, and can go into the hands of such committee as may be charged with the duty of bringing this investigation to a close, so that the labor expended upon it may not have been in vain. The Committee regrets its inability definitely to dispose of the important subject committed to its charge, and presents this report for its own justification, and for the additional purpose of notifying the succeeding Congress of the incompleteness of its labors, and that they should be completed.

A circular from the Bureau of Refugees, Freedmen and Abandoned Lands, announces that the Congressional appropriation of $25,000, for the relief of destitute citizens of the District of Columbia, has been expended, and no further aid from that source can be expected.

A circular issued by the State Department in December last to the South American republics involved in the present war with Spain, is published. It proposes that a conference of representatives from Spain, Peru, Chili, Bolivia and Ecuador shall be held at Washington the first of April next, to treat of all matters in difference between the belligerent parties, and agree upon terms of permanent peace. The replies of the governments to which it is addressed have not yet been received, but it is presumed that a favorable answer from all of them will soon be sent, notwithstanding that previous proposals of a similar nature were rejected by some of the Pacific republics.

The following is a statement of the public debt of the United States on the 1st of March:

Debt bearing coin interest, $1,466,855,191.80; debt bearing currency interest, $787,028,880; matured debt not presented for payment, $18,576,689.07; debt bearing no interest, $424,126,528.32; total debt, $2,690,587,289.19; amount in the treasury, coin, $107,271,031.12; amount in the treasury, currency, $52,255,368.27; total, $159,823,399.39.

The President and his Cabinet are busily engaged in necessary preparations for the execution of the military government bill for the South.

A communication has been laid before the Senate from the Secretary of War transmitting a statement of Gen. Howard, Commissioner of the Freedmen's Bureau, in response to a resolution of the Senate calling for information in regard to the extreme want in the Southern States, etc. The report states that from official sources and confirmed by gentlemen from different sections of the South, he estimates that 32,522 white, and 24,238 colored people will need food from some source before the next crop can relieve them. The number of rations required for one month is 1,709,000; for five months, probable time required, 8,545,000; at twenty-five cents per ration, the estimated cost will be $2,133,750; of this $625,000 have already been appropriated, leaving $1,508,750 to be provided.

From the South.

RICHMOND, March 7.—At a meeting to-night of five thousand negroes to ratify Sherman's bill the white speakers gave a programme for a call of a convention by the negroes to adopt a constitution which will be sent to Congress as the loyal men's constitution. The negroes were advised to vote against any constitution adopted by a convention to be called by the present Legislature.

The lower house of the Missouri Legislature has passed a bill to amend the Constitution so as to allow negroes to vote—ayes 76, nays 46.

Advices from Yorktown, Va., state that there are large numbers of freedmen there in great destitution. The Freedmen's Bureau have taken measures to supply them with food, and remove and scatter many of them where their labor will be in demand and they can support themselves.

Gov. Brownlow of Tennessee, has issued a general order for the organization of a volunteer force to serve three years, subject to his orders as Commander-in-Chief, and also to act as a military police to preserve peace and to protect the people.

Gov. Pierpont, in his message to the Virginia Legislature, convened in extra session to consider the Military Reconstruction bill, after alluding to the manner in which Virginia was forced into the secession movement against the will of a majority of the people, reviews the history of the past two years, during which time the southern people had unwisely conducted themselves in the most offensive manner. He regrets the rejection of the Constitutional Amendment, and alludes to the confiscation act following the rejection of the proposition now offered. He wishes to escape this danger. Three-fourths of the people of Virginia were well disposed, and the cause of irritation proceeded from a few. He therefore urges the acceptance of the situation, and the adoption of the course marked out in the measure just adopted by Congress.

Temperance.

THE New York State Temperance Society will hold its first quarterly meeting in Tweddle Hall, Albany, on Wednesday and Thursday, the 20th and 21st of March, commencing at 11 o'clock A. M. All temperance societies are invited to send each two delegates to this meeting. The managers of the Society are especially requested to be present. Invitations to address the meeting have been extended to Rev. Dr. Cuyler and Rev. Henry Ward Beecher, of Brooklyn; Hon. Henry Wilson of Massachusetts, Ex-Governor Yates of Illinois, and Dr. Charles Jewett of Connecticut.

There will be a County Temperance Meeting at the Court House in Rochester on Saturday, March 16th,—sessions at 10 A. M., 2 P. M. and 7 P. M.

From Albany.

THE Assembly has passed the bill to establish a training and normal school at Fredonia; also, that to authorize the formation of corporations to secure parsonages for presiding elders of the Methodist Episcopal Church; also, that to aid in the construction of the Albany and Susquehanna Railroad.

The Senate has passed the bill calling a State Convention to amend the Constitution on the second Monday in May. Also, to amend the charter of the Foreign and Domestic Missionary Society of the Episcopal Church.

The Convention question about which the two houses of the New York Legislature have disagreed, is now in the hands of a conference committee, with, it is said, a fair prospect of a settlement. The terms of compromise are reported to be the adoption of the Senate plan of 137 delegates, chosen from Senate districts, and of the Assembly plan of 32 delegates at large—the suffrage for delegates to be limited to the present constitutional voters of the State.

Indian Treaties.

SINCE the 12th of February treaties have been made with the following tribes, providing for their removal from Kansas, &c., to the Indian country south of that State, namely:—The Kaws, the Sacs and Foxes of Mississippi, the Sacs and Foxes of Missouri, the Miamis, Peroras of Wisconsin, Pankashows, Ottawas, Kickapoos, Shawnees and Stockbridges of Wisconsin. The Delawares were treated with last year.

Recent Fires.

DURING the past week fires have occurred at the following named places, with losses indicated by the figures annexed:—Youngstown, O., $60,000; Mt. Morris, N. Y., $7,800; Rochester, $10,000; Oswego, $100,000; Toledo, O., $20,000; Boston, (M. E. Church,) $15,000; St. Louis, Mo., $10,000; Washington, D. C., $12,000, five persons killed; Lockport, N. Y., $10,000; East Franklin, Mass., $15,000; Nashville, $20,000.

From the Plains.

DENVER papers say the Indians are assuming an hostile attitude in the neighborhood of Fort Dodge on the Arkansas river.

The Idaho Avalanche of Feb. 16th says General Crook is prosecuting the Indian war with great vigor, notwithstanding the winter season.

From Mexico.

THE city of Acapulco was abandoned by the Imperialists on February 19th, who were taken to San Blas by the French frigate Victoire. Three French vessels remained in the harbor of Acapulco, but held a neutral position. The greatest order and confidence prevailed among the people.

THE Governor of Illinois has signed the bill making eight hours a legal day's work in that State in the absence of contracts to the contrary.

Foreign News—By Telegraph.

DUBLIN, March 6.—An attack was made by a body of Fenians upon the Drahega Barracks yesterday. The attacking party was received with great gallantry by the military and police stationed in the barracks, and several volleys were given the assailants, who retired in confusion, losing a number killed and wounded, whom they took from the field. The repulse was complete. Several of the government forces were wounded, including three of the police.

LIVERPOOL, March 6.—Dispatches have been received by the Government stating that an attack was made by a small force of Fenians upon Castle Martyr yesterday, but the enemy was repulsed and driven off. One of the attacking force, said to be an American officer, was shot.

LONDON, March 8—Noon.—Several prominent English newspapers have received and published a proclamation pretending to come from the Government of the Irish Republic. It declares that after ages of outrage, and vain appeals to reason and justice, they have at last resolved to appeal to arms to rescue Ireland from serfdom and establish national union, public safety and political freedom, and bring about the consequent separation of church and state. As republicans they appeal to republicans throughout the world for sympathy and support.

Dispatches from Dublin, Cork, and other parts of Ireland, received during the morning and afternoon give the following intelligence:

A body of Fenians, 1,500 strong, were reported to be threatening the town of Tipperary.

The troops had a battle with a band of insurgents near Kilfinora, in the county of Limerick, and defeated them, killing one man, wounding several, and taking thirty prisoners. Among the latter was the Fenian Chief, Gen. Lane. A force of rebels some three or four hundred strong, was also beaten by the soldiers at Clonmel. Several of the former were killed, eighteen prisoners were taken and a quantity of arms was captured. The Fenians stripped private houses of all guns and other weapons, and bands of men are moving through the counties of Clare, Tipperary and Limerick, and have frequent conflicts with the police.

LONDON, March 7—Evening.—Dispatches received during the day from Dublin and Cork give the following particulars of the last outbreak in Ireland:

A fight took place on Tuesday night at Tallaght, eight miles south of Dublin, between the armed police and a large body of Fenians. One of the latter was killed and five were wounded. The police captured eighty prisoners and six loads of ammunition, and up to dark to-day over 200 prisoners had been brought into Dublin.

The main body of the Fenians engaged in the fight retreated to the hills north of Dublin, with Lord Strathnoirn, the commander of the British forces in Ireland, in vigorous pursuit.

The police station at Kilmarclock, eighteen miles south of Limerick, in the county of Munster, was attacked by two hundred Fenians, who were repulsed, leaving three of their number dead on the field and losing fourteen prisoners.

LONDON, March 9.—Official dispatches received from Ireland say that loads of arms have been discovered and seized by the military; and this fact seems to confirm the reports that the rising of the Irish had failed to be general.

DISPATCHES from Dublin state that small bands of Fenians are patrolling the counties of Cork, Waterford, Tipperary and Limerick, pressing the people into their ranks and committing robberies everywhere.

DUBLIN, March 10.—The band of Fenians who were in possession of the barracks at Kilteel, in Kildare, have been dispersed by the troops. The insurgents made an attack on the barracks at Mount Mellik, at the foot of the Sliere Bloom mountains, and were repulsed. Two of the attacking party were shot.

Gen. Burke, one of the Fenian leaders in the south, has been captured at Tipperary.

PARIS, March 10.—The Moniteur states that by this time all the French troops must have left Mexico, and that the departure of the Emperor Maximilian from Vera Cruz was to have taken place on the 8th of March.

ATHENS, March 10.—A terrible earthquake has taken place in the island of Mytelene. All the habitations on the island are in ruins, and hundreds of lives have been lost.

LONDON, March 11.—All the accounts from the scene of the disturbances in Ireland represent that matters have become quiet and that order reigns once more. There have been no more fresh conflicts between the armed police and the Fenian bands, who are fleeing to the mountains out of pursuit of the military.

The Princess Alexandra is reported to be very ill this morning.

LONDON—Noon—March 11.—Consols opened at 91 for money. American securities are as follows:—5.20 bonds, 74¼; Illinois Central shares, 78¼; Erie, 38¼.

LIVERPOOL—Noon—March 11.—Cotton market opens quiet at the following quotations:—Middling Uplands, 13d; New Orleans, 13½d. The sales to-day will probably reach 8,000 bales. Breadstuffs quiet. The provision market is quiet. Lard, 50s. 9d. per cwt.

THE FAMINE IN INDIA.—A report has recently been made to the Government of Bengal of the ravages of the Indian famine in the Province of Orissa. In this report it is estimated that in Orissa the loss of life, from the want of food and its consequences, amounted to between 500,000 and 600,000 persons; and that in some places three-fourths of the population have died. Orissa had a population before the famine of 4,5000,000, and deaths are still reported at the rate of 150 a day. In other provinces the destruction has been great, and it is announced that already 1,000,000 of people have been destroyed by the great famine of 1866 in an area of country not larger than England and Wales—a destruction that amounts to one-sixth of the population among whom the famine raged!

THE venerable Father Webb, the oldest Methodist clergyman in the world, is said to be very ill at his residence in Barnstable, Mass., and is not expected to recover.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, March 12, 1867.

THE decline in gold last week was very decided. Early in the week it was selling at about 129, from which point it gradually fell off until it touched 123¾. At the close of the week the price rallied a little, as Government securities in Europe did not advance to correspond with the fall in gold on this side. Gold sold at the first board in New York yesterday at 125¾. Government securities advanced somewhat in Europe last week, but not as much as was anticipated; 5-20s were firm at 74 in London, and sold at corresponding rates in Paris and Frankfort.

Money is in fair supply in New York, though rates of interest are a trifle higher. The last weekly bank statement was not favorable. In Boston, last week, financial matters took a sudden and unfavorable turn in consequence of heavy failures. Several banks it is supposed will lose largely. The disturbance commenced by the very bad failure of the First National Bank of Newtonville. The Boston Bulletin says:—"State-st. has never before experienced anything of such a disastrous character, and never before has the confidence of so large a number of trusting business men been so outrageously violated."

A fair supply of currency is reported at Cincinnati and Chicago. At the latter point money has not been as easy as at present in some months. Wholesale dealers report that western collections continue to improve.

The eastern dry goods trade did not improve last week, as was anticipated. Country merchants will procure their supplies later in the season this year than usual.

The New York stock speculators have for some time been in great tribulation. The market has been ruled by the "bears," causing large holders of *Fancies* to feel anything but comfortable. A New York paper says that in nineteen of the *fashionable* stocks, the decrease in value from Jan. 2 to the close of February was "twenty four millions eight hundred and twelve thousand dollars." Very little consolation has been derived by any "upward tendency" since the beginning of March.

Money is abundant in England and on the Continent. The Bank of England recently reduced its rate of interest to 3 per cent. The following are the latest quotations for money in the leading cities on the continent:—Paris, 3—2¾; Vienna, 4—4; Berlin, 4—3½; Frankfort, 3½—3½; Amsterdam, 3½—3½; Turin, 5—0; Brussels, 3—2½; Hamburg, 0—2; Madrid, 6—0; St. Petersburg, 7—8—9.

One million eight hundred ounces of gold were shipped from Australia last year. The annual product of the gold and silver mines of the United States is rapidly increasing. Our production is now more than that of any other country.

WOOL.—The wool markets of New York and Boston have been somewhat excited since the passage of the Bingham Tariff Bill. Buyers appeared in large numbers when it was known the bill had become a law, anxious to purchase at previous rates. Holders at once put up their prices from 3 to 5c. on domestic, and from 5 to 10c. on the various grades of foreign. The prices asked were a little higher than manufacturers were, as a general thing, disposed to give, yet the sales last week were considerable. The transactions at Boston foot up 975,000 lbs., at 47@75 for fleece, and 20@43 for the various grades of pulled. The Bulletin says:—"A large quantity of South American wool is now on the way to the Atlantic markets, and the probability is that a great portion of it will have to be reshipped to European markets." A Detroit house advertises 250,000 lbs. of wool to be sold at once at market value.

The Secretary of the Treasury, on inquiry of the Custom House officers, has found it impossible at present to find all the samples of the various kinds of wool, &c., by which the tariff is to be in part regulated. It has been found necessary to send abroad for the requisite specimens, and the Secretary has therefore appointed George W. Bond, a well-known Boston wool broker, to proceed at once to Europe to collect samples.

Woolen goods are firmer, but the tariff has produced, as yet, no decided change in prices.

COTTON.—Cotton is dull, and the foreign market depressed. Very little is being shipped just now.

WHEAT AND FLOUR.—The tendency of prices is to lower figures. There is very little doing in the general market.

WHEAT AT THE SOUTH.—The reports from Alabama, Tennessee and other wheat-growing States at the South and Southwest, are very favorable in regard to the prospects of the coming wheat crop. The Chattanooga (Tenn.,) Union says:

From our country exchanges we learn that the winter has been an exceedingly favorable one for farming interests. There has been snow enough to protect the wheat, and there is every prospect of abundant crops.

— The Mobile Advertiser, edited by John Forsyth, is for accepting reconstruction under the Sherman bill.

— On the organization of the 40th Congress Schuyler Colfax of Indiana was re-elected Speaker of the House.

— It is reported Postmaster-General Randall is to resign and go to Vienna as Minister in place of Mr. Motley.

— All the clerks in the Freedmen's Bureau and in the city post-office at Washington have taken the pledge.

— Dr. J. H. Robinson, a writer of Ledger stories of the most highly sensational order, died in Minnesota last week.

— The steamer Equator, on her last trip from Portland to Halifax, lost overboard a new locomotive worth $20,000.

— The number of deaths reported in New York last week was 439; number of deaths in the public institutions, 87.

— The U. S. steamer Tuscarora has gone to the Fejee Island to punish the savages for barbarities on American seamen.

— The elections for members of the Italian Parliament have generally resulted in the defeat of the supporters of Ricasoli.

— Miramon has been completely defeated near Zacatecas, and three of his brothers and all the high officials made prisoners.

— It is stated that not one gallon of whisky out of fifty made in the cities of New York and Brooklyn pays the Government tax.

— Illinois has within her borders two million sheep. These are worth eight million dollars, and yield annually three million profit.

— There is considerable excitement in Bath, N. Y., on account of the negro children being refused admittance to the public school.

— Holders of seven-thirty notes, dated Aug. 15th, can now exchange them for six per cent. five-twenty bonds, issued under act of 1865.

— The Agricultural Department has received a supply of vegetable seeds and cereals from Europe, and is preparing them for distribution.

— Five citizens of Alexandria, Tenn., offer to prove conspiracies in White Co. to assassinate Union men, if summoned before the Legislature.

— Lord Stanley answers to an inquiry of the House of Commons, that neither Brazil nor Paraguay has ever invoked the mediation of England.

Special Notices.

WESCOTT'S ADJUSTIBLE DASH CHURN.

This Churn is meeting great favor wherever introduced. The following is a specimen of the Testimonials recently received. Such testimony proves the truth of all that is claimed for the Adjustible Dash over all other Churns extant:

We, the unersigned, farmers of Madison County, N. Y., having thoroughly tested "H. P. WESCOTT'S ADJUSTABLE DASH CHURN," can with confidence recommend it to our brother farmers throughout the Country. We believe it to be *the best Churn yet invented*. It produces a better quality and a greater quantity of butter from a given amount of cream, than any other churn we have seen; and we have them all, for this section has been flooded with all sorts of contrivances for making butter—"Rotaries," (several kinds,) "Double-dashers," "Thermometers," "Dairy Maids," &c., &c. It is indeed gratifying to have at last an opportunity to supply ourselves with a genuine and reliable article in every respect—a Churn, got up on the right principle, (the old dash,) which we believe is the only plan that will make good butter.

If you are troubled with Indigestion, Rising of Food, Sour Belchings, Acidity of the Stomach, or any other form of Dyspepsia, avoid all stimulating drinks which relieve only temporarily, and take COE'S DYSPEPSIA CURE, which will surely afford permanent relief.

O. K. B. B. See adv. in another column, and send 2 stamps for full particulars, including tricks of the trade.

Itch, Salt Rheum.—Wheaton's Ointment will cure the itch in 48 hours,—also cures Salt Rheum, Ulcers, Chilblains and all Eruptions of the Skin. Price 50 cents. Free by mail by sending 60 cents to WEEKS & POTTER, Boston, Mass.

For sale by all druggists. 885-52t

Additions to Clubs are always in order, whether in ones, twos, fives, tens, twenties, or any other number. Subscriptions can commence with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless specially directed otherwise. Please note this.

Freshets.

MARION, VA., March 8.—The whole Virginia and the Tennessee Valley has just been visited with the heaviest freshet that has occurred within the memory of the oldest inhabitant. The whole valley from Lynchburg to Chattanooga has been swept by the swollen streams. It rained incessantly for three days, which, with the melting snow from the mountains, overflowed all the streams.

CHATTANOOGA, March 6.—We have had a four days' storm, and the bridges are down in all directions. The bridge of the Washita and Chattanooga Railroad at Whiteside Station has been carried off. Communication north and east is entirely cut off. The bridge over the Tennessee river at this place has been carried off. It was nine hundred yards long. The country is flooded.

THE President has nominated Paran Stevens of New Jersey, as Commissioner to the Paris Exposition, in place of Dr. Peterson of Philadelphia, resigned.

IN the House of Representatives on Friday, Mr. Wood of New York, introduced a resolution of sympathy for Ireland, which, after discussion, was referred to the Committee on Foreign Relations.

THE Senate on Friday had an interesting discussion on the sale and use of liquor in the Capitol. Some of the Senators denied that any had been sold there, or professed ignorance of any such proceeding. Others maintained that while the prohibition of sale was well enough, any Senator who chose should be allowed to bring his bottle to the chamber or committee room. Mr. Wilson of Massachusetts, took the lead on the temperance side of the question.

New Advertisements.

GOODRICH'S NEW AND VALUABLE POTATOES.—We can furnish EARLY GOODRICH, considered the best and most productive early variety in cultivation; also the fine later sorts, GLEASON and CALICO. Price, packed and delivered to Railroad or Express, $3 per bushel; $5 per barrel.
ELLWANGER & BARRY,

Awarded first premium at N. Y. State Fair. For description address J. A. LAFLER, Inventor and Manufacturer, Albion, Orleans Co., N. Y.

RICHARDSON'S CREAM PUMP STRAINER. Patented Sept. 23, '62; Re issued March 17, '63.
SEE CUT AND NOTICE ON LAST PAGE OF THIS PAPER.

It is well known among Dairymen that it is impossible to obtain a perfect separation of the cream in the churn, owning to the drying of the surface of the cream while rising in the pans, so that the friction of the dash does not separate it, and more or less cream remains, both in the butter and the buttermilk, in the form of tough, white specks or flakes, besides cream only partially churned. This difficulty is entirely obviated by using RICHARDSON'S CREAM PUMP, the object of which is to force the cream through a very fine sieve before churning, leaving the butter and buttermilk entirely free from any cream whatever. The result is a large increase of butter, with a better flavor and color, which will keep better, for the reason that there is no sour cream left in it.

Directions:—Set your cream pail alongside the churn, and at the same height. Insert the pump into the cream and, with a steady stroke, pump the cream into the churn.

RECOMMENDATIONS.

We, the undersigned butter dealers in Chautauqua Co., N. Y., have bought a large number of firkins of butter, made the past three seasons, of dairymen who are using RICHARDSON'S CREAM STRAINER, and believe, upon examination, that it is the greatest improvement in butter making that has been made—based, as it is, upon the scientific principles of perfectly pulverizing the cream before churning, so that the gentle friction of the dasher is brought upon all parts of the cream alike, consequently there can be no unchurned cream left to be mixed in with the butter or buttermilk.—D. W. Sperry, W. Winsor, Stockton; H. J. Thayer, Sinclairville; Milton Smith, Seeley Strong, Jamestown; Thomas R. Covey, Mina; Arthur Fenner, Sherman.

We, the undersigned dairymen of Chautauqua Co., N. Y., having bought and used one of RICHARDSON'S CREAM STRAINERS, do recommend it to all dairymen as making more and better butter than we can make in any other way. It leaves no cream in the butter or buttermilk, nor any dirt or hair.—N. Corbit, L. Dorman, L. Stebbins, E. Eggleston, J. W. Huntley, F. Dutton, Rev. C. Sanderson, M. Ends, M. Sheldon, Samuel Hall, M. S. Plato, N. Kenyon, Charles Hall, T. Sheldon, G. Williams, Sherman; H. S. Ayer, R. S. Connolly, Robert Blood, Clymer.

STOCKTON, March 1st, 1867.—We, the undersigned dairymen of Stockton, Chautauqua Co., N. Y., have used RICHARDSON'S CREAM STRAINER for the past three years, and do cheerfully recommend it to all dairymen. We can make from two to three pounds more butter at each churning from the milk of twenty cows. We can churn quicker, and the butter requires less washing to prepare it for salting.—George Payne, Wm. M. Putnam, W. Winsor, Wm. O. Miller, Jason Crissey, Frank Crissey.

For Machines or Rights of Territory, apply to W. H. KEELER, Sherman, Chaut. Co., N. Y. Machines sent to any address, by Express, on receipt of $3.

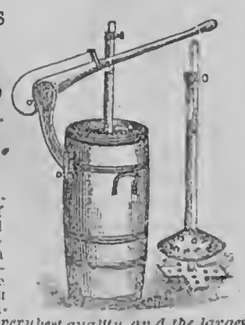
H. P. WESTCOTT'S ADJUSTABLE
DASH CHURN.



First Pat'd Aug. 1863, *Improvements Pat'd April,* 1865 *and Nov.* 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, an d the larges quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¼ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¾ bbl.,) $10; No. 5, (1 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
E. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*
"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*
Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.
"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*
"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*
"The very best Churn extant."—*Prairie Farmer.*
"It is perfectly common sense in its structure."—*Ohio Farmer.*
"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

THE GREAT AMERICAN TEA COMPANY

Have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.
All goods sold are warranted to give satisfaction.

PRICE LIST.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₱ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ₱ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ₱ lb.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.
Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

Great American Tea Company,
Nos. 31 and 33 VESEY-ST., cor. of CHURCH.
Post-Office Box, 5643 New York City.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by Post-office money orders, or by Express, as may suit the convenience of the club. Or, if the amount ordered exceed thirty dollars, we will, if desired, send the goods by Express, to "*collection delivery.*"

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the

GREAT AMERICAN TEA COMPANY,
31 & 33 Vesey-st., cor. of Church.
Post-Office Box, 5643 New York city.

[For manner of getting up Clubs see former editions of this paper.] 888-tf

IN MEMORIAM.

BY WM. H. ALLEN.

The share of the world—its ills and woes
That burden this life so drear,
I would fain lay down and seek repose;
For sore are the hardships here,—
The hopes' and fears' unending throes;
And sweet is the rest and profound
Where the cypress drooping shadows the rose,
Where the sky weeps its dews at evening's close,
And the grass is green on the mound.

The fields are bright in the springtime gay;
The birds are blithe on the trees;
There's a glory shines in the full noonday,
There's perfume of flowers in the breeze;
There's a voice that sings a mingled song
Of triumph, of sadness, decay,
And its notes are low and sweet and strong,
And it dies and swells and sweeps along,
But it never dies away.

I sat on the seat we loved so well,
And viewed what we used to view;
And the olden time came back like a spell,
And the buried love glowed anew.
But to me the music that lessened and grew
Had naught of joy in its tone;
For the heart that was tender and kind and true
Was still and cold in the mould, I knew,
And I was left there alone.

Let the West paint its robes in ruddy gold,
And the shades seek the East, long and fair,
And the zephyrs of evening their pinions unfold
And fan with their coolness my hair;
There's no peace for me in the gathering rest.
No balm which the winds distil;
For my brow is too dry and hot and oppressed,
And the grief is too strong that reigns in my breast,
And my heart is too seared and chill.

Rochester, March, 1867.

The Story Teller.

A TRUE STORY.

MANY years ago I happened to be one of the referees in a case that excited unusual interest in the courts from the singular nature of the claim, and the strange story which it disclosed. The plaintiff, who was captain of a ship which traded principally with the West Indies, had married quite early with every prospect of happiness. His wife was said to have been extremely beautiful, and no less lovable in her character.

After living with her in the most uninterrupted harmony for five years, during which time two daughters were added to the family, he suddenly resolved to resume his occupation, which he had relinquished on his marriage, and when his youngest child was but three weeks old, he sailed for the West Indies. His wife was devotedly attached to him, sorrowed deeply at his absence, and found her only comfort in the society of her children and the hope of his return. But month after month passed away and he came not, nor did any letters, those insufficient but ever welcome substitutes, arrive to cheer her bitter solitude. Months lengthened into years, yet no tidings were received from the absent husband, and after hoping against hope, the unhappy wife was compelled to believe that he had found a grave beneath the weltering ocean.

Her sorrow was deep and heartfelt, but the evils of poverty were now added to her afflictions, and the widow found herself obliged to resort to some employment in order to support her children. Her needle was the only resource, and for ten years she labored early and late for the miserable pittance which is ever so grudgingly bestowed on an humble seamstress.

A merchant in New York, in moderate but prosperous circumstances, accidentally became acquainted with her, and, pleased with her gentle manner, no less than her beauty, he improved their acquaintance with friendship.

After some months he offered his hand and was accepted. As the wife of a successful merchant, she soon found herself in the enjoyment of comforts and luxuries such as she had never before possessed. Her children became his children, and received from him every advantage which wealth and affection could procure.

Fifteen years passed away; the step-daughter married, and by her step-father was furnished with every comfort requisite to her new avocation as housekeeper. But she had hardly quitted his roof when her mother was taken ill. She died after a few days, and from that time until the period of which I speak the widower had resided with the younger daughter.

Now comes the strange part of the story. After an absence of over thirty years, during which time no tidings had arrived from him, the *first* husband returned as suddenly as he had disappeared.

He had changed his ship, adopted another name, and spent the whole of that long period on the ocean, with only transient visits on shore, while taking in or discharging cargoes, having never been nearer home than New Orleans. Why he had acted in this unpardonable manner towards the family, no one could tell, and he obstinately refused all explanation.

There were strange rumors of slave-trading and piracy afloat, but they were only whispered conjecture rather than truth. Whatever might have been his motives for his conduct, he was certainly anything but indifferent to his family concerns when he returned. He raved like a madman when informed of his wife's second marriage and subsequent death, vowed vengeance upon his successor, and terrified his daughters with the most awful threats in case they refused to acknowledge his claims. He had returned wealthy; and one of the reptiles of the law, who are always to be found crawling about the halls of justice, advised him to bring a suit against the second husband, assuring him that he could recover heavy damages. The absurdity of instituting a claim for a wife whom death had relieved from the jurisdiction of all earthly laws, was so manifest that at length it was agreed by all parties to leave the matter to be adjudged by five referees.

It was upon a bright and beautiful afternoon in the spring when we met to hear this singular case. The sunlight streamed through the dusty windows of the court room, and shed a halo around the long, gray locks and broad forehead of the defendant—while the plaintiff's harsh features were thrown into still bolder relief by the same light which seemed to soften the placid countenance of his adversary.

The plaintiff's lawyer made a most eloquent appeal for his client, and had we not been informed about the matter, our hearts would have been melted by his touching description of the return of the desolate husband, and the great agony with which he beheld his household gods removed to consecrate a stranger's hearth. The celebrated Aaron Burr was the counsel for the defendant, and we anticipated from him a splendid display of oratory.

Contrary to our expectations, however, Burr made no attempt to confute his opponent's eloquent oratory. He merely opened a book of statutes, and pointing with his thin finger to one of the pages, desired the referees to read it, while he retired a moment for the *principal witness*.

We had scarcely finished the section which fully decided the matter in our minds, when Burr reëntered with a tall and elegant female on his arm. She was attired in a simple white dress, with a wreath of ivy-leaves encircling her large straw bonnet, and a lace veil completely concealing her countenance. Burr whispered a few words, apparently encouraging her advance, and then gracefully raised her veil, discovering to us a face of proud surpassing beauty. I recollect as well as if it happened yesterday how simultaneous the murmur of admiration burst from the lips of all present. Turning to the plaintiff, Mr. Burr asked, in a cold, quiet tone:

"Do you know this lady?"

"I do."

"Will you swear to that?"

"I will; to the best of my knowledge and belief she is my daughter."

"Can you swear to the identity?"

"I can."

"What is her age?"

"She was thirty years old on the 20th day of April."

"When did you last see her?"

"At her own house, about a fortnight since."

"When did you see her, previous to that meeting?"

The plaintiff hesitated—a long pause ensued—the question was repeated, and the answer at length was—

"Thirty years ago."

"When she was just three weeks old," added Burr. "Gentlemen," said he, turning to us, "I have brought this lady here as an important witness, and such I think she is. The plaintiff's counsel has pleaded eloquently in behalf of the bereaved husband, who escaped the perils of the sea and returned only to find home desolate. But who will picture the lonely wife, bending over her daily toil, devoting her best years to the drudgery of sordid poverty, supported only by the hope of her husband's return? Who will picture the slow process of heart-sickening, the wasting anguish of hope deferred, and finally the overwhelming agony which came upon her when the last hope was extinguished, and she was compelled to believe herself a widow? Who can depict all this without awakening in your hearts the warmest sympathy for the deserted wife, and the utterest scorn for the mean, vile wretch who could thus trample on the heart of her whom he swore to love and cherish? We need not inquire into his motive for acting so base a part. Whether it was love or gain, or licentiousness or selfish indifference, it matters not; he is too vile a thing to be judged by such laws as govern men. Let us ask the witness—she who stands before us with the frank, fearless brow of a true-hearted woman—let us ask which of these two has been to her a father."

Turning to the lady, in a tone whose sweetness was in strange contrast with the scornful accent which characterized his words, he besought her to relate briefly the recollections of her early life. A proud flush passed over her beautiful face as she replied:

"My first recollection is of a small, ill-furnished apartment, which my sister and myself shared with my mother. She used to carry out every Saturday evening the work which had occupied her during the week, and bring back employment for the following one. Saving her wearisome visits to her employers, and her regular attendance at church, she never left the house. She often spoke of my father, and of his anticipated return, but at length she ceased to mention him, though I observed she used to weep more frequently than ever. I then thought that she wept because we were poor, for it sometimes happened that our only support was a bit of bread; and she was accustomed to see by the light of chips which she kindled to warm her famishing children, because she could not purchase a candle without depriving us of our morning meal. Such was our poverty when our mother contracted a second marriage, and the change to us was like a sudden entrance to Paradise. We found a home and a father." She paused.

"Would you excite my own child against me?" cried the plaintiff, as he impatiently waved his hand for her to be silent.

The eyes of the witness flashed fire as she spoke:

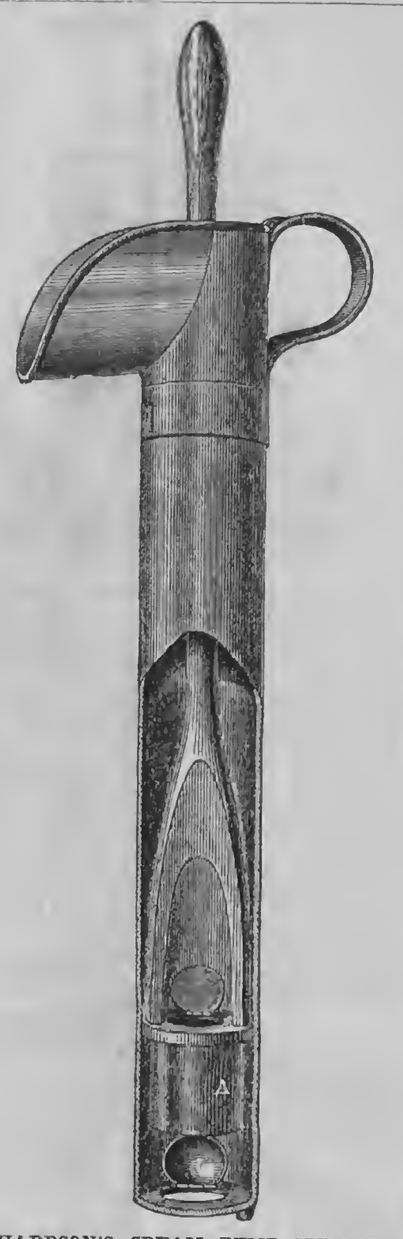
"You are not my father," exclaimed she, vehemently. "What, call you my father—you who so basely left your wife to toil, and your children to beggary! Never! Behold there my father," pointing to the calm defendant, "there is the man who watched over my infancy—who was the sharer of my childish sports, and the guardian of my inexperienced youth. There is the man who claims my affection and shares my home;—there is my *father*. For yonder selfish wretch I know him not. The best years of his life have been spent in lawless freedom from social ties; let him seek elsewhere for the companions of his decrepitude, nor dare insult the ashes of my angel mother by now claiming the duties of kindred from her deserted children."

She drew her veil hastily around her as she spoke, and moved as if wishing to withdraw.

"Gentlemen," said Burr, "I have no more to say. The words of law are expressed in the book before you; the words of truth you have heard from woman's pure lips;—it is for you to decide according to the requisitions of nature and the decrees of justice."

I need not say that our decision was in favor of the defendant, and the plaintiff went forth followed by the contempt of every honorable man who was present at the trial.

New Inventions, Etc.



RICHARDSON'S CREAM PUMP STRAINER.

SEVERAL years ago, Mr. M. A. RICHARDSON of Sherman, Chautauqua Co., N. Y., invented and patented a *Cream Pump Strainer*, which was exhibited at the N. Y. State Fair in 1862 and awarded premium. Since then Mr. R. has greatly improved his invention, and obtained a re-issue of the patent. The Strainer is highly approved by dairymen, and is becoming popular wherever known—as evidenced by the fact that about five hundred are now in use in Chautauqua Co. alone. The Strainer, as now constructed, is represented in the above engraving. For particular description, recommendations, &c., see advertisement of Mr. W. H. KEELER, owner of the patent, in this paper.

AN IMPROVED PORTABLE FOUNTAIN.—Mr. John Hegarty of Jersey City, has lately called at our office with a very beautiful portable fountain combined with an aquarium and flower stand. The base consists of a box, in which are planted any vines or creepers which climb up a trellis-work, within which is arranged the basin for supplying the fountain, and a pump worked by a clock-movement for forcing up the water, which is discharged in several jets. There is an elevated basin which, as well as the basin below, can be used as an aquarium. There are also stands for flower-pots; and the whole is surmounted by a bouquet-holder. This portable fountain is a very handsome ornament for a parlor or piazza, and Mr. Hegarty informs us that it can be made in large numbers for fifty dollars each.—*American Artisan.*

CARBURETING GAS.—An important improvement has been made in illuminating gas, by using the vapors of volatile hydro-carbons and mixing or combining the same with the gas before its passage into the service mains. The invention also includes, besides this process of carbureting the gas, certain devices for accomplishing the same in the holder. H. L. Stuart of New York city, is the assignee.

A GREAT PAIR OF ROLLS.—Herr Krupp of Essen, is now engaged in the construction of a plate mill which throws all other plate mills into the shade. It will consist of a pair of rolls *twenty-seven feet long and five feet in diameter*, each weighing over 100 tons. With this train Herr Krupp proposes to produce steel plates of sufficient size to make one-piece boilers.

HORSE RAILWAY CAR.—A recent invention effects a great desideratum, securing alike safety and facilitating the working of horse railroad cars, by a novel application of the pole to the draw-bar, whereby the former may, separately or without the whiffletree, be instantaneously disconnected from the draw-bar. Daniel T. Robinson, of Boston, Mass., is the inventor.

MISCELLANEOUS ENIGMA.

I AM composed of 57 letters.
My 40, 52, 7, 31, 42, 11, 46, 15 is a Union General.
My 4, 39, 52, 57 is a musical instrument.
My 37, 36, 33, 12 is an article of food.
My 49, 31, 28, 48, 51, 14, 10, 2, 6, 4 is the name of a tree.
My 23, 56, 12, 12, 33, 47 is a color.
My 46, 7, 20, 1 is a farming utensil.
My 5, 55, 33, 13, 22 is a fish.
My 25 is a vowel.
My 26, 39, 43, 14, 1, 29 is a drink.
My 49, 27, 18, 8, 17, 23 is a fowl.
My 2, 35, 48, 3, 34 is a vegetable.
My 9, 48, 13, 44, 45, 39 is a metal.
My 50, 24, 35, 45, 20 is sweet.
My 36, 21, 43 is the name of a girl.
My 16, 38, 42, 53 is an article of clothing.
My 50, 30, 18, 19, 36 is a domestic animal.
My 32, 55, 41, 7, 18, 11, 15, 9 is a kind of fruit.
My 10, 55, 43, 54 is a pronoun.
My whole is a true saying.

MATHEMATICAL PROBLEM.

A MAN has a debt of $504 which he wishes to discharge with six indorsements, and have the sum of 2d and 5th indorsements equal to $144. What sum shall he pay at each payment so that the payments may be in geometrical progression?

Gainesville, N. Y. J. E. BRAINARD.

☞ Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN No. 893.

Answer to Miscellaneous Enigma:—The more haste the less speed.

Answer to Anagram:

GOD bless United States; each one
Has government, the people's own;
The people rule, their rulers are
Elected servants, to take care
Of what is for the public good;
And the best men be chosen should,
And often changed, that surely we
May prosper, and be forever free.

Answer to Trigonometrical Problem:—Either 23,099 or 58,876 perches.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless directed otherwise. Please note.

Keep a List!—If each agent will keep a list of all the names sent us, with dates and amounts of remittances, it will greatly facilitate the correction of any errors which may be made at either end of the line.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

READER,—Please act as Club Agent for the Rural, or induce your Post-Master or some other influential person to become a recruiting officer for the "Rural Brigade."

Notice of Spring Campaign on News page.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HENRY S. RANDALL, LL. D.,

Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS,

Late Pres't N. Y. State Ag. Soc'y, Southern Cor. Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

HO FOR THE SPRING CAMPAIGN!

FARMERS are you ready? Are your plans matured, your forces marshaled, your implements in order? Is the seed clean, the plow-point sharpened, the team strong and well trained? The winter has been long and severe—it "lingers in the lap of Spring"—but the sun is shining longer and hotter as each day goes by, and some fine morning not far distant the dreamy farmer will rub his eyes open in astonishment when he sees his wide-awake neighbor turning the first furrow for the spring crops. Are you sure, then, that you are ready to improve the earliest opportunity for plowing and sowing that the soil and weather will furnish? Will there be no fence or gate to repair to keep the stock in their proper bounds, or odd jobs you have not thought of, to occupy the first day when you should be plowing?

Often much depends on this early start. How many instances can you call to mind, of crops grown by different farmers on soils equally well prepared and equally fertile, that have yielded widely varying quantities of grain, the difference being in favor of the earliest sown! With the oat crop this is often the case; it cannot be sown too early. It requires the rain and cool weather of the spring months to develop vigor and strength to push it through the heat and drouth of the summer to a bountiful harvest. Favorable weather must be improved; for if the "nick of time" be passed, long storms may occasion a week's delay. This confuses the work. When you should be preparing the planting ground, you are but finishing the sowing, and unless you make extraordinary efforts your operations will follow this order through the entire season.

Are you ready to improve your method of farming—to cultivate better—adopt a more scientific rotation of crops—use the best machinery—expend more capital in carrying on your operations? Of all men the farmer should possess the strongest faith, and make the broad fields of his farm his bank of deposit, considering manures, underdrains and good stock the best representatives of his accumulated capital.

ABOUT SUBSOIL PLOWS AND PLOWING.

SEVENTEEN years ago I bought a subsoil plow, and first commenced subsoiling in a sixteen acre lot in the spring, using two yoke of oxen, which I consider the best kind of a team to subsoil with. After this field was subsoiled, it was planted to corn, which turned out a good crop. The next grain crop I think was wheat, which also turned out a fine crop, with nice, bright straw, which had not been seen on the field for ten years previous. I concluded that I had been well paid for the expense of subsoiling. The subsoil of this field was generally a stiffish clay, underlaid with gravel; the clay was from one to two feet deep. The subsoiling seemed to loosen up this clay sufficiently to let the water down after heavy rains, which it did not do previous to this treatment.

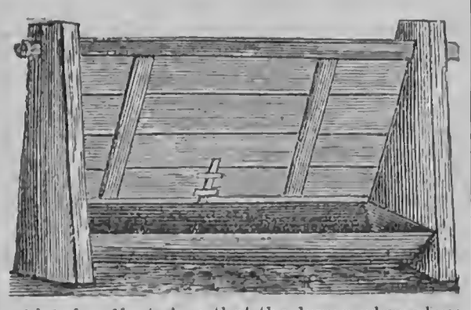
A few years after I subsoiled part of another field where the subsoil was also clay and several feet deep. In this field I was not able to see that any benefit had been derived from the subsoiling, and I have come to the conclusion that it will hardly pay, unless it is to loosen up a light subsoil, as in the first mentioned field. I have subsoiled parts of other fields where I thought I was well paid. Subsoiling cannot be properly done, except in spring and fall, when the ground is soft, so that the plow can run down deep.

I never saw a subsoil plow which was properly constructed. It should be wedge-shaped, growing larger towards the heel, or it will not keep clean, which makes it draw more than as heavy again as though it scoured—it is like a common, or surface plow, which will not scour; it will not half do its work. The mould-board should be made in a circular form so as not to have any sharp angles about the plow. Mine never would clean itself until I had a new mould-board made in the form I have described. The standard should be one and one-half inches thicker at the heel than at the front, which is exactly the reverse in all that I have ever seen.

I have found the subsoil plow very useful in underdraining. I first open the furrow with a common plow; then follow with the subsoil, going up and back in the same furrow, which loosens the soil down quite deep, and it can then be shoveled out rapidly in comparison to what it could without using it. J. C. MC V.

A CONVENIENT FEEDING TROUGH.

O. L. WILLIAMS, Meadville, Pa., sends us the accompanying plan of a convenient trough for feeding hogs or sheep. It is especially well designed for feeding hogs, and may be placed in the pen, the swing door above the trough forming one side. If desirable to use it out of doors it may form part of a fence. The construction is simple. Two upright board standards about four feet high are nailed to the ends of the trough to support a swing door or partition,



which is adjusted so that the lower edge plays back and forth just over the top of the trough. The view given is of the rear side of the trough, and the partition is swung forward to shut the animals away while their food is being prepared. When ready the slide is withdrawn, the partition swings over to the rear side and the hogs can "go in." Slats of wood should be placed across the trough to keep the animals from standing in it. By swinging the partition high enough the hogs may pass under it as through a door.

ABOUT BEE CULTURE.

WE have two modes of increasing an apiary—one by *natural* and the other by *artificial* swarming. Many bee-keepers let their bees do as they incline,—swarm when they please or let it alone, and as often as they deem best. Our best bee-keepers, however, prefer to divide them, or, in other words, make them swarm.

A writer on bees in No. 51 of the RURAL for last year, stated that "natural swarming is generally regarded as safest and best." It is not my desire to provoke a controversy on this subject, but I deem it due to your bee-keeping readers that Mr. HAZEN, the author of the statement, should give some *proof* in support of it. If his statement is true it is important that they should have the facts before the next swarming season, for a multitude of bee-keepers will then be dividing their bees. For my part I should be pleased to have him give the name and address of even *one* bee-keeper, qualified to manage bees with any degree of success, who has tried artificial swarming, as now practiced by our best bee-raisers, and has abandoned the process as being unsafe and less advantageous than the natural mode of increase.

Mr. HAZEN calls the attention of your readers to a method of dividing bees which he denominates as an "untried experiment," and is desirous that they should make a trial of it. Why not, Mr. HAZEN, try "experiments" first in your own apiary? Then, if you suffer no loss, and the plan is successful, it will be time enough to induce others, less experienced than yourself, to give them a trial. There are modes of dividing bees that are safe and successful, and none that are "untried" and questionable should be given to the public. It is my belief that there are modes of increasing an apiary more simple and practical than the one you mention.

St. Charles, Kane Co., Ill. M. M. BALDRIGE.

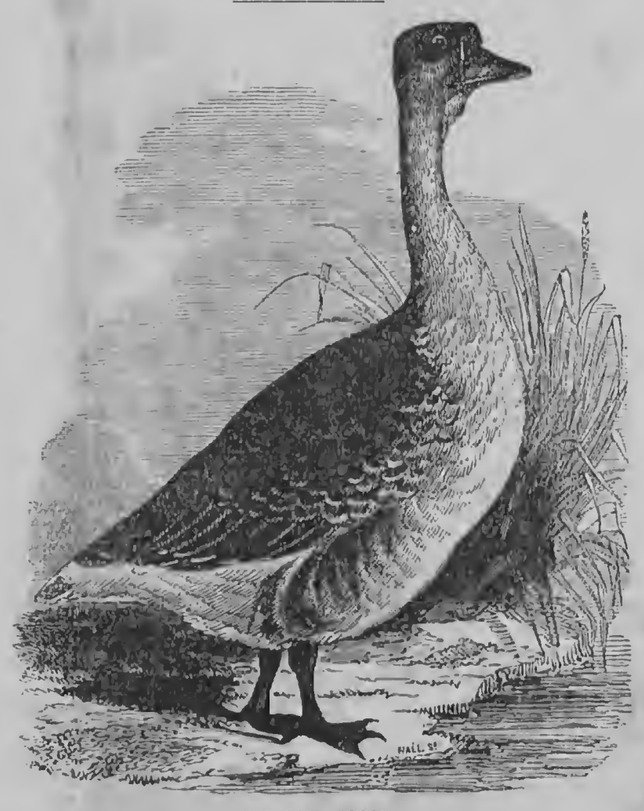
SHEEP FOLDS—MANURE.

IN some sections it is the practice to spread a coating of earth over the area of the sheep fold, and when a considerable quantity of droppings have accumulated the whole is removed and spread upon the soil if seasonable for the distribution. If not, the mass is placed in a compact heap for future use, and another coating of earth supplied to the fold, and so on during the sheltering season. In this way every portion of the manure is saved in a most effective state—a matter of grave importance to the farming population.

There is another method of treating manure of all descriptions, somewhat expensive, but perhaps the most remunerative of all, and that is by furnishing a shelter especially for it where it is packed away as it accumulates in the stables. Here it is left in a pure state, or composted with the litter about the barn and stables to undergo such fermentation as will naturally result from such an accumulation, till the proper season for applying it to the soil arrives. This compost heap should not be in close proximity to the stables, as the effluvia escaping from it is believed to be not only offensive to stock but detrimental to their health and proper development.

DOMESTIC ANIMALS should have special care and attention during the ensuing few weeks.

GEESE AND DUCKS.



AFRICAN GOOSE.

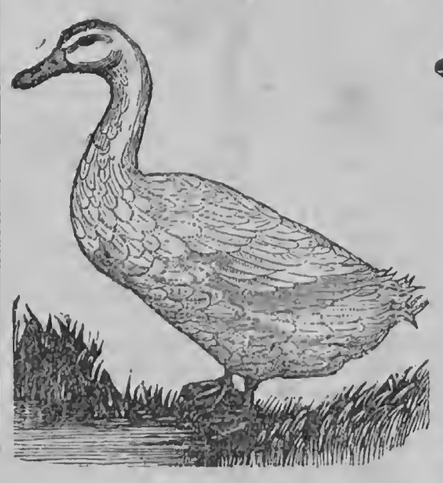
WE have just received a letter from "An Old Subscriber," Dundas, Canada West, asking for information about the African Goose and the Aylesbury and Black Cayuga Ducks. As these are valuable varieties of fowls, and the subject is a timely one, we reply by giving illustrations of the birds, and brief descriptions.

The African is the largest of all the goose family, a gander in good condition often weighing from twenty to twenty-five pounds. They are noble looking birds, and on account of their majestic appearance and dignified movements on the water, have been called by some swan geese. Their voice is peculiarly coarse and deep, and unlike that of any other variety. Some time ago, Mr. EBEN WIGHT of Boston, who is good authority in these matters, wrote as follows:—"The African goose proves much more prolific than the Bremen, or any common goose seen about the country; it is a stately looking goose, of gray upper plumage, with white under the body, and any one not having a large dew-lap or pouch, should be rejected, as less likely of attaining to the largest size." Mr. WIGHT considers a cross of the African and Bremen superior to the pure bred as prolific layers, and equally good for the table.

The Aylesbury is the best of the white ducks; its plumage is snowy white, its legs and feet yellow, and its bill flesh-colored. It is also large in size, and excellent for the table. When properly fed the adult ducks should average ten to twelve pounds per pair. They are prolific layers, and are said to be less noisy than the common breed. The Aylesbury duck originated in England and derives its name from the town near which they are raised in large numbers for the London market.

The Black Cayuga is the best of the dark ducks, and is scarcely inferior in size to the Aylesbury. It originated on Cayuga Lake, and has been extensively bred and brought to notice by J. R. PAGE, Esq., of Sennett, N. Y. It is a very superior bird for the table, its flesh having the juiciness, richness, and game flavor of the best of wild ducks.

The duck possesses many excellent qualities, its manner and action on land and water are curious and pleasant, and its character is harmless and inoffensive. They are very prolific layers.



AYLESBURY DUCK.

BLACK CAYUGA DUCK.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

HOW TO RAISE LAMBS AND TEGS.

NUMBER THREE.

DISOWNING LAMBS.

BAKER, when a ewe disowns her lamb, places them in a pen, two and a half feet by three; or if the ewe is very refractory, fastens her by a ring and staple to an upright stake—the strap being so short that she cannot turn round to butt her lamb. She is held for it to suck frequently, and if she continues refractory after it is able and tries to help itself, she is switched over the face and ears till she submits. BROWN, ELITHARP, PITTS and SANFORD use the pen, and the switch "persuasive" if necessary,—ELITHARP turning the ewe's head so she can see the lamb as it sucks. E. O. CLAPP uses the pen, the stanchions, the switch, and sometimes frightens her by tying a dog in her sight, to arouse her maternal instincts. A. H. CLAPP confines her head in stanchions, and prevents her stepping about with her hind feet, to get away from the lamb, by narrow bars—placed close on each side—but releases her and puts her alone with her lamb a short time each day; and he sometimes frightens her with a dog or some unusual object. GREGORY uses a pen so narrow that the ewe cannot turn round, and places the lamb under her. HAMMOND uses a pen, separating the lamb from the ewe about half the time, and placing it where she can hear it bleat; HEYNE, a pen about five feet square; POTTLE, a small box or pen, preferring a dark one; RICH, SAXTON and WILCOX, a small pen; WRIGHT, a small box-stall, tying the ewe so she cannot turn round. It will be understood, of course, that *all* assist the lamb to suck *frequently*. PITTS thinks that early success depends upon this frequency.

We do not remember ever to have found the *switch* necessary; and not being very strong advocates of "corporal punishment" have never recommended its application, according to time-honored custom, to the recusant dam; but the above testimony in its favor is certainly very strong. The small pen, made dark if it can conveniently be done, and placed out of hearing of the flock, with *kind* treatment, has always sufficed in our experience.

Some of our correspondents have mentioned their arrangements for conveniently feeding the confined ewe, but there is nothing peculiar in them. She must be well fed to prevent a drying up of the milk—her uneasiness, &c., producing a strong tendency in that direction.

FEEDING LAMBS GRAIN, ROOTS, &C., BEFORE WEANING.

This is not necessary when the lambs are dropped after the ewes are turned to grass, or within three or four weeks of that period; and accordingly, some of our correspondents who have their lambs yeaned thus late, do not feed them at all, except what they obtain from the racks and troughs of their dams. In the case of earlier lambs, BROWN feeds them, until they are turned to grass, fine cut potatoes and shorts—some of the latter being kept in the trough all the time, to be eaten at will. He fences off a separate apartment for them in the sheep stable by means of a rack, the perpendicular slats of which are five inches apart. These permit the free ingress and egress of the lambs, but exclude the ewes. In this apartment is placed a lamb rack, in which is put the finest and best hay, and a shallow feeding trough so combined with the rack as to prevent the lambs from getting into it. All our other correspondents who have early lambs prepare a separate apartment for them, and generally on essentially the same plan. E. O. CLAPP feeds them oats and shorts; A. H. CLAPP, bran; HAMMOND, oats, giving less at first, and twelve quarts a day, (divided into two feeds,) to a hundred, after they become about a month old and have got to eating well; if they are January and February lambs, increases the feed, so that between the first of April and their being turned out to grass they receive about half a bushel a day; feeds the ewes and lambs their grain at the same time, and if all the latter do not immediately enter their separate enclosure, drives them in "with a long whip having a little brush on the end of it;" after they have eaten their grain, turns the ewes and lambs out of the stable into the yard while their racks are being filled with hay, and on letting them in, again

separates out the lambs and *shuts* them in their enclosure for two or three hours. Heyne, when the lambs are about four weeks old, confines them apart from their dam daily at 9 A. M. and 2 P. M., for a period not mentioned, but according to our recollection of his former oral statements, they are separated two or three hours each time; feeds, at three months old,* from twenty to twenty-four quarts of oats a day to one hundred, and roots if he has them. The Marshalls feed fine cut potatoes and bran; Wilcox, shorts, or shorts and ground oats in equal parts, kept constantly in the trough.

We have never had our lambs dropped early enough to require separate feeding—but if we did so, should prefer ground oats, or oats and shorts, with a small quantity of roots. All the feeds mentioned above, however, are undoubtedly good ones. Lambs with an abundant supply of good milk would require no extra feed, but they rarely obtain this in winter.

DOCKING AND CASTRATION.

Baker docks and castrates lambs at six to ten days old; Brown, Heyne, Rich and Saxton, at four weeks old; E. O. Clapp, at three weeks; A. H. Clapp and Wright, at three or four weeks, but Clapp does not perform both operations at the same time; Elitharp docks at one or two weeks, and castrates at eight; Gregory docks at washing and castrates at shearing; Hammond docks at two weeks and castrates at four; the Marshalls dock and castrate at from six to fifteen days;† Pitts, at from one to four weeks; Pottle, at from one to three weeks, according to the "strength and vitality" of the animal; Sanford, at two weeks; Wilcox, at one or two weeks, but does not perform the operations together. Our own views as to time, manner, appropriate weather, etc., are given in the Practical Shepherd.

KILLING TICKS ON LAMBS.

All concur that dipping the lambs in a decoction of tobacco, strong enough to kill ticks, is the most effectual mode of removing these parasites from the flock. The time of our correspondents' dipping them varies from two or three days to two weeks after shearing the dams. We prefer the latter time, so that all the ticks on the ewes shall have had time to get (as they will,) on the lambs.

WEANING LAMBS.

Baker weans lambs at three months old, making it a point to do so "during the dark of the moon," as they will not bleat as much for their dams in dark as in light nights; Brown, the Clapps, Elitharp, Rich, Saxton and Wilcox, at four months; Hammond, from three and a half to four months; Heyne, from three to four months; the Marshalls, from four to four and a half months; Pottle, from three to three and a half months; Sanford, five months; Wright, from four and a half to five months. We prefer four months, but might shorten or extend the time according to circumstances.

TEGS—PASTURAGE AFTER WEANING.

A lamb is called a teg after weaning and thenceforth until it is shorn, at the usual time. As the kind of pasturage most suitable for tegs has been the subject of considerable discussion, and consequently doubt, in England, we put the following question to our correspondents:—"Do you prefer to put tegs on pasture lands, or on the after-growth of meadows?" Baker prefers, if the season is wet and the feed good, to return them to the pasture they are used to; Brown, the Clapps, Elitharp, Hammond, the Marshalls, Pitts, Saxton and Wilcox, prefer the after-growth of meadows; Pottle prefers pasture if fresh and good; Rich, good pasture; Sanford would prefer good, fresh pasture, but not having it at that season, uses the after-growth of meadows; Wright thinks he would prefer good pastures if fed close and then allowed to start up fresh; E. O. Clapp likes to put tegs on stubbles (especially wheat stubbles,) where the land has been seeded down to grass; Pottle objects to this, because "the sharp ends of mown stubbles hurt them."

Our own experience was given in the Practical Shepherd thus:—"The moist, mild climate and constant rain in England, affect pastures very differently from the scorching and often very dry summers of the United States; and as a general thing I have found good, fresh rowen or after-math on meadows, or the new seeded grass in grain stubbles, better feed for lambs than rested pastures, unless the latter have been seeded the same or the previous year, and the grass on them is tender and fresh." Such is our continued experience, though it might not be so, nor do we feel at all confident it would be so, under the conditions named by Wright; but in our climate, and on heavily stocked farms, those conditions are seldom conveniently attainable.

There is unquestionably force in Pottle's objection to stubbles. Whether they ever produce sore mouths, as some believe, is very doubtful; they certainly have never affected our tegs in that way,— but they eat off wool from their legs and heads, and thus injure their appearance in points where "fashion" is very exacting.

FEEDING TEGS GRAIN IN SUMMER.

Our next question was:—"Is it expedient to feed tegs anything but grass during summer?" Those whose replies are simply in the negative, without assigning any reason, are the Clapps, Elitharp and the Marshalls. Pitts considers grain feed in summer "too severe a tax on the the stomach, and one which will tell before they are turned to grass the next spring:" Pottle thinks it improves their summer growth, but that they are not likely to do as well the succeeding winter; Wilcox deems it injurious to the tegs. Several of the above admit, and probably all if questioned would admit, the propriety of extra feeding in summer, where drouth or other incidental causes have cut off the necessary supply of pasturage.

Baker thinks it well to feed lightly of wheat bran, or bran and oats, once a day after weaning; Brown, that it is advisable to feed from the same period sparingly with bran or shorts, with a few oats mixed; Hammond, that tegs should be fed regularly with grain; Heyne puts tegs up nights and feeds them hay; Rich commences feeding oats and bran in equal quantities immediately after weaning, increasing the amount as fast as they will eat it, to half a bushel a day to fifty; Sanford thinks they should be fed lightly with grain; Saxton has succeeded well in feeding them oats and bran or fine feed; Wright thinks that if in good condition they need but little extra feed, and that one object in feeding thus early is to get them tame, and to teach them all to eat from the trough.

It will be borne in mind that these remarks all apply strictly to *summer* feeding, and not to *fall* feeding, which is entirely another matter. Having no opinions to offer in the premises but those founded on partial observation‡ and on theoretical considerations—for we never have made it a practice to give tegs any other feed but grass in the summer—it is with great reluctance that we express our decided dissent from the views of some of the most eminent Merino breeders in the country. We do not doubt that tegs will grow larger and shower the first summer with grain added to their feed; that in moderate sized flocks, and managed with the great care and skill of such men, they may continue to thrive not only through the first winter but throughout their lives; and that thus they acquire an early maturity and perhaps ultimately a larger if not actually a more perfect development. But under ordinary management and in larger flocks, we believe the results hinted at by Messrs. Pottle, Pitts and Wilcox, are more likely to follow: and that, at all events, this early training of the system to demand in the warmest period of the season more nutriment than is supplied by good sweet grass—on which all herbiverous animals in their normal condition fatten—is not expedient for the mass of sheep farmers on the score of general economy, and tends to reduce the natural hardiness of the animal and its capacity, on necessary occasions, to endure short keep. In the highly artificial mutton breeds, which devote their short lives to the accumulation of fat, these are considerations of little importance; but in sheep intended to meet the wants of the wool grower, they possess prime importance.

FEEDING TEGS IN THE FALL.

But all agree that after the pasturage begins to fail in quantity or nutriment, in autumn, tegs should receive extra feed. Baker thinks as soon as the first frosts set in they should get three or four quarts of oats to one hundred, and when the nights grow cooler be confined to the barn and yard nightly and fed hay, turning them out *early* in the morning; Brown, that the summer grain feed should be proportionably increased as the grass becomes injured by frost; E. O. Clapp recommends feeding six quarts of oats to the hundred after first of October—increasing the amount to twenty quarts during the month and to thirty quarts later (we suppose he means in the winter;) A. H. Clapp, sixteen quarts of oats to a hundred, from middle of October to first of January—afterwards twenty-four quarts; Elitharp says that after first of October, or after frost partly kills the grass, sixteen quarts of oats, and hay at night, will carry them in good flesh into the winter; Hammond feeds corn, oats, shorts, roots and pumpkins in the fall—the roots whole, the pumpkins broken into two or three pieces, until cold weather, when both are cut up—the daily feed being half a bushel of corn, oats and shorts, in equal parts by measure, and a bushel of roots to a hundred; Heyne does not state his fall feed to tegs, but says "they must not be allowed to get down" at that season; the Marshalls, after grass begins to fail, feed wheat bran, with a light sprinkling of oats—amounts not stated; Pitts, as soon as the grass fails, or the tegs do not do as well as before, feeds oats, or oats and shorts, with choice hay at night—giving half a bushel of oats and shorts to sixty or seventy, after they get to eating well; Pottle, at such time as drouth, frost or any other cause weakens the supply or nutriment of the grass, feeds enough oats, or oats and wheat bran mixed, to supply the diminished nutriment of the grass; Rich feeds oats and bran in equal quantities, half a bushel to fifty; Sanford feeds hay at night, and refers to the Practical Shepherd for further directions; Saxton feeds the same in fall as after weaning—amount not stated; Wilcox, when the grass begins to fail, feeds tegs all the pumpkins they will eat, or for lack of these, roots, generally sugar beets, from a fourth to half a pound per head—or enough to keep them in good thrifty condition—has fed grain, but considers above by far the best; Wright, after frost has killed the grass, feeds a pint of oats a head, or an equivalent in cracked corn, and thinks tegs eat it much better near sunset than early in the morning. It will be understood, of course, that all the feeds mentioned by our correspondents are *daily* ones. We think that many, if not all of them who do not state the fact, feed tegs hay at night after the grass gets poor, and that they omit to mention this only because they consider it a matter of course. Probably all too, who do not habitually house their sheep, house their tegs at night, as soon as the nights become cold, and from the heavy cold storms in the day time, which begin to occur after the middle of October. We have no desire to add anything to our own opinions, under this head, expressed in the Practical Shepherd.

It was an oversight in us not to ask our correspondents how they fed their tegs in winter. Some have mentioned their winter feed; the others who feed grain in the fall, probably generally feed the same and rather more of it after the first of December. Tegs require great regularity in feeding—bright, fine, early-cut hay (we consider half clover and half meadow hay the best)—some green feed—clean, airy stables—free access to water—and abundant exercise.

Under a question asking for general suggestions, several of our correspondents lay much stress on the importance of exercise for sheep of all ages, and especially for ewes in lamb.

* Heyne, who manages Mr. Chamberlain's flock of Silesian Merinos, has the lambs dropped in the fall or early part of winter.

† See Gen. O. F. Marshall's article on this subject in a back number of the RURAL.

‡ We consider all observation partial which is not *habitual* and which does not embrace all the circumstances and details—and *such* observation is confined to the owner or manager of the flock.

THE TARIFF ON WOOLENS.

As promised last week we give below the clauses of the new General Tariff which prescribe the rates of duties on woolens:

SEC. 2. *And be it further enacted*, That in lieu of the duties heretofore imposed by law on the articles hereinafter mentioned, and on such as may now be exempt from duty, there shall be levied collected and paid for the goods, wares and merchandise herein enumerated and provided for, imported from foreign countries, the following rates of duty, that is to say:—On woolen cloths and woolen shawls, and all manufactures of wool of every description, made wholly or in part of wool, not herein otherwise provided for, 40 cents per pound, and in addition thereto 35 per cent. *ad valorem*; on flannels, blankets, hats of wool, knit goods, balmorals, woolen and worsted, yarns, and all manufactures of every description, composed wholly or in part of worsted, the hair of the Alpaca goat, or other like animals except such as are composed of wool not otherwise provided for, valued at not exceeding 40 cents per pound, 20 cents per pound; valued at 40 cents per pound, and not exceeding 60 cents per pound, 25 cents per pound; valued at above 60 cents per pound, and not exceeding 80 cents per pound, 35 cents per pound; valued at above 80 cents per pound 40 cents per pound, and in addition thereto upon all above named articles 35 per cent. *ad valorem*.

On endless belts or felts for paper or printing machines, 20 cents per pound, and 35 per cent. *ad valorem*. On bunting 20 cents per square yard, and in addition thereto 35 per cent. *ad valorem*.

On women's and children's dress goods and real or imitation calico cloths, composed wholly or in part of wool worsted, the hair of the Alpaca goat or other like animals, valued at not exceeding 20 cents the square yard, 6 cents per square yard, and in addition thereto 35 per cent. *ad valorem*; valued at above 20 cents per square yard, 8 cents per square yard, and in addition thereto 40 per cent. *ad valorem*, provided that on all goods weighing four ounces and over per square yard, the duty shall be 50 cents per pound, and in addition thereto 35 per cent. *ad valorem*

On clothing ready made and wearing apparel of every description, and balmoral skirts and skirting, and goods of similar descriptions or used for like purposes composed wholly or in part of wool, worsted, or hair of the Alpaca goat or other like animals, made up or manufactured wholly or in part by the tailor, seamstress or manufacturer, except knit goods, 50 cents per pound, and an addition thereto of 40 per cent. *ad valorem*. On webbings, beltings, braids, galloons, fringes, gimps, cords, cords and tassels, dress trimmings, head nets, buttons, or barrel-buttons, or buttons of other forms for tassels or ornaments, wrought by hand or braided by machinery; made of wool, worsted or mohair, or of which wool, worsted or mohair is a component material, unmixed with silk, 50 cents per pound, and in addition thereto 50 per cent. *ad valorem*. On Aubusson and Axminster carpets, and carpets woven whole for rooms, 50 per cent. *ad valorem*; on Saxony, Wilton and Tournay velvet carpets, wrought by the Jacquard machine, 70 cents per square yard, and in addition thereto 35 per cent. *ad valorem*; on Brussels carpets wrought on the Jacquard machine, 44 cents per square yard, and in addition thereto, 35 per cent. *ad valorem*; on patent velvet and tapestry velvet carpets printed on the warp or otherwise, 40 cents per square yard, and in addition thereto, 35 per cent. *ad valorem*; on tapestry Brussels carpets printed on the warp or otherwise, twenty-eight cents per square yard, and in addition thereto thirty-five per cent. *ad valorem*. On treble ingrain, three-ply and worsted chain Venetian carpet, 70 cents per square yard, and in addition thereto 35 per cent. *ad valorem*. In yarn Venetian and two-ply ingrain carpets, 12 cents per square yard, and in addition thereto 35 per cent. *ad valorem*. On druggets dockings printed, colored or otherwise, 25 cents per square yard, and in addition thereto 35 per cent. *ad valorem*. On hemp or jute carpeting, 18 cents per square yard. On carpets of wool, flax or cotton, or parts of either or other material not otherwise herein specified, 40 per cent. *ad valorem*; provided that mats, rugs, screens, hassocks, bedsides and other portion of carpets or carpeting shall be subjected to the rate of duty herein imposed on carpets or carpeting of like character or description, and that the duty on all other mats not exclusively of vegetable materials, screens, hassocks and rugs shall be forty-five per cent. *ad valorem*. On oil-cloths, for floors, stamped, painted or printed, valued at 50 cents or less per square yard, 35 per cent. *ad valorem*; valued at over 50 cents per square yard, and on all other cloth except silk oil-cloth, and on water-proof cloth not otherwise provided for, 45 per cent. *ad valorem*; on oil silk cloth, 60 per cent. *ad valorem*.

Condensed Correspondence, Items, &c.

CORRECTION.—We published "C. N. ROGERS & SON'S" sheep cuts several numbers back. It should have been E. W. ROGERS & SON.

TRAINING SHEPHERD DOGS.—D. LAPHAM, Orangeville, Mich., asks us or "any of our subscribers" to inform him how to train a shepherd dog. *We*, at least, are not able to give any description of the process on paper which would be sufficiently intelligible to amount to anything. It would be as easy verbally to teach a man how to mow or swim, or go through the military manual exercise.

WOOL SAMPLES.—L. DENSMORE, Sharon, Wis., incloses three samples from a two-year-old ram. If growing *fine* Merino wool is the object and the ram is right in all other particulars besides the quality of the wool, he *may* be a good one for breeding. But the samples are too fine, and indicate too light a fleece, if the heavy American Merino fleeces are aimed at.

T. D. ARNOLD, Windboro, La Cross Co., Wis., sends samples from two rams, both of fair quality and length. We cannot undertake to decide on the positive or relative value of rams without seeing them, but according to the descriptions sent, No. 1 is by far the best and is a good one. The cross between Infantado and Paular often results favorably.

BLACK LAMBS.—"A Western Subscriber" asks if a black Merino lamb proves impurity of blood on the part of the sire or dam. It does not. We have heretofore stated that black lambs occasionally appeared among the pure blood flocks of Spain in their palmiest days—that they appeared and continue to appear at rare intervals in their best descendants in the United States. To the question whether they should be excinded from the flock, we answer yes. A black ewe may never have a black lamb—yet we should expect this color would be more likely to crop out in some of her descendants than in those of a white ewe, and consequently that breeding from her would increase the tendency in the flock to produce black lambs.

Dairy Department.

CONGESTIVE PUERPERAL FEVER IN COWS.

PUERPERAL FEVER is of two kinds, congestive and inflammatory. The one is generally confounded with the other, and both are usually described by authors under the head of "milk fever." The symptoms exhibited and the course of treatment required differ too much, in my opinion, to justify us in classing and describing both kinds of the disease under the same head. That which is common to most animals consists of inflammation of the membranes of the womb and intestines, and is produced by exposure to cold or injury inflicted during parturition. The other, almost peculiar to cows, occurs within a few days after calving. It almost invariably attacks those that are *fat* or in a plethoric condition, and have previously given large quantities of milk. The superabundance of blood, which, up to the time of parturition has nourished the calf, is not always at this period fully diverted into its new channel for the formation of milk.

A cow in poor condition, or a young one that has not attained her growth, is seldom if ever attacked with this form of the disease. The reasons for this are obvious. All the nutriment which the blood affords is required in the young and growing cow to support the increase of size, and in the poor cow to give strength and to develop the lean muscles.

On the other hand the superabundance of blood in a fat or plethoric cow at the period of parturition frequently causes serious disturbance. If, at this critical juncture, the bowels become constipated and the mammæ does not at once take on its function of secreting and yielding milk, trouble is immediately at hand. The fluids being all retained within the system, already full to repletion, produce immediate and serious disturbance. Serum is effused, causing by its pressure upon the brain and nervous centers imperfect power of motion, and impaired sensation. The following symptoms will usually present themselves. Rumination ceases, indicating that the digestive organs have suspended their functions. The dew or moisture upon the *muzzle* disappears, or in other words becomes dry. The body gradually distends in consequence of the gases that are generated—the result of indigestion. Next, the nervous system indicates the progress of the malady. The cow begins to stagger; the hind parts appear at first most affected; she soon reels, and finally falls; gets up and falls again, and soon becomes unable to rise at all. Her head will now be bent around and rest upon her side; she refuses to notice her offspring; as the disease rapidly progresses she soon becomes prostrated full length upon the floor. Her breathing is slow and stertorious; pulse scarcely perceptible; the pupils of her eyes dilated; all the visible blood vessels distended to their utmost capacity; the extremities cool and sometimes cold; surface heat low; occasionally she becomes convulsed; partial vomition sometimes occurs through the nostrils—the last is an alarming symptom. The udder in this type of the disease is seldom swollen or inflamed.

In regard to the treatment, it should be early, prompt and energetic, as the disease runs its course with astonishing rapidity. Death frequently takes place in from eighteen to twenty-four hours from the time symptoms of the malady are first exhibited. The disease proves more fatal in hot than in cold weather, and in my opinion indicates a want of tonicity in the blood vessels. This fact makes an important suggestion to us in regard to the treatment to be adopted. Blood-letting, which is recommended by nearly all authors as the first and most important thing in the treatment, is, in my opinion, worse than useless—is in fact positively injurious. I have had quite an extensive experience in the treatment of this disease for the last five years, and every case that has proved fatal has done so in defiance of bleeding. On the other hand, every case that has recovered has done so without blood-letting. The course of treatment that has proved most successful with me, and which I now recommend to others, is as follows: An active purgative combined with stimulants, should be given as soon as symptoms of the disease exhibit themselves. One pound of Epsom salts, half a pound of common salt, and two ounces of ginger, should be dissolved in two or three pints of hot water. Next dissolve twenty drops of Croton oil in one ounce of oil of turpentine; add to this the yolk of four eggs and beat them well together, then mix this with the salts previously dissolved. Sweeten the mixture with a small teacupful of molasses, and administer it from a bottle. Pour it down slowly and carefully. By so doing you will be more likely to succeed in having the medicine reach the fourth or true digestive stomach.

The following injection should then be given: Warm water, one gallon; common salt, two ounces. This may be repeated every six hours. The limbs should be freely hand-rubbed, and the cow properly covered, according to the weather. The milk should be drawn at short intervals, and the udder gently rubbed to solicit this organ to assume its proper function. The cow should be turned from side to side occasionally, and the head frequently sponged with cold water.

The turpentine and ginger may be repeated every three hours—administered each time in a quart or two of well made flour gruel, to prevent the irritant action of the turpentine upon the membranes of the month and fauces. Purgation once established, the patient may be considered safe. Should the bowels remain unmoved at the end of eighteen hours, give one quart of linseed oil to which an ounce of the turpentine may be added. The turpentine fulfills more than one important function in the treatment. It usually relieves the bloat or tympanitic distention, stimulates the dull and torpid stomachs to action, gives tone to the blood vessels, relieves the stupor, and equalizes the circulation.

Lyons, N. Y., 1867. C. MINK, V. S.

Rural Spirit of the Press.

Raising Timber on the Prairies.

W. W. PARKER of Benton, Iowa, writes the Iowa Homestead concerning his experience in raising timber on the prairies. He commenced from seed and cuttings in 1858—planting three acres to the Black Locust, drilling in the seed. The rows were eight feet apart, and the intermediate space planted to corn. At two years old two thousand trees were transplanted to neighboring farms, and one hundred dollars' worth beside sold to various parties. In 1864 the grove was thinned with the ax, and ten loads of fence poles taken off. What were left, up to last fall, made an average growth of 18 feet in height, but the borers attacked the trees in such numbers as to necessitate the cutting of them down to save them for use. The trees were from four to seven inches in diameter, and equal to at least 2,000 good oak rails. From his experience the writer is satisfied that it will pay well to plant Cottonwood, Soft Maple, Lombardy Poplar, and other soft varieties, for fuel even, without taking into consideration the protection against the sweeping winds which career over the prairies during the winter months.

Diseased Potatoes—Effects on Cattle.

JOHN HAYNES, Londonderry, N. H., writes the N. H. Mirror and Farmer concerning the bad effect produced on cattle by feeding them with rotten or partially decayed potatoes. An acquaintance of his fed his cows with them and lost three of the number in a short time. Various opinions, as to the cause of the death of the cows, were expressed, but no one thought of imputing it to the potatoes. A post mortem examination found the first and second stomachs in a healthy condition, but the third or manifold was discovered to be distended, and one-half or more of its contents perfectly dry and adhering to its walls, the result of inflammation and the cause of death. Subsequently Mr. H. fed his cow a few bushels of diseases potatoes—a peck per day—when she was attacked in the same way as were those of his neighbor, when antidotes for poison were administered with success. There can be no doubt that, in both cases, the effects produced were the direct results of feeding diseased potatoes to the cattle. Owners of stock would do well to make note of this.

Cotton in Missouri.

A NEW ORLEANS paper states that farmers, in certain portions of Missouri, are about to devote most of their lands to the raising of cotton the ensuing season. This announcement induces the editor of the Louisville Industrial Gazette to give a history of cotton raising in Missouri and Southern Illinois from 1824, when the experiment commenced, to the present time. The exports of cotton, from these sections, have varied from 10 to 100 bales per annum. The editor of the Gazette does not believe that cotton can be profitably grown in the region mentioned, owing to the frequent occurrence of early frosts, and the competition which must soon result from the introduction of capital and the reorganization of labor in the old cotton growing States.

Rural Notes and Items.

DEFERRED.—Several valuable articles intended for this paper, and also a number of advertisements, are necessarily deferred.

THE SEASON.—The Weather, which was balmy last week, took cold on Saturday, and there was a heavy fall of snow—about eight inches—which we hear is considerably drifted in the country. As we write (March 18) the sleighs are flying, bells jingling, and the winds whistling—in defiance of the almanac, market gardeners and sentimental folk who write and sing about *lovely* Spring. P. S.—Don't plow nor plant till the snow melts!

A MODEL RURAL CLUB FROM A REAPER FACTORY.—We have just received a club of sixty-one subscribers (with a check for $152.50,) from Mr. H. F. PHILLIPS, general foreman in an extensive manufacturing establishment at Auburn, N. Y.—with the promise of ten or fifteen names more in a day or two. Mr. P.'s letter closes thus—"All *new* subscribers, and all workmen in the factory and shops of the DODGE & STEVENSON Manf'g Co., Auburn, N. Y., manufacturers of DODGE'S MOWER AND REAPER, Ohio and Buckeye Patents." A Model Club, truly—the largest we ever received from any one factory—and the more complimentary because it comes from a model establishment, where both work and business are carried on systematically. We venture to say that none of the machines turned out by the Company will be the worse in construction or finish from the fact that so many of its employes take and read the RURAL, while we are confident the men and their families will be interested and benefited. There is yet room on our books for the names of members of clubs from manufacturing establishments all over the country. Who takes the next page?

NEW ENGLAND AG. SOCIETY.—The annual meeting of this Society was held in Boston, March 7th. Delegates from all the N. E. States, except Maine, were present. After an opening address by the President, Hon. G. B. LORING, of Salem, Mass., an election took place, and resulted in the choice of the following Board of Officers for the ensuing year:

President—Hon. Geo. B. Loring of Salem, Mass. *Sec'y*—Daniel Needham of Groton. *Treas.*—Isaac K. Gage, Fisherville, N. H. *Vice Pres'ts*—S. L. Goodale, Me.; Hon. Frederick Smith, N. H.; Daniel Kimball, Vt.; William Brigle, Mass.; Amasa Sprague, R. I.; E. H. Hyde, Conn. *Trustees—Maine*—Seth Scammon, Columbus Stewart, Waldo T. Pierce, Geo. W. Ricker, and J. F. Anderson. *New Hampshire*—Moses Humphrey, S. W. Buffum, W. P. Estes, Geo. W. Riddle, Virgil C. Gilman. *Vermont*—Geo. Campbell, D. R. Potter, Henry Clark, Ebenezer Bridge, and Thomas Saunders. *Massachusetts*—S. H. Howe, C. T. Plunkett, Levi Stockbridge, Charles P. Preston and S. B. Phinney. *Rode Island*—Edward P. Pierce, David Pike, A. B. Chadsey, J. D. W. Perry and Thomas B. Buffum. *Connecticut*—J. J. Webb, Benj. Sumner, H. S. Collins, Burdett Loomis and G. C. Hitchcock.

The proceedings were interspersed with a rather racy discussion relative to the action of the President in the appointment of an "official organ" of the Society, but his course was finally endorsed, and the decision acquiesced in under a species of protest on the part of some gentlemen connected with the Agricultural Press. A more extended notice of this matter is precluded, if it were desirable to make it, for the reason that we do not like to bring upon our heads the chastisement implied in this remark of the N. E. Farmer:—"There may be an occasional 'family jar' among us, but woe to the outsider who interferes!" This pickled rod stops us right about here.

OUR PHOTOGRAPH ALBUM PREMIUM.—Under date of March 11, 1867, Mr. J. B. POTTER of Lake Co., O., writes us in this wise:

FRIEND MOORE:—On Friday evening I received in good order the *Photograph Album* you sent me; and I must say I was somewhat disappointed, for it was *a much nicer and better book than I expected*. A dealer in Albums, to whom I showed it, pronounced it a good $5 Album. So please accept my most hearty thanks, along with my best bow, and be assured that I shall remember the RURAL *substantially*, on every opportunity. It is a pleasure to work for so good a paper as the RURAL, especially when the labor is appreciated in so agreeable and substantial a manner as you have done. I will close with PAT'S expressive salutation of "*Give me you yit.*"

Our Agent-Friend (as well as others interested) is assured that the "dealer in albums" is right as to the Photograph Album we give, for it is "a good $6 album" and would readily sell at that price, though we call it a $5 premium. It costs us nearly $1 more than each an album as would "fill the bill" of our offer, but we like to *agreeably disappoint* our agents, and have this year succeeded well in that direction. We may add that we have secured a large number of albums of the same size and style as the one sent to Mr. POTTER (well bound, pearl mounted, with gilt clasps, and holding 100 pictures,)—one of which will be sent (if preferred to other premium offered,) to every person remitting for ten new subscribers at club rate, ($2.50 per copy,) or seven at $3 each.

—A Physician in Erie Co., N. Y., to whom we recently sent an Album, in a letter acknowledging its receipt says:—"You should see the sparkling eyes and witness the scene of rejoicing its arrival caused. To think that a little pains taken while at the home fireside or on the professional tour, should not only supply nineteen families with good substantial reading matter, but also be the means of procuring such a rich reward! And I am going to try for at least another name, and then will it be asking too much of you to send *your photograph* for a place on page first?"

FEEDING CORN TO STOCK.—(F. C., Ill.) There are various opinions, most of them apparently well sustained by facts, as to which is the most profitable way of feeding corn to stock. We should prefer grinding the grain fine without the cob. Cooking the meal will pay better when feeding it to hogs than to cattle. We cannot tell, at present, where the best farmer's mills for grinding grain can be purchased.

SPRING RYE.—J. Y., Johnstown, Fulton Co., N. Y., writes us, in answer to an inquiry lately published in the RURAL, that spring rye is grown by a few farmers in his vicinity. He sent with his note a sample of the grain, which falls much below winter rye in size, brightness, and plumpness of berry. J. BUTTS of Irondequoit, near this city, says spring rye can be obtained in that town for $1.25 per bushel.

REMOVING RINGBONE.—(S. H. N., Erie Co., N. Y.) In the early stages of ringbone blistering and canterizing are, doubtless, the best remedies. The horse must be kept quiet. In its advanced stages the disease is nearly or quite incurable. Perhaps some RURAL readers will give us a well-tried mode of treatment, successful if resorted to in time.

NEPAUL BARLEY.—"A Subscriber" at Cicero, N. Y., wishes to know where and of whom he can obtain twenty bushels of Nepaul or Naked Barley.

ROOT CUTTERS.—(W. L. F., Poultney, Vt.) We have not, at present, the address of any manufacturer of root cutters with cleaners attached.

HORTICULTURAL.

ABOUT PRUNING.

The best implement to prune with is the thumb nail and fore finger. This implies that all pruning *should* be done at early stages in the growth of the tree—done constantly on the new, tender growth—and that the tree should be trained gently and watchfully up from the first bud to its ripe maturity. The next best implement is the pocket knife; and that means that no branches that are useless, superfluous or out of place should be allowed to grow larger than small twigs. The knife wounds the tree, but it is so slight and so nicely done that it heals quickly and without much injury to the vitality of the plant. The necessary implements, oftentimes, are the saw, mallet and chisel; they are like the surgeon's knife and saw, tools that must be used to save life and future usefulness, because there is no alternative. He is unskillful and ignorant who trains a tree from the beginning, and finally must resort to these.

The first object in pruning is to give shape to the tree—to grow and distribute properly the bearing wood. This is the sole object during the first years of the tree's growth. To make this wood healthy and hardy it should be grown slowly; hence the pruning should not be severe, but timely and moderate. Another object in pruning, at a later stage in the life of the tree, is to produce fruitfulness. This is best done by pinching or pruning in the middle or latter part of summer, which checks the woody growth and turns the power of the tree to the development of buds for fruit.

It is a frequent practice with farmers to prune closely early in the spring. With old trees this system tends to produce a thrifty growth of wood, and sometimes is thereby beneficial; young trees treated in this way produce too much wood, and will not bear fruit as readily. The obvious rule, then, is: prune old trees early, to invigorate them and produce new bearing wood; but prune young and thrifty trees in the growing season, to induce fruitfulness.

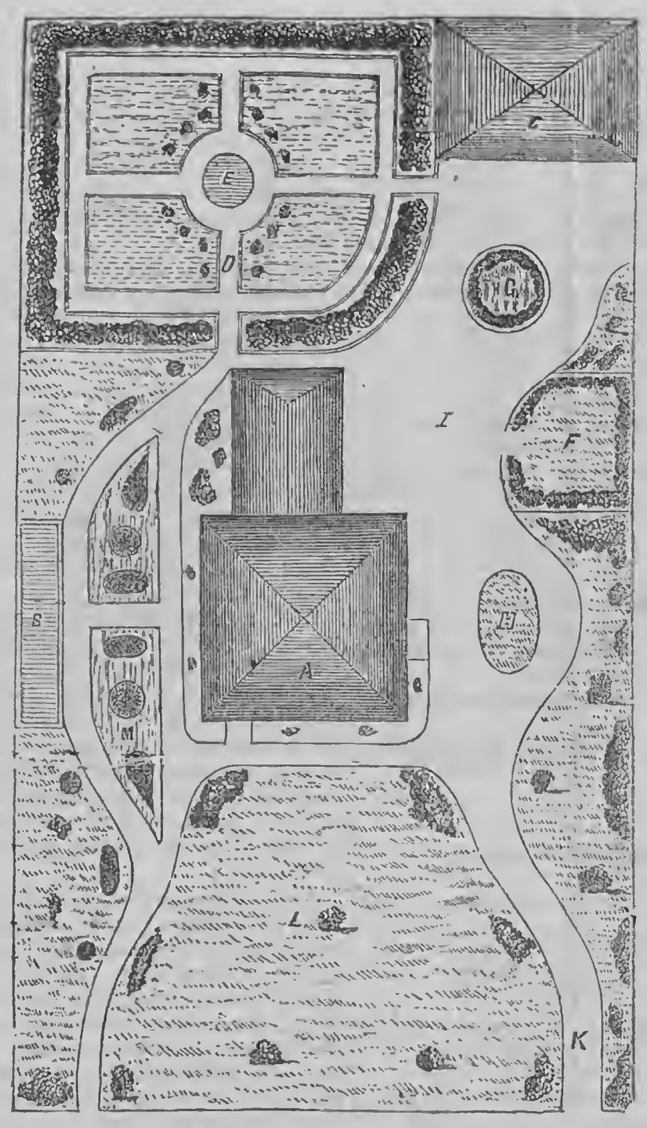
WINE AND GRAPES—NO. II.

A host of new, or previously unknown names, at once appeared on the list of wine grapes, to supply the deficiency or remedy the defects of their predecessors. Hybrids and seedlings multiplied and are still increasing. The truism that we are a progressive people, seldom satisfied with that really attained but ever striving for something higher, is exemplified anew in the commendable ambition now displayed to achieve complete success for our country by demonstrating that we can grow a grape and make a wine equal, if not superior, to any of the old wine growing regions of Europe. The interests of a great, independent nation like our own, would seem to demand this, to say nothing of the moral and physical benefits to be derived from it. California has done much to accomplish this desirable purpose, but much more remains to be done. It is for the Atlantic States I now write. The Scuppernong, the leading grape of the Southern States, which requires three pounds of sugar to the gallon of must, can never aspire to the rank of a real wine grape. Taking, therefore, the grape or wine regions of the Northern and Middle States as the theater of action, and their productions with which these results are to be accomplished, we at once look abroad, regardless of names or awards of committees, for the grape that promises the attainment of this high and desirable object.

Of the multitude a few only can be justly entitled to take rank as wine grapes. The Norton's Virginia will fill, to some extent, the place of the imported port wine for medicinal purposes. The Ives Seedling is attracting some attention, but fears are entertained that want of sufficient amount of saccharine will prevent its being a superior wine grape, and the same may be said of many others. The Diana and Delaware possess excellencies for wine superior to the varieties named, and even to the Catawba, possessing saccharine, acid, and other qualities in better proportion and greater amount with less foxiness, and still they come short of supplying us with a fruit from which we can produce a wine demanded by refined taste, to take the place of the best European wines. I will not attempt to say that any one now known will come up to the standard of the Reisling and Orleans, from which the finest Rhine wines are made, or those from which the best French is produced in the Medoc district. Nor will I venture the opinion that we have any one that equals the Black Hamburg or Chasselas de Fontainbleau as a fruit, but will give my conclusion on the merits of the Iona, after carefully comparing by taste Dr. Grant's Iona wine of 1864, made in the quantity of two gallons only, with Mr. Mottier's Catawba of 1859, Mottier's premium Delaware, and Grant's Delaware, which was that the Iona is superior to them all. I was fully assured, both by Dr. Grant and several other gentlemen, that it was pure and entirely free from any addition whatever. And still further by comparison with several specimens of foreign wines, such as Johannesburger, Steinberg, Hockheimer, and Rudesheimer, Rhine wines of great celebrity. I was forced to the conclusion again to give the Iona the preference.

It both surprised and gratified me to find it possessing such delicacy and purity of aroma and bouquet, with richness and sprightliness of flavor. There was an entire absence of the rough acidity and foxiness that characterizes most of our native wines. I was shown, a short time since, three samples of wine made by Dr. Grant last fall from Iona grapes, which contain alcohol or spirit, as was determined by a careful test applied in my presence, corresponding to the weight of must reported. One sample, pressed Sept. 14th, which registered saccharine 94 on the scale, with alcohol 12.5 per cent.; one pressed the last of October 120 saccharine, alcohol 14.6; another pressed thirty days after picking, 130 saccharine, alcohol 15.6. It will be remembered that fermentation was not fully completed. Another sample of wine of 1864, must of 100 saccharine, gave of alcohol 14 per cent. It must be clear from these facts that this grape contains sufficient sugar to make a wine of abundant spirit to stand shipping any distance or keeping any length of time desired. As a fruit the Iona has no equal in this country for out-door culture. Looking back over the history of grape growing and wine making in this country, with its failures, abandonment, renewal and advancement up to the present day, we find much of promise for the future.

Hammondsport, N. Y. C. D. Champlin.



PLAN OF LANDSCAPE GARDEN—NO. V.

Reference to Plan.—A, Dwelling; B, Cold Grapery; C, Stables; D, Kitchen Garden; E, Basin of water; F, Laundry Ground; G, Circular Grass Plot; H, Oval to turn carriages around; I, House Yard; K, Carriage Road; L, Lawn; M, M, Flower Garden.

LANDSCAPE GARDENING.—No. V.

BY WILLIAM WEBSTER.

Having previously but briefly alluded to the form and color of trees and shrubs in combination, I will now mention a few of those which contrast well with one another in garden scenery; but as my space is limited, I cannot enter very fully into details; therefore confine myself to such varieties as are conspicuous for their foliage, fruit, or blossom.

Among the deciduous shrubs which I shall mention is the Barberry. *The Barberris Canadensis*, although a very common shrub, is none the less valuable, as its bright cornelian-colored fruit is very showy in autumn. *Barberris Purpurea* is a beautiful variety, with dark, purple foliage and fruit that forms an admirable contrast to the dark green of the Arbor Vitæ or the Hemlock. *Cornus Florida* is rather a small-sized tree than a shrub; but as it is somewhat slow in growth it may be introduced wherever shrubs are grown. This variety is remarkable for the large size of its flowers which are borne in great abundance in April and May. *Cornus Mascula*, or Cornelian Cherry, is conspicuous for the large size and brilliant color of its fruit. *Cornus Sanguinea*, better known as red dogwood, is also very conspicuous in winter for its dark, blood-red stems and branches. *Cornus Variegata* is very striking for its distinct, variegated foliage. *Euonymus Americana*, or Burning Bush, is named from the glowing, fiery crimson of its numerous fruit, which contrasts beautifully with evergreens in autumn. *Sambucus Racemosa*, although very common, should not be ignored, as its compact clusters of bright red berries are very showy. *Rhus Cotinus*, or Purple Tinge, is a great favorite for the light, feathery flowers with which it is covered in midsummer. *Cydonia Japonica*, or Japan Quince, is a very conspicuous shrub in early spring, when it is covered with a profusion of bright scarlet crimson flowers.

In addition to the shrubs which I have mentioned, there are two climbers which ought not to be omitted on any account, as they form remarkable contrasts, viz: the *Celastus Scandens*, more commonly known as Bittersweet. This has the faculty of twining itself around the stems and branches of trees in such a way as to appear at a little distance a part of the tree itself. It is a very attractive object in a landscape, and a very striking effect may be produced by the introduction of this beautiful climber among evergreens. The leaves are large and handsome, and the fruit, which is produced and borne in large clusters of orange-colored capsules, is very remarkable, especially if planted in the vicinity of evergreens and allowed to twine itself around the straggling branches of some deciduous tree. *Ampelopsis Hederacea*, or the Virginia Creeper, is one of our finest native climbers. It grows rapidly, and is admirably adapted for the covering or concealing of any unsightly object, such as an old building, pile of rocks or fence. The foliage is large and of a dark green in summer, which gradually changes to orange and then to a dark red or rich crimson, later in the season.

Among evergreens I select a few that would form a beautiful contrast to the shrubs and climbers already mentioned. *Thuya Occidentalis*, or American Arbor Vitæ, is a beautiful evergreen for ornamental hedges or single specimens. *Thuya Aurea*, or Golden Arbor Vitæ; the foliage of this is a beautiful light yellowish green, not quite so hardy as the American, as it is rather liable to get browned in winter. *Thuya Siberica*, or Siberian Arbor Vitæ, is one of the most valuable of its class for this climate, as it is perfectly hardy, dark green, and retains the color of its foliage through the winter. *Juniperus Communis*, or Common Juniper, a beautiful small, pyramidal-shaped tree,—contrasts well with spreading shrubs. *Juniperus Sabina*, is a low growing, wide spreading shrub, with dark green foliage. This is all I can mention at present, but the list will be continued in my next.

This design comprises about three acres. The greater portion is devoted to ornamental purposes, about half an acre only being appropriated to kitchen garden. The flower beds are cut in the turf, and the planting is almost wholly of shrubs which are distributed plentifully around in masses.

NO MORE CHEAP TREES.

Eds. Rural:—We have been planting cheap apple trees in this vicinity till we are convinced that it is unprofitable—actually ruinous "What do we call cheap apple trees?" Those that are manufactured in all the nurseries in the country by cutting the roots of seedlings into a half dozen pieces, more or less, and grafting thereon. So thoroughly convinced are we that root-grafted trees are unhealthy, short-lived and unproductive, that our Horticultural Society, after a full discussion of the question, passed a resolution recommending all interested to plant no root-grafted apple trees.

The experience of all the members of our Society proves that in this section eight years is about as long as a root-grafted apple tree can live. The tests are perfect. The same varieties, from the same nursery, have been planted side by side, and those grafted on the stock have done well, are healthy, and bearing good crops; while those grafted on pieces of roots have died in large numbers, are unhealthy, and bearing inferior crops. Let your nurserymen take warning, and prepare themselves to furnish us with stock-grafted trees with which to replant our dying orchards.

T. A. E. Holcomb,
Sec'y S. P. Hort. Society.

South Pass, Ill., March 2d, 1867.

THE TENT CATERPILLAR.

G. W. Cone, Stanley Corners, N. Y., writes as follows:—"We are to have but few caterpillars in this vicinity this season. I have just been through my young orchard of 330 fruit trees, pruning, cutting scions and looking for insects. Last year I found as many caterpillars' eggs on two or three trees as I now find on the whole. This seems to be the case through this section as far as I have been able to learn. Last year they were more numerous here than ever before, but, for some reason, most of them died on the tree where they were hatched. Now, since Providence has done so much toward exterminating them, let every man who owns a tree fully resolve that not a worm shall live on his premises. If we fold up our arms and let them alone because there are but few, they will overrun us again in a year or two; let's *go to work* and clean them out."

"Rural Subscriber," Lockport, N. Y., also writes us on this subject, recommending fruit growers to destroy the eggs of the caterpillar now, as they can be plainly seen on a bright day, glistening in the sun like silver. A little labor now will save a great deal later in the season. Our correspondent also sends us a drawing and description of an implement he has constructed for reaching up to the ends of the limbs from the ground and cutting off those parts to which the eggs are attached. The plan is ingenious, but pruning shears mounted on long handles with a cord attachment, may be procured at the stores at less cost and bother than would attend the making of the one described.

Selling Vegetables by Weight.—Among the subjects up for discussion before the N. Y. Farmers' Club, at a recent meeting, was that of buying and selling vegetables by weight instead of by measure, as now practiced. On this point P. T. Quinn made a long argument in support of the proposed change, adducing sundry cogent reasons in favor of it. The State Agricultural Society of New Jersey, at its January meeting, took action on the subject in the shape of a memorial to the Legislature of that State, asking for the enactment of a law making the change imperative in that State. Dr. Smith stated that all farm produce was weighed in the markets of California and the practice was found much more satisfactory than the old one of measuring. It had the merit of honesty to recommend it, which the old method had not.

Horticultural Notes and Queries.

Designs for Flower Beds and Gardens.—Every person of taste admires an orderly and appropriate arrangement of flowers in beds or gardens, yet very many are at a loss how to produce it. Beginners in the culture of flowers, or those growing new varieties, may have the exact picture in their minds which they would like to reproduce on the flower bed or garden, yet not have experience enough to accomplish this object. Our correspondent, William Webster of this city, has developed a system which is novel, and apparently may be very convenient and useful to any desiring assistance in arranging their flowers in beds or gardens. Designs are drawn to a scale on cards, and colored; the various colors in the design of the bed or plot are numbered, and against the numbers are the names of the flowers suitable for that arrangement and color. Thus one can see at a glance what flowers to select, and in what shape and proportion to plant them, to produce a certain form and suitable contrast of colors. Mr. W's card will be found in our advertising columns.

Catalogues, &c., Received.—Genesee Valley Nurseries, Frost & Co's Descriptive Catalogue of Choice Flower Seeds. Also their Trade List of Fruit and Ornamental Trees for the Spring of 1867. —— Select Catalogue of Roses, New Plants, Greenhouse, Bedding and Hardy Herbaceous Plants, cultivated and for sale by Joseph W. Vestal, Cambridge City, Ind.

Good Tomatoes.—(Young Gardener, Mich.) All of the varieties of tomatoes advertised in the Rural are, doubtless, good. If you are growing plants to sell, we should think you would find it most profitable to grow these new varieties to quite an extent.

Grape Culture and Grape Roots.—(C. F., Nunda, N. Y.) Fuller's Grape Culturist—a standard work on grape culture—will be sent from this office, by mail, on the receipt of $1.50. Our advertising columns will tell you where to get grape roots.

Angers Quince Stock.—(J. F. S., Niagara Co., N. Y.) The Angers Quince may be worthy of trial as an ornamental hedge near buildings. We should not recommend it as a fence to turn stock. Nurserymen usually have large stocks.

Growing Cranberries—Plants.—S. T. writes us that he wishes to plant a cranberry patch, and desires some of our correspondents to inform him how to prepare the land, how to plant, cultivate, &c.

Use for Trunks of Apple Trees.—(S. B. H., Alexander, N. Y.) If the bodies of the apple trees are sound and smooth, they will sell well in this city for plane stock, &c.

Time to Trim Cedar Hedges.—(F., Medina, N. Y.) Trim cedar hedges in the spring before the new growth begins.

New Advertisements.

NATIVE EVERGREENS—Of the following varieties, 5 to 12 inches high, Balsam Fir, White Spruce, Arbor Vitæ, White Pine and Hemlock, at $7 ₩ 1,000; $25 for 5,000. Packing free.
JAMES A. ROOT, Skaneateles, N. Y.

20,000 APPLE TREES, 4 to 5 Years old; 30,000 Peach; 2,000 Plum; 1,000 extra sized Dwarf Pear; Grape Vines, &c., which will be packed in the best manner, delivered to Fairport station or Rochester, in such quantities as may be wanted, and at reasonable rates. McCARTHY & PLOWER,
Penfield, Monroe Co., N. Y.

VIOLA ODORATA, (English Sweet Violets.)—I have several thousand roots of this beautiful flower, double-blue, and exceedingly fragrant. I will send them, post-paid, at the following rates:
Good roots, well packed, each, ...$0.30
" " per dozen,..... 2.25
They will be ready to send out as soon as the weather will permit. Address S. P. WAKELEE,
896-2t Care of Jas. Vick, Rochester, N. Y.

POWELL'S EARLY TOMATOES.—The Plants are hardy, of vigorous habit, foliage large and distinct. Fruit extra early, medium size, smooth, bright red and SOLID in every case; on this important point there is no mistake, which is more than can be said of any other early Tomato yet introduced, and will equal, if not exceed in product, any competitors. It is the earliest ever cultivated on the Hudson River, has been tested fairly, and will ripen about the 1st of July with good cultivation. Price 25 cents per packet. For sale by SAM'L T. THORBURN, Seedsman, 46 Hudson-st., Albany, N. Y.

KEECH'S NEW SEEDLINGS—GENS. Mead and Sheridan, two of the best Strawberries yet known, post-paid, by mail $5 ₩ dozen; for each dozen ordered of the above I will add 2 plants of Gens. Grant and Sherman, each. New Jersey Scarlet, very early, $2 ₩ 100; Agriculturist, $2 ₩ 100; $10 ₩ 1,000. 800 extra 2 year Iona vines, the best in market, $18 ₩ dozen; $100 ₩ 100; Delaware layers, $20 ₩ 100; 1 year, $18 ₩ 100; 2 year, $3 ₩ dozen. Diana, one year from cuttings, very strong, $18 ₩ 100. Rebecca, 1 year from cuttings, $5 ₩ doz. Cash to accompany orders.
896-2t JOS. KEECH, Waterloo, Seneca Co., N. Y.

IONA AND ISRAELLA VINES FOR SALE. Extras, Double Extras, 1 and 2 years, at *very low rates*. Send early for Price List, before buying elsewhere. I. L. WARING, Amenia Vineyard, Amenia, N. Y. 896-4t

Standard Pear Trees, Small Fruits, Grape Vines, Ornamental Trees and Shrubs, Evergreens, Green-House and Bedding Plants, Roses, Etc., Etc.,
at very low rates. The following Catalogues will be sent, pre-paid, to all applicants upon receipt of postage stamps, as follows:
No. 1. Descriptive Catalogue of Fruit Trees, Vines, &c., 10 cents each.
No. 2. Descriptive Catalogue of Ornamental Trees, Shrubs, Roses, &c., 10 cents each.
No. 3. Descriptive Catalogue of Green-House Plants, Dahlias, Verbenas, Bulbs, &c., 5 cents each.
No. 4. Wholesale Catalogue or Trade List, 5c. each.
No. 5. Catalogue of Flower Seeds, 5c. each. [896-4t

A NEW GRAPE! SALEM.

The subscriber now offers for sale, for the first time, the above grape, named SALEM, from the place of its origin. It is a variety considered not only superior to any of the former well-known numbers, but also to any hardy grape at present before the public, combining, as nearly as possible, every quality desired in an out-door grape—being one of the hardiest, healthiest and most vigorous of vines, and producing enormous crops of beautiful and high-flavored fruit. Like the other well-known kinds, Nos. 4 and 15, this is a hybrid between the Native and the Black Hamburg; bunch large and compact, berry large as Hamburg, of a light chestnut or Catawba color, thin skinned, perfectly free from hard pulp, very sweet and sprightly, with a most exquisite aromatic flavor, not equaled by any other out-door grape for wine or table; as early as Delaware or Hartford, having never failed to ripen in the most unfavorable season for the past six years. Taking all its qualities into consideration, earliness, hardiness and great vigor of vine, size and quality of fruit, it is pronounced by a few of the best judges who have tried it, to have no equal among all the numerous varieties now before the public; and I can, with confidence, recommend it as the best of my collection, and now offer it for the first time.
Feb., 1867. E. S. ROGERS, Salem, Mass.

NOTICE.

The subscriber would here state, that he has disposed of his entire stock of vines and wood of the Salem Grape to I. L. Waring of "Amenia Vineyard," Amenia, Dutchess Co., N. Y., to whom all orders for the same must hereafter be addressed. E. S. ROGERS.
Salem, Mass., March 2, 1867.

The undersigned will dispose of a few layers of the SALEM with two eyes at $5 each, and next Autumn be prepared to supply one year old vines in quantity. The demand for this valuable grape will be large, it is therefore advisable for those who wish to secure them to apply early. Circular with engraving on application. I. L. WARING, Amenia Vineyard, Amenia, Dutchess Co., N. Y.

GRAPE VINES FOR SPRING PLANTING.

My stock of vines for spring planting comprises a general assortment of the different varieties; all of which have been grown with the utmost care and with special reference to producing healthy, well-matured roots.
Long experience has proved my system of growing vines to be the best in practice, and by devoting my energies entirely to this one department, I am enabled by past experience and, with the aid of extensive and perfect facilities, to produce better vines and in larger quantity than any other propagator. In an eminent degree is this true of my present stock of

IONA AND ISRAELLA VINES.

These two varieties have very justly received the highest commendations everywhere, and the Iona has come to be acknowledged the best American wine grape. Read the following:

"The Iona and Israella Grapes, originated by Dr. C. W. Grant, at Iona Island, are the best grapes in America."—*N. Y. Tribune.*

"The Iona is unequalled by any native, and is probably unsurpassed by any foreign kind."—*Am. Agriculturist.*

Pleasant Valley, Jan. 1867.
Dr. C. W. Grant:—I have tried the Iona wine by the severest tests that could be furnished, and all of the trials have been very satisfactory.
Taking the best Catawba wine that has been made as "*very good*," I should place Delaware next above it in rank; Diana, for some qualities, next above that; and Iona above all.
Placing Iona by the side of the finest wines of Germany, that are not excelled in the world, it does not suffer in comparison in any respect, while it has some important characteristics entirely its own, that, in my estimation, place it above that of all other grapes with which I am acquainted. I intend to plant largely of it, and of that only, and from my own experience and extended observation, confidently recommended the same to my friends. Inclosed find order for 10,000 Iona vines, No. 1, Vineyard Class. C. D. Champlin,
Secretary Pleasant Valley Wine Co.

The great popularity of these two most valuable varieties has induced their extensive propagation from immature wood, and thus thousands of vines have been produced and disseminated, which will only serve to injure their well merited reputation and to disappoint those who have purchased them.
Being in possession of the original vines, and also of many of the first propagated from them, I have been supplied with an abundance of mature wood to grow a large stock for market, and now offer at low rates vines of such extra quality as will not disappoint the planter.
☞ Great Inducements are offered to clubs. Send stamp for Price Lists of Vines, with engravings of Iona and Israella, and ask your neighbors to join with you in forming a club. Manual of the Vine (a thorough treatise,) sent for 30 cents. Address
C. W. GRANT, Iona, (near Peekskill,)
896-4t Westchester Co., N. Y.

HER HEAD UPON MY SHOULDER.

One dark and dreary winter day,
When snow-drifts fast were melting,
And 'gainst the window's dewy pane
The rainy flakes were pelting,
Before the red hearth's genial blaze,
As outer blasts blew colder,
I was seated at my Birdie's side
With her dear head on my shoulder.

I heeded not the storm without;
Within the the sun was shining;
The clouds of life were lifted then,
I saw the silver lining;
And as my darling sweetly smiled,
My throbbing heart grew bolder;
I dreamed, as I had never dreamed,
Till her fair head pressed my shoulder.

I dreamed of riches and of fame
Acquired by honest labor,
A name to live when I am dead,
And wealth to help my neighbor;
I dreamed, too, of a happy home
Where, growing old and older,
Her little hand clasped close in mine,
Her head upon my shoulder.

The tide of years may bear us on,
Perchance our paths diverging;
The frosts of time may blast the bud,
And freeze the love that's surging:
But not until each heart-throb cease,
And dust to dust shall moulder,
Shall I forget the blissful hour
When her head lay on my shoulder.

Marion, N. Y., Feb., 1867. P. J. B.

Written for Moore's Rural New-Yorker.

DOMESTIC BLISS.

Now, my kind readers, should I chance, in the course of my remarks, to differ somewhat from the sentiment that has been so abundantly dealt out to you in every periodical, from the "Child's Paper" of simple anecdotes, to the very *eclat* of fashion, love and nonsense, do not turn up that organ that is so ready to express the scorn of its very fastidious bearer, and throw aside the paper with an impatient—"Pshaw!" And you, especially, young ladies, who have been declaring your age at "precisely eighteen" for the past ten years, do not twist your rosy lips in scorn and screech out "A crusty old bachelor!"—but condescend to hear me through, and then look about you, and I can assure you that you will find the world full of living examples to prove the truth of the assertions herein made.

I do not wish, as so many have done, to be all alive to the one side of this question and apparently dead to the other; I shall not present all the dark spots of the picture and conceal the light ones; but, as you well know, light and shade must be combined in order to produce a pleasing appearance. It is in this combining of light and darkness that so many have failed in portraying "scenes from life." They lead you up where all is light and beauty; they tell you of the gentle breezes that play about you; they direct your attention to the light of the sun, in whose congenial rays you may ever bask in peace; they recount to your dazzled mind the joys, pleasures and luxuries awaiting you; but they never warn you of the storms and tempests that may come; they fail to tell you that the same mild rays of the sun may not always fall upon you, and that night must, as ever, succeed the day; they fail to enumerate the trials, perplexities and disappointments which lie in the pathway of nearly all of us during our journey here below. They continually revolve the glowing spots before the eyes of the reader till he is led to believe the pictures thus painted but a common leaf from the volume of human life. They gaze upon these gilded scenes, where all is sunshine and felicity, till they seem to forget that the place is nothing more than earthly and that the characters are only human.

Why is it that such trash should be continually before the people and so many maintain silence? Why should the minds of our young people, especially, be thus overladen with such views of an ideal life, and so little of the real be presented them? Ah, there comes a revolting confession! We, as a people, are given too much to romance and dreams. The young (and often those who are not so young) are too fond of the silly, yellow-covered literature, with which the shelves of our book stores and news offices are laden, and neglect the ponderous tomes of their fathers' well-stocked libraries and, above all, that great volume of Nature, from which we may glean many a profitable lesson.

All of you have seen the dusty, rough and rusty mechanic, farmer or miller, as he appears during six days of the week, and know full well how pleasing is the change produced by washing, combing, &c., on the Sabbath. We would know him, covered with dust and dirt and clad in his ragged and patched garments; but the change produced by the new apparel, put on for a day, renders him almost a new person. We fail for a time to recognize him. It is under such a dress that these scenes of which I have spoken are sketched. There are times in the lives of all when the sun shines brightly, fortune seems to smile and we are indeed happy; but it is only the one day in seven.

And what effect, do you ask, has marriage upon society? Why should all these comparisons have been introduced to represent "home scenes?" Ah, that is no secret if you will but read from the open volume of living facts, every day before you. Look at the record of that penniless youth who, five years ago, led to the hymeneal altar a happy and trusting maiden, and on whose brow rested not a line of care or trouble. Interpret for us the language of that wrinkled brow, the ashy pallor of the once rosy cheek, and the dullness of the once flashing eye, and then ask yourself, if you will, if you *can* sanction the cry of "marry, marry!" The honeymoon always lasts for awhile, and the happy couple almost forget that they are of this world, where all things perish and life brings its trials to all, when some stern reality calls them back to their old existence. "Old existence," did I say? Ay, except more has been added to the burden beneath which he was before struggling. No matter what opportunities he may have for business in other places, he is now bound to that place which he calls home. And such a home! The unmarried man may go when and where he will, remain as long as he desires, and return when his business shall have been completed, knowing that no "affectionate" wife is waiting at home, hoping, looking and longing for his return, and ready to greet him with the never-failing "curtain lecture," for his having been so long absent. Happy, happy are they who are not compelled to bow to their petticoated rulers and ask if they may go, and how long they may be gone, and ever stand in fear of being Caudled. Oh, wretched, wretched are they who are subject to the whims and caprices of nervous, notional and pettish woman!

Do not understand me to maintain that happiness may not be found in the married state. That is not my position. I believe it the duty of many to marry; but I am likewise of the opinion that the world would become better, and the human family, as a class, be rendered happier if many who are married had remained single. For boys not out of their teens to take upon themselves the burden of caring for a wife and family when they are, in reality, incapable of supporting themselves, seems to me to be a little unwise and out of character.

I know that poets and novelists tell us much of the poor who plunge into domestic life, where are to be seen "the happy and contented wife, the affectionate and loving husband, with a rosy little cherub playing about in childish glee;" but such are the mere brain-creations of romantic lovers, who have never seen, or, having seen, know little of the realities of life and glory in the mistaken opinion that domestic life is a continual play of ecstacy. But do the thousands of poverty-stricken families who are actors in the great drama of life realize that to them it is a paradise? Oh, the weary, weary toil, from morn till night, the cold, desolate and scantily furnished hovel, in which they manage, by the strictest economy, to support life, the dirty, noisy, sickly, squalling young ones, the unhappy, disappointed and heart-broken wife, and the discouraged, "hard-hearted" and "unfeeling" husband! Such examples are daily crying aloud to the young who contemplate taking upon themselves an additional burden, to "Consider, consider!" What are your pecuniary circumstances? What salary do you command? Many married men are there, within the circle of my acquaintance, whose yearly income does not exceed three hundred dollars. That must be a pleasing prospect for contemplation to those who are to subsist on such an allowance! A young man leading a quiet and temperate life might possibly manage to live on that amount; but when one or more shall have been added to draw from the scanty store, that renders it quite a more difficult affair to manage. Oh yes, I understand why some of you have no fears. You settle down in the immediate vicinity of an affectionate father who will not see you suffer, well knowing that a little may be received daily from his supply. Yes, that is noble! that is magnanimous! But when that opportunity shall no longer be afforded you — what then? Oh, you will "scrimp" and save, economise and borrow, enslave yourself and family, till death shall call you away, then take your departure from this world, leaving not enough effects to defray your funeral expenses.

Young men, this is no overwrought picture. Look about you, and you will see the world full of witnesses for the truth of my position. Let me exhort you, then, before you take this important step to consider well your situation. First, know yourself. Enter not "*in vinculis matrimonii*" till you know that you have an abundance; but if your allowance is small, better by far pass to your grave with no one to mourn your departure than drag through distress and poverty a sorrowing wife and helpless family, to be left to the mercies of an unfeeling world. Again I say, "Consider! consider!"

Williamsfield, Ohio. C. T. Leonard.

Mrs. President Johnson.—The appearance of the President's wife, at a late reception at the White House, is thus described:—"Mrs. Johnson appeared at the reception for the first time. I felt a deep anxiety to see the woman who had taught her husband to read, and inspired him with that lofty ambition which led to place and power. She stood near the President to his right; pale, thin, stamped with care and sickness, a countenance of thoughtful sadness, an expression of deep curiosity. Looking for a moment at each person introduced, her eye would drop immediately in meditative thoughtfulness, as if her mind and heart were filled with thoughts and emotions far different from the giddy throng passing by. All who know her speak well of her."

Royal Courtesy.—A peer, when dining with Queen Victoria, was challenged by a royal duchess to take wine with her. He politely thanked her, but declined the compliment, stating that he never took wine. The duchess immediately turned to the Queen, and jocularly said:—"Your Majesty, here is Lord ——, who declines to take wine at your Majesty's table." Every eye was turned to the Queen, and not a little curiosity was evinced as to the manner in which the abstainer would be dealt with. With a smiling and graceful expression the Queen replied: "There is no compulsion at my table."

"Anything to please the child," as the nurse said when she let the baby crawl out of the window.

TO CONTRIBUTORS.

The following contributions are respectfully declined, for the reasons annexed:—"Are there Flowers in Heaven?" U. Rhythm badly mixed. Other accepted.——"March," M. A. D. Some lines are very fine, but others are incomprehensible.——"How the New Year is Going," S. L. C. The figure is long since worn out. "To Mothers" and "Sweet Flowers of Spring." Some stanzas very pretty, others quite slip-shod. You hardly need be reminded that "crib" and "lid" do not rhyme, nor "hearts" and "flock," nor "yield" and "heal." Schoolboys and the Spanish proverb tell us "there are no birds in last year's nest;" you say "Robins will come to the last summer's nest." Other article accepted.——"Arithmetical Question," G. W. P. Not correct.——J. A. P. M. Your article is well done for so young a writer; but we do not publish any thing sectarian.——"Home," "Woman Suffrage," H. Not new. Other accepted.——"A Leaf from the Past," A. E. H. Your style is good, but the theme and plan are old.——Contributors might save themselves and us a deal of trouble by dropping the pernicious habit of underscoring every third word. Some articles would look perfectly ridiculous, if printed as written. Remember that where everything is emphasized nothing is emphatic. Construct your sentences correctly, and any intelligent reader will inflect them properly without the aid of Italics.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

DEPARTING WINTER.

Brave old Winter, thou'rt passing, yes, passing away,
And the fair spring is dawning upon us to-day;
We will welcome thy advent, O beauteous guest,
For thy bowers resemble that home of the blest.

In my dreams I have wandered the fair meadows o'er,
I have fancied me seated on Catatunk's shore;
There to watch its pure waters so silently flow,
As they wind round most gracefully forming a bow,

To the bold Susquehanna, the Chesapeake bay,
And the dark rolling ocean where dashes the spray;
But return, O my mind, to my youth's happy home,
Where my memory with pleasure so often will roam.

To my eyes has been painted the woodland so gay,
With rich clusters of wild flowers to cheer up the way;
The sweet carols of songsters methinks I have heard,
As the leaves of the forest their melody stirred.

And the soft rustling whisper methinks I can hear,
As it comes like a spirit all gentle and clear
To release one from labor or lull to repose
A heart that is wearied and laden with woes.

Yes, the plowboy's loud whistle doth echo full well,
From farm-house to cottage just over the dell;
While the spring is approaching, and lowing of herds
Is mingled with songs from the long absent birds.

Spencer, N. Y. L. E. E.

Written for Moore's Rural New-Yorker.

ELIA.

Ah, gentle Elia, whither has fled thy power? We have essayists many and humorists many, but thy health is not in them. In vain we seek for thy tender grace, thy humor delicate as the leaves of the mimosa.

Prëeminent upon our shelf stands Macaulay in stately majesty. We turn the leaves of our Carlyle and are thrilled by his sturdy vigor, his earnest manliness. Leigh Hunt, the appreciative, himself does not fail of appreciation. With dear old Christopher North we love to ramble through fields and woods and hills, e'en at the striding pace of seven miles an hour; and in the same society we joy to catch the dew born of "Ambrosial Nights."

In these and many others our soul delights to revel; but thou, O Elia, art the frequent companion of our night watches; and the first light of the morning doth often crown thy open page. Perennial is thy charm. Thou art not our king, but our brother.

In thy "Complaint of Married People," *our* young friends who are but just emerging from the halo of the honeymoon, and they who have passed far beyond its doubtful gleam, are led to see their follies and sometimes, yet too rarely, to avoid them. In these times of more than Jewish prejudice we bless the days without trichinæ, that gave us the "Dissertation upon Roast Pig." In the long winter evenings, when we would shuffle away the time, the worthy "Sarah Battle" becomes our oracle. Behind our chair her figure seems to stand with finger pressed on lip, and not in her countenance can we discern either "ominous conjecture" or assured success. Speechless as marble, expressionless as glass, she watches the varying fortune of the game, yet seems to control it by some weird influence. Patron saint of whist is Sarah Battle.

Under all the current of thy cheerfulness our minds project the dark tragedy of thy life, and we see that the sparkling ripples hide depths of darkness from whose silent gloom only a strong arm and steadfast heart have enabled thee to rise. We see thee walking with thy "poor, dear, dearest sister;" we join the social gatherings at thy home; we enjoy the "linked sweetness" of thy hesitating wit; and we go away rejoicing, feeling stronger and better for thy genial companionship. Sincerely do we thank our stars, O Elia, that, before we were born, they shone over thee, and that underneath their mild radiance thou didst work out through trial and sorrow so grand a simplicity of character.

¶

Alexander Dumas, Jr., was recently asked, "How happens it you no longer go into company?" "Because I saw company made me more stupid, and I did not make company more sprightly."

Sidney Smith said that a certain person was so fond of contradiction that he would throw up the window in the middle of the night, and contradict the watchman who was calling the hour.

Written for Moore's Rural New-Yorker.

TIRED.

Tired, physically tired, weary with labor, trembling and faint, with aching brow and throbbing temples, with stiffened muscles and unsteady step, with drooping form and limbs that refuse to do their bidding—the vigor of the body departed, nothing but weariness—tired!

But the night cometh, and the weary shall rest. The aching head shall be softly pillowed, the toiling hands shall be folded lightly over the tranquil breast, the labors and perplexities of the day shall give place to quiet dreams. In sweet forgetfulness of daily toils and exhausing cares, sleeps the tired one, while the Father above tenderly takes care of His helpless child. Cometh also the morning. New vigor animates the muscles. The current of life goes bounding joyfully through the system. Firm in nerve and fresh in spirit, he goes forth to his daily work. God be thanked for the night, but more for the morning!

Tired, mentally tired, weary of problems, of theories, of speculations, of ancient authors, of "unusual constructions," of iambic trimeters, of exponential curves. Weary of books, of large books, of little books, of books with paper covers, of borrowed books, of books in which are only words and sentences and chapters. Tired of recitation rooms with their black-boards and rows of benches, tired of petty deception, of assumed worth, of conceited ignorance—tired, very tired!

But the summer will come, the beautiful green-robed summer, the ever joyous summer, and will bring with it a release from wearisome duties, a rest for the tired brain. Know we each of a blessed nook somewhere on this wide earth, a cheery cottage with vine-covered porch where Mother sews and Father reads the paper, or, perhaps, a dear old farm-house, with cherry trees in the yard and the "ten acre lot" stretching beyond, which, brother writes, is "sowed to wheat this year." Know we each of some such place, where we shall breathe a purer atmosphere, where warm hearts shall welcome us, where we shall lay down our burden of cares, where the mists shall gently roll away from our befogged understanding, and leave us ourselves again, light-hearted and free, no longer known as erudite students, but simply the dear children at home again. And so we labor on patiently, inspired by the thought of the well-earned rest that awaits us.

Tired, spiritually tired, weary of broken resolutions, of half-formed purposes, of partial consecrations; weary of in-dwelling sin, of vain imaginings, of envious promptings, of rebellious uprisings. Tired of yielding to temptation, tired of an unbelieving heart, tired of doing the "evil I would not;" tired of sin, unspeakably tired!

But shall the conflict always last? Is there no respite in the struggle against Satan and sin? Is God less merciful to him who labors in His service, than to him who labors for himself? "There remaineth therefore a rest," when we shall have finished our work, when the sun of our life shall have set, whether it go down in the purple splendor of a fair summer's eve, or whether it be obscured by the gray sleet of adversity. Then only shall we know the full import of the precious assurance of "rest for the weary." But, except we labor faithfully, except we be tired, rest is not rest. The more tired we are, the sweeter the repose, the more glorious the awakening. ***

DEAN SWIFT'S RESOLUTIONS.

The following resolutions were drawn up by Dean Swift to be observed "when I come to be old:"

Not to marry a young woman.

Not to keep young company, unless they desire it.

Not to be peevish, morose or suspicious.

Not to tell the same story over and over to the same person.

Not to be covetous—the hardest of all to be kept.

Not to be over severe with young people, but to make allowance for their youthful follies and weakness.

Not to be influenced by or to give ear to the knavish tattling of servants.

Not to be too free of advice, nor trouble any but those who desire it.

Not to talk much, nor of myself—very hard again.

To desire some good friend to inform me which of these resolutions I break or neglect, and to reform accordingly.

PERSONAL INFLUENCE.

Blessed influence of one true loving human soul on another! Not calculable by algebra, not deducible by logic, but mysterious, effectual, mighty as the hidden process by which the tiny seed is quickened, and bursts forth into tall stem and broad leaf, and glowing tasseled flower. Ideas are often poor ghosts; our sun-filled eyes cannot discern them; they pass athwart us in thin vapor, and cannot make themselves felt. But sometimes they are made flesh; they touch us with soft, responsive hands; they look at us with sad, sincere eyes, and speak to us in appealing tones; they are clothed in a living human soul, with all its conflicts, its faith, and its love. Then their presence is a power, then they shake us like a passion, and we are drawn after them with gentle compulsion, as flame is drawn to flame.—*Blackwood's Magazine.*

A wicked wag says the reason young ladies look so bold and fierce in these days, is because they tie their hair so tightly on the back of their heads that they cannot shut their eyes. Another rightly says that brushing the hair back on the temples and forehead gives them a bare-faced appearance.

Sabbath Reading.

NIGHT—SONG IN LENT.

by richard storrs willis.

Mournful night is dark around me,
Hushed the world's conflicting din,
All is still and all is tranquil—
But this restless heart within!

Wakeful still I press my pillow,
Watch the stars that float above,
Think of One for me who suffered,
Think and weep for grief and love.

Flow, ye tears! though in your streaming
Oft yon stars of His grow dim!
Hallowed is the grief He wakens,
Blest the tears that flow for Him,

Written for Moore's Rural New-Yorker.

MORNING ASPIRATIONS.

Again I wake from my dreams to the thrilling pulsations of real life. The modest blush of morning overspreads the face of Nature, and it creeps tenderly through the lattice of my lonely chamber, luring me forth into the battle of life. Behold the first throbbings of another day! The mighty sun draws nigh, borne on the fleet chariots of the air; his glittering messengers, mounted in the eastern sky, hail the sleeping world and herald his glorious advent as with a thousand trumpets. And all nature seems to wake with invigorated spirit and shout for joy over the birth of day. The proud pine trees, arrayed upon a thousand hill-tops, shake their flowing banners triumphantly in the breath of morning. The venerable mountains chronicle the glad event, writing their rude, dark figures on the ambient parchment of the sky. The gentle stars look down the world a sad farewell and fade before the glory, dew-dropping the earth with their parting tears. All the mighty elements are mingling their voices in harmonious communion. The very air we breathe comes down to us through those golden depths, laden with a charm.

And I awake and catch the inspiration. My soul assumes a lofty tone correspondent with the deep grandeur around me. It flutters with joyous emotions. I inhale the mighty aspirations of the wakening world. I seem to stand upon high thrones and to quaff the spirit of the universe. From all around some whisperings of cheer. Something awakes new fire in my spirit. Something would raise me higher. Something would spur on my soul to noble energies while yet there is time. Hail glorious morning, hail! A welcome to our world! Thou comest with eloquence of joy to my yearning soul. It has not come in vain. It is the dawning of a new life to me. It cometh as the harbinger of better days. The future looms up full of pleasant prospects and radiant as the morning.

What untold hours have I squandered in trifling. We have no time to fool away. Each day must show its progress if we would attain anything like excellence. The days of life are few. Let me here end this course of folly. Henceforth I will act in a different manner. Awake, O my soul, awake! Why dost thou live to so little purpose in this great and glorious world? Make mighty efforts to redeem the misspent past. Let yonder rising sun mark the beginning of a new era in my history. Let me grasp effectually the omnipotent present. Let the great turning point be now. Let me show how much I can achieve to-day. Let me stretch every nerve, seize every second of time and improve it in the noblest occupation. May I take a long day's journey toward immortality. Let me live whole weeks of common days in this one day. Let it be the most glorious day that has ever dawned on me. Let this week mark higher accomplishment than any in all my life before. And let each succeeding day and week and month be brighter than its predecessor. Let me fight valiantly and invincibly against all mighty obstacles that oppose themselves, and all weaknesses of nature, and trample them beneath my feet. Though hedged about with difficulties, let me toil through with unconquerable zeal. Let me throw my whole soul into all my undertakings; and let me bring forth something worthy of myself. Let me not breathe the glorious breath of life in vain. Frank.

"THY WILL BE DONE."

On the deck of the great ship at sea a mother sat gazing at something lying before her, while tears flowed like rain. For days and nights she had been watching and praying over her little child, so anxious and so earnest that it might live. But the beautiful flower drooped, and faded, and died. And she was now looking at its waxen face and hands as it lay in its rude little coffin, ready to be buried in the great deep, where no stone could mark its grave. A single sweet flower, the only one in the whole ship, was clasped in its tiny hand. The passengers were all gathered round, silent and sympathizing, and many in tears. The great ship glided swiftly on, knowing nothing of the sorrows within her.

The hardy sons of the ocean had been piped "to bury the dead;" and, grouping around the windlass, they thought of the beautiful child that so lately was their pet. One spoke of the sweet face, another of its playfulness, and another of the mother's loss. All was ready now. The coffin was placed on the main hatches as a bier. The fresh winds moaned through the cordage. The maintop was hove to the mast, and the great ship paused and stood still. The captain read the funeral service, "we commit this body to the deep." The bell tolled the knell. The little coffin plunged in and sank down, down, down. But the mother, without a doubt that the eye of Jesus would follow her little one, and his voice raise it from the ocean grave at the last great day, stayed her soul upon Christ, and meekly bowed and said, "Thy will be done."—*S. S. Times.*

The Reviewer.

THE AMERICAN CONFLICT. A History of the Great Rebellion in the United States of America, 1860–'65. Its Causes, Incidents and Results: Intended to Exhibit Especially its Moral and Political Phases, with the Drift and Progress of American Opinion Respecting Human Slavery from 1776 to the Close of the War for the Union. By HORACE GREELEY. Illustrated by Portraits on Steel of Generals, Statesmen and Other Eminent Men; Views of Places of Historic Interest; Maps, Diagrams of Battle-Fields, Naval Actions, Etc.: From Official Sources. Volume II. [8vo, pp. 732.] Hartford: O. D. Case & Company.

THE idea that to write a good history the historian must be far removed in time from the era of his theme, like most abstract propositions which have resulted from the transformation of a metaphor into an argument, is not wholly true. For some purposes, perhaps for general historical purposes, it is better that the historian be entirely clear of all immediate influencies flowing from the events he describes; just as the general, out of range of the conflict, must understand the ordering of the battle better than the private in the heat and smoke. But for the feelings produced, the excitement, the incidents that inspire courage or induce panics, the knowledge of the soldier is infinitely superior to that of his commander. So of slavery in America and the terrible war in which its barbarism culminated, and by which it destroyed itself. It did not rest upon any real basis of self-interest, and the war which it insisted upon was not only without any excuse or provocation, but was a rebellion against a Government so constructed that never by any possibility can it give cause for insurrection. It found its origin and support only in the meanest and lowest passions of the human heart. Moreover, it was barbarism wielding the power of civilization. And the ordinary historian, a century hence, who proceeds regularly upon the question of motive, will be totally at fault. For such an anomalous theme the writer must have come into actual contact with the popular feeling, and witnessed the driftings of popular opinion that marked its progress. These conditions could hardly have been more perfectly fulfilled than in HORACE GREELEY, the veteran journalist and life-long foe of slavery; and his great work, just completed, will probably be, so far as its specific object is concerned, a standard authority never to be displaced.

NEW AMERICA. By WILLIAM HEPWORTH DIXON, Editor of the "Athenæum," and Author of "The Holy Land," "William Penn," Etc. [12mo.—pp. 495.] Philadelphia—J. B. Lippincott & Co.

THIS work, by a literary Englishman of ability and reputation, is the result of a visit last summer to our country. Mr. DIXON says—"I went out in search of an old world, and found a new one. East, west, north and south, I met with new ideas, new purposes, new methods; in short, with a New America." He avers that "the men who planted these Free States—doing the noblest work that England has achieved in history—were spurred into their course by two great passions: a great love of Liberty; a deep sense of Religion," and says he has pictured what he saw of the changes now being wrought in the actual life of man and woman on the American soil, under the power of these master passions. We have read the volume with profound interest. The author's discussions of many topics, from his English point of view, are entertaining and spicy and fresh. He visited many peculiar religious socities—such as the *Oneida Communists*, Shakers, Mormons, etc.,—and gives accounts of their creeds and customs which may be read with interest and profit by the great mass of intelligent Americans; for our author saw and examined into many things of which we, as a people, take little heed at present, though some of them (like the excrescence of Mormonism,) must ere long involve questions of vital interest. The book is fair to the people and country, and the investigations of the peculiar religious sects will prove both interesting and instructive, though few may admit the conclusions of the author in regard to the importance of the symptoms of these skin diseases of America. The volume is issued in excellent style, on tinted paper and contains several illustrations.

KALOOLAH; or the Adventures of Jonathan Romer of Nantucket. By W. S. MAYO, M. D. [12mo. pp. 514.] New York: G. P. Putnam & Son.

THIS is a new edition of a book which was published seventeen or eighteen years ago and ran through several editions. It is one of that class of stories which are generally disparagingly denominated imitations of "Robinson Crusoe," though many of them far surpass in interest if not in verisimilitude DE FOE's celebrated narrative. It purports to be the life of a boy too smart for his teachers, who was more fond of roughing it than of the tameness of in-door life, and who, after some lively adventures among the hills and streams of Northern New York, run away to sea; and there the story proper begins. KALOOLAH, the heroine, was an interesting young lady, nearly white, daughter of the king of a fabulous country in Central Africa, whom JONATHAN found among a lot of slaves offered for sale on the coast, and whom of course he rescued and finally married. The recital of adventures is interesting; and if the author has failed of making his heroine anything more than an ordinary Yankee girl in wild African costume, he has done no worse than many more pretentious novelists. For sale by DEWEY.

TALES OF A TRAVELLER. By WASHINGTON IRVING. [16mo. pp. 258.] Illustrated. New York: G. P. Putnam & Son.

THIS edition of IRVING's "Traveler" is one of a series of popular books, in cheap form, for railway or fireside reading which the PUTNAMS propose to issue, under the title of "Railway Classics." Nothing need be said here on the quality of WASHINGTON IRVING's writings; for the verdict concerning them, both of the people and of the critics, has long since been settled. If a publisher is ever entitled to the thanks of the friends of literature, it is when he issues a cheap but decent edition of a standard author. There are thousands of people who must read something, but cannot afford to buy costly books. If not furnished with books that *are* books at prices within their means, they will buy "books that are no books," because they are cheap. A celebrated English poet could not have done anything to lower himself more in the estimation of every one of his readers than when, a short time since, he refused to have a cheap edition of his works issued for the poorer classes. That was the very snobbery of literature. For sale by DEWEY.

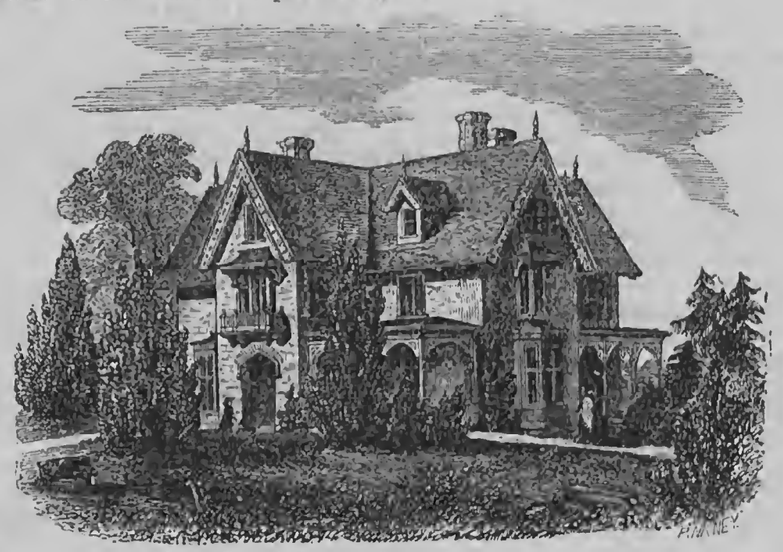
THE STORY OF A STOMACH: AN EGOTISM. By a Reformed Dyspeptic. [pp. 60.] New York: Fowler & Wells.

THE writer of this pamphlet has committed the common fault of "saying too much before he begins;" but perhaps it would be too much to expect a reformed dyspeptic to digest his subject matter thoroughly. However, if all he says is true—as we know part of it to be—his hints will be valuable to those who suffer the tortures of dyspepsia.

WILLIS AND "IDLEWILD."

NATHANIEL PARKER WILLIS.

IN the RURAL of February 2d we gave a sketch of the life and character of the late N. P. WILLIS, whose death was then the most recent event of the literary world. His remains were taken to the family burying ground, at Mount Auburn, near Boston, for interment, and were borne to the grave by the most celebrated literary men of the country, with a large concourse of friends and citizens. In this number we present an accurate portrait of Mr. WILLIS, and a view of "Idlewild," his residence near Newburg, on the Hudson. The manner in which it received its name is thus related: Mr. WILLIS was negotiating for its purchase, when the proprietor said disparagingly, "It is nothing but an idle wild;" and he at once adopted the last two words for its title, the fame of which has since become coextensive with his own.



"IDLEWILD," THE HOME OF WILLIS.

Various Topics.

ARTEMUS WARD.

JUST as the RURAL was sent to press last week came the brief announcement of the death of CHAS. F. BROWNE, "Artemus Ward," at Southampton, England. He died on the 6th and was buried in Kensal Green Cemetery on the 9th. He was born in Waterford, Maine, where his mother still resides, and was connected with the press at a very early age. He is said to have been at one time the most rapid compositor in the country. His first literary productions appeared in the Carpet-Bag, a comic weekly published in Boston, on which he was employed as a practical printer. But it was while local editor of the Cleveland Plaindealer that he first came into general notice as a humorist, from his letters published over the signature of Artemus Ward, the traveling showman. These were at once seized upon and widely copied, their success being a source of great astonishment to their author. He followed up the happy vein he had struck, worked it carefully, and ultimately made it a source of great pecuniary profit as well as literary reputation.

In 1863 he visited Utah, and the next year he appeared in the principal cities of the Union with a series of paintings illustrative of Mormon life, probably the best executed pictures ever exhibited as a "panorama," and an inimitable lecture descriptive of life at Salt Lake, as seen through the eyes of a complete humorist and constant punster. He was a good deal of an actor; and the three attractions combined made his show more popular than the imaginary "wax figgers" of the fictitious ARTEMUS. About six months since he went to England, where he was met with a most flattering reception, leased Egyptian Hall, in London, and repeated his exhibition and lecture until failing health compelled him to desist. He was thirty-three years of age at the time of his death, and unmarried. Those who knew him personally speak of him as a genial and companionable man, mild tempered and of a generous disposition.

The first announcement of the death of one whose life has been devoted to anything classed under the head of nonsense always creates a most unpleasant sensation. The mind pictures at once the contrast between the mirthful moods of the jester and the pangs of dissolution, and by a fallacious argument takes it for granted that great talents have been wasted. The afterthought, however, dispels, or should dispel, this illusion. The ordinary philanthropist and the labor-lightening inventor are not more truly public benefactors than the genuine humorist, who, if he does not relieve the physical suffering of a few lives, at least drives the blueness out of many. To keep mankind good-natured is no mean task; and to wit devoid of malice we owe a tribute not inferior to that unhesitatingly rendered to poetry and philosophy.

WM. PENN'S DEED FROM THE INDIANS.

THIS indenture witnesseth, that we, Packenah, Jaracoam, Sikals, Partequesott, Jevis, Essepenock, Felkroy, Hekellapan, Econus, Machlona, Meteheougha, Wisa Powey, Indian Kings, Sachemakers, right owners of all lands from Quing Quingas, called Chester Creek, all along by the west of Delaware river, and so between the said creeks backwards as far as a man can ride in two days with a horse, for and in consideration of these following goods, to us in hand paid by William Penn, proprietary and governor of the province of Pennsylvania and territories thereof, viz: 20 guns, 20 fathoms matheoat, 20 fathoms strand water, 20 blankets, 20 kettles, 20 pounds powder, 100 bars leads, 40 tomahawks, 100 knives, 40 pairs of stockings, 1 barrel of beer, 20 barrels of red lead, 100 fathoms of wampum, 30 glass bottles, 80 pewter spoons, 100 awl blades, 300 tobacco pipes, 100 hanks of tobacco, 20 tobacco tongs, 20 steels, 200 flints, 30 pairs of scissors, 80 combs, 60 looking-glasses, 200 needles, one skipple of salt, 30 pounds of sugar, 5 gallons of molasses, 20 tobacco boxes, 100 jewsharps, 20 hoes, 30 gimblets, 30 wooden screw boxes, 100 strings of beads, do hereby acknowledge, &c. Given under our hands, &c., at Newcastle, second day of the eighth month, 1689.

The above is a true copy, taken from the original by Ephraim Morton, now living in Washington, Penn., formerly a clerk in the land office, which copy he gave to Wm. Stratton, and from which the above was taken in Little York, this 7th day of December, 1813.

GIVE THE PRINTERS FAIR PLAY.—We have a piece of advice which we wish to impress firmly and indelibly upon the public mind, and that is to give the printers fair play. Do not forget that it costs something to puff as well as to advertise, and never sponge upon a printer in any way whatever. It is printer's ink that makes nine-tenths of our fortunes; it takes money to buy ink, type and paper, and yet, after all this, few are the thanks the printer gets. Give the printer fair play, and give up all expectations of gratuitous puffing, &c. Daniel Webster was "mighty near right" when he remarked of the press, "Small is the sum required to patronize a newspaper, amply rewarded is its patron. I care not how humble and unpretending the gazette which he takes, it is next to impossible to fill it without putting into it something that is worth the subscription price."

BENEDICT ARNOLD—A RELIC.

THE New Haven Palladium says:—We have the identical sign that used to hang out over the store of Benedict Arnold when he traded in Water street in this city, and we present below a copy of it as near as a sign can be copied on paper. It is about three and a-half feet long and two and a-half broad. The sign is black, and the letters look at first glance as if put on with yellow paint; but on close inspection, they are discovered to be gilt.

The sign was found some time since in the garret of the house in which Arnold lived (opposite his store,) and is now the property, we learn, of Jacob T. Hotchkiss, who has permitted it to be deposited in the Museum. We have followed the style, proportions and pointing of the letters on the sign very nearly. There was one peculiarity, however, that we could not well imitate, viz., the dots of the i's in the motto, which on the sign are inverted commas instead of mere dots. It will be seen that there is no point between the name and the occupation. Both sides of the sign are almost precisely alike. The motto, "Sibi Totique," is translated thus—"For himself—for the whole," or "for all." The first sentence is most decidedly appropriate to the man, who was "for himself" in all things.

B. ARNOLD DRUGGIST,
Book-Seller. &c—
FROM LONDON,
Sibi Totique.

When Arnold was in London, we are at this moment unable to tell. He was engaged when here in the trade of horses and mules to the West Indies, and it is probable that his visit to London was while he was in business, though that is mere conjecture. He was born in Norwich, in this State, in January, 1750, and was apprenticed to an apothecary in that city, and a very troublesome apprentice he was too.

A BISHOP'S ANATHEMA OF THE FENIANS.

THE Roman Catholic Bishop of Killarney delivered himself in severe terms against the Fenians, after the late disurbance in his district. Among other hard things, he said:—"If we must condemn the foolish youths who have joined in this conspiracy, how much must we not execrate the conduct of those designing villains who have been entrapping innocent youth, and organizing this work of crime? Thank God they are not our people; or, if they were, they have lost the Irish character in the cities of America. But beyond them there are criminals of a far deeper guilt—the men who, while they send their dupes into danger, are fattening on the spoils in Paris and New York—the execrable swindlers, who care not to endanger the necks of the men who trust them, who care not how many are murdered by the rebel or hanged by the strong arm of the law, provided they can get a supply of dollars either for their pleasures or for their wants. Oh! God's heaviest curse—His withering, blasting, blighting curse—is on them. I preached to you last Sunday on the eternity of hell's torments. Human reason was inclined to say, 'It is a hard word, and who can bear it?' But when we look down into the fathomless depth of this infamy of the heads of this Fenian conspiracy, we must acknowledge that eternity is not long enough nor hell hot enough to punish such miscreants."

A SPECIMEN OF OLD SCOTLAND.

THE Inverness Courier records the death of an eccentric individual named Hugh Miller, at the advanced age of 83. All Hugh's acts bore the stamp of eccentricity. He still adhered to the ancient style of tying the hair in a cue, and wore the broad blue bonnet in vogue nearly a century ago. His farm-houses were of the most primitive construction, quite in keeping with the huts of Barra or Uist, but certainly rare to be seen at the present day in any part of the mainland of Scotland. The door of Hugh's house had to do service for both bipeds and quadrupeds, the owner and his cattle occupying respectively the opposite ends of the same domicil, while the poultry were allowed to roost or lie in either end as their instincts dictated. To modern modes of agriculture Hugh was a perfect stranger, adhering rigidly to the good old system of tillage which obtained in this country some sixty years ago. He plowed shallow, sowed his grain at least seven weeks or more later than the ordinary time for doing so, and, as might be expected, reaped a deficient crop at a corresponding late season in the autumn, Hugh's motto being that "the worst farmer had his chance of getting a good year as well as the best."

THE NATION'S CURSE.

THE revenue commissioners estimate that there are annually consumed in this country 42,000,000 gallons of distilled spirits, 186,000,000 gallons of fermented liquors, and 10,000,000 gallons of imported liquors, the estimated cost of which is $500,000,000, on which the Government derives an income of $47,727,276. This of course does not include the liquor smuggled into the country, nor the immense amount secretly and illicitly manufactured, which would vastly increase this estimate; nor does it include the enormous loss annually sustained by labor and capital, the direct result of drinking habits, nor the suffering and vice directly caused by strong drink. These should be presented to make a correct balance sheet.

CURIOSITY IN WATCHES.—An Englishman has patented a watch without hands that shows on its face no figures but those which tell the hour and minute looked for. The figures are displayed as they are wanted, and no others appear on the watch face.

Reading for the Young.

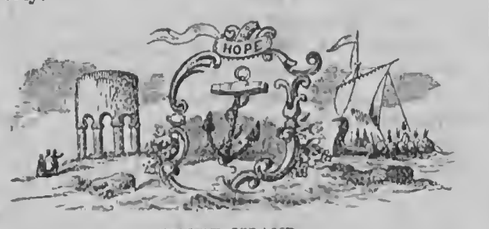
ORIGIN AND SEALS OF THE STATES.

NUMBER TWO.

IN 1602, BARTHOLOMEW GOSNOLD, sailing from England nearly west, discovered Cape Cod, the extreme eastern point of Massachusetts, to which he gave the name it still bears. He landed at various points on the coast, explored the country to some extent, and on his return gave so favorable an account of it that a company of merchants from Plymouth and Bristol got up a colony which came over to settle the new country. They landed in 1607, but became discouraged and returned in the following year.

MASSACHUSETTS.

In 1620, however, the Pilgrim Fathers, 102 in number, came over intending to settle on the banks of the Hudson, but were driven further north, and landed at Plymouth. Every one knows their story. The colony was almost a pure democracy until 1639, when they established a representative body. Salem was the first permanent town that was built. JAMES II., following out the design of his predecessor, revoked their charter, and united all the colonies of New England in one, under a government of his own appointing. But at the end of his reign their former government, with some modifications, was restored. Massachusetts was one of the original thirteen States, and on her soil the first blood of the Revolution was shed, and the first substantial victory gained; for though Bunker Hill, in a military sense, was a defeat, it had all the moral force of a victory. Maine was a part of the State until 1820, when it was divided from it and admitted into the Union. Massachusetts has an area of 7,800 square miles. Much of the surface is hilly, though the highest peak, Saddle Mountain, is only 3,600 feet above the level of the sea. She is not rich in minerals, but iron, plumbago (black lead) and lead are found in sufficient quantities to pay for mining. There are valuable granite quarries in Berkshire. There are three celebrated colleges in the State, Harvard, Williams and Amherst, and a theological seminary at Andover. The present population is 1,231,000. The "Bay State" is her poetical name; and the motto on her seal signifies "By the sword she seeks peaceful repose under liberty."



RHODE ISLAND.

Rhode Island is the smallest State in the Union, in geographical extent, though not in population. ROGER WILLIAMS, who was expelled from Massachusetts for his religious opinions, was its first white settler. In his wanderings he slaked his thirst at a spring, and in acknowledgment of "GOD'S merciful providence to him in his distress," called the place "Providence," a name still borne by the city afterwards erected on the spot. He purchased the land of the Narragansett Indians in 1636, and welcomed everybody, no matter what his religion, to settle within its limits. The colony was chartered in 1663. Of the original thirteen States, Rhode Island was the last to ratify the Federal Constitution, which she did in May, 1790. The charter granted by CHARLES II. was the only constitution of the State until 1844. The interests are largely manufacturing; the surface is very hilly, but there are no mountains; and the area measures 1,360 square miles. Brown University is situated at Providence. The present population is 174,600 Very sensibly the coat-of-arms has an English motto; and on the left you see a representation of the famous "Round Tower" of Newport.

CONNECTICUT.

Connecticut was originally two colonies—Hartford, settled in 1635 by emigrants from Massachusetts, and New Haven, settled in 1638 by emigrants from England. They were united under one charter in 1662. It was this charter which was secreted in the "Charter oak," at Hartford, in 1686, when Governor ANDROS, by authority of King JAMES, demanded its surrender. The government of the State was administered under it until 1818, when its present constitution was formed. Connecticut has three colleges—Yale, the most richly endowed in the country, founded in 1701, Trinity College, at Hartford, and Wesleyan University at Middletown, and a theological school at Hartford. The State contains 4,674 square miles, with a very hilly surface and a rocky soil. The farms are mostly "grass farms." Its coast on Long Island Sound is indented with many good harbors. Minerals are abundant; and there are extensive quarries of fine marble and free-stone. The present population numbers 460,000. Connecticut is sometimes called the "Nutmeg State," a sarcastic allusion to the ingenuity of its inhabitants, who were said to make and peddle wooden nutmegs. The motto on the coat-of-arms signifies—"He who brought us over sustains us."

SPRING CAMPAIGN
OF THE
RURAL BRIGADE!

A NEW QUARTER OF THE RURAL

Begins April 6,—a good time for new clubs or additions to old ones to commence, though we can still furnish back numbers from Jan., or subscriptions may date from Feb. or March 1st. March is a good month in which to fill up Premium Clubs already begun, and also to form new ones. There are hundreds of localities in which clubs may yet be organized and Rewards of Merit secured. Our former Premiums are continued, and several new ones added,—(see part in RURAL of 9th, and full list in Supplement.)

ANOTHER SPLENDID PREMIUM!—By request we have added LAMB'S FAMILY KNITTING MACHINE to our list of Premiums For 65 Yearly Subscribers (at least 50 of them being *new*) at club rate, $2.50 per copy, we will give a Lamb Knitting Machine, the Cash Price of which is $65.00.

MORE YET.—We have also added DOTT'S WASHING MACHINE, price $14, and will give it to every person remitting for 30 subscribers (20 of them *new*,) at club rate;—and the CHAMPION CLOTHES WRINGER, price $9, which we will give for a club of 15 subscribers (10 of them *new*,) at club rate.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., MARCH 23, 1867.

NEWS OF THE WEEK.

From Washington.

A BILL introduced into the House by Mr. Van Horn of New York, provides for the construction of a ship canal around the Falls of Niagara, said canal to be constructed by the Secretary of War as a Government work, and to be free from tolls, excepting such as will be necessary to keep up repairs on the same. This bill is the same as the one recently presented in the Senate by Mr. Chandler of Michigan.

Representatives of the Richmond banks are in Washington endeavoring to obtain possession of the quarter of a million of specie captured with the Jeff. Davis party a couple of years ago. They obtained from the President an order on Treasurer Spinner to turn it over to their custody, taking bonds for the faithful delivery of the same, and its return in case of Congressional or Judicial action requiring it. The Treasurer, upon receipt of the order, assured the parties that they could give no bonds which would be satisfactory to him, and flatly refused to allow the gold to be taken from his keeping. The Committee on Retrenchment, of which General Van Wyck is Chairman, has been ordered to investigate the matter.

General Grant has issued an order assigning commanders to the new military districts of the South, under the Reconstruction bill, as follows:

First District—State of Virginia—To be commanded by Brevet Major-General J. M. Schofield, headquarters at Richmond, Virginia.

Second District—North and South Carolina, to be commanded by Maj.-General D. E. Sickles, headquarters at Columbia, South Carolina.

Third District—Georgia, Florida and Alabama, to be commanded by Maj.-General G. H. Thomas, headquarters at Montgomery, Alabama.

Fourth District—Mississippi and Arkansas, to be commanded by Brevet Major-General E. O. C. Ord, headquarters at Vicksburg, Mississippi.

Fifth District—Louisiana and Texas, Maj.-General P. H. Sheridan, headquarters at New Orleans, Louisiana.

Mr. Pomeroy has introduced into the House a bill to secure the speedy construction of the Union Pacific Railroad, southern branch, and telegraph line, and authorzing the Secretary of the Treasury to guarantee the bonds of the Company, &c., it being the bill of last session revised.

The President has communicated to the House a letter from minister King, dated February 18th, in which the latter says the laws of Rome do not tolerate any other form of public religious worship than such as conforms to the teachings of the Roman Catholic Church, but the right of any foreign minister at the Papal Court to hold religious services under his own roof, and in accordance with the forms of his national or individual faith, has never been questioned or interfered with.

The new national bankrupt law makes another batch of officers. There is to be a register of bankruptcy in each Congressional District, and the pay in some cases must be quite large, while in all it is doubtless worthy hungry men's attention. Certainly, the hungry fellows have found it out, and are already in droves at Washington to get the places.

WASHINGTON, March 16.—The receipts of internal revenue to-day were $36,132.18; for the week ending to-day they foot up $2,347,436.18. The aggregate receipts for the fiscal year to date are $208,188,938.43.

The amount of fractional currency received from the Printing Bureau during the week ending to-day was $388,000. The shipment during the same period was $819,411.

WASHINGTON, March 18.—The Reconstruction Bill as it passed the Senate will come up in the House to-morrow, and a committee of conference will be had immediately.

From Albany.

THE bill appropriating $250,000 towards the erection of a new Capitol, was further discussed in the Assembly on Wednesday, and finally ordered to a third reading by a decisive vote. An amendment was added, prohibiting the authorities from tearing down the Congress Hall block until after the adjournment of the Constitutional Convention.

The Assembly has passed the bill to provide temporary homes for sick and wounded soldiers.

A committee of the Legislature has agreed to report a bill appointing three commissioners to regulate prostitution in New York city, with power to grant licenses to houses of prostitution and assignation. Medical inspectors are also provided to inspect the inmates of such houses.

From the South.

FORTRESS MONROE, March 15.—The Dismal Swamp Canal, which connects the harbor of Norfolk and Portsmouth with the sounds and inland waters of North Carolina, is in process of great improvement. Col. Walton, the engineer of the projected improvements, with a number of assistants, is surveying the canal and staking out the line. The whole course is to be dredged and deepened, and the width increased twenty feet, making the canal sixty feet wide. The locks also are to be removed, and extended twenty-five feet. The excavating will commence next month, and when finished will place the canal in a condition to accommodate ten times the amount of business it is cable of doing at present.

The colored people of Louisville, Ky., are about to establish a weekly paper devoted to their interests, and entitled the Colored Kentucklan.

The Maryland Senate, by a vote of 17 to 1, has passed a bill appropriating $100,000 for the relief of the suffering South.

WASHINGTON, March 17.—Numerous letters have been received here from various parts of the South showing an astonishing revolution in public sentiment with regard to reconstruction. The bill recently passed by Congress for that purpose has already met with much favor from prominent citizens of excluded States, who were at first earnestly opposed to it. The example of Virginia in accepting the terms proposed will be rapidly followed by all other Southern States. The few who oppose this course exert but little if any influence to defeat the general design of restoration.

Gov. Jenkins states that after the close of the war the Georgia Legislature passed a law paying the old debt of the State by the issue of new bonds, which, being issued under the authority of the present Government, are declared illegal by the bill and are now worthless. All of the Southern States are in the same predicament.

RICHMOND, Va., March 17.—Gen. Schofield has set aside the municipal election at Fredericksburg. It is probable that he will do the same all oves the State, and the old officers will hold on until a new election.

The Freshet.

CINCINNATI, March 13.—The reports received from below this city represent great destruction of property by the flood in many places. Between New Albany and Evansville the river is thirty miles wide. Thousands of cattle, sheep and hogs have been drowned, and hundreds of thousands of bushels of grain have been lost. The country is covered with floating stacks of hay, wheat and oats. Nearly all the steamboat landings are under water, and the boats cannot make their landing. Shawnee Town is completely inundated. In the lower part of Covington hundreds of houses are under water.

A special dispatch from Nashville to the Gazette, says the reports of suffering at Chattanooga and other places along the Tennessee river are appalling.

At Chattanooga on the 11th, the water was from twelve to twenty feet deep, many houses toppling over and others floating away. The Mayor with a posse of citizens was foraging among the loaded cars for food. The agent of the road protested, but the Mayor said the people were starving. Twenty-five dead bodies were seen floating down the river at Bridgeport, Ala., on the 12th. The loss of property is estimated at a million dollars. Gen. Cortin, at Nashville, was making efforts to send rations through to Chattanooga.

CAIRO, March 13.—The levee near Mound City broke this morning. The breach is about forty feet wide and six inches deep. The citizens are doing all they can to prevent an inundation of the town.

LOUISVILLE, March 16.—Railroad communication with Memphis is entirely suspended, the road along the Cumberland River being several feet under water.

Foreign News—By Telegraph.

LONDON, March 11—Evening.—Ireland is quiet. The Government, however, is organizing its forces into six flying columns for pursuit of scattering bands of Fenians and active service in case the necessity should arise. The band of Fenians which was recently encamped on the Galtee Mountains has vanished, leaving no trace of their whereabouts.

LONDON, March 15—Noon—Four more vessels of war have sailed for the Irish coast. Fears are entertained of a rising of the Irish in Liverpool.

DUBLIN, March 17.—Forty of the prisoners recently captured have been committed for trial at Limerick on the charge of high treason.

Archbishop Cullen praises the Government for its clemency to the rebels in Ireland.

DUBLIN, March 17.—The fear that the Fenians would attempt another general rising to-day has not been realized. Dispatches from all parts of the island report that the country is quiet. Frequent arrests are made by the Police in the disaffected districts.

The emigration to America from Cork for the past few days has been extremely large. Many of the emigrants are recognized as being connected with the Fenian uprising near Killarney. It is supposed the unusual exodus is caused, in part at least, by anticipated bloodshed in Ireland.

BERLIN, March 13.—Herr Munchausen, Premier of the Government of Hanover in the government of the late King, has challenged Count Von Bismarck for words uttered in debate in the German Parliament.

LONDON, March 14—Eve.—It is stated that the European powers have failed to agree on the Eastern question. Russia demands additional concessions for the Christian subjects of the Sultan.

Dispatches from Constantinople state that the Turkish Government is determined to continue the war in Candia, and is preparing to send ten fresh battalions of troops to the island under command of Hussan Pasha.

LIVERPOOL, March 14.—The American Chamber of Commerce in this city gave a grand banquet to-night in honor of the heroes of the Atlantic Cable, at which gold medals were presented to Cyrus W. Field, Capt. Anderson, Mr. Canning and Mr. Willoughby Smith. The entertainment was a splendid affair. The American Minister, Mr. Adams, and all the leading American merchants of this city were present.

LONDON, March 17.—The reform bill which is to be brought into Parliament by the Government to-morrow, will give the right of suffrage to rate paying householders after two years' residence—to men paying one pound yearly taxes, or having thirty pounds in a savings bank, or fifty pounds in the funds, and to all members of the learned professions and graduates of the universities. The bill also provides for a fifteen pound franchise in the counties.

From Canada.

TORONTO, C. W., March 15.—The military authorities are making active preparations to receive the Fenians, should they attempt another raid. Half a battery of artillery and fifty men of the 17th regiment were sent to Brantford this morning. It is expected that two troops of Hussars will join them in a few days. A brigade, to consist of artillery, cavalry and infantry of the regular army and 1,000 volunteers, will rendezvous at Brantford. From this place they can be transported east or west on short notice.

OTTAWA, March 15.—Large nuggets of gold have been found in the county of Renfrew. The local Crown land agent has in consequence been notified to sell no more lands in his jurisdiction.

THE present and prospective condition of the labor market is exciting considerable interest among the working classes of New York. Advanced rates of remuneration, with few exceptions only, are contemplated by the men of the building trades. Ship building is dull, and the mechanics employed in it are working at reduced wages. The present unsettled state of the labor market is unparalleled.

GET WHAT YOU PAY FOR.—In buying Saleratus, as other things, see that you get what you pay for, viz.: 16 ounces when you pay for a pound. If you always buy D. B. De Land & Co.'s *Best Chemical Saleratus* you will never be deceived, but always get *full weight* and the *best goods*.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, March 19, 1867.

THERE is now no lack of money for legitimate business in this locality. The banks generally will not extend their loans to any considerable extent until after the quarterly reports of the 1st of April. The condition of the banks of the State is believed to be sound, and that the quarterly statements will be very satisfactory. Money is easy in New York, and call loans are made at 6 per cent. Prime bills are discounted at 6¼@7½ per cent. At the close of the week the stock market was dull, and prices fell off. Erie declined 1 per cent. under large sales, closing at about 58. The decrease in the business of the Erie Railway for February, as compared with the corresponding month in 1866, amounts to $70,393.

The Boston money market has not fully recovered from the excitement and loss mentioned last week. The "solid men" of Boston still wonder that $1,200,000 should be drawn from their old banking institutions so easily, and by comparatively new men in business. Bank officers are holding meetings to regulate in some way the matter of "certified checks," in order to guard against losses in the future.

Last week there was a financial excitement in Providence, caused by the failure of Taft & Co. for $1,500,000, followed by that of Amasa Morton for about $900,000 and Bailey & Eaton for $500,000. Taft & Co. were large manufacturers, but not confining their operations to regular business had speculated largely in print cloths. These heavy failures have disturbed business considerably outside of Providence, and it is thought other houses must suffer severely.

The Cincinnati Gazette reports that business is improving at that point, and that trade is fairly active.

The depositors of the defunct Bank of Medina, N. Y., at a meeting held recently, resolved not to accept less than 50 cents on the dollar. It is said the prospect is not encouraging for so large a dividend.

A new bank is to be started at Toronto, C. W.; Mr. Green, late manager of the Bank of Montreal, to be Cashier.

Counterfeit one dollar bills on the First National Bank of Warren, Ohio, and counterfeit five dollar bills on the First National Bank at Mansfield, Ohio, are in circulation in the West.

A new counterfeit five dollar National Bank Note has recently been put in circulation. It differs from the genuine in this:—It has the figures of but four persons in the group surrounding Columbus, while in the group in the genuine there are five.

A rumor has prevailed, to some extent, that there has been an over-issue of bonds at the Treasury printing office. A Committee of Congress is proposed to examine into the affair. It is not now believed there has been any serious error committed. An investigation, however, is necessary to put the matter at rest, both at home and abroad.

WOOL.—The advance of last week has been maintained in the eastern markets. Sales have been large. The Boston sales foot up over 1,000,000 lbs., at a range of 50@76c. per lb. for fleece, and 25@67½c. for the various grades of pulled. The outside rate was for Rochester and other choice brands. The Boston Commercial Bulletin says:

Commission merchants are much embarrassed by the extreme views and limitations of consigners, who, under the new tariff, are expecting to realize a much larger advance than it is possible to obtain in the present state of the market for wool products. Country prices for wool, which before were relatively high, as compared with those upon the seaboard, are now relatively higher than ever. Consequently receipts are falling off, and stocks here cannot be replaced at anything like current prices.

COAL TRADE.—The amount of coal moved from the coal regions of Pennsylvania during the year 1866 was 14,738,063 tons, an increase over the amount taken from the same region in 1860 of fully 50 per cent. From 1840 to 1849, inclusive, the whole amount was but little over 21,000,000 tons.

TOBACCO.—Tobacco is raised to a considerable extent in twenty-eight States of the Union. The State of New York raised, last year, it is estimated, 800,000 lbs.; Massachusetts, 4,400,000 lbs.; Connecticut, 8,200,000 lbs. The amount raised in all the States was 339,501,500 pounds. As compared with 1860 there was a falling off of 104,000,000 lbs. The falling off in Kentucky and Virginia was larger than in any of the other States.

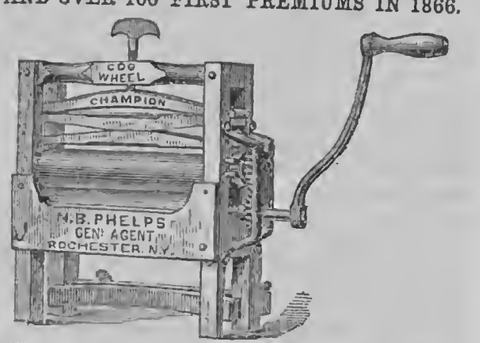
AGENTS WANTED for HEADLEY'S *GREAT WORK*—The only book issued on our Navy during the Rebellion. Agents find no competition.

Comprising popular Biographies of our Naval Heroes, by Hon. J. T. Headley, the distinguished Author and Historian—complete in one large volume—handsomely illustrated on steel. The best paying agency of the day. In connection with this work our Agents can take orders for five of Headley's Standard Works of our own publication. Call or send at once for Circulars and terms. Address E. B. TREAT & CO., Publishers, 896-2t 654 Broadway, New York.

A GOLD MEDAL WAS AWARDED
To the Manufacturers of the
CHAMPION WRINGER IN 1865,
AND OVER 100 FIRST PREMIUMS IN 1866.



The only Wringer in use with the
PATENT COG-WHEEL ROLLER REGULATOR,
Which, not only allows the Rolls to separate at BOTH ENDS without disconnecting the cog-wheels; but also allows them to be pressed together without bringing the cog-wheels any closer in contact. It has taken time and experience to perfect this great and long-sought invention. But it is now in a practical form, and gives universal satisfaction. We warrant it right in every respect.

The Patent Curved Clamp
Has an equal bearing on a tub the whole length of the Wringer, while all other Wringers are merely fastened to a single stave at each end. Agents wanted, to sell wherever they please. Over four thousand parties are now selling this Wringer. A list of wholesale dealers, price list and circulars, sent on application. Address N. B. PHELPS, Gen'l Agent, Rochester, N. Y.

FRUIT and ORNAMENTAL TREES
FOR THE SPRING OF 1867.

ELLWANGER & BARRY have the pleasure of offering for Spring planting their usual large and well grown stock of

The News Condenser.

— Opium valued at $300,000 has been seized at San Francisco.

— Apprehensions of Fenian invasion still keep Canada on the *qui vive*.

— Edwin Miles of the Syracuse Journal died at his residence in that city on the 14th.

— A powder mill near Xenia, O., exploded on the 12th, killing two men. Loss $10,000.

— In a recent battle with the Indians near Stein's mountain, sixty-three of them were killed.

— Yellow fever is raging at Panama. Sixteen deaths occurred on the U. S. steamer "Jamestown."

— Gov. Smyth has appointed Thursday, April 4th, a day of fasting and prayer in New Hampshire.

— Meerschaum, similar in appearance to that found in Europe, has been discovered in Franklin Co., Mo.

— Business is brisk at Fenian headquarters. Arms and money are sent in freely, and volunteers offered.

— Chinese goods to the value of $500,000 imported into San Francisco, have been seized for undervaluation.

— New York expects another call from the cholera this year, and is making arrangements to be "not at home."

— The U. S. Consul General at Havana reports that the Spanish authorities are very vigilant to prevent the slave traffic.

— Dr. Howe of Boston, the well known philhellenist, has gone to Candia with the fund raised here for the suffering Cretans.

— Two bills for equalization of bounties have been introduced into the House and referred to the Committee on Military Affairs.

— The Commissioner of Internal Revenue has issued an order directing the seizure of all liquors sold for less than the Government tax.

— Chas. F. Browne, "Artemus Ward," directed by his will that after the death of his mother his property, $60,000, be used to found an asylum for printers.

Special Notices.

THE PRACTICAL SHEPHERD,

A COMPLETE TREATISE ON THE BREEDING, MANAGEMENT AND DISEASES OF SHEEP.

By Hon. HENRY S. RANDALL, LL. D.,
Author of "Sheep Husbandry in the South," "Fine-Wool Sheep Husbandry," &c., &c.
PUBLISHED BY D. D. T. MOORE, ROCHESTER, N. Y.

TWENTY-FIVE THOUSAND COPIES of this valuable work have already been issued, and the demand for it is now greater than a year ago. To meet this demand a large edition is now in the hands of the binders and will be ready for agents in a few days.

THE PRACTICAL SHEPHERD is unquestionably *the best and most complete Treatise on Sheep Husbandry now obtainable*. It is the *latest* of Dr. RANDALL'S works on the subject, and combines the results of a life-long experience and observation as a sheep breeder and wool grower. Every flock-master in the land should have the work. It is indispensable,—and no work on any branch of husbandry ever gave better satisfaction. The work is highly approved by both Press and People, as extracts from letters and notices (heretofore published) abundantly testify.

☞ THE PRACTICAL SHEPHERD comprises 454 large duodecimo pages, and is printed, illustrated and bound in superior style. Sold only by Agents and the Publisher. The canvassers for Todd's Patent Stamp for Marking Sheep are authorized Agents for the sale of the Practical Shepherd. Price, $2. Sample copies mailed, post-paid, on receipt of price.

Address **D. D. T MOORE,**
Editor Rural New-Yorker, Rochester, N. Y.

That Hacking Cough must be a source of great trouble, and will certainly produce fatal results if not attended to. Just enough of COE'S COUGH BALSAM to wet the throat, taken once an hour, will cure it in a very short time and only costs 35 or 40 cents.

O. K. B. B. See adv. in another column, and send 2 stamps for full particulars, including tricks of the trade.

Itch. Salt Rheum.—Wheaton's Ointment will cure the itch in 48 hours,—also cures Salt Rheum, Ulcers, Chilblains and all Eruptions of the Skin. Price 50 cents. Free by mail by sending 60 cents to WEEKS & POTTER, Boston, Mass.

For sale by all druggists. 855-52t

Additions to Clubs are always in order, whether in ones, twos, fives, tens, twenties, or any other number. Subscriptions can commence with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless specially directed otherwise. Please note this.

NEWS PARAGRAPHS.

ST. PATRICK'S DAY, 17th, was very generally celebrated by Irishmen in the large cities, but no disturbance is reported. All was quiet in Canada.

A RIOT between soldiers and citizens occurred in Carlisle, Pa., on the 15th. One soldier and one citizen were killed, and several others were wounded, some seriously.

THE revolution in the Argentine Confederation has not been suppressed, Government forces having been defeated; but vigorous measures are in progress and the national guard is called out.

DISPATCHES from various points on the Atlantic coast, dated 17th and 18th, announce a snow storm of considerable severity, and at the present writing (18th P. M.) a heavy one is prevailing here.

GENERAL HOWARD urges voluntary contributions to the extent of half a million to aid the destitute in the South. This, with the million proposed to be given by Congress, will avert immediate starvation.

STOCK RAISING in Illinois has grown to enormous proportions. During 1866 there were sent from that State to the New York market 165,278 head of cattle, being more than was sent from all the other States combined.

LARGE numbers of Fenians are in Washington urging Congressmen to recognize immediately their rights as belligerents. They will appear before the Committee on Foreign Affairs as soon as that committee is organized.

New Advertisements.

REAL ESTATE AND LOAN AGENTS.—The undersigned will attend to the purchase and sale of Real Estate in Western New York. Also, pay taxes, collect rents, notes, accounts and mortgages, negotiate loans, &c. All communications enclosing stamp for return postage, will receive prompt attention.

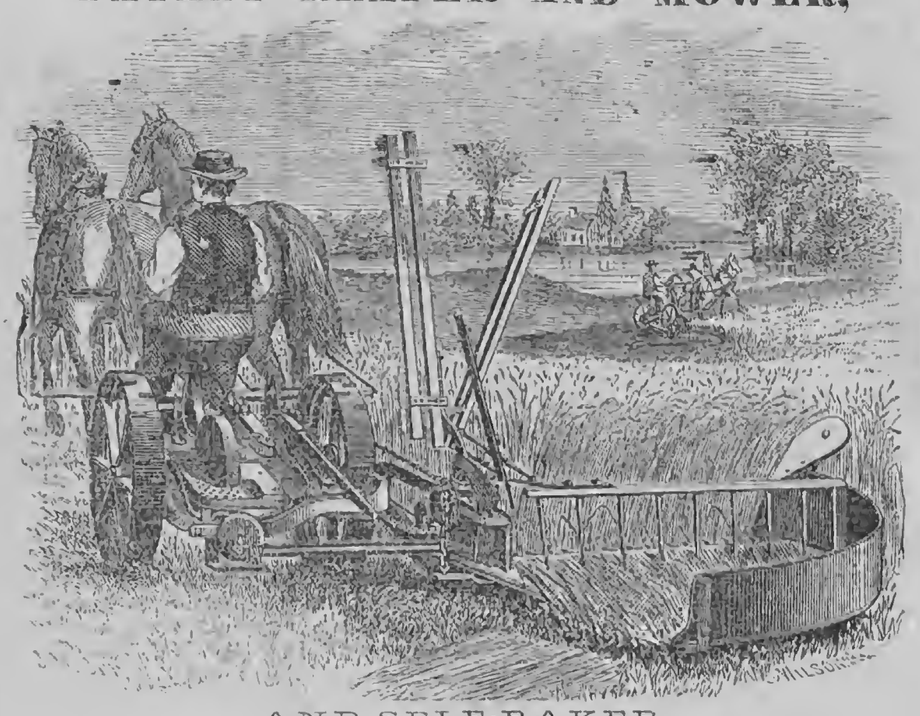
Constans, St. Paul, Min.; Edward H. Biggs, St. Paul, Min.; Wm. H. Leonard & Co., Minneapolis, Min.; Jas. Jenks, Clearwater, Min.; Dr. G. F. Townsend, St. Anthony, Min.; Tickner, Tolman & Co., St. Cloud, Min. 894-9teo.

DANA'S PATENT SHEEP LABEL.—The only perfectly successful label ever introduced. We continue to furnish these labels stamped with names and numbers to order. Samples will be sent free per mail to those wishing to examine them before ordering.

The many flattering testimonials daily received from the thousands who are now using the labels, show that while the *name* on the label proves to be a great security against the loss of the sheep, the *numbers*, in connection with the Sheep Registers (which are got up especially to accompany these labels,) furnish a facility never before attained for keeping a record of the flock. The Sheep Registers are arranged with numbers corresponding to those on the labels, and ruled with headings, under which to note the age, pedigree, weight of fleece, and various other items important for one to note who would improve his flock. The bound Registers are arranged to keep the record of a flock of 400 sheep for five years. The sheet Registers, which are sent free to those ordering 100 or more labels, are arranged to keep record of a flock of 200 for one year. Spring Punches, manufactured for punching the ear, with tube fitted to the shape of the wire, and gauged to reach just the right distance upon the ear, for the label; and the handles arranged so as to answer as pinchers to close the label in the ear. Double Spring Toe Shears, a superior article for trimming sheep's toes.

PRICES.—Sheep Labels, ₱ 100, $3,00; Spring Punches, each, $1,25; Toe Shears, $2; Bound Sheep Registers, each, 50c. For 500 Labels or more, stamped with same name, per 100, $2,25. All orders for less than 50 labels, 10 cents additional. Can stamp whole name, if not more than nine letters. In sending orders, the name should be written with great distinctness, to avoid mistakes. *Greenbacks* should accompany the orders for each of the above articles, and may be sent by mail at my risk. Send no registered letters. To lessen express charges to those ordering Labels, the various orders from the West, which are *prepaid*, will be put together in packages, and sent, at my expense, to Rochester, N. Y., Chicago, Ill., or Cleveland, Ohio, and forwarded from either place, as persons may direct. Agents wanted everywhere to solicit orders, to whom a liberal discount will be made. Address C. H. DANA, Inventor and Manufacturer, West Lebanon, N. H.

DODGE'S PATENT REAPER AND MOWER,



AND SELF-RAKER,

OHIO AND BUCKEYE PATENTS COMBINED.

Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:

L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a REVOLVING RAKE, and does its own reeling, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED

The Special Diploma and Grand Medal of Honor,

AS THE BEST

COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and FIRST PREMIUMS, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

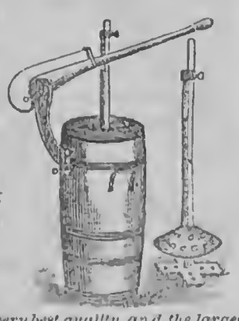
H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.



First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor*. The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.) $16; No. 2, (⅝ bbl.) $11; No. 3, (½ bbl.) $12; No. 4, (⅜ bbl.) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker*.

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune*.

Mr. Robinson also named it FIRST and commended it manifest of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City*.

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times*.

"The very best Churn extant."—*Prairie Farmer*.

"It is perfectly common sense in its structure."—*Ohio Farmer*.

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator*.

☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

SONG—OUR WILL.

BY FRANK E. BABBITT.

My songs are o'er; my heart lies dead
With WILL in his low, narrow bed.
Poor WILL, dear WILL, my loved, my own,
Has gone, and I am left alone.

When brazen-throated War called forth
Our heroes from the dauntless North,
He went, brave, tender soul, with those
Who love the right and smite its foes.

His horse stands idle in the stall;
His coat hangs empty on the wall;
And, o'er our old hearth-stone I see
His sword hang rusting—woe is me!

For WILL is not; nor earth, nor air,
Give back his form to our fierce prayer;
Our hero sleeps—GOD rest his soul,
And, gracious, ease our heavy dole!

Coldwater, Mich., March, 1867.

The Story Teller.

Written for Moore's Rural New-Yorker.

ENTERTAINMENT FOR MAN AND BEAST.

BY EDWIN R. JOHNSON.

It was on a somewhat chilly day in the early spring of 186– that I was riding near the boundary line between New York and Pennsylvania, on a journey to the interior of the latter State. My sole companion was a young man whom I had hired to drive me down to my destination, behind his sleek but not over active span of grays. He belonged to a not very numerous class, to be found only in or about small villages in the interior—youngish men generally, who own nothing but a team and pick up a precarious living for themselves and a good one for their horses by doing any odd jobs of "hauling" that come in their way, sometimes getting steady employment for two or three weeks with a farmer or lumberman, and again carrying a transient passenger like myself across the country where the lines of stage travel will not accommodate him. Their leisure hours, which are numerous, are spent in the company of the wiseacres who haunt the village hotel, or "house"—that pretentious establishment where, on alighting for dinner from the stage, and being the only guest, I have been blandly interrogated by the host as to whether I would "have my baggage checked,"—and their leisure days, which also are not few, are passed among their relatives whose landed interests keep them forever "at home" to such visitors. The class of whom I am speaking are centaurs morally and intellectually, if not physically, and their better half, the team, is generally the better provided with the comforts of life. Their affection for their horses is genuine; and if you will allow them to manage the conversation, they will be enthusiastic, during a long journey, in their discussions of the merits of horseflesh generally and of the span before you particularly. And if one of them now and then uses the whip pretty sharply, you may be sure it is not from anger, but only from vexation that the beasts should fail to do themselves justice before a stranger whom their master has just been entertaining with such a glowing account of their capabilities.

The class whose peculiarities I have spent so many preliminary words in discussing, was represented on the present occasion by a man about twenty-six years of age, of good physical development, though rather under medium height, with a large, good-natured face, smooth shaved. His garments were all cheap and of coarse texture; yet, without being at all pretentious in their cut or the way they were worn, they showed indications of a gentlemanly instinct. The shirt-collar, contrary to the usual custom with such characters, was buttoned close and surrounded with a small cravat. He showed in his conversation that he had done a good deal of desultory reading and unsystematic thinking and had quite a command of language. He had grappled fearlessly with the profoundest questions of history, ethics, theology and civil government, and imagined that for some of them he had discovered new and complete solutions. Moreover, he had a propensity and some skill for punning, which now and then cropped out most fantastically between grave opinions on social affairs or solemn declarations of religious belief. His name was JONAS BURT.

A few days later, when we were riding in the deep valley of a branch of the Susquehanna, BURT called my attention to a huge rock, poised far above us, that was split in two, and wanted to know if I did not "suppose that was done when the Saviour was crucified." I looked at him a moment, thinking at first that it was a ghastly attempt at a jest; but saw that he was profoundly in earnest. No young lady was ever more at a loss to answer a suitor with an unknown income than I was to reply to his simple question. I did not dare to destroy what was for him a conclusive proof of the authenticity of Scripture. So I told him truthfully that I did not know. I afterwards learned that he had been a sort of self-licensed preacher at one time, and was considered quite a learned man by the inhabitants of the Otzinachsin Valley.

As night began to fall, I grew anxious about a place to put up. BURT had shown a strong desire to stop at a roadside inn that we passed just before sundown; but as I was in a hurry to reach my destination, I insisted upon continuing the journey.

I hailed a farmer who was crossing the road to his barn, and inquired for a tavern.

"Nobody keeps reg'lar tavern within six mild of here," he answered, "but old LOXON, about half a mild ahead, across the creek, he keeps entertainment. Maybe you might get in there."

BURT informed the team that they couldn't have a lock of hay short of LOXON'S, which information, or else a sharp application of the whip, caused the epicurean grays to strike a respectable gait and maintain it for the whole half mile.

I was hungry and tired, and longed for supper and sleep. Twilight had already fallen like a spotless sheet on the bed of drowsy Earth, and the heavy coverlid of darkness was rapidly settling down, as we crossed the creek and hauled up in the door-yard of the venerable LOXON.

The creek was a noisy stream, five or six yards wide, that babbled on over a rocky bed underlying a thick stratum of soft shale, through which the deep gorge had been cut. On the hither side stood a dilapidated building that seemed to have been by turns a saw-mill, a grist-mill and a woolen factory. It was dark, and the door and windows were barred; but the wheel appeared to be going, for there was a dismal grinding and creaking within. The house of the man who "kept entertainment" was built close under the perpendicular bank, with a space of perhaps thirty yards between the front door and the border of the stream.

LOXON himself answered our call and intimated that he might be persuaded to make room for us. He was an elderly man in a good state of preservation, with a quiet and observant manner, who, to unwary travelers, might be Abou Ben Ahdem or Abou Ben Kill 'em (the pun is BURT'S) for aught that you could detect in his appearance.

The house was long and low and seemed to have been built by piecemeal. There was a sort of piazza running almost the entire length, upon which several doors opened.

We sat around a cheerful fire in a large room, while LOXON'S daughters, two round-cheeked, red-armed girls, not altogether uncomely in face or form, prepared the supper. As I joined but little in the conversation, I had leisure and opportunity to exercise my ingenuity in observation. One conclusion I reached, which afterwards proved correct, that between BURT and the younger of the two young women there was some degree of acquaintance, which, by a tacit agreement, both ignored; but I thought they slightly over-did it.

Directly opposite me at the fire-place, and next me at the table, sat one of the most hideous human beings I have ever seen. He was a man somewhere beyond thirty-five years of age, badly hump-backed, with a mouth drawn somewhat out of shape by physical suffering, and very handsome but devilish eyes. He continually reminded me of an unlettered copy of Rashleigh Osbaldistone, in SCOTT'S "Rob Roy"; though had I been at the time a classical Freshman in college I should probably have thought of calling him nothing but Thersites. As it was, I set him down for the "beast" referred to on the sign which stood at the corner of the bridge.

This dwarf and BURT were soon involved in a fierce political discussion. It appeared from the turn of his arguments and the tone of his conversation that his desire was not so much to establish any theory of his own as to find fault with all that were mentioned. He seemed to hate everything fair and true because it contrasted with his deformity, to despise himself and be angry with his Maker because of his hideousness, of which he was fully conscious. But I noticed once or twice, when he had occasion to pass a word or two with the younger girl, that his voice lost some of its harshness and his tone disclosed something of human sympathy.

When we intimated a wish to retire, BURT and I were shown into a large room, about in the center of the house, in which were two beds. In one corner were four barrels, on top of these a large box, and on that several bags full of something, I did not know what. Various parcels of dried herbs were hung up about the room. There was not a chair in it, but a long, low box, covered with curtain calico, made a sort of settee. One window looked out upon the piazza, and the other, directly opposite, stared at the shaly cliff only a few feet distant. There was a bolt-sheath on the door, but the bolt was missing. On observing which, my facetious friend made some remark about "old LOXON having new locks on his house." But I soon set him at ease by producing a patent door-fastener, with which I made entrance from the outside impossible.

I slept soundly at first, but afterwards woke up with an uneasy feeling of apprehension and could not get to sleep again. While I lay there allowing an imagination more lively, if possible, than my bed-fellows, to torture me with its thick-coming suggestions of disaster, I was quite certain that I heard the latch click, as if subjected to a soft pressure. Then, as if the would-be intruder were frightened, there was an absolute silence—that oppressive stillness in which you seem to hear the fermentation of the atmosphere. BURT until now had been snoring; but the click seemed to arrest the attention of his half-conscious senses.

My mind ran rapidly over the situation, and I saw that in case of an attack there were absolutely no means of defence—nothing in the room that could be converted into any sort of weapon. I never carry dirk or pistol. In a few seconds I had become so excited that it was impossible to lie still; and a scheme suggested itself that I rose to carry out.

I went to the back window, raised it softly, and, reaching out, secured a fragment of rock almost as large as my fist. Returning to my bed, I pulled the case from a pillow, dropped the stone into it and tied a knot close down to hold it. I now felt perfectly secure and found no trouble in getting to sleep, though daylight reasoning would have told me that my weapon would avail me nothing unless I could have my man at exactly the right distance and keep him there until I could swing it.

I do not know how long I had slept when I was aroused by BURT bounding out of bed. The noise of the horses kicking in the stable had awaked him. He did not understand the door-fastener, and I got up to let him out. But he was impatient, and before I could get the door open he had tried the front window and, finding that nailed down, had gone to the other, raised it and leaped out. I unfastened the door, however, thinking he would not like to return, barefooted as he was, over the sharp stones to the back window.

As I stepped away from the door I thought I heard another step outside, but, being now thoroughly awake and on my feet, thought nothing of it.

Some minutes later, but before my eyes closed, the door was slowly opened and a figure entered which I at once knew to be that of the Beast, though it was pretty dark.

My first impulse was to spring upon him at once, but I waited a moment to be certain that I was not dreaming. Meanwhile he advanced to the deeper shadow at the foot of BURT'S bed, and stood still.

I passed my left hand to the fore side of the bed, and then, with one movement, threw all the clothes to the back side and bounded out upon the floor. I was about to address the intruder with some demand for explanation or some formal declaration of war; but the words stuck in my throat, and I advanced and clinched him at once.

His form prevented my getting a favorable hold, and he was as strong as an ox. The result was that I was thrown heavily to the floor.

Just then BURT returned. He comprehended the affair instantly and appeared to know his man; for, instead of taking hold of the Beast as a wrestler, he made a sudden spring and sunk his fingers into his throat with a terrible grasp. I was up in a moment. I saw the gleam of a knife aimed at BURT'S breast; but before it reached him he relaxed his hold and dodged out of the way. The next instant a blow from my improvised slung-shot, intended for the Beast's head, fell upon his shoulder. He staggered, hesitated a second or two, and then turning, darted through the still open window and was gone. Strange to say, this little drama did not seem to arouse any one in the house.

In the morning men only were entertained at LOXON'S hospitable board—the Beast did not appear. To my inquiries mine host returned very unsatisfactory replies, pretending ignorance of the dwarf's identity and giving me to understand that he was a traveler like myself. BURT asked no questions and made no allusion to the subject whatever. But while we rode that day I drew from him the fact, which I had surmised before, that the Beast had aspired to the hand of that fair daughter of the house of LOXON and had imagined that the superior attractions of BURT were the cause of his discomfiture. He also informed me that on going to the stable he found the horses in a position indicating that they had not got into trouble without help. It had been done to call him from the house.

When we returned, a few days later, we reached the old mill in the middle of the afternoon. The Beast was just coming out of the door. He had an old woolen stocking around his neck. BURT coolly reined up the horses and inquired in a friendly tone as to his health.

After a searching look at both our faces, as if to see whether he was detected, the poor fellow answered that he was "pretty well except a little cold and a sore throat"—which assertion was not borne out by any hoarseness.

"Well, take care of yourself," said BURT as he whipped up the team, "and don't let Jack Frost get his fingers at your throat again—nor any other man."

ARITHMETICAL PROBLEM.

A POULTRY dealer bought thirty hens of A, at the rate of three for a dollar, and thirty of B, at the rate of two for a dollar. He then went to C, and said:—"I bought hens of A and B at the rate of five for two dollars." He bought 60 of C, at that rate, amounting to $24. Why did A and B receive $1 more than C for the same number of hens?

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, In Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2.50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless directed otherwise. Please note.

Keep a List!—If each agent will keep a list of all the names sent us, with dates and amounts of remittances, it will greatly facilitate the correction of any errors which may be made at either end of the line.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

READER,—Please act as Club Agent for the Rural, or induce your Post-Master or some other influential person to become a recruiting officer for the "Rural Brigade."

THE

CENTRAL

PACIFIC RAILROAD COMPANY

Having completed, equipped, and put in operation nearly one hundred miles of their Road, from Sacramento, California, to within twelve miles of the summit of the Sierra Nevada Mountains, continue to offer for sale, through us, their

FIRST MORTGAGE BONDS,

Issued in conformity with the Acts of Congress and the laws of the State of California, upon the division of their Road located in the State of California, and extending one hundred and fifty-six miles from Sacramento City to the California State line.

The Bonds have Thirty Years to run from July 1, 1865, and are secured by a

FIRST MORTGAGE,

Constituting an absolute prior lien on the portion of Road above named, with all the Rights, Franchises, Equipments, &c., pertaining thereto.

The amount of these First Mortgage Bonds to be issued per mile is limited by law to the amount of United States Bonds allowed and issued to aid the construction of the Road, and the Mortgage by which they are secured is *declared by Act of Congress to constitute a lien prior and superior to that of the United States Government.*

Interest at the rate of Six per cent. per Annum, payable Semi-Annually, on the First days of January and July. Principal and Interest payable in

UNITED STATES GOLD COIN,

In the City of New York.

The price of the Bonds is fixed for the present at 95 per cent., and accrued interest from January 1st in Currency, the Company reserving the right to advance the price whenever it is their interest to do so.

The Road forms the Western part of the

MAIN TRUNK

OF THE

Great National Pacific Railroad,

authorized, adopted and aided by

THE UNITED STATES GOVERNMENT.

It runs through the heart of the richest and most populous section of the State of California, connecting the

Extensive Mining Regions of Nevada, Utah and Idaho

with Sacramento and the Pacific Coast, from whence their supplies must be drawn; and the earnings of the portion already running are very heavy, *and largely in excess of the interest upon the Company's Bonds.*

Having been for some time familiar with the operations of the Central Pacific Railroad Company, we are satisfied that they are conducted with rare ability and prudence, and that the energetic and economical management of the Company's affairs entitles them to the confidence of Capitalists and of the public. We have carefully investigated the progress, resources, and prospects of the Road, and have the fullest confidence in its success, and in the value and stability of the Company's securities. The attention of Trustees of Estates, Institutions, and individuals desiring a long, safe and remunerative investment, is especially invited to these First Mortgage Bonds.

Orders may be forwarded to us direct, or through the principal Banks and Bankers in all parts of the country.

Remittances may be made in drafts on New York, or in Legal Tender Notes, National Bank Notes, or other funds current in this city, and the Bonds will be forwarded to any address by Express, free of charge. Inquiries for further particulars, by mail or otherwise will receive punctual attention.

FISK & HATCH,

BANKERS & DEALERS IN GOVERNMENT SECURITIES,

No. 5 Nassau St., New York.

N. B.—All kinds of Government Securities received at the full market price in exchange for the above Bonds. Also,

☞ All descriptions of Government Securities kept constantly on hand, and Bought, Sold, or Exchanged.

☞ Gold Coin and United States Coupons bought, sold, and collected.

☞ Deposits received on liberal terms, subject to check at sight.

☞ Collections made throughout the country.

☞ Miscellaneous Stocks and Bonds bought and sold at the Stock Exchange on commission for cash.

☞ Special Attention given to the Exchange of *SEVEN-THIRTY NOTES* of all the Series for the New *FIVE-TWENTY BONDS* of 1865, on the most favorable terms. 896-2t

Cure guaranteed in every case when applied according to the directions inclosed in each box, or the money will be refunded. Write for a Circular—sent gratis. Address DR. J. STEPHENS & CO., OCULISTS, PRINCIPAL OFFICE, No. 840 BROADWAY, NEW YORK.

P. S.—Dr. J. STEPHENS & Co., have invented and patented, *MYOPIA*, or *CORNEA FLATTENER*, for the cure of NEAR-SIGHTEDNESS, which has proved a great success. Write for a Circular. 856-26teo,

PERUVIAN GUANO SUBSTITUTE!

BAUGH'S RAW BONE

SUPER-PHOSPHATE OF LIME.

BAUGH & SONS,

SOLE PROPRIETORS & MANUFACTURERS,

DELAWARE RIVER CHEMICAL WORKS, Philadelphia, U. S. A.

For Wheat, Rye, Barley, Corn, Oats, Potatoes, Tobacco, Buckwheat, Sorghum, Turnips, Hops, Garden Vegetables, and every Crop and Plant.

Especially recommended to the Growers of STRAWBERRIES, RASPBERRIES, BLACKBERRIES, AND ALL SMALL FURITS.

BAUGH'S RAW BONE

SUPER-PHOSPHATE OF LIME,

Is eminently a success as a Substitute for Peruvian Guano and Stable Manure—and is offered to the Agriculturists of the Northern and Eastern States as a fertilizer that will cheaply restore to the Soil, those essentials which have been drained from it by constant cropping and light manuring.

IT is very prompt in its action—is lasting in effect to a degree unattained by any commercial manure in the market, and is afforded at a much less cost than *bought* Stable Manure, or Peruvian Guano. The Labor involved in its use is far less than that of applying stable manure, while there is no risk from the introduction of noxious weeds.

OUR NEW PAMPHLET, "HOW TO MAINTAIN THE FERTILITY OF AMERICAN FARMS."—90 pages, giving full information in regard to the use of manure, &c., will be furnished gratis, on application.

BAUGH BROTHERS & CO.,
GENERAL WHOLESALE AGENTS,
No. 181 PEARL ST. AND 4 CEDAR ST., NEW YORK.

☞ For sale by Local Dealers in all parts of the United States and British Provinces. 892-6teo

A VALUABLE MEDICINE.—DR. POLAND'S White Pine Compound, advertised in our columns is a successful attempt to combine and apply the medical virtues of the White Pine bark. It has been thoroughly tested by people in this city and vicinity, and the proprietor has testimonials to its value from persons well known to our citizens. We recommend its trial in all those cases of disease to which it is adapted. It is for sale by all our druggists.—*Independent.*

THE GREAT NEW ENGLAND REMEDY!

DR. J. W. POLAND'S

WHITE PINE COMPOUND

Is now offered to the afflicted throughout the country, after having been proved by the test of eleven years, in the New England States, where its merits have become as well known as the tree from which, in part, it derives its virtues.

THE WHITE PINE COMPOUND cures Sore Throat, Colds, Coughs, Diphtheria, Bronchitis, Spitting of Blood, and Pulmonary Affections generally. It is a remarkable remedy for Kidney Complaints, Diabetes, Difficulty of Voiding Urine, Bleeding from the Kidneys and Bladder, Gravel, and other complaints. For Piles and Scurvy, it will be found very valuable. Give it a trial if you would learn the value of a good and tried Medicine. It is pleasant, safe and sure. Sold by Druggists and Dealers in Medicine generally. [886

GEO. W. SWETT, M. D., Proprietor, Boston, Mass.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of Intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

MISSOURI.—SUGGESTIONS TO EMIGRANTS.

THERE has never been a time in the history of this country when the tide of emigration from the old and thickly settled New England and Middle States equaled that of the present. Until the ending of the Rebellion emigration flowed almost entirely westward; now, the stream is divided and Northern farmers are widely seeking new homes in the genial clime of the South. The States of Delaware, Maryland and Eastern Virginia are destined, at no remoted period, to be densely populated. Situated contiguous to or within easy reach of the Capital and the great seaboard cities, their products will readily be conveyed to the best markets, and all the available power of their water courses will be occupied and their rich stores of coal, iron, and other minerals will contribute to a stable and wide prosperity.

Westward lies a still broader field before the industrious emigrant. Westward is the path of Empire; there are the wide prairie States whose capacity for producing all that contributes to satisfy the necessities or luxuries of man will be tested only when they shall be populated with two hundred millions of people. The cities of the West will one day rival in greatness those of the seaboard; machinery will hum along her water courses; her beds of coal and mountains of iron, her mines of gold, and silver, and copper, will give her vast power and wealth, and a diversified industry will render her prosperity stable and her people independent.

While the advantages of the West are so profuse that the emigrant can hardly go amiss of prosperity in whatever part he may settle, yet there are localities which possess an obvious present superiority and a prospective future one of great importance. Towards such the far-sighted pioneer will direct his course, and as time rapidly brings their advantages and obvious destiny nearer to view, the faster will be the stride of their progress.

Among the Western States taken as a whole we believe no one is destined to outstrip "Free Missouri" on the road to greatness. Geographically she is the central State of the Union; the Mississippi rolls by her eastern border and the Missouri divides her domain. Her lands are mainly rolling without being hilly; they are well watered and timbered, and fertile. No where are there more beautiful prairies. Her climate is that in which can be grown cotton, sugar-cane, tobacco, wheat, corn, grapes, and all the hardy fruits of the North. To the purposes of the stock and wool grower no climate or land is more suitable. Through her territories pass the great central lines of railway that will stretch from ocean to ocean, and in a short time her products can reach the Pacific with a facility equal to that by which they now pass to the Atlantic and the Gulf of Mexico. Already there is a large tide of emigration coming, chiefly from the Middle States, pouring into Northern Missouri, and taking up the lands along the line of the Hannibal and St. Joseph Railroad. The lands bordering on this road are offered to actual settlers at prices ranging from $2.40 per acre upward; long credits are given if desired, at low rates of interest, and the titles are unquestionable.

So much we have written about Missouri in the belief that many will be benefited by having their attention directed thither, but lest we should be overwhelmed with inquiries for further information we will do a little free advertising and suggest that those of our readers interested address E. J. CRANDALL, Esq., an Agent-Friend of the RURAL NEW-YORKER, at Brookfield, Linn Co., Missouri, a gentleman of reliability, formerly of Central New York, with whom we have long been acquainted, who is now in a position to advise those seeking homes in his adopted State or other portions of the West or Southwest.

RURAL FARMERS' CLUB.

Advice to Farmers Moving West.

J. W. HAMMOND, Henry Co., Iowa., writes this advice to farmers who are about to settle in the West. There will be many unbelievers in his doctrine:—"My advice to farmers who have lately moved to the West, is to always follow in farming the example of the old settlers of the country. Whatever crops they cultivate you should cultivate. If they raise wheat extensively, sow wheat; if they raise a great amount of corn, then raise corn; and if they do not raise wheat or corn, or some other crop that you cultivated in the East, then let it alone also. If you moved from a country where one man could only cultivate from five to ten acres of corn, to a place where one man can raise thirty acres, then plant thirty acres for each able-bodied workman, knowing that thirty acres where corn can be produced without much labor will bring no more profit than ten acres where so much labor is required. The same mode of cultivation that old settlers practice should be adopted. If they do not hoe their corn it is because it will not pay. More good can be done with the horse and plow than with the hoe. Any person moving to a place in the West, where people have no barns, should not be in too much hurry to build, for if barns would pay they would be built. No people will undertake anything that will pay, or drop anything that will not pay, any quicker than the people of the West. They have no money to lose, but have it all to make."

Alsike Clover.

"B.," Victor, N. Y., asks us to tell him through the columns of the RURAL what Alsike clover is, and in what respect it differs from, or is superior to, the kinds of clover now generally cultivated.

Alsike, or Swedish clover (*trifolium hybridum*) is a pale red perennial species which obtains its name from Alsike, Sweden, where it was first discovered; it is also found wild in Norway and Finland. Originating in these northern countries it is consequently of a hardy and vigorous constitution. It has pale red flowers, a somewhat lank stalk, and oval, obtuse leaves, which are less and of a lighter green than those of red clover. The flower head is globular and the blossoms are fragrant. This clover does not attain its full luxuriance until the second or third year after sowing, and the first year especially does not make much growth. It is best adapted to mixing with other grasses for permanent grass land. It keeps green and succulent up to the period of ripening. It is adapted to clay soils, and moist or even marshy locations. It will not produce a second crop after mowing, as will red clover; the latter should be sown with the Alsike, if the soil is suitable where permanent grass land is desired, as it will produce one or two crops and then give way to the Swedish.

The chief value of this new variety of clover is its hardiness, and adaptation to mixing with other grasses for permanent seeding. As a fertilizer or a transient crop, it is not likely to compete with red clover where the latter thrives well. It has attracted much attention from apiarians, as it furnishes excellent bee-pasture. For this purpose red clover is worthless on account of the inability of the bee to reach down to the sweet in the flower.

To Exterminate Lice on Stock.

O. C. Ross, Penfield, N. Y., writes us that having tried brine, tobacco, water, snuff, kerosene,'&c., for destroying lice on his stock without success, it occurred to him that "if white hellebore will kill worms on currant bushes why not also lice on stock?" Accordingly he applied four large spoonfuls on each animal once a week in the following manner:—"The animals were first curried all over, rubbing the hair towards the head, and the hellebore was then applied with a tin pepper box from ears to tail, dusting it carefully under the manes of the horses. Three applications, and the work was done. Snow and rain falling on the stock probably renders the remedy more effectual. It is a sure cure."

Cudweed.

"A. S.," Durham, N. Y., asks us what is the quickest and best method of exterminating cudweed, live-forever, or life-everlasting, as it is variously named—a weed which is common from Canada to Texas, but rarely very troublesome. It is remarkable for its tenacity of life; for it will continue fresh and even grow for some weeks, when dug and hung up in a dry room. Probably the best way to rid a field of it is to plow so as to expose the roots as much as possible, then gather them with the harrow or with a stiff toothed wire rake. Unless considerable effort is made to gather the roots, simple plowing will not be likely to destroy its vitality; thorough summer-fallowing might do it, however.

Muck on Sandy Soil.

"A SUBSCRIBER" asks if it is profitable to draw muck on to sandy and gravelly soils. The best answer we can give to this question is, try it and see if the result will warrant cost. Some beds of muck are far more valuable than others as fertilizers. Muck — — profitably used in composting with barnyard manure and dried, as bedding for stock, to absorb the liquids. Muck would change the consistency of light, sandy soils, but whether this use would be profitable depends on the value of the land and its products, and the cost of the work.

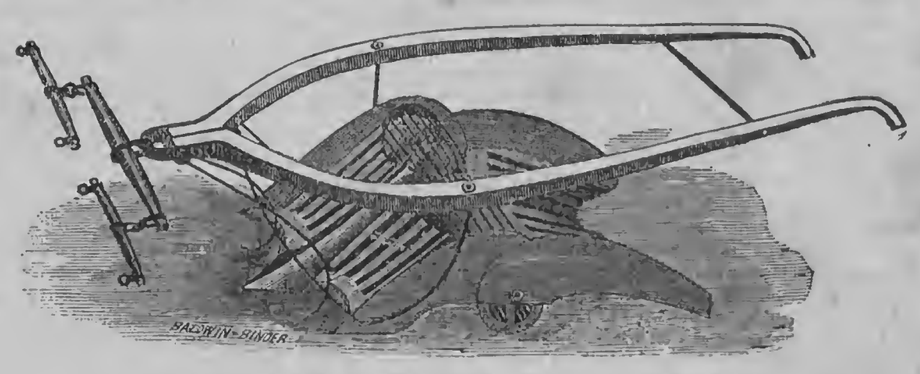
STUDY YOUR SOIL.

Much time and money are annually lost, and great disappointment experienced, by the practical neglect of this common-sense maxim. Take, for example, the potato crop of 1866. Thousands of bushels were lost by the rot, mainly from planting on *unsuitable soils*. For scientific men may *speculate* upon the potato disease as long as the world stands, and after all it will be found that the secret lies in *soil*, *cultivation* or *variety*, or all of these combined. But I have no doubt that *soil* has most to do with the health of the crop. Farmer A, whose farm is a well-drained sandy loam, last year raised a good crop of potatoes, and lost very few by disease, while B., perhaps, who planted on a clayey, retentive soil, lost most of his crop. Now, it does not follow that B. should think less of his land because his potatoes rotted. Had he put his farm into wheat, barley, grass or fruit, and bought his potatoes of A., he would probably have made more money than by trying to produce a crop unsuited to his soil.

It is one of the best features of our country that there is such a variety of climate and soil. It gives greater diversity to our industry, and thus suits the changing tastes of our people. While one man is engaged in growing cotton, another is growing wool — while a third is carding and spinning it, a fourth is raising the wheat, pork, potatoes, butter and cheese, with which to feed them all. Notwithstanding, I am an advocate for *mixed husbandry*, as far as the crops are *suited to the soil*, and needed for the wants of the family. But, certainly, in raising products for *sale*, the best course would seem to be to confine ourselves to crops from which we receive the largest returns with the least cost, at the same time keeping up the fertility of our soil. If farmer A., by superior management or more congenial soil, can raise wheat ten cents per bushel cheaper than B., why, in a few years he will be comparatively rich, while B. will be comparatively poor, if both stick to wheat growing,—while, perhaps, if B. turn his attention to stock and dairying, he may make more money than A. I have known men keep sowing wheat, wheat, on their light, sandy, exhausted soils, until they could not raise ten bushels to the acre; when, perhaps, had they planted beans or potatoes, they might have realized double the profits for their labor, and improved their land at the same time.

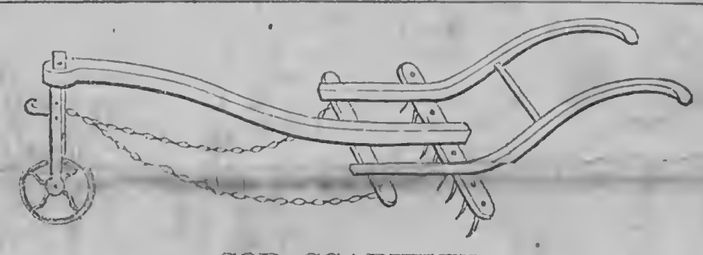
One thing should *never* be lost sight of, viz.:—Before sowing or planting any field *be certain* that the soil is well adapted to the crop, and is in proper condition to receive the seed.

P. P. B.



KINTZ'S CHAMPION POTATO DIGGER.

THE above cut represents a Potato Digger just patented by H. J. KINTZ of Greece, Monroe Co., N. Y. It is claimed by the patentee that this machine will do the work of potato digging in a style superior to any hitherto presented to the public. He avers that it has been tested and found on trial to meet all the requirements of such a machine, doing its work effectually and with great rapidity—that first class farmers and good judges of agricultural implements pronounce it to be the best machine, for the purpose, ever brought before the public. A pretty good idea of the construction and operation of this digger is afforded by the engraving. It is light, the draft being about equal to that of a light plow, and will dig from five to seven acres per day. The expense of the machine is so small as to place it within the means of potato growers. For further particulars see advertisement on another page of this paper.



SOD SCARIFIER.

SCARIFYING the sod of permanent pasture and mowing lands is a cheap mode of increasing their products, of which farmers should more frequently avail themselves. If the roots in a tough old sward can be severed and the sod somewhat broken, the grass acquires fresh power of vegetation. The air and moisture effect better results; the grass roots tiller, and new, vigorous shoots spring up. We illustrate an implement which is intended to slice the sod. The teeth should be formed like the coulter of a plow, and should be kept sharp and set about six inches apart with a furrowed rake so as to cause them to hug the ground. By going both ways of a field the sod will be cut in small squares, and if further scarifying is deemed beneficial a harrow may then be used. Fresh grass seed could be sown in this way to advantage.

SORGHUM—CULTURE FOR FAMILY USE.

DURING the high prices of sirup it has been a question whether it will pay to raise our own sweetening if it becomes cheaper. Although in many places last year the manufacture of domestic sweetening was almost a total failure; yet enough has been done heretofore to show what can be accomplished. The necessity of growing cane for the manufacture of our own sweet, to those accustomed to its use, is already established. A few words as to its cultivation. In the field where the corn is to be planted, select a place to plant the cane; rich, well drained, sandy, or porous subsoil will do. Land on which the water stands much of the time will not answer. Some people say that it is better to sprout the seed before planting, as it will come up more even and get the start of the weeds. Seed that has been grown in this latitude (42°) three or four years, should be renewed from the South or South-west, as it here deteriorates in value yearly. Among the varieties of cane the most prominent are Regular Sorgo—an old variety; Liberian — new and popular — does not blow down; Oomseeana—sometimes called Otaheitan—best for sugar; Nee-a-za-na, or White Imphee, two feet shorter than either of the above; stands up well.

Although many plant in drills, it is thought by others to be more economical to plant in hills, so the crop can be cultivated both ways, the object being to have the cane as stocky and large as possible. The pith contains the sweetening. The ground should at no time be worked very deep, and especially the last time through with the cultivator, as it would destroy the little fibrous roots. When the bulk of the seed becomes about ripe, or should there be a heavy frost, the cane should be stripped. For this purpose flatten a broom handle to a thin edge and with it fall the leaves to the ground; after they become dry they may be raked in piles for fodder. One man can strip an acre of standing corn in a day. In cutting up use the common corn knife. Grasp the hill about midway from top to bottom, cut it off close to the ground, and while you have it in your hand cut off about two feet of the top end and lay them down butts one way to bind. The wilted leaves may be twisted into bands, putting a short band around the middle of the bundle, and another around the butts, evening them on the ground while binding. After being cut the canes should be kept out of the hot sun. If stored awhile in a dry, airy place in the shade, before making up, all the better. There is a right way and a wrong way of doing work, and sometimes many ways for doing a thing, all of which may be right; in this business it is essential the operator should not be slovenly—should use his tact and skill to the best advantage.

In regard to health of *sorgo sirup* I quote from the Sorgo Journal as follows: The per centage of cane and fruit sugar, contained in Sorghum sirup is much greater than that contained in an equal volume of tropical molasses or sugar-house sirup, for the latter is always deprived of all the crystalizable sugar which can be obtained by both ordinary and extraordinary means before it is put in the market for sale. Moreover, tropical molasses and sugar-house sirup, while they do not contain any crystalizable sugar that can by any means be withdrawn from them, *do contain* most of the soluble filth and impurities which pertained to the original product of sugar and sirup. And not only this, but they also contain soluble matter resulting from all the agents used in defecating and refining. This of itself, when we remember that such an offensive substance as putrid blood, and such poisonous agents as sulphate of zinc, diacetate of lead, and nitrate of silver are sometimes used by sugar refiners, would make us look upon the residuum of these operations with suspicion. Reference is frequently made to the utter disregard for cleanliness common in sugar-houses, and many revolting details are given in illustration of the fact. Perhaps the filth which comes to us in our molasses and sirups in this way, would not be particularly unhealthy, and a reference to it here may not be exactly in place. But the exemption which we enjoy from being injuriously affected, results from the absence of a knowledge of these facts. If the eater of common tropical molasses and sugar-house sirup, could know at the time of eating, all the ingredients contained therein, all the dubious channels through which they have passed, and the filthy contacts to which they have been exposed, we feel certain that a very sick sensation would be experienced, and a convulsive movement of the dorsal and abdominal muscles would be induced, much like that which follows a diet of tartar emetic. W.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

THE WOOL TARIFF—ITS PASSAGE AND EFFECTS.

THE recently enacted tariff on wool and woolens is a literal copy of the original bill drafted by the Wool Growers' and Manufacturers' Committees in the winter of 1865-6, with the inconsiderable exception of providing eleven instead of ten per centum duty, in addition to the specific duty, on one or two classes of wool. That original bill constituted clauses in the general tariff bill which passed the House of Representatives during the first session of the late (39th,) Congress, but for reasons which have already been stated in these columns, the Senate postponed its consideration until the succeeding session.

The wool and woolens clauses were so palpably just and necessary that they had gone through the ordeal of the House without even an attempt at amendment by the most ultra free-traders in that body. The wool growers of the country — and this class constitutes a majority of the farmers in several States—had been suffering severely under the operations of the then existing tariff. Our woolen manufactures were languishing under foreign competition. The delay of another year would bear heavily on both interests. Under these circumstances the very able Representative of the 16th Ohio district, JOHN A. BINGHAM, moved, in effect, to take the wool and woolen clauses out of the general tariff and pass them as a separate bill. This was done by a strong vote in the House, July 27, 1866. The Senate however adhered to its policy of postponement, and this bill, too, went over the session among its unfinished business.

The succeeding session brought up the subject under a new aspect. Hon. DAVID A. WELLS, Special Commissioner of the Revenue, had been charged with the duty of preparing, during the recess, a complete *projet* of a general tariff. The Senate took no action on either of the House bills lying on its table until his report was received. That report evinced no little ability, but the wool growers complained that while he proposed a very serious diminution in the amount of protection asked by them, and afforded by the House bills, he had not given them any official hearing as he had offered to do, and once or twice set a time for doing; and that he had fallen into some very grave errors of fact in relation to their branch of industry.

The first effect of Mr. WELLS' recommendations in regard to the duties on wool, as on other objects of protection, was serious. They were supposed to represent the views of the Secretary of the Treasury. They found a response in the secret feelings of even many pretended "tariff men," in both branches of Congress. The free traders took heart. The wool and woolen clauses of the House bills were made the subjects of particular attack. The New York Tribune stood faithfully by us, and GREELEY's thundering blows fell thick and fast; but all the other leading journals of the great commercial metropolis fought us bitterly and to the bitter end. The Chicago Tribune, which in energy and talent has few equals, spread consternation among weak-kneed western politicians in Congress, by its vehement and untiring denunciations; and these denunciations were re-echoed by GRIMES & Co. in the Senate chamber. The wool dealers in our great eastern cities raised an asserting howl. Even a small division of eastern manufacturers, headed by Mr. SLATER of Mass., cast off their connection with the National Association of Wool Manufacturers, and went for the old traditional policy of their order—low duties on wool.

When the general House bill and the Commissioners' report came up for consideration in the Finance Committee of the Senate, there was a variety of avowed and unavowed views in that body in regard to wool and woolen duties. We shall not here attempt to give the real position of each member. But our impressions are decided that Senator MORGAN of New York, held the "balance of power" on that question. His earlier associations as a great merchant, and as a resident of the city which is the "head center" of free trade, might have been expected to incline him to the side of low duties, just as the associations of Senators GRIMES, DOOLITTLE, HENDRICKS, HENDERSON, etc., representing more rural constituencies, might have been expected, on a question of vital importance to the agricultural interest, to incline them (but which wholly failed to do so,) in an opposite direction. But Mr. MORGAN is a practical and judicious man. As a member of the Legislature of the State of New York, and as its Governor in trying times, he learned to know and respect the wants of the great mass of its people. He gave his influence in the Finance Committee in favor of the wool provisions of the House bill instead of those of the WELLS' *projet*, and accordingly they were engrafted, with one trifling exception, in the new general tariff bill which the Senate passed as an "amendment," in reality a substitute for that of the House.

The Senate bill, as we may properly call it, did not come before the House until the early part of February. It was a long one, containing a multitude of provisions different from those of the bill it purported to amend, and these required careful consideration. It was of course referred to the Committee of Ways and Means. When that Committee was nearly ready to report, its Chairman, Mr. MORRILL of Vt., was called home by the supposed mortal illness of his mother, and the Chairmanship devolved by seniority on Mr. HOOPER of Mass. We have great respect for this dignified and solid gentleman, and hope his heart was in the right place; but he was in a new position, and could not drive on the business of his Committee or of the House, like that true friend of the farming interest, the able, energetic, statesman-like MORRILL, whose discretion, fairness and want of one-sidedness always carried the confidence of the House and disposed it to follow his lead. Mr. HOOPER might have received the most efficient aid from the parliamentary knowledge, brilliant talents and trenchant debating powers of another member of the Committee, Mr. CONKLING of New York — who, by-the-by, received many votes in his canvas for the United States Senatorship, on the ground that he was in favor of the House wool tariff, and could, in such emergencies as should arise, do more than his rivals to promote its success and perpetuity. But he was necessarily absent, attending the Supreme Court of New York. Another member of the Committee, and another ardent and able friend of the wool interest, General GARFIELD of Ohio, was restrained from even putting on the appearance of pressing in front of the temporary Chairman by considerations of personal delicacy, which need not here be alluded to, but which would be expected to influence the conduct of a high-minded man. The Committee embraced other true friends—but the absents we have named irreparably damaged its solidarity and effectiveness.

As the session drew towards its close, Mr. MORRILL was repeatedly telegraphed by the Wool Growers' and Manufacturers' Committees, and by other friends of the tariff, entreating him to return to Washington; and he left the bedside of a dying parent to do so. His determined onset — the particulars of which are familiar to our readers — gave momentary hope of a successful issue; but when strong parliamentary measures were proposed, timid friends and pretended friends wavered. And finally Gen. SCHENCK's unfortunate flax amendment, and the debate and action which grew out of it, wasted precious and necessary hours.

Discovering that all hope of the passage of a general tariff bill was lost, the friends of the wool tariff bethought themselves of the "Bingham bill," (as it is sometimes called for convenience of designation,) which was lying in the Senate, like a shell shot in a former fight, covered from notice by the debris of later battles. We do not assert that the friends of the wool growing interest had forgotten it, or that they did anything prematurely to call attention to it. It might prove a convenient dernier resort! When it became necessary to use it, Senators SHERMAN and WADE of Ohio, were first applied to. They were willing to make the attempt, but did not feel over sanguine of success. But the friends of the measure in and out of the House, rallied round its friends in the Senate, and infused them with their own ardor. After an earnest consultation as to the surest mode of procedure, the bill was put on its passage and carried March 2d, 1867, by the following vote:

Yeas—Anthony, Cattell, Chandler, Conness, Cragin, Dixon, Edmunds, Ferry, Foster, Fowler, Frelinghuysen, Grimes, Harris, Howard, Howe, Kirkwood, Lane, Norton, Nye, Poland, Pomeroy, Ramsey, Ross, Sherman, Stewart, Trumbull, Van Winkle, Wade, Willey, Williams, Yates—31.

Nays—Buckalew, Cresswell, Davis, Henderson, Hendricks, Johnson, McDougall, Patterson, Saulsbury, Sprague, Sumner, Wilson—12.

Absent, or not voting—Brown, Cowan, Doolittle, Fessenden, Guthrie, Morgan, Morrill, Nesmith, Riddle—9.

We offer no local analysis of this vote, as every one can make it for himself. The votes of SUMNER and WILSON of Mass. and SPRAGUE of R. I., in the negative, will we think attract attention and surprise.

Nor shall we attempt to make out a "roll of honor" among the friends of the wool and woolen tariff. We may be permitted, however, without detracting anything from the others, to add a few names to those already mentioned, whose public efforts gleam up brightly in our memory. Second to none stands that of Mr. DELANO of Ohio. But for him the original House bill might have been lost in the first session of the Thirty-ninth Congress. Local jealousies had crept into the contest. Many of those on whom we had most firmly relied were wavering. It was then that his resistless charge, like that of DESSAIX at Marengo, changed the fortunes of battle. A more effective burst of eloquence has not been heard in the House of Representatives since the palmiest days of JOHN RANDOLPH. Dissension and jealousy were abashed. The breaking lines formed again, shoulder to shoulder, and marched to victory. All honor to the farmers' friend, COLUMBUS DELANO. Mr. GRINNELL of Iowa, though bitterly assailed by the Western free-traders, and opposed by a Senator of his own State, labored constantly and effectively for the House bill. His speech on the subject, near the close of the late Session, lies before us, and had we the space we would most gladly republish it. The facts are put forward with a clearness and straightforwardness that command admiration. Messrs. ECKLEY and LAWRENCE of Ohio; WAIN, VAN ZERNAM, KETCHUM, HOLMES, etc. of N. Y.; DAWES and ALLEY of Mass.; WOODBRIDGE and BAXTER of Vt.; PRICE and HUBBARD of Iowa; MOOREHEAD, LAWRENCE and KELLEY of Pa.; WENTWORTH, CULLOM, FARNSWORTH, MOULTON and HARDING of Ill.; MCCLURG of Mo.; DONELLY of Minn.; and the entire delegations of Michigan and West Virginia were active and uncompromising advocates of wool potection. And we have it on high authority that Speaker COLFAX was in warm sympathy with us. The Senators of Ohio, Illinois and Vermont were steadfast friends of the wool growers. Judge HARRIS of N. Y., though his re-election was in part defeated on a tariff issue, magnanimously voted for the bill. The list of votes shows how other Senators stood on the question.

Outside of Congress we are deeply indebted to the efforts of the Wool Growers' and Wool Manufacturers' Committees. Messrs. MONTGOMERY, POTTLE and GARLAND of the former, discharged their duties with conspicuous zeal, ability and effect, and deserve the lively gratitude of the wool growers of the nation. Mr. MONTGOMERY attended during the entire session; Messrs. POTTLE and GARLAND during much of it. J. P. ALEXANDER, a delegate from the Summitt Co. (O.) Association, spent a short time in Washington and gave useful aid; and so did Mr. ROGERS of N. Y., and Mr. FLINT, a large wool grower of California. Mr. J. R. DODGE of the Agricultural Department furnished valuable statistics and published some strong articles in favor of the cause. The Manufacturers' Committee, Messrs. HAYES, KINGSBURY, and others who were occasionally in attendance, worked most strenuously and in constant co-operation with the Representatives of the Growers. We aver, without fear of denial, that the whole national organization of Manufacturers kept their faith with us to the letter and spirit; and probably there is not a single individual, in or out of Congress, who contributed more to a successful result than their indefatigable and talented Secretary, JOHN L. HAYES.

Let us accept our great victory thankfully and modestly—imputing no bad motives to those who honestly and courteously differed with us. Let us not of all things, because we have attained our own object, desert other industrial interests which are struggling for just and necessary protection. They helped us—we are bound in honor and duty to help them. The industrial interests of the country are not rivals, but a brotherhood; and not one of them can be suffered to languish without detracting something from the complete development and success of the others. Let us not lay down our arms under the impression that we shall have no further use for them. The free-traders will not slacken their efforts. It will be wonderful if they do not in the next session of the 40th Congress attempt to revise the wool and woolen tariff. At all events they will do so soon. We must keep our organization perfect and our powder dry. Two years ago we were a rope of sand, possessing, as a separate interest, about as much influence in Congress as a tribe of Choctaws. Last winter a distinguished Senator remarked that he "did not favor the wool tariff but should vote for it in deference to public clamor." That is it, exactly. So much for union and organization! Let us keep in a situation where we can make our "clamor" effectual in the ears of those who do not wish to give up their soft seats in the national Capitol, and of those who wish to succeed to those seats.

Before dismissing this subject, we feel called upon to utter another word of warning. Many growers are expecting too much, especially in immediate effects, from the new wool tariff. Those who are to buy our wool have, of course, been preparing for the present contingency. A year or more must elapse before the law will produce its full natural results, And even then it will not produce any wild inflation of prices. Reasonable men do not expect to be legislated into wealth. Industry must achieve it. We only asked to have our labor put on a par in our own markets with the cheap labor of other countries. We regarded the rights of the consumer, because justice required it, and because we desired permanent legislation. Being placed on an equality with the foreign producer, skill, energy and improvement must do the rest, and shame on the citizen of the United States who first "cries hold" in the encounter.

WOOL BUYERS IN CONVENTION.

A WOOL BUYERS' CONVENTION was held at the Court House, Rochester, on the 19th inst, and attended by nearly fifty buyers, mostly residents of this and adjoining counties, though the call invited all in Western New York. Mr. C. A. HARRINGTON of Albion, was called to the Chair; E. R. JOHNSON of Rochester, and E. H. PARMALEE of Bergen, were appointed Secretaries. After a pretty general expression of the views of those present, a committee of seven (consisting of Messrs. D. Lowry, O. Allen, F. Lockey, H. C. Lucas, H. H. Goff, C. A. Harrington and John Berry,) was appointed to draft and report resolutions. The committee subsequently made a report which (after some amendment and discussion) was adopted in the following form:

Whereas; The bad reputation of the wool of Western New York with manufacturers (growing more so every year,) is causing them invariably to purchase their wool in other localities, from the fact of its condition being so much better than ours, we recommend to wool growers the following rules:

1st. That sheep should not be allowed access to straw stacks, especially of barley or bearded wheat.

2d. All sheep, except perhaps bucks, should be well washed in a running stream, and as early in the season as the weather will permit.

3d. That the sheep should be shorn, weather permitting, within six to ten days after washing.

4th. At the time of shearing the fleeces should be carefully folded, moderately loose, and wound with small, strong, light-colored, glazed twine, brought twice each way around the fleece, carefully excluding all dead wool and tags.

And we recommend to wool buyers to be governed in their purchases by the following rules:

1st. A deduction of one-half on unwashed bucks.

2d. A deduction of one-third on washed bucks.

3d. A deduction of one-third on all other fleeces, black, unwashed or excessively gummy or heavy, or other unconditioned wool, or that made unmerchantable by an excessive use of twine, or by stuffing with tags or dead wool.

4th. In purchasing wool thus prepared for market, to pay a price proportionate to its relative worth as to texture, strength and other desirable qualities.

Mr. ELMORE of Brockport, offered the following, which was adopted:

Resolved, That the owner of wool offered for sale shall be held responsible for the condition of said wool, making no difference who folded up the wool.

Mr. D. D. T. MOORE believed that buyers had long paid a premium for frauds in doing up wool, and that they would be, as they ought to be, swindled forever unless they paid for fleeces according to quality and condition. The following resolution, offered by him, was adopted:

Resolved, That the buyer of wool should, in all cases, discriminate in making his purchases, paying in proportion to its quality and merchantable condition—instead of paying a uniform price, or nearly so—for all clips in a town or section, without regard to quality or condition.

Mr. MOORE thought the Convention had made a mistake in not calling in the wool growers to consult with them as to their mutual interests,—and suggested that the buyers adjourn to meet the first Monday in May, inviting the wool growers to meet with them. The suggestion was adopted,—the Convention adjourning to meet at the City Hall, Rochester, May 6th.

— We condense the above from reports in our daily papers—not having space for particulars or comments. As a full report of the proceedings has been furnished the Editor of this Department, we presume he will notice the same in a future number.—M.

Condensed Correspondence, Items, &c.

ALPACAS.—H. C. SANFORD, Carlton, Orleans Co., N. Y., referring to the inquiries for alpacas, made by a "subscriber," published in the RURAL, Feb. 9, from Shushan, N. Y., says that he has been employed more than two years in the same search, and cannot learn that there are any in the country, except a few brought in a Government vessel to Mare Island; that he applied to the Peruvian Legation in Washington, "but found much reticence in regard to them; that he has learned that the Peruvian Government forbids their exportation in order to control the market for their wool; that he is in correspondence with an American in South America who is acquainted with the owner of a large herd of them, and hopes through the former to obtain some; that if our Shushan correspondent wishes to join in the importation he probably can soon have an opportunity. [If the latter wishes to take this course, let him directly address Mr. SANFORD.] Mr. S. asks "if we can give any information as to the market for and value of their wool?" We cannot.

WHO BRED IT?—"X. Y. Z.," Washington Co., N. Y., puts the following case and question:—"Supposing I have a ewe which I purchased of Hammond and I take that ewe to his ram Green Mountain; have I a right to say that I bred the produce, giving its pedigree?" We think you have. Somebody bred the lamb, and certainly HAMMOND did not do it. He did not own it before or after birth. He did not direct the coupling. Whatever may be his opinion of his ram Green Mountain, he might have thought him entirely unfitted to breed with that particular ewe. He is in no way responsible for your action in the premises. You owned the dam; you exercised your own judgment and rights as an owner in coupling her; you therefore bred the produce. However much that produce may actually be indebted to Mr. HAMMOND'S skill, and however little to your own, you discharge your entire obligations to him as a breeder by "giving its pedigree."

DIVIDING PASTURES FOR SHEEP.—"F.," Forkstone, Wyoming Co., N. Y., writes that he has a pasture of thirty acres, on which he proposes to keep a small flock of sheep; that by a small outlay in repairing fences, this can be divided into four fields; and he asks whether it would be of any benefit so to divide it in order to obtain a "change of pastures." Probably a little gain can be secured in the amount of pasturage by the division, especially if any portion of it is of a poorer character than the rest, so that the sheep will neglect it if not confined to it. Sheep love fresh grass, too — but they also love *range*. Merinos detest close quarters. Among our sheep pastures are two, of sixty acres each, and we cannot say that we ever wished them subdivided.

INFLAMMATION OF THE LUNGS.—C. FERRIS, Millport, N. Y. The disease described by you is probably inflammation of the lungs.

THE pressure upon our columns for several weeks has rendered it necessary to defer giving portraits and pedigrees of sheep. They will soon be resumed.

Rural Spirit of the Press.

Japan Spring Wheat.

A WRITER in the Boston Cultivator gives the vendors of an article called "Japan spring wheat," puffed for its excellence and productiveness by the interested, a smart rap for the falsity and impudence of their pretensions. He has tried the wheat and found it a species of sorghum, whose seed made a very white flour, but neither in quantity nor quality did it approach the excellence claimed for it. Besides, the seasons in this latitude are too short to permit it to mature fully, even were it desirable for cultivation.

Carrots for Horses.

A WRITER in the Prairie Farmer refers to the practice of feeding carrots to horses as a proper and commendable one, if the quantity used is not great. As the horse is fond of the carrot he would indulge in it to excess, if fed all his appetite would seem to crave. Properly apportioned out, they form a healthful kind of food, ample, with a due share of other fodder, for the sustenance of horses whose labors are not of a very exhausting character. The carrots should be sliced up longitudinally; for if cut in the opposite way the horse is apt to get choked in eating them. Under the conditions mentioned a judicious supply of carrots will render the use of grain unnecessary. Severe and continuous labor, however, will render an infusion of grain into the feed of the horse indispensable, else the ability to labor will be impaired.

Horn Distemper.

THE N. Y. Times, in reply to an inquiry as to the cause of the horn distemper or hollow horn, imputes it to hard usage,—to a lack of proper food, drink and shelter,—in consequence of which the cattle come out in the spring lean and dispirited and with little recuperative force. Such cattle, it is affirmed, are alone subject to the horn distemper, or if exceptions exist, they are so few as to affirm rather than disprove the correctness of the rule. In most cases the hollow horn can be detected by the coldness of the horn near the base at the head. It is customary to seek a cure by means of boring the horn near the base, when, if the disease exists, bloody matter will exude from the orifice. Some plug up the holes when the discharge ceases, while others leave them open. The former is the best plan—at least the horn looks better than when left like a flute stalk.

Plowing by Steam.

THE Meadville (Pa.) Republican asserts that THOMAS S. MINNIS of that place has successfully solved the problem of making steam available in plowing and cultivating land. This steam plowing machine is so constructed as to adapt itself to all kinds of surface, plain or broken, and crawls over the ground with an unbroken bearing, its motion being not unlike that of a snake in its movements. In other words, it is a kind of steam "hoop-snake" whose executive force is equal to many scores of ordinary plows. It breaks up, harrows, drills and seeds or plants a strip fifteen and a-half feet wide at each passage. Its rate of progress is about four miles per hour and it will finish off about ninety-six acres of ground, planting and all, in the space of twelve hours. Such a machine as this would work a great revolution in farming operations on the great prairies of the West or the savannas of the South.

The Agricultural Exhibition at Paris.

ACCORDING to a correspondent of the Journal of Commerce, the preparations for the agricultural display at the Paris Exposition are to be on a scale surpassing anything heretofore witnessed on any similar occasion. The principal development is to be upon the island of Billan Covert, in the Seine, about three miles below the Champs de Mars. There will also be a display of agricultural implements, of all descriptions, at the model farms of Vincennes. The trials of machines on the farms will be made at intervals so as to coincide with the various seasons of production, commencing with April and ending with October. Live stock exhibitions will take place every alternate fortnight during the same period. A prize of honor, consisting of some work of art of the value of $2,000 is to be awarded to the exhibitor who shall be adjudged to have "deserved best" of agriculture. Other prizes will be given for the best specimens of agricultural implements as may be adjudged by the committees of examination.

Plowing in Manure.

G. R., in the Germantown Telegraph, reviews the various methods practiced by farmers in the management and application of manures, and concludes that no mode has been or can be devised of uniform application. Much must depend on the character of the soil to be fertilized, the crop to be grown, and whether immediate or somewhat remote results are sought to be obtained. A like diversity of opinion and practice prevails with respect to the depth to which manure should be covered by the plow. Some argue that it makes no difference whether the depth be four, eight, or more inches, as the result will be the same at harvest time. This conclusion is not acquiesced in by the party referred to, and we think his dissent based on good grounds. He says, "when near the surface it decomposes sooner and hence acts sooner, and the supply is more quickly exhausted; when turned under deeper its action is more extended and slow. Hence, if applied just before the crop it is intended to benefit, a shallow covering is what is wanted; but if the interval between the manuring and the crop is prolonged, the furrow should be deepened in the same proportion." This seems to be a reasonable conclusion, and we believe it is a correct one.

Rural Notes and Items.

NEW QUARTER—*Ho for the Rural's Spring Campaign!*—The second Quarter of Vol. XVIII of the RURAL NEW-YORKER will commence next week—April 6—and hence *now* is the time for new subscriptions or renewals, to date from that period. See notice on News page. The success of the RURAL during this quarter has been extraordinary, and we fain believe the 13 numbers issued in that period THE BEST we ever published;—judge ye, after examining matter, illustrations, typography, paper and printing. Are not 52 numbers of such a paper worth the full price, ($3,) and if so what subscriber loses anything if we do choose to pay liberal premiums to club agents for helping us to reach, this year, a circulation of One Hundred Thousand? And, again, what friend of the paper will decline to aid us, about these days, in attaining that number of armor-bearers for the Rural Brigade?—a brigade which fights for the Right all over the land, and has members in every State, Territory and Province on the Continent!

THE PARIS EXPOSITION.—The exhibition of samples of the world's natural productions, and the manufactures of all nations, contemplated by the Emperor NAPOLEON, commences in Paris on the first of April, and will continue during the season. The building consists of a series of concentric circles covering forty acres of ground. Each of these circles is devoted to one kind of products, posited according to the countries exhibiting them, thus affording a chance to readily contrast those of the same kind from various localities and countries. Departments are ranged in the following order: France on the Eastern side, Great Britain and her Colonies, Central and South America, the United States, Tunis and Morocco, Persia, China, Siam, Japan, Egypt, Turkey, the States of the Danube, Rome, Italy, Russia, Scandinavia, Denmark, Greece, Portugal, Spain, Switzerland, Austria, Germany and Prussia. Belgium and Holland will have a small space alongside of France. There are thirteen circular galleries, and sixteen radiating from the center outward. The whole edifice, with the exception of the two galleries nearest the garden, is built of iron—the exceptions being of stone. The display will, unquestionably, be the most imposing ever witnessed, and form an epoch in the Industrial History of the World.

"THE AMERICAN FARMER'S HORSE BOOK,—Embracing, in addition to the subjects usually treated of in similar works, a *full description* of the causes and nature of several diseases peculiar to the *American Horse;* together with *original, simple* and *effective* modes of treatment, including those of some diseases heretofore considered incurable, and also an extended Treatise on Stock Raising and Stock Management. The whole especially adapted to the use of the Farmer. By ROBERT STEWART, M. D., V. S.—Embodying the Results of twenty years Original Investigation and Veterinary Practice."—Such is the title of a handsome volume of 600 pages recently published by C. V. VENT & Co. of Cincinnati. A cursory examination of the work has led us to form a favorable opinion as to its value and adaptability to American farmers, and we shall recur to it again. See advertisement in this paper.

OUR DICTIONARY PREMIUM.—An Agent-Friend in Erie Co., Pa., writes:—"I received the Dictionary in good order, except one corner a little rubbed. And now thanks, very many thanks to thee for this *favor*. But, Dear Sir, could you have been looking in through the keyhole when the book was laid on the table and opened, (with this announcement, *A Premium for Rural Captains,*) the looks of thankfulness and gratitude that beamed from the countenances of father, mother and seven children, with the little ones clapping hands, would have paid you for one-half of the book. This certainly is 'good pay' for working for the Rural Brigade."

HAY IN THE MOW—HOW TO MEASURE.—E. G. S., Erie Co., N. Y., wants to know how many square feet of a mow of clover hay, on which grain has been placed, will make a ton. It is difficult to determine the weight of hay per foot in a mow, depending on the size of the mow, the quality of the hay and the amount of pressure to which it has been subjected. Some clover will make a ton for every 450 cubic feet, while other mows may require 500 cubic feet to give an equal weight, or even a trifle more than this. This method is but an approximation to the true weight at best.

ILLINOIS STATE FAIR, PREMIUM LIST, &c.—The next Illinois State Fair will be held at Quincy, commencing Sept. 30th and ending on the 5th of October. The grounds will be open for the reception of all articles, except stock, on the 20th of September. The premium list is very comprehensive, embracing everything pertaining to farm production and rural manufacture—making in all sixty-two divisions or classes. So we learn from a pamphlet containing the proceedings of Executive Committee of Ill. State Ag. Society.

APPRECIATION OF THE RURAL.—A Connecticut subscriber thus concludes a business letter:—"As I am writing I will tell you what I think about the RURAL. It is the best paper of its class that I have ever taken. I could not do without it any way, shape or manner. I like it better than I should if it was all agricultural. Long may you live to conduct the Rural."

THE CORNELL UNIVERSITY.—The Trustees of the Cornell University met in the State Agricultural Rooms, Albany, on the 12th inst. Professors EVANS and RUSSELL were appointed to the chairs of Mathematics and Modern Languages. It is thought the University will not be opened till the autumn of 1868.

SAW-MILL DOGS.—(R. O. D., Ballston Center, N. Y.) There are none of the new saw mill-dogs in use here yet, but in the lumber regions south of this they are said to have superseded the old style of mill-dogs. R. P. LAWTON, Esq., of Oramel, N. Y., is said to be well posted on the subject of your inquiry.

A "HEFTY" PIG.—Mr. GEO. GRAVES of Newport, Herkimer Co., N. Y., writing us about the kind of pigs they have in that region, says:—"Mr. WM. MARVEL of Poland, in this county, killed a pig lately, seven months and twenty days old, that weighed, when dressed, 377 lbs. *Almost a hog.*"

HEMLOCK BARK—EXTRACT.—"A Subscriber" wants to know the process of making the "extract of hemlock bark." We do not know the process of making the "extract," nor are we acquainted with any one who does.

NOVA SCOTIA RED CHALK.—G. C. M., Guilford, N. Y., will probably find out about the "red chalk" at the drug stores. The druggists here keep the article.

HORTICULTURAL.

OHIO GRAPE GROWERS' MEETING.

(Concluded from March 9th.)

SUMMER PRUNING.

DR. WARDER of Cincinnati said the object of summer pruning was to remove all exuberant growth, but yet leave wood and leaves enough to protect and mature the grapes. His plan had been to rub off the young shoots which are not necessary for next year's wood, nor for present fruit bearing. This work should be done when the young growth is but a finger's length. All bearing shoots getting more than a fair nutriment, and so leading the rest, should be pinched off at two leaves beyond the last bunch of fruit.

Dr. SPALDING said it was the custom generally in Missouri to pinch in all the fruit-bearing branches at two leaves beyond the last cluster.

J. R. BROWN of Put-in-Bay stated that a neighbor had thoroughly trimmed his vines, taking off all laterals and shortening the longer canes. His own vineyard, through his absence, had been left almost wholly untouched. By the time of vintage, his neighbors' vines had lost most of their leaves, and the fruit was far from being well ripened, while his own were never better and sold at the highest prices.

Mr. GRIFFITH said that he regarded early summer pruning, removing water sprouts and redundant weak shoots as indispensable to good culture; but subsequent operations should be limited to careful pinching, with a view to develop, direct and perfect the growth of wood and foliage, rather than to retard or hinder their development; and in no case should strong and thrifty portions of the vine, or dark green foliage, be removed—as the leaves are the lungs of the vine and its greatest source of supplies.

Dr. DUNHAM commenced summer work early by nipping off the ends of laterals, and later in August he stopped off the leading canes, too. This, perhaps, was too severe, yet thus far the result has been uniformly good. Mildew had visited him but one year, and then but a small quantity of his crop had failed to ripen. The rot, last year, had struck his grapes slightly in June. Never trimmed his fruit-bearing branches closer than two joints from the outmost bunch, and often left three leaves.

Mr. MERRELL of Geneva, N. Y., did not consider it an axiom that by pruning the wood we direct all the energies and growth of the vine into the fruit; thinks the process checks growth and does not commonly direct it; could not subscribe to Dr. WARDER's doctrine, that if the vines had been neglected early, excessive growth should be checked by breaking off branches well back from the tips.

PRUNING AND TRAINING.

A good deal of discussion was had on the time and modes of pruning, and the comparative merits of the several modes of training—the preference for trellises or stakes, &c. The majority of the speakers, however, seemed in favor of the post and wire trellis as being used on the Islands and in the best vineyards around Sandusky and Cleveland; then training the vines on the horizontal arm system or some modifications thereof.

THE COST OF STAKES AND TRELLIS.

The following is a comparison of the cost between trellis work and stakes, as furnished by Mr. O. D. FORD of East Cleveland:

Number of vines per acre—8x10, 544; 8x8, 729; 6x6, 1,210.

Number of posts per acre, 22 feet apart—8x10, 231 posts, $23.10; 8x8, 297 posts, $29.70; 6x6, 385 posts, $38.50.

Amount of wire per acre—(No. 9 wire, going from 19 to 20 feet per lb., at 6½ cts. per lb.)—8x10, 693 lbs., $45.04; 8x8, 911 lbs., $59.21; 6x6, 1,151 lbs., $74.81.

The number of stakes per acre, where stakes are used, costing $35 per M., 8x10 would take 1,088, costing $38,08; 8x8, 1,458 stakes, costing $50.03; 6x6, 2,420 stakes, costing $84.70.

Each proprietor, by taking into consideration the location of his vineyard, will be able from the figures given by Mr. FORD to ascertain the cost of each. The wire in this estimate is supposed to be second-hand telegraph wire. The plan suggested by Mr. FORD for using this wire is to brace the end posts about six inches below the upper wire, perforate each of those posts at proper intervals for the reception of the end of the wire, drawing each to the required parallel by a small windlass, and fastening the whole to center posts with small nails.

Mr. T. S. HUBBARD of Fredonia, N. Y., furnished another estimate, as follows:—An acre of vineyard with rows 8 feet apart and 15 rods in length, contains 22 rows—330 rods of trellis and 990 rods of wire; requiring—44 posts, 4x6, or 4x5 in., at 25 cts., $11.00; 200 posts, 3x3 in., at 12½ cts., $25.00; 44 braces, at 10 cts., $4.40; 6 lbs. wrought nails, at 10 cts., $0.60; 990 lbs. No. 9, new wire, at 7½ cts., $74.25. Total, $115.25. If No. 10 wire is used the cost per acre will be about $12 less. The price named for new wire is much less than the current rate for several years past, but not below what it can now be obtained for by the ton. The cost of posts every man can ascertain in his own neighborhood. The cost of stakes, using two for a vine, at 6x8 feet apart, 900 to the acre, at 6¼ cts. each, would be $125—or if 8x8 feet apart, 680 to the acre, $85.

THE WINE TARIFF.

Remarks were made on the insufficiency of the present rate of duty on foreign wines to afford protection to the makers of native wines, and a memorial to Congress was prepared and signed, asking for a uniform duty of $1 per gallon on imported wines. This memorial was too late for presenting to the Congress then in session, so will be sent to the new one.

THE NEXT ANNUAL EXHIBITION,

On the invitation of the citizens of Elyria, was appointed to be held at that place, in October next. The Annual Meeting was appointed to be held in Cleveland, 3d Wednesday of February, 1868.

MILDEW, INSECTS—PEACHES AND ROSES.

AT the September session of the French Imperial Horticultural Society attention was called to the subject of blight or mildew, when a member stated that he had been successful in the use of sulphur in the expulsion of the parasites from his peach trees and rose bushes. The slow combustion of this article around the infected trees and bushes, under the influence of the sun's rays, had proved an effectual exterminator of the pest complained of. It was generally agreed that the remedy should be applied while the leaves are only partially developed, as the remedy acts more effectually then than it does later in the season.

A correspondent supplies the Commissioner of Agriculture with a recipe for killing insects on orchards and graperies. He says:—"Saw a hogshead in two; put twenty to thirty pounds of sulphate of iron into one half, and fill up with chamber lye—water will answer, but urine is best. When the liquid becomes black it is fit for use. This preparation should be applied to the trunks and branches of the trees and poured round the collars, which will kill and keep off all worms infesting these parts and add vitality to the trees.

DECIDUOUS SHADE TREES FOR PRIVATE GROUNDS.*

OF the Chinese varieties of Magnolias, the Magnolia *Conspicua* and *Soulangeana* are the most generally known—both good; but if either one was to be selected, we should choose the *Soulangeana*, because it is a more rapid

FIG. 18.—MAGNOLIA CONSPICUA.

grower, and because its flowers appear to escape injury from frosts better than the *Conspicua*. Both form spreading round-headed trees of middle size, and should always be arranged in the foreground of a group of evergreens, because of their flowering early in spring before the growth

FIG. 19.—ENGLISH ELM.

of their leaves. A variety called Magnolia *Lenne* is described in Hovey's Magazine as being as hardy as the *Conspicua* of vigorous habit, with flowers the color of the *Soulangeana*, but more than twice the size, full as large as a tea-cup. Magnolia *Purpurea* and *Gracilis* are both shrubs, and perhaps should not here be spoken of; but as we have found in planting that their arrangement as undergrowth to the *Conspicua* and *Soulangeana* produces a happy effect, we venture to mention them.

Among Elms, we give the preference to what is termed English Elm—*Ulmus Campestris*—because of its less spreading habit as compared with our American Elms, and more because of its retaining its foliage later, thus carrying the

FIG. 20.—OSAGE ORANGE.

season of foliage almost into the winter months. A great number of varieties of this species occur among the trees sold, because all are grown from seed. The planter can frequently select trees of a dozen different habits among those offered by the dealer. The Cork-barked is considered only a variety, but the cork-like covering of its bark renders it a tree of marked character, and always commanding notice. The Osage Orange, where a tree of medium size is wanted, possesses characters that should bring it more in use as an ornamental tree than has been the case. It forms a very regular round-head, with glossy dark green leaves, very much like the Orange. It is entirely free from insects.

*Concluded from our issue of March 2.—ED. R. N.-Y.

FIG. 21.—PERSIMMON TREE.

The Persimmon, or Virginia Date Plum, is another desirable shade tree, too little planted. It forms an upright round-head, rather erect than spreading. Varieties may be selected yielding fruit that ripens early in September or before frosts, and very palatable, in fact by many preferred to foreign dates; but the greater number of the trees grown do not produce a fruit at all eatable until after several severe frosts have mellowed its natural harsh astringency.

There are many other trees of value that we could name, but for want of room must defer doing so until a future time.—*Horticulturist.*

PREMIUMS FOR GRAPE GROWERS.

THE "Longworth Wine House" at Cincinnati offers three premiums for superiority in grape growing, as follows:—A silver pitcher, two goblets and waiter, to cost not less than three hundred and fifty dollars, as the first premium; a silver cup, to cost not less than one hundred dollars, as a second premium; and a silver cup, to cost not less than fifty dollars, as the third premium. The first premium to be given to the best general wine grapes of the whole country. The second premium is to be given to the best variety of grapes for wine purposes in the State of Ohio, provided it is not awarded to the grape that receives the first premium, in which case it will be given to the second best wine grape in the country. The third premium to be given to the best table grape, for general purposes, in the country. The fruit is to be exhibited at the coming fall consolidated exhibition of the American Wine Growers' Association of Ohio and Cincinnati Horticultural Society, in quantities of ten pounds or more, with samples of the wines from the competitors for the first two premiums, if practicable.

WHO INTRODUCED THE TOMATO.

IN answer to an inquiry in relation to the introduction of the "Tomato" for table use in the United States, a correspondent of the N. Y. Observer assigns the credit to a sea captain, a relative of his by marriage. This seafaring individual paid a visit to the father of the relator, residing in the interior of Pennsylvania, during the autumn of 1818, and found in the garden a lot of tomatoes, then denominated "love apples," and not used as food because they were supposed to be poisonous. The captain, however, averred the contrary, and soon produced a dish which he denominated a *Catalonian Salad*. It was found to be all the concoctor claimed for it, and thereafter the Tomato became a favorite in that section—its reputation spreading rapidly over the country.

ORCHARD GROUNDS.

There is a general opinion among most fruit growers that, to get good apples and a prolific yield, the ground on which the trees are planted should be steadily cultivated. An Illinois orchardist has supplied some facts to the Fruit Growers' Companion, which seem to disprove the excellence or propriety of the cultivating system. Ten acres were devoted to an apple orchard and cultivated for five years, when five acres of the ground were seeded down and the balance cultivated five years longer and then also put down to grass. The result was that the five acres first put down produced more and better fruit than the other five and were less affected by apple pests.

GRAPE GROWING—WINTER PROTECTION.—My Concord grapes are safe from the effects of winter freezing, but the Isabellas, alike exposed on the trellis, are nearly killed. There can be no doubt but that even the Concord and other hardy vines come forward earlier and fruit earlier when laid down in the winter. I have seen a Concord vine that had been protected thus, bear fruit two weeks earlier than a vine that had been exposed on the trellis. Let every man who has a yard and garden grow a few grape vines, but with all his care and painstaking he must not expect a large crop of grapes every year. I have found that vines, like apple trees, if they yield heavily one year do but little the next.

CHICAGO HORTICULTURAL SOCIETY.—We have received a neatly executed copy of the constitution and by-laws of this Society, embracing the names of its officers for the year 1867. They are: *President*—Hon. J. YOUNG SCAMMON. *Vice Pres't*—Edgar Sanders. *Sec'y*—Robert A. Meers. *Cor. Sec'y*—Isaac A. Pool. *Treas.*—H. D. Emery. *Librarian*—Henry Lumbard. *Ex. Com.*—F. Sulzer, Samuel Muir, Robert Kuntze, A. H. Hovey, John Blair. The constitution and by-laws are of a character indicating a live institution, and we hope it may prove a beneficent and successful one.

MARROWFAT PEAS.—We presume that L. D. L., Kelloggsville, can get the pure "marrowfats" at any regular seed store.

Domestic Economy.

DOTY'S WASHING MACHINE.

THE three following letters were all received on Monday last:

MR. MOORE:—Will you please inform me where DOTY'S washing machine can be obtained? I have not seen their advertisement, and as it is very highly spoken of in your paper (also the Tribune) as all that can be desired as a washer, we think we will try one.—MRS. J. M. B., *East Elba, March 18.*

EDITORS RURAL:—In your paper of March 16, Mr. HENRY A. TRENCH speaks of a washing machine which, according to his account, must be unsurpassed. Can you tell me where such a machine can be had? Who is the maker? what is the price, &c.?—and oblige a constant reader of the RURAL.—NORMAN G., *Lisbon, Kent Co., Mich.*

DEAR SIR:—In the RURAL of March 16th, I noticed an elaborate "puff" of "Doty's Washing Machine," and looked over the advertising columns to find where one could be obtained, but could find no notice of it. Now, we wash at our house occasionally, and if Doty's machine is such perfection, please let a fellow know where one can be found, and oblige—G. N. S., *Geneva, N. Y.*

In answer to all which we beg to state that, although the publication of the article alluded to was worth $100 to the patentee or manufacturer of the DOTY Washer, we did not receive or expect the "first red cent" therefor. In fact we published the article because we believed the writer an honest man and good judge in the premises, and no one interested in the sale of the machine knew anything about the matter until it appeared in the RURAL,—but subsequently, without any solicitation on our part, the general agent sent us an advertisement which (after being deferred a week for want of space,) appears in our present number. After receiving the article of Mr. TRENCH, we concluded to add the DOTY Washer to our Premium List, and have done so, as will be observed by reference to notice at head of our News page.

A GOOD BLACK INK.—One lb. extract logwood; one oz. bicromate of potash; one-half oz. prussiate potash; six gallons water. Pulverize the ingredients, and heat boiling hot and stir thoroughly; then strain through a thin cloth.

HOW TO HARDEN TALLOW.—(J. H., Rome, N. Y.) Tallow should be slowly and thoroughly cooked when it is fried out of the scraps. This is one essential towards making it hard. When melted for candles, add four ounces of alum to ten lbs. of tallow.

INQUIRY.—If any of the readers of the RURAL know of a harmless preparation for removing freckles, they will confer an exceedingly great favor if they will make it known through the RURAL.—W. Y.

COUNTERPANE—HOW TO KNIT IT.—"LYDIA," Madison, Wis., wants to know how to knit a counterpane; also how many pounds of knitting-cotton will be required for the purpose.

WEAVING COVERLIDS.—Mrs. R. asks if any RURAL reader can inform her how to weave a cotton and wool coverlid of pretty pattern.

FACTS.—The Chemical Saleratus is the *Best Saleratus*. Chemical Saleratus is better than Soda. Chemical Saleratus has 16 ounces in a paper; others have 14 to 15 ounces.

New Advertisements.

WANTED—A PARTNER WITH A Small capital, to engage in the Grape Business. Having a farm of Superior grape soil, in the best location in the Union, with every convenience and facility to produce grapes at little cost, and having about 5,000 good Iona, Israella and Delaware vines, Solicit a correspondence with whoever would like to engage in the same. Address RYDER & CO., Sing Sing, N. Y.

TO LOVERS OF FLOWERS.—I have a choice variety of Flower Seeds, comprising the finest Asters ever grown of every sort—Everlastings, Double Zinnias, Carnation Pink, Dianthus, Primrose, African Marygold, Mexican Poppy, Henderson's Perfection, and many other choice kinds. For 25 cents and postage stamp, I will send six kinds; for 50 cts. and postage stamp, 12 kinds. Mrs. H. C. KENT, Scipioville, N. Y.

O. ORDER K. EARLY OF *Montclair,* **B. E. WILLIAMS,** *New Jersey.* **B**

We consider this berry the very best that has come under our observation, and recommend it to the notice of Blackberry growers and amateurs.—*Am. Inst. Farmers' Club Com., N. Y.*

The berry is quite as large as the Lawton and the fruit is perfectly sweet when ripe, melting in the mouth and leaving no core.—*P. T. Quinn, N. J.* 897-3t

MONROE COUNTY NURSERIES,

SPRING 1867.

We offer for sale a general assortment of *all* kinds of Nursery stock. Would call *special attention* to our stock of Peaches, Standard and Dwarf Cherries, 2 years old. *Raised on their own roots*, and a fine assortment of Evergreens. We also have a few thousand Standard Apple Trees, 4 years old, slightly injured by the hail, which we will sell very low. 897-4t GOULD, BECKWITH & CO., Rochester, N. Y.

A NEW WINTER PEAR.—WINTER DUCHESSE—Duchesse D' Hiver, or Tardif de Toulouse—I am pleased to announce that this new and valuable pear is now offered to the Fruit Growers of this country. Notices and descriptions of it have appeared from time to time in the horticultural journals, and the public have been made acquainted to some extent with its qualities. It still enjoys the high reputation in France which it acquired several years since as a winter pear, and it is believed will fill a want which has always been felt for a first-class, long keeping winter fruit suitable for profitable orchard culture and marketing. Its qualities may be described as follows.—Trees, strong growers, very vigorous, and of early fruitfulness, and succeeding well on either quince or pear stock. Fruit, in size, form and color, bearing a great resemblance to Duchesse d' Angouleme. Color, at maturity, a pale yellow with red cheek. Flesh, melting, juicy, sweet and perfumed. Time of ripening—keeps well until March. A comparatively small number only are offered for sale. Three Dollars each for fine standard trees. Address, C. W. SEELYE, Rochester Central Nurseries, Rochester, N. Y. 897-2t

ROCHESTER CENTRAL NURSERIES.

C. W. SEELYE.

The subscriber, having purchased the interest of his former partner in this Nursery, would call the attention of old customers and all persons desiring to purchase

First class Fruit and Ornamental Trees, Shrubs, Vines, Plants, &c.,

to the stock of this establishment. Particular attention is given to filling orders directly for PRIVATE USE, and it will be found by all who order in this way, that they can deal more satisfactorily and at *lower rates* than when ordering through a third party. Correspondence is solicited from those interested in planting

Orchards, Vineyards, Private Grounds, Cemeteries, &c.

☞ Descriptive and Priced Catalogues will be sent on receipt of 10 cents.

☞ Special terms will be given to all who may make inquiry upon bills, in which all the articles and quantities of each are distinctly specified. Address,

C. W. SEELYE, Rochester Central Nurseries, 897-2t Rochester, N. Y.

IONA AND ISRAELLA VINES FOR SALE. Extras, Double Extras, 1 and 2 years, at *very low rates.* Send early for Price List, before buying elsewhere. J. L. WARING, Amenia Vineyard, Amenia, N. Y. 896-4t

BERRY BOXES! Berry Boxes!—The subscribers, having enlarged their facilities for the manufacture of Berry and other Fruit Boxes, are now fully prepared to furnish the material in any quantity at short notice. 100 samples sent on the receipt of $1 (two kinds.) Prices range from $7,50 to $10 ₱ M; a discount of 10 ₱ cent. where 10,000 or more are ordered. Send for Circular and Price List. Address WARREN & RIX, Jeddo, Orleans Co., N. Y. 897-tf

JEWETT & NORRIS,

ATTORNEYS AT LAW,

Boston, Mass., and London, Eng.,

Prosecute claims in favor of *Heirs, Legatees* and *next of kin* in any part of *Europe, Great Britain* or any *British Colony.* Family Charts and genealogy prepared.

$500,000,000 in Money and Estates remain unclaimed in Great Britain and Ireland alone. We have lists of persons advertised for as next of kin.

Lists of persons whose heirs have been advertised for by order of the Court of Chancery between 1760 and 1866.

Lists of intestates deceased in United States, Australia, British Guiana, New Zealand, Van Diemen's Land, Victoria, Cape Good Hope, South Australia and New South Wales, leaving property in England, or the Colonies.

Lists of unclaimed dividends in National debt, Bank of England and South Sea Stock.

Fee for search for any name, two dollars. Address or apply to the Boston offices. JEWETT & NORRIS, 897-3t 46 Washington Street, Boston.

FLOWER GARDENS FOR EVERYBODY!—WM. WEBSTER'S New American Style of FLOWER GARDENS. The most exquisite Designs in this Elegant Style, sent by mail to any part of the United States. Enclose 25 cts. and a 3 ct. stamp, and receive by return mail a sample bed with list of Seeds.

Address WM. WEBSTER, 893-tf Landscape Gardener, Rochester, N. Y.

VIOLA ODORATA, (English Sweet Violets.)—I have several thousand roots of this beautiful Flower, double-blue, and exceedingly fragrant. I will send them, post-paid, at the following rates:

Good roots, well packed, each, ...$0.30
" per dozen,..... 2.25

They will be ready to send out as soon as the weather will permit. Address S. P. WAKELEE, 896-2t Care of Jas. Vick, Rochester, N. Y.

KEECH'S NEW SEEDLINGS—GENS. SHERMAN and SHERIDAN, two of the best Strawberries yet known, post-paid, by mail $2 ₱ dozen; for each dozen ordered of the above, I will add 2 plants of Gens. Grant and Sherman, each. New Jersey Scarlet, very early, $3 ₱ 100; Agriculturist, $2 ₱ 100; $10 ₱ 1,000. 800 extra 2 year Iona vines, the best in market, $15 ₱ dozen; $100 ₱ 100; Delaware layers, $20 ₱ 100; 1 year, $18 ₱ 100; 2 year, $5 ₱ dozen. Dianas, one year from cuttings, very strong, $18 ₱ 100. Rebecca, 1 year from cuttings, $5 ₱ doz. Cash to accompany orders.

896-2t JOS. KEECH, Waterloo, Seneca Co., N. Y.

IONA AND ISRAELLA GRAPE VINES, AT WHOLESALE AND RETAIL.

Extra quality of Vines of the above varieties, for the Spring trade, at low prices. Grown from large and well ripened wood not forced in any manner—warranted true to name. Samples of three or more sent at wholesale prices on receipt of the money.

☞ Special inducements offered to those wishing to form clubs. No vines grown by us from green cuttings. Vines of all the other leading varieties at retail.

Wood for propagation of Iona and Israella, first quality, by the thousand lots.

☞ For Price Lists address HOLTEN & ZUNDELL, Haverstraw, Rockland Co., N. Y.

FLOWER SEEDS!

FLOWER SEEDS!

IMPORTED THIS SPRING.

FROST & Co.,

GENESEE VALLEY NURSERIES, ROCHESTER, N. Y.,

Would respectfully invite the attention of their customers and others, to their fine and extensive collection of

CHOICE FLOWER SEEDS

just imported from the best houses in Europe:

Standard Pear Trees, Small Fruits, Grape Vines, Ornamental Trees and Shrubs, Evergreens, Green-House and Bedding Plants, Roses, Etc., Etc.,

at very low rates. The following Catalogues will be sent, pre-paid, to all applicants upon receipt of postage stamps, as follows:

No. 1. Descriptive Catalogue of Fruit Trees, Vines, &c., 10 cents each.
No. 2. Descriptive Catalogue of Ornamental Trees, Shrubs, Roses, &c., 10 cents each.
No. 3. Descriptive Catalogue of Green-House Plants, Dahlias, Verbenas, Bulbs, &c., 5 cents each.
No. 4. Wholesale Catalogue or Trade List, 5c. each.
No. 5. Catalogue of Flower Seeds, 5c. each. 896-4t

A NEW GRAPE!

SALEM.

The subscriber now offers for sale, for the first time, the above grape, named SALEM, from the place of its origin. It is a variety considered not only superior to any of the former well-known numbers, but also to any hardy grape at present before the public, combining, as nearly as possible, every quality desired in an out-door grape—being one of the hardiest, healthiest and most vigorous of vines, and producing enormous crops of beautiful and high-flavored fruit. Like the other well-known kinds, Nos. 4 and 15, this is a hybrid between the Native and the Black Hamburg; bunch large and compact, berry large as Hamburg, of a light chestnut or Catawba color, thin skinned, perfectly free from hard pulp, very sweet and sprightly, with a most exquisite aromatic flavor, not equaled by any other out-door grape for wine or table; as early as Delaware or Hartford, having never failed to ripen in the most unfavorable season for the past six years. Taking all its qualities into consideration, earliness, hardiness and great vigor of vine, size and quality of fruit, it is pronounced by a few of the best judges who have tried it, to have no equal among all the numerous varieties now before the public; and I can, with confidence, recommend it as the best of my collection, and now offer it for the first time.

Feb., 1867. E. S. ROGERS, Salem, Mass.

NOTICE.

The subscriber would here state, that he has disposed of his entire stock of vines and wood of the Salem Grape to J. S. Waring of "Amenia Vineyard," Amenia, Dutchess Co., N. Y., to whom all orders for the same must hereafter be addressed. E. S. ROGERS.

Salem, Mass., March 2, 1867.

The undersigned will dispose of a few layers of the SALEM with two eyes at $5 each, and next Autumn be prepared to supply one year old vines in quantity. The demand for this valuable grape will be large, it is therefore advisable for those who wish to secure them to apply early. Circular with engraving on application. J. L. WARING, Amenia Vineyard, Amenia, Dutchess Co., N. Y.

GRAPE VINES FOR SPRING PLANTING.

My stock of vines for spring planting comprises a general assortment of the different varieties; all of which have been grown with the utmost care and with special reference to producing healthy, well-matured roots.

Long experience has proved my system of growing vines to be the best in practice, and by devoting my energies entirely to this one department, I am enabled by past experience and, with the aid of extensive and perfect facilities, to produce better vines and in larger quantity than any other propagator. In an eminent degree is this true of my present stock of

IONA AND ISRAELLA VINES.

These two varieties have very justly received the highest commendations everywhere, and the Iona has come to be acknowledged the best American wine grape. Read the following:

"The Iona and Israella Grapes, originated by Dr. C. W. Grant, at Iona Island, are the best grapes in America."—*N. Y. Tribune.*

"The Iona is unequalled by any native, and is probably unsurpassed by any foreign kind."—*Am. Agriculturist.*

PLEASANT VALLEY, Jan. 1867.

DR. C. W. GRANT: I have tried the Iona wine by the severest tests that could be furnished, and all of the trials have been very satisfactory.

Taking the best Catawba wine that has been made as "*very good,*" I should place Delaware next above it in rank; Diana, for some qualities, next above that; and Iona above all.

Placing Iona by the side of the finest wines of Germany, that are not excelled in the world, it does not suffer in comparison in any respect, while it has some important characteristics entirely its own, that, in my estimation, place it above that of all other grapes with which I am acquainted. I intend to plant largely of it, and of that only, and from my own experience and extended observation, confidently recommended the same to my friends. Inclosed find order for 10,000 Iona vines, No. 1, Vineyard Class. C. D. CHAMPLIN, Secretary Pleasant Valley Wine Co.

The great popularity of these two most valuable varieties has induced their extensive propagation from immature wood, and thus thousands of vines have been produced and disseminated, which will only serve to injure their well merited reputation and to disappoint those who have purchased them.

Being in possession of the original vines, and also of many of the first propogated from them, I have been supplied with an abundance of mature wood to grow a large stock for market, and now offer at low rates vines of such extra quality as will not disappoint the planter.

☞ Great inducements are offered to clubs. Send stamp for Price Lists of Vines, with engravings of Iona and Israella, and ask your neighbors to join with you in forming a club. MANUAL OF THE VINE (a thorough treatise,) sent for 50 cents. Address

C. W. GRANT, Iona, (near Peekskill,) 896-4t Westchester Co., N. Y.

Ladies' Department.

A FADED FLOWER.

'Tis only a little faded flower
Gathered in a shady bower;
But ah! the one has gone to rest
Who once wore it on her breast.

Those dear hands are meekly crossed;
And many a winter's ice and frost
Have rested on that lonely grave.
Be still, sad heart, why wildly rave?

Ah! this little flower is faded;
And I am weary, worn and jaded.
She has joined the angel band
In a brighter, happier land.

Watkins N. Y. A. M. M.

Written for Moore's Rural New-Yorker.

WOMEN AND BOOKS.

Early chronicles relate that "a Countess of Anjou paid two hundred sheep and five measures each of rye, wheat and millet for a book of homilies." Would we be far wrong in asserting that not one of our modern belles would relinquish a single adornment, saying nothing of investing half her income, for a similar purpose? Some people think a "Bible and cook-book" library enough for a woman; but mankind generally prefer the society of learned and accomplished ladies, especially after the freshness and bloom of youth have passed. In the young, beauty is charm sufficient to enthrall half the world; but when the artless grace of the first twenty years, that golden age of love and ingenuousness, has flown, then woman needs something more to hold the affection she formerly inspired.

Venus and the Graces deck only the young; Pallas Athene must be invoked to make aged women attractive. The education of modern girls is suited only to their free, girlish days, when their mission is to please and adorn. These soon pass; the music, poetry and accomplishments of school days are neglected, and, since "nature abhors a vacuum," jewelry, feathers and fashion occupy the otherwise empty mind. When the maiden becomes a wife and mother, the great fault of her education is fully apparent; she has no resources within her own mind and soul; the culture she has received was outward; drawing and music were in her fingers—no deeper; reading was but proper pronunciation of words, a task to be done; outwardly she was charming, but so little was she morally and intellectually benefitted by this education that she yet retains the instincts of savage nature and adorns herself with beads, brass ornaments and feathers accordingly.

It is because of this exclusive outside development that the women of to-day are so little for literature, do so little for its encouragement, so rarely collect books or own libraries. A wealthy lady will pay for a camel's-hair shawl, or a rich velvet dress, money sufficient to buy twenty elegant and precious volumes, priceless to her for the knowledge they could impart. What hoards of mental wealth could not almost every woman accumulate by applying to the purchase of books the sums spent by her in plumes and laces that give no warmth, ribbons and buttons that fasten nothing, and long yards of trailing silks that clothe only the pavement! What noble pictures and engravings might she not buy with her golden trinkets!

Not that we would have women eschew all ornaments and appear in man's coarse fabrics. No! delicate colors and soft textures belong by birthright to women, the flowers of the human race. Rich lace about the throat and wrists adds new beauty to form and face; but to what purpose are great webs of lace, dangled and festooned round a dress, unless to evoke "curses not loud but deep" from those who have the ill fortune to get entangled in the meshes?

Yet all our ladies have not thus fallen into senseless imitation of Parisian follies. Surely, we have in our land ten thousands of pure-hearted women, who are only thoughtless, not heartless. They will listen to a friendly voice that tells them to retain that simplicity than which there is nothing more charming; expend their longings for beauty in earnest, loving study of flowers and pictures; collect, read and love the writings of the pure and gifted, rigidly eschewing those books which, under various forms, present false views of life, and, cultivated and truly refined, prove anew to the world "how better than fine gold, more precious than rubies," are true women. Amilie Pettit.

St. Louis, Mo., 1867.

Directions for a Lady's Dress. — Let your ear-rings be attention, encircled by the pearls of refinement. Let the diamonds of your necklace be truth, and the chain of Christianity. Let your bracelets be charity, ornamented with the pearls of gentleness. Let your bosom-pin be modesty, set with compassion. Let your finger-rings be affection, set with the diamonds of industry. Let your girdle be simplicity, with a tassel of good humor. Let your garb be virtue, your drapery politeness. Let your shoes be wisdom, secured with the buckles of perseverance.—*Troy Budget.*

Jenny Lind.—It is not true that Jenny Lind is singing in public to retrieve her fortune. She merely sings for charitable purposes, and she emphatically denies the reports of her husband being either a spendthrift, a gambler, or a drunkard. She assures her friends, in whatever part of the world they may be, that Mr. Goldschmidt is a good husband and a kind father.

A Maine paper suggests that high schools where young ladies can be taught household duties be established in that State, and F. W.—fit for wives—be inscribed in the degrees.

Written for Moore's Rural New-Yorker.

ADULT INFANTS.

Aunt Rachel had been for some time busily engaged reading. All at once she laid the paper on her lap, raised her spectacles to the top of her snowy cap-frill, and, crossing her hands most emphatically, said, "Well! Somebody has had her say about babies, and I may as well have mine. But it is not the little, worrying, helpless, crying things I'm going to speak against—though I was never so fond of them—but about the great, grown-up babies, who go drawling round, trailing their long dresses about the house, with faces as expressionless as 'Simple Simon's.' One would hardly think there was life enough about them to ache; but they are always complaining, always miserable—which is true in one sense, miserable specimens of womankind. They talk so whiningly, are so affected, so helpless, it gives me the flare-ups to see 'em round.

"I was at brother Ben's last summer when Tom came home with his wife for a visit. Her father was pretty well off; and she'd come up just as she was a mind to, had always been waited on, I guess; for of all the helpless creatures, I might say laziest—it's nothing else—I never see! If going to walk or ride, Tom must fold the wrappings about her, or pull on the rubbers of the helpless Lily. Her name would suggest fairness and frailty; but she was merely a healthy, hearty infant; and when I saw him doing it I felt like pushing him over. Then it was 'Tommy, dear, bring me this,' and 'Dear Tommy, bring me that;' and he seemed to think it all right, and may-be always will, if he can support her in that way. For some time sister Betsey put herself out in a hundred ways to wait upon her, while she lounged round, pretending to make tatting a little, embroider a little, and do a good deal of nothing at all.

"One day Betsey was sick and said to me, 'You'll see that Lily's room is all right—will you?' I nodded. Long after noon I went up, and there was the bed just as she left it in the morning. Thinks I, 'You'll make it yourself, or sleep in it as it is; but I'll set you an example.' So I raised the window, threw off the clothes and laid the bed all nicely, ready to put them on again, and went down. Next day she left it just as usual; and I thought to myself, 'The clothes won't get taken off by me, if you sleep in it as it is till doomsday.' Well, the next day she thought it about time to take the hint, so just shook up her bed and raised the window in the morning, and when I saw her going up stairs in the course of the day, I said to her, 'If you want the broom and dust-pan, you'll find them in the kitchen.' She looked at me rather indignant, but went back and got them, and after that she took care of her own room. After Betsey got well I told her what I *did'nt* do. She smiled, and said maybe I'd done a good thing after all"

Bell Clinton.

A PARIS WEDDING INCIDENT.

The other day a wedding took place at the Madeleine Church, between a very noble gentleman and lady, and among the crowd that gathered outside to see the splendid bridal party was a miserable beggar about twelve years old. Now, in Paris every one who has not something to sell is carried off to a police house — if they stop in the streets as this one did — and accordingly an officer was just asking her if she had anything to dispose of, and the poor thing was trembling in every limb for fear of imprisonment, when a sweet little girl, a sister of the bride, happened to overhear the policeman as she passed by, and to save the ragged offender, she quickly placed in her hand a superb bouquet she was carrying, and answering for her said, "Yes, she has these flowers, but she asks too much and I cannot buy them." As she turned to go on, an old gentleman, who saw and understood it all, stepped forward and, putting a gold piece in the poor child's palm, remarked, "I will give twenty francs for it," and presented it to the amiable little angel whose goodness had been more fragrant and beautiful than the choicest blossom that ever graced a garden.

OUR SPICE BOX.

An Irishman warns the people not to trust his wife because he never was married to her.

Prentice says:—"The only poetry a handsome girl appreciates is written with a mustache on her lips."

A pert little girl boasted of one of her friends that her "father kept a carriage." "Ah, but," was the triumphant reply, "my father drives an omnibus."

There are very affectionate female friends who kiss each other through two thicknesses of veil, and know how to hug each other without disarranging a curl.

Old Women.—There are three classes into which all the women past seventy that ever I knew were to be divided:—1, That dear old soul; 2, That old woman; 3, That old witch.—*Coleridge.*

Hearts, the best card in the chance-game of matrimony; sometimes overcome by diamonds and knaves; often won by tricks; and occasionally treated in a shuffling manner, and then cut altogether.

"My dear young lady," exclaimed a gentleman, "I am astonished at your sentiments. You actually make me start—on my word you do." "Well, sir," replied the damsel, "I've been wanting to start you for the last hour."

"Bridget, how came you to burn the bread so?" "Och! an' is it burned it is? Sure, then, ma'am, but it's no fault of mine, for wasn't you after telling me las' thing afore you wint out, a large loaf must bake one hour, an' I made three large loaves, so I baked 'em three hours jist; for what else should I do?"

TO CONTRIBUTORS.

The following contributions are respectfully declined, for the reasons annexed:—"Farmers," W. W. The article, as you say, was "hastily scribbled off," and for that very reason is not good enough for the Rural. If you have not time to write carefully, do not write at all.——"Acrostic," P. Badly rhymed and badly worded.——"To My Darling in Heaven," C. Subject old and versification faulty.——"Our Country and her Traitors," S. Political.——"Prospective," S. G. Not new. Read Longfellow's "Rainy Day." "Dawning" and "morning" would pass for a rhyme in Boston, but not in any place where the English language is spoken correctly.——"Mutability of Time" and "Parental Affection," M. H. Subjects exhausted.——"Night," B. C. Of your four stanzas the meaning of the first three is precisely identical; each is very good, but renders the other two superfluous.——"The Old Paths are Overgrown with Grass," M. J. N. Too diffuse and indistinct.——"The True Meaning of Woman's Suffrage," M. M. Your article is well enough in itself, though some of it is not new by any means; but the Rural has already given space to a free and pretty full discussion of the subject.

Choice Miscellany.

TO AN INDIAN GOLD COIN.

BY JOHN LEYDEN.*

Slave of the dark and dirty mine,
What vanity has brought thee here?
How can I love to see thee shine
So bright, whom I have bought so dear?
The tent-ropes flapping lone I hear
For twilight converse, arm in arm;
The jackal's shriek bursts on mine ear
When mirth and music wont to charm.

By Cherical's dark wandering streams,
Where cane-tufts shadow all the wild,
Sweet visions haunt my waking dreams
Of Tevlot loved, chill, still and mild,
Of castled rocks stupendous piled
By Esk or Eden's classic wave
Where loves of youth and friendship smiled,
Uncursed by thee, vile yellow slave!

Fade, day-dreams sweet, from memory fade!
The perished bliss of youth's first prime,
That once so bright on fancy played,
Revives no more in after time.
Far from my sacred natal clime,
I haste to an untimely grave;
The daring thoughts that soar sublime
Are sunk in ocean's southern wave.

Slave of the mine, thy yellow light
Gleams baleful on the tomb-fire drear—
A gentle vision comes by night
My lonely widowed heart to cheer;
Her eyes are dim with many a tear,
That once were guiding stars to mine;
Her fond heart throbs with many a fear!—
I cannot bear to see thee shine.

For thee, for thee, vile yellow slave,
I left a heart that loved me true!
I crossed the tedious ocean wave,
To roam in climes unkind and new;
The cold wind of the stranger blew
Chill on my withered heart; the grave,
Dark and untimely, met my view—
And all for thee, vile yellow slave!

Ha! com'st thou now so late to mock
A wanderer's banished heart forlorn,
Now that his frame the lightning shock
Of sun-rays tipt with death has borne?
From love, from friendship, country, torn,
To memory's fond regrets the prey,
Vile slave, thy yellow dross I scorn!
Go mix thee with thy kindred clay!

* A young Scotchman, a linguist and antiquary, who died in India in 1806, at the age of thirty-one.

Written for Moore's Rural New-Yorker.

JOTTINGS IN TOWN.

What! Spring really here? We almost fancy it is, the sun shines so cheerily, everything seems so warm and bright. To be sure, the wind as it greets us has a sharp, cold touch; but we try to persuade ourselves it is only the last farewell breath of Winter, and that this day, so gloriously bright, is but a forerunner of the greater glory and brightness which is to come. So, repeating the words, "Wisely improve the present; it is thine,"—applying it to ourselves, by leaving off the "wisely" perhaps, we are away for a day's enjoyment. A few steps—we're in a stage bound down Broadway, that world of itself, where the motley crowd surges up and down; so many apparently treading the same path, and yet just so many distinct and individual lives.

Among this crowd of the grave, gay, careless and careworn, you may mark the bright, steadfast eye which bespeaks the earnest soul, or the brilliant, flashing one, gazing into the dim distance, where it beholds a jeweled crown which Fame is holding. Here, too, are the cold and self-reliant. There walks one — the rush, hurry and strife have no effect on him—he saunters leisurely along, glorying in his wealth and fame. He *has* obtained *these*, but in doing so has sacrificed his principle and integrity. Too many gain fame by bartering for it all their soul's nobleness and truthfulness. See this child darting in and out among the crowd, her hands full of violets, blue violets. God bless her for bringing flowers here! "Please buy my violets, spring violets." Were we only walking, we would certainly treat ourselves to some; for with those in our hands and the warm, glorious sunlight around us, it would not require much imagination to persuade ourselves it was really spring. There! she has sold some. A kindly looking old gentleman takes a bunch, and as he drops the money into her hand drops also a kind word into her ear, and with it much gladness into her heart.

Another passes—avaricious, selfish—you read it in his face. A little, pale, timid creature puts forth her hand. "Please sir, a few pennies." He mutters, "Begone!" buttons up his great coat, not only to keep the pennies from getting out, but also to keep the sunshine from getting in, lest it might soften and melt his frozen heart. Well, "God made him, so we will let him pass for a man."

While we have been gazing, Broadway has receded wondrously fast. Lo! we find ourselves face to face with the ever too enticing water—so on to a small steamer and off for a trip down the Bay. The breeze which we thought so warm and spring-like on land seems to have changed in an amazing degree. We almost fancy we have been suddenly transported to the North Pole. But we came for pleasure; so, whatever our thoughts are respecting the climate, we'll not breathe them. Moreover, we do enjoy it as we rush along through the waves, now past Governor's Island, where the grim old fort, terrible we think more in name than in appearance, frowns upon us; past Gibbet Island, and so along the Jersey shore stretching on one side and the Long Island on the other. Then here we find Staten Island with its hills, summer retreats, rural villages, and other beauties, and now along its shore we ride, when lo! we are almost in the midst of forts. To our left—dark, desolate, dreary, standing solitary, the waves rolling and dashing against it on all sides—we recognize Fort Lafayette; a little further, still to the left, standing out defiantly on Long Island, Fort Hamilton; to the right, directly opposite on Staten Island, we find Fort Richmond; on the hill just above, built in a semi-circle and covering Fort Richmond, we see Fort Tompkins—all solid stone structures, with their great, terrible guns guarding well the entrance to New York Harbor. But they have somewhat lost their interest within the past two years.

Now we have changed our course and are "homeward bound." The Bay seems full of sailing craft, all outward bound. The sun, shining upon the water, throws the reflection upon their sails and gives to them that strange but beautiful tint so peculiar to the sea; so that the ships seem part of the sea itself—great ocean birds, with their wings spread, floating off to distant climes.

A ride home by sunset—glorious! None of your land, more particularly city, sunsets, where you lose sight of the sun the moment it drops behind a house or tree. See how it lights up the sky and the few clouds which hang around, not with a golden hue; no, no! we've heard of golden sunsets ever since we were a child, and although we are ever ready to acknowledge their beauty, still it cannot vie with this. Here you see every shade exquisitely blended, from the faintest tint of the rose pink to the deeper but not less beautiful crimson. We reverence, we glorify, the art which, catching a thousand beauties of earth and sky and sea, places them upon canvas; but it can never reproduce this.

Onward speeds our vessel, cutting the waves as they roll around it. We look down into the deep and wonder at its mysteries; we gaze where the sky and water meet and realize the beauties. The sun is sinking, sinking, slowly, gloriously—it throws its last ray across the waves, then seems to sink into the ocean and be buried there. But when the night shall have passed, it shall rise again from out the sea, at first casting only a faint line of light across the water, but as it ascends, growing brighter and brighter, until it reaches the zenith when it shall cast its glory as far as its rays extend. So from out the troubled sea of blood arises our sun of peace, though faint at first, growing brighter and clearer and stronger, until it shall fill our whole land with its glory, and the nation, purified and blessed, shall breathe forth a united Amen.

We have reached the pier—we leave the calm of the sea behind us and enter once more the bustle of the city. Another ride on Broadway, this time viewing it by gaslight, and we are "home again"—so *au revoir!* V.

New York, March, 1867.

WIT AND WISDOM.

A Sinking Fund — The Hoosac Tunnel.

Railway "jams" are anything but preserves.

Too many poets mistake aspiration for inspiration.

How much does a fool weigh generally? A simple-ton.

What is better than a promising young man? A paying one.

Care for what you say, or what you say will make you care.

A regular life is the best philosophy; a pure conscience the best law.

A fool's heart is in his tongue, but a wise man's tongue is in his heart.

Punch wants to know of what color is blind man's buff? Invisible yellow, perhaps.

Halifax papers advertise "Pick-me-up-Bitters." The "Knock-me-down" sort are most in use.

Can a man who has been fined by the magistrates, again and again, be said to be a re-fined man?

A Russian miser is noticed as having learned to bark, in order to save the expense of keeping a watch dog.

Why can persons occupied in canning fruit stow away more of it than any one else? Because they *can*.

It is with a word as with an arrow; the arrow once loosed does not return to the bow, nor a word to the lips.

Why is a conscientious baker like a ship without ballast? Because being short of weight he gives a *roll* over.

It is not work that kills men, it is worry. It is not the revolution that destroys the machinery, but the friction.

What proof is there that Robinson Crusoe found his island inhabited? He saw a great swell pitching into a little cove.

Sabbath Reading.

Written for Moore's Rural New-Yorker.

"WHAT THEN?"—A RESPONSE.

BY I. R. BRADNACK.

After the joys and songs, the scenes of mirth,
The shade, the sunshine and bright dreams of earth,—
Only a conscious smart, an empty name,
Only an aching heart, a weary frame,
Only a sad farewell, a silent bed
Within the grave, with the forgotten dead!
Is this the whole of life, the end of man?
Ah no!—death closes his brief mortal span,
But faith looks through the clouds of gloomy night
Which hang around the tomb, and sees the light
Of life immortal, by the gospel brought;—
A life with endless joys and pleasures fraught;—
After a well-spent life on earth, is given
A crown and an eternal home in heaven!

Cambria Parsonage, 6 March, 1867.

SABBATH SCHOOL BOOKS.

The art of interesting children and instructing them at the same time, is beginning to be understood. Those who can talk to children or write for them acceptably are still few; but the senseless nursery tales of giants, witches and fairies, and the equally senseless because uninteresting and ineffective abstract homilies, have had their day. For every-day reading the children's magazines that have recently been started and prove so successful, undoubtedly come pretty near the correct idea.

But unless Sabbath school libraries have greatly changed in character since the writer of this was a boy, a corresponding reform is needed there. We still remember with pain the disappointment we suffered when we first gained access to one. From the infant class corner we had looked longingly at the loaded shelves in the farther end of the room, envying the older pupils who were permitted to "draw" them, envying even the librarian who could read merely the titles as they passed through his hands. Our imagination filled them with all sorts of delightful stories, and we were sure there could be no end to the wisdom of their teachings and the beauty that shone from their pictured pages.

In due course we graduated from the infant corner and were placed in a class with seven other boys. Just before the close of the session a package of eight books was handed to the teacher, who passed it to one of the class. He quickly selected one and passed it to the next. The next two each took one. The other four looked at the remaining books and all "guessed they wouldn't take any to-day." They came to us last. We looked over the five titles—they were five "memoirs." Without the remotest idea what a "memoir" was, but supposing it was all right, we took one at random. Probably not one in a hundred of our readers need be told that it turned out to be a biography of the Rev. Mr. Somebody or other, a very good and pious man, but in whose life not a single event had occurred that could interest a boy. Thereafter we were as wise as our classmates, and politely declined taking any more "memoirs," except when the teacher thrust them upon us with the assurance that they were "very good," an assertion which, of course, we could not flatly contradict, though we did not believe it. We felt an intense interest in "Slim Jack, the Circus Boy," and the lesson of his sad fate was probably not lost upon us; but though we comprehended just as clearly the moral of the religious life of Rev. John Jones or his devoted wife, we found nothing entertaining in a story utterly devoid of incident, and could not read it even from a sense of duty.

If this article should fall under the eye of any one whose duty it is to select books for a Sabbath school library, we hope he will bear in mind that children must be interested before they can be instructed. No matter how important the truths presented to them, if they are not in an attractive form they will be utterly unheeded by the majority if not by all. If you are at a loss to know what will interest them, one thing at least you may bear in mind and be very certain there are no exceptions to it, that they do *not* care for "memoirs."

The Lie.—It is not calumny nor treachery that does the largest amount of mischief in the world; they are continually crushed, and are only felt in being conquered. But it is the glistening and softly spoken lie, the amiable fallacy, the patriotic lie of the historian, the provident lie of the politician, the zealous lie of the partisan, the merciful lie of the friend, and the careless lie of each man himself, that casts that black mystery over humanity, through which any man who pierces we thank as we would thank one who dug a well in a desert, happy in that the thirst for truth still remains with us, even when we have wilfully left the fountains of it.—*Ruskin.*

Suffering.—Sorrow sobers us, and makes the mind genial; and in sorrow we love and trust our friends more tenderly, and the dead become dearer to us. And just as the stars shine out in the night, so there are blessed faces that look at us in our grief, though before their features were fading from our recollection. Suffering! Let no man cheat it too much; because it is good for him, and it will help to make him sure of his being immortal. It is in sorrow, the night of the soul, that we see farthest, and know ourselves natives of Infinity and sons and daughters of the Most High.—*Euthansy.*

A business that does not challenge the scrutiny of God, and the approval of a good conscience, cannot be consistent and proper.

When the world crowds Christ out of the heart, duty becomes simply cold, irksome, hard duty, and the worship of God a bore.

The Traveler.

Southern Editorial Correspondence.

SOME NOTES OF A TRIP SOUTH.

Route Traveled—Battle Grounds—Bones—Cemeteries—Wheat—Labor—The Negro—Effects of Kindness—Present Condition—Infanticide—Their Future—Want of Feeling.

I LEFT Washington about the 12th of February, and my route was through the interior of Virginia to Richmond; thence via Petersburg, Weldon, Raleigh, N. C., Columbia, S. C., Augusta and Savannah, Ga., and Charleston, S. C., to Wilmington, N. C.; thence via Petersburg, Richmond and Acquia Creek back. The same route was traveled but a small distance, though it embraced nearly 2,000 miles.

One sees all along the evidences of a recent war, in dismantled forts, breastworks, and all sorts of contrivances of men for offensive and defensive war; but as they only serve to "point a moral or adorn a tale," I shall pass them at present—remarking, however, that at several stations in Virginia, I saw piles of bones brought from the battlefields. I had heard that human bones were gathered with those of the animals, but could see none, though I made considerable search. The Union dead have been nearly or quite all gathered into neat, rural cemeteries, which in a few years will be beautiful resting places for the dead. Though they may not be regarded at present with the feelings which made RACHEL weep for her children, by the surrounding population they will be respected as the last resting places of brave men who died in defence of their country.

There is a pretty broad breadth of land through Virginia in winter wheat, which is looking uncommonly well, and if it escape the insect, bids fair for a heavy crop. If no accident befall it there will be double the quantity raised over last year. Wheat also looks well throughout the South, and has come through the winter in fine condition. In Georgia oats were up, peach trees in blossom well up into North Carolina, on my return, which was early in this month.

Labor is beginning to be more systematised and reliable, and planters are making greater exertions for the cotton crop. The change of labor from slave to free is making a great change in cotton cultivation. Less land will be worked, but labor and fertilizers will be concentrated, and a more improving and profitable agriculture will be the result. I predict that in a few years more cotton will be grown than ever before, and on what are now considered the worn-out lands of the older States cotton growing will prove very profitable.

The negro population is yet very much in a condition of *unrest*. They have not all seen the elephant yet, though thousands who went to see him last year have returned to their homes, "wiser" and generally "sadder men." Where they had good and kind masters, and those who treated them fairly the last year, they have had a surplus of labor at command this spring. But a bad man, or one who has cheated them, can get no laborers at all, and many a fine plantation will lie entirely unworked from that cause. This changed relation between the races from slave to hired servant is working a very noted change in the temper and character of the intercourse between the white and black.

The sudden abolition of slavery has been most unfortunate in many of its results upon the blacks. They are the prey to all kinds of sharpers, and are wandering about the country by countless thousands. A large demand has sprung up, especially in the Carolinas, for laborers to go to Texas and Arkansas. Much larger wages can be paid there, and it is not uncommon to see agents picking up all the best hands to start plantations there. One agent filled his complement by promising that in Texas every negro might go to his work on a mustang pony, his wife behind him, and a gun for himself before.

Infanticide has been equal to anything we have ever read of in China or India. Through my whole journey I saw but two infants, or, indeed, hardly any children from two years and under. And, if possible, that is not the worst feature, for very few live children are born now. The black women have long possessed the knowledge of a harmless and common vegetable, which, in a decoction, will produce abortion. While slaves they were watched, and its use prevented; but being freed from these restraints, they are fast lapsing into barbarism, and as a general thing shirk the responsibilities of maternity. It is a horrid state of things, and will rapidly reduce the number of blacks in the South, and will continue till they become a fixed people. It seems to me that their fate is fixed, and that rapid extermination will go on till their numbers equal the demand which the superior race will have for their services, and that will not exceed one-quarter what the number now is. I think that three-quarters of the present population will become extinct. It will be a great field for European and Asiatic emigration, and when once systematically established, the whole South will become a densely populated region. The Chinaman will be at home on the rice plantations along the Carolina coast. Few are now being cultivated, for the want of both labor and the capital to stock them properly, though there is no crop grown with so much profit as rice at this time.

To show how rapidly the natural barbarism of his nature develops itself in the negro, when left to his instincts, a single fact among a great number that came to my knowledge, will suffice. A man and his wife called upon a planter in South Carolina this past winter to hire out. He employed the man, but as the woman had three little children he did not feel able to employ her, as he could furnish no room for her to live in. About a month after he was surprised at her calling again for work, but on his telling her that he could not employ women who had children, she very coolly informed him that her children had all "took sick and gone clean dead." Tens of thousands of children have perished the past year because their mothers found them an incumbrance. T. C. P.

Washington, D. C., March, 1867.

WILD DUCK HUNTING.

THE preceding illustration presents some of the features in scenes witnessed by the sportsman of aquatic proclivities. This species of game abounds along the Atlantic coast and the bays and affluents of the Lakes. They may be frequently seen flying in long, waving lines comprising many varieties, differing in size and tint of plumage, but when in the water a species of disintegration takes place, each variety gravitating towards a common center or family union. These flocks are made up, along the sea coast, of the Canvas-back, the Red-head, Ruddy, Black Scoter, Ruffle-head, King, Long-tailed, and others. In the inland waters are found the Wood Duck, Teal, Blue-winged, Ring-necked and several others of less prominence.

In hunting ducks, some sportsmen succeed well in boats disguised with forest garniture, floating in these gently down upon the flock, as the ducks are feeding or engaged in amorous conversations or quacking. Others take up a screened position, within easy range of a decoy so like a duck as to deceive the real ones—arresting their flight and causing them to settle around the sham presentment of themselves—when the sportsman lets off both barrels, killing in the water with one and with the other as the frightened birds take wing. On these occasions a good dog or retriever, used to the water, is of great use, saving the game when it chances to fall in places not readily accessible in boats or on foot, as also much walking which the hunter would be compelled to perform without this aid. The illustration shows how the retriever performs his portion of the ducking business, but can hardly delineate the pride of bearing characteristic of the animal as he lays the trophy at the feet of his master. Duck shooting, like deer stalking, has its seasons of excitement and lassitude—variations more sensibly felt by the tyro than by the practiced sportsman, who rarely loses his equanimity, whether his shots tell or fail. From early autumn till the opening of the vernal season, ducks are more particularly in order, and then it is that the sportsman has an eye open for this species of aquatic game, and rarely fails in supplying his larder from any flocks that may chance to cross the range of his vision.

Various Topics.

Written for Moore's Rural New-Yorker.

MORNING.

How many times has my heart been gladdened by the rising of the sun over the hills of the old homestead, where the corn and clover sparkled with the dew, and the newly headed wheat nodded lazily to and fro in the enchanting breeze, as spring and summer joined hands for the coming harvest. I looked upon the broad fields with a proud eye then, for I thought every speckled corn-tassel and budding kernel gave promise of much happiness. But as the brightest morning may be darkened by the clouds that seemed so beautiful when far away, so our lives may be shadowed by the approach of that which was wont to dazzle our eyes with its deceptive glory. But however darkly the gloom may gather, we know there is always "sunshine above the mist."

It is natural for us to look back upon our childhood and liken it to the morning; because the horizon of our life has never since seemed so bright, nor music of the birds by the way-side so sweet, nor the breath of the flowers so fragrant; and our friends, unmasked of our childish confidence by the noonday sun, have never since proved so true.

There is always a charm hovering over the morning; and its magical presence lends beauty to everything we see or hear. Would you listen to music? It may be grand at night—it is sublime in the morning. Would you know a friend? Meet him in the mornig. You will then find him more as GOD made him than after the enchanted hour has passed. Would you look upon Niagara, or some old silvery-browed mountain? Go while yet the darkness lingers near, and see how they smile upon the morniug.

Glorious morning! We can almost imagine heaven nearer as you approach; for in heaven it is always morning. CHAS.

Rochester, 1867.

SUGGESTIONS ON HEALTH.

THE human system, though capable of great endurance and recuperative energy, often unexpectedly gives out. Men, women and children cannot toil unceasingly for a long period of time without intervals of rest and sleep. To preserve a perfectly healthful tone of body and mind, these intervals should be longer than some suppose. Unceasing toil or excitement of mind predisposes to the neglect of the health of individuals and families. Some never wash their whole person, or know that it is necessary to preserve health. Others do this at improper times, or in an improper manner, and conclude they receive injury, not knowing that a general bath should not be taken when the system is overheated with exercise, or soon after a meal.

The object of a bath, or general washing of the whole system, is to remove the effete matter that accumulates thereon, by perspiration or exposure to dust; and as soap and warm water, with a good rubbing, is necessary to take dirt and sweat out of clothes, so we may conclude it is good to take dirt and sweat from the surface of the body. When convenient, this washing of the person should be done in the morning before breakfast, or a little before dinner, if not too fatigued. The feet of adults and children should often be soaked in warm water, with a little ashes in it, so as to loosen the scurf, that often forms painful corns, and prevents a healthful circulation in them.

The feet should be bathed in the evening, and then retire to rest. Many people injure their health and endanger their lives by washing their feet in cold water at night, after they have ceased exercise. Had they washed them thus in the morning, and exercised through the day, it might not have hurt them; but it is never safe to wash them thus at night.

PHOTOGRAPH PRINTING.—The art of printing books and papers from plates taken by photography is coming into practical use. The New York Gazette says:—"We were yesterday shown an exact fac-simile copy of the London Punch, reduced in size about one-third, printed from a phototype by a new process. By this application of photography any book or paper can be reproduced at a rapid and cheap rate, the Punch being afforded at three cents a copy. For illustrated works it is invaluable. A company has been formed, and several acres of land purchased in Brooklyn for the erection of buildings. Messrs. Ticknor & Fields have interested themselves in the matter, and it is understood they will make arrangements for the publishing of some rare works after this process."

WHERE DOES THE DAY BEGIN?—The first beginning of the day is somewhere between America and Asia. The precise locality of that somewhere has not been determined. If the Pacific ocean were thickly populated with men, the place of the beginning of the day would be a matter of great consequence, and would probably be settled by statute. The day would start from a meridian line extending from pole to pole, and the longitude of this day line would be so accurately fixed that a man might stand astride it and realize the paradox of having one foot in Monday and the other in Tuesday. Many of the readers of this will live long enough to hear this subject discussed in national councils.

ADVANCEMENT OF SCIENCE IN AUSTRALIA.—Mr. Grubb, an optician of Dublin, has completed an enormous reflecting telescope, which was ordered by the Victoria Legislature, for the sum of £5,000, for Melbourne. The tube of the instrument is four and one-half feet in diameter. The sides are made of tapering steel ribs, and the entire instrument is not only singular on account of its dimensions, but also because of its completeness, accuracy and finish.

MISCELLANEOUS ENIGMA.

I AM composed of 31 letters.
My 3, 2, 29, 11, 18, 1, 21 is one the United States.
My 6, 15, 32 is a domestic animal.
My 33, 10, 34 is a boy's nickname.
My 32, 8, 9 is a conjunction.
My 17, 15, 29, 11, 7, 19, 16, 14 is a city in Nova Scotia.
My 11, 21, 23, 5, 28 is a county in North Carolina.
My 27, 15, 20, 4 is a county in Georgia.
My 15, 26, 22 is a girl's name.
My 30, 25, 12 is the ruler of day.
My 13 is sometimes a vowel.
My whole is one of Dr. Franklin's maxims.

ANSWERS TO ENIGMAS, &c., IN No. 895.

Answer to Miscellaneous Enigma:—Good works will never save you, but you can never be saved without them.

Answer to Anagram:

Out of the deeps of heaven
A bird has flown to my door,
As twice in the ripening summers
Its mates have flown before.

Why it has flown to my dwelling
Nor it nor I may know;
And only the silent angels
Can tell where it shall go.

Answer to Mathematical Problem:—$8, $16, $32, $64, $128, $256.

Reading for the Young.

ONLY A BROOK.

[A DYING child feared the River of Death, but while passing over whispered,—"It is only a little brook, after all."]

DEAR mother, I tremble to think I must die,
It is lonely and sad in the dark grave to lie;
Could you but go with me, I know that your hand
Would guide through the gloom of Death's shadowy land.

This deep, endless river! I shrink as I feel
Its darkness and mystery over me steal;
I fear its wild waves will my soul overwhelm,
Ere I reach the far shore of the heavenly realm.

But what is this music that falls on my ear,
Enchanting my senses, dispelling my fear?—
Oh, the angels are with me, I am not alone,
They're bearing me safe to my dear Father's home!

The playmates I loved, who have gone on before,
Are waiting for me on the beautiful shore;
Jesus beckons me to him, I follow His call—
It is only a little brook, after all!

Written for Moore's Rural New-Yorker.

MENTAL IMPROVEMENT.

NEWTON, on being asked how he had succeeded in making so many great discoveries, replied, "By thinking." And it is by thinking that we may all improve ourselves. Thoughts beget thoughts, and if we will allow ourselves to undergo this *labor* we may all accomplish great things. No instruction or aid from foreign or academical sources can take the place of *thinking*. If we expect to become useful and respectable members of society, we must exert our *mental faculties*—must strive against little difficulties, *and press on*, for those must persevere who win, and wear bright laurels of purity and holiness. All who would attain to honor and glory—who would deck their brows with wreaths of knowledge—must shake off natural indolence, and enter upon that courageous path of duty which is so indispensable for those who are clambering the steps of Knowledge,—those who are seeking that pearl of great value, which, in after years, will "serve for delight, for ornament, and for ability."

And now, my dear readers, whether you are boys or girls, men or women, I hope you will ever consider it a mistaken idea that none but those who have enjoyed the advantage of a collegiate or academic education can distinguish themselves in the arts and sciences. In this country there are no privileged orders; all who will may become proficient in knowledge. True, we cannot all command the genius of a HERSCHEL, a SHAKSPEARE, or a COPERNICUS; but we may all enter into the broad dominion of knowledge and gather from her labyrinthean bowers jewels that will shed a luster upon home and heart more resplendent than the costliest gems of Golconda's mines. METTA.

Olivia, Arkansas, Jan., 1867.

MARBLES.

No better indication of the approach of spring can be found than in the groups of marble-playing boys. The blue-birds and swallows are not more so. The sidewalks and back-alleys are alive these bright days with the boys and their marbles. On this subject an exchange says:

We passed some boys playing marbles yesterday. It carried us back—and it ain't often that we are *carried* back, we generally have to go back afoot—to youthful days, when we used to "lag for the base," when it was play for "fun" or for "keeps."

The man is often shadowed forth in the boy at marbles. The conscientious boy won't play for "keeps" because he has been told that it is gambling, and therefore wrong. If he resolutely maintains his position in the face of the laughs and jeers of his companions, the chances are that he will grow up to be a conscientious man.

The boy who continually and systematically cheats at marbles we would't like to trust, either as boy or man.

There is another kind of boy who agrees to play for "keeps" and when he loses says it was for "fun." We know numbers of men who we think used to play marbles that way.

Then there is the boy who sticks to what he says, and if he loses he does it without a whimper. He may not be as good as the conscientious boy, but the principle of honor is in him that will win respect when he comes to play a bigger game in life than that of marbles.

There is a sharp, wide-awake boy, who watches the game with the eye of a lynx, and is quick to detect a weakness in another's game, and to cover up any in his own. He shouts "knuckle tight" oftener than any one else, and if a player drops his marble he will yell "fen slips" quicker than the player can say "slips," to the latter's discomfiture, sending him "back to the severance." The cunning diplomatist is there, who is skilled in the "rounds," by which he takes advantage of all favoring circumstances. In short, very many phases of human nature are portrayed in the boys' game of marbles.

We observed one thing in the game we glanced at yesterday. Each of the boys had a bit of some kind of soft fur to rest their hands on when making a shot, to keep them from being soiled by contact with the earth. This was a refinement in the game of marbles that we never saw before. Dirty hands and a round patch of mud on each knee, we considered inseparable from the game. We would have been whipped for lying if we had come home to our parents in any other plight and said we had been playing marbles. But the world is improving.

To love something more than one's self—that is the secret of all that is great; to know how to live for others—that is the aim of all noble souls.

SPRING CAMPAIGN
OF THE
RURAL BRIGADE!

A NEW QUARTER OF THE RURAL

Begins April 6,—a good time for new clubs or additions to old ones to commence, though we can still furnish back numbers from Jan., or subscriptions may date from Feb. or March 1st. March is a good month in which to fill up Premium Clubs already begun, and also to form new ones. There are hundreds of localities in which clubs may yet be organized and Rewards of Merit secured. Our former Premiums are continued, and several new ones added,—(see part in RURAL of 9th, and full list in Supplement.)

☞ All whose subscriptions expire this week (March 30,) will find the number, **897**, after name on address label, and will of course understand that, unless promptly renewed, their papers will be discontinued under our advance payment rule. We trust all will renew, and that each will, if convenient, induce at least one new recruit to join the Rural Brigade.

ANOTHER SPLENDID PREMIUM!—By request we have added LAMB'S FAMILY KNITTING MACHINE to our list of Premiums. For 65 Yearly Subscribers (at least 50 of them being *new*) at club rate, $2.50 per copy, we will give a Lamb Knitting Machine, the Cash Price of which is $65.00.

MORE YET.—We have also added DOTY'S WASHING MACHINE, price $14, and will give it to every person remitting for 30 subscribers (20 of them *new*,) at club rate;—and the CHAMPION CLOTHES WRINGER, price $9, which we will give for a club of 15 subscribers (10 of them *new*,) at club rate.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., MARCH 30, 1867.

NEWS OF THE WEEK.

From New York.

ON Monday, the 18th, the Irish Catholic citizens of New York celebrated St. Patrick's day with a grand procession of their various fraternities, which ended in a riot in Grand street. A truckman, who had offended the processionists by being on the street with his truck when they were passing, in attempting to turn off into a cross street was set upon by numbers of them, and badly beaten. Policemen who came to his assistance were assaulted, one of the mounted marshals of the procession using his sword with terrible effect, and several of them are now lying in a critical condition.

MARCH 23.—The storm of Thursday was the severest known here in five years. There was no signs at an early hour this morning of its abating.

The Australasian was unable to come in yesterday, and the Ocean Queen and Merrimac were unable to go out.

From Washington.

ON Saturday, the 23d, the President sent in to Congress his veto message on the Supplementary Reconstruction bill. He objects generally to the provisions of the bill, and especially to those relating to the registry, no person being allowed to vote whose name is not recorded. He says, as the preliminaries to holding conventions are under martial law and condneted by the commanding officer, and as there is no appeal from the registry, those in control of it may so act as to prevent the election of such delegates as may faithfully represent the wishes and sentiments of the State in the convention to be called to frame a new constitution.

The bill was passed over the veto—in the Senate by a vote of 40 to 7; in the House by 114 to 25.

The committee to investigate the affairs of the Printing Bureau, report no fraudulent or over-issue of Government securities.

From the South.

RICHMOND, March 23.—It is authoritatively announced that General Lee is strongly in favor of the people voting for a convention, and says every man not actually disfranchised should not only take the necessary steps to prepare himself to vote, but to prepare all his friends, white or colored, to vote right. He thinks co-operation of all the people, officials and citizens, should be promised, and that the chief object should be to get as quickly and quietly as possible back into the Union with such rights as are left us. He thinks the oath proposed is such as every good citizen not disfranchised, ought now to be able to take as a simple matter of truth and duty as a citizen of the country.

Col. Bumford, Assistant Commissioner of the Freedmen's Bureau for North Carolina, states that there are at least six thousand persons in North Carolina suffering from want of food, of which number two-thirds are whites. Three thousand bushels of corn were distributed during the month, sent by the Relief Commission of New York city. The distribution by the Bureau of Government rations was as follows:—To hospital, 6,483; orphan asylum, 195; destitute whites, 10,958; destitute blacks, 13,421.

Advices from North Alabama state that the inhabitants living a distance from the railroad are dying of starvation, and unless relief reaches them, the whole range of counties in the Sand Mountain region will be depopulated. The recent floods destroyed over three thousand bushels of corn and a large amount of food sent by the Relief Associations to the sufferers.

The Delaware Legislature has adjourned. Among the important legislation have been the passage of a bill to equalize punishments regardless of color, the rejection of the Constitutional Amendment, and the passage of the amendatory school law.

BALTIMORE, March 24.—The Legislature adjourned yesterday sine die.

The bill admitting negroes to testify on the same footing as whites in the Courts of the State, failed to pass.

The ex-rebel Gen. Longstreet has expressed his opinions on the Reconstruction plan in the columns of the New Orleans Times. He says there is no humiliation attached to an acceptance of the terms proposed by Congress, and he has no reason to doubt that such an acceptance in good faith will secure the re-admission of the Southern States.

From China and Japan.

THE Chinese Government resists all attempts to build a railroad through Mongolia.

The French are about to construct a street railroad from Shanghai to Leechow.

The United States steamers Hartford, Shenandoah and Ashuelat are at Hong Kong. The Shenandoah goes to Yokohama to relieve the Wyoming.

Minister Burlingame is in high favor at Pekin. His conciliatory course is highly approved.

A terrible explosion occurred in the harbor of Hong Kong on the 17th of January. An old hulk called the Sulpier, used for the storage of powder, blew up, and together with the Bremen schooner Themis, was totally destroyed. Thirty or forty lives were lost. Many persons who were in boats in the neighborhood were killed. Two hundred thousand pounds of powder were on board the hulk. Hong Kong was shaken by the explosion as if by an earthquake. Four English gunboats, moored in the vicinity, barely escaped destruction. In the village of Tohinatee one hundred and thirty houses were unroofed and the most of them shaken to pieces.

Business is dull at Yokohama, and among the causes calculated to prolong the depression is the death of the Mikado. Law and custom prescribe, on such occasions, a long period of national mourning, which implies a cessation of trade, business and amusements. The usual period of mourning is fifty days, at the end of which the ceremonies attending the appointment of a successor will take place, which will occupy thirty days more.

Rinderpest.

THE United States Consul at Antwerp has informed the Secretary of State of the breaking out anew of the rinderpest, that fearful scourge which swept over the greater part of Europe last year. Secretary McCulloch has issued circulars to Collectors of Customs cautioning them to be on their guard and prevent the landing of foreign neat cattle and hides. The English papers, however, state that the plague has entirely disappeared from Great Britain. The European Times says:—"No case occurred during the week ending March 2—the first time that there has been an entire absence of reports since the outbreak first commenced."

From South America.

LATEST advices from Rio Janeiro report nothing important in the progress of the war.

Two steamers, with Argentine and Oriental troops on board, had exploded, and quite a number of lives were lost, and an Argentine war steamer had been run down.

The Mendoza rebellion had been suppressed.

United States intervention was talked of, but not generally expected.

A conspiracy to murder the members of the Government of Buenos Ayres had been discovered and the conspirators seized.

Recent Fires.

DURING the past two weeks fires have occurred at the following places, with losses indicated by the figures annexed:—Augusta, Me., $12,000; Chicago, $150,000; Memphis, $150,000; Boston, $6,000; Brighton, Mass., two school houses, $20,000; New York, including Winter Garden Theatre, $600,000; Cincinnati, $20,000; Troy, $5,000; Pittsburg, $75,000.

From Albany.

THE eight hour bill has passed to a third reading in the Assembly.

The bill establishing free schools throughout the State has passed the Assembly.

The House has resolved to hold evening sittings for the remainder of the session, except on Saturdays.

NEWS PARAGRAPHS.

THE Memphis and Little Rock Railroad has been consolidated with the El Paso and Pacific Railroad, of which General Fremont is President.

THE belief prevails at the South that the postal currency, so-called, is not redeemable by the Government, and is worthless. There is of course not the least reason for such an idea.

THE people of Kansas expect a plague of grasshoppers. The country is filled with the eggs deposited by last year's swarms, and two months will hatch them out, probably to devour every green thing.

THE Wisconsin Assembly has reconsidered the passage of the resolution submitting to the people the question of extending suffrage to women, and rejected it by a vote of forty-three to thirty-seven.

EDWARD O'BRIEN, a New Jersey railroad tender, has been convicted of manslaughter and fined $600 and sentenced to three months' imprisonment for negligence causing an accident by which two passengers were killed last summer.

THE United States Consul at Zanzibar, under date of December 9th, officially informs the State Department of the murder of Dr. Livingstone and half of his native followers, on or about the 25th of October last, by a band of natives in the interior of Africa.

INFORMATION has been received that the cable intended for the submarine telegraph from Cuba to Florida is now in satisfactory process of construction in London, under the supervision of Mr. W. E. Everett. It is expected to be laid by the early part of June next.

THERE is considerable mystery about the erection of a monument to Aaron Burr, in the cemetery at Princeton, N. J. His dust lies elsewhere. It is said by residents that the slab was secretly brought to Princeton only a few weeks since, and raised at midnight by unknown hands.

A NORTH CAROLINA correspondent of the RURAL corrects the statement that the last Revolutionary soldier is dead. There is one living in Concord, Cabarrus Co., in that State, named John L. Brown. He is one hundred and three years old, "enjoys perfect health and chops all the wood for the family."

A SAD affair is reported from Houston, Texas. Two young men, tinsmiths, were waiting for their dinner, and to while away the time began to play with an old bombshell which they had got ont of the bayou, into which a large number were thrown at the surrender. It exploded, wounding both of the young men fatally.

THE Japanese Commissioners to Washington are Onotomoguro, First Commissioner; Matsumatoyudayre, Second Commissioner; Fukusawauketchi, Secretary; Tsudasenya, First Interpreter; Sekeyshinpatchi, Second Interpreter; Yinnoshinnoso, Paymaster; Ogasawarn Owata Haigker, Naval Officer, and native servants.

THE Lafayette (Ind.) Conrier says:—"It is reported that a diamond of immense value was found in the Tippecanoe River, near Monticello, on Monday. The value of the precious stone was first estimated at $250,000. Subsequent investigation reduced it to $25,000, and a later and more scientific observation places the figures at $16,300."

THE colliers of Schuylkill Co., Pa., are banded together for the purpose of controlling the mines, and have committed serious outrages. One Superintendent has been murdered, and others are threatened. The ruffians are mostly Irishmen, and are known as "Molly Maguires." It is impossible to punish them, as they have confederates in every jury that can be empanneled.

THE Irish enthusiasm in New York has all subsided, and the late rebellion in Ireland is conceded to have been a disgraceful failure. The only party who receive any attention are those who favor an invasion of Canada. Several meetings have been held on the subject of an early invasion, and steps are being taken that look something like work.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, March 26, 1867.

MONEY is in fair supply in Western New York, and there is no particular pressure in any of the commercial towns at the East or the West. Rates of interest are a little higher in New York on call loans, but the supply of funds is reported fair. The Boston papers continue to discuss the great bank frauds which recently occurred in that city, and as the Sub-Treasurer's office was somewhat mixed up in the matter, the U. S. Dist. Attorney was notified of the transactions and is now engaged in an investigation. The price of gold has continued for the past week very uniform. Sales were made in New York yesterday at 134¼. On the first of May about $24,000,000 in gold will be paid out by the United States Treasury. Probably one-third of this amount is due to foreign holders of 5-20s. Heretofore when interest has been paid to foreigners, on these securities, they have at once re-invested a large portion of it in the same description of stocks. The shipment of specie on Saturday last, from New York, was unusually light—being only about $70,000. The prospect now is that gold will decline between this and the first of May, in anticipation of the large disbursements then to be made. Some heavy failures are reported at the East, and some small "irregularities" have been discovered in the accounts of bank officers. It is believed bank directors are pretty generally looking over their books, and these examinations have caused a few resignations of those heretofore implicitly trusted. Such "resignations" are the result of speculations in gold or fancy stocks.

The New York Chamber of Commerce has adopted a memorial to the Legislature asking for a repeal, or at least a modification, of the usury laws of this State. A resolution was reported at the same meeting recommending an early return to specie payments.

Mr. Morrill has recently introduced into the Senate a gold bill, which he designs as a measure to prepare the way for specie payments. A New York paper says the plan is "so extreme that the measure is deemed certain of defeat." One proposition is to require the Treasury to suspend sales of gold until the reserve coin reaches $200,000,000. It is contended that the bill as it now reads would aid the "bulls," rather than tend to bring down the price of gold.

WOOL.—The eastern wool market was not quite as active the last week as for two weeks previous. A further advance is not expected until there is an advance in woolen goods, which have not responded to the recent advance in the raw material. A letter from Detroit says: "The clip of 1866 is now mostly out of the hands of the grower. What little remains is being taken by local buyers at 52@53c. Wool is selling in Detroit at 60c. for XX, 55c. for X, and 50@52c. for medium. The amount now held by growers will not exceed 150,000 lbs." Some lots in Rochester have recently been taken at 50@53c.

WHEAT AND FLOUR.—There has been a good deal of activity in the wheat and flour markets, both east and west, of late, and prices have advanced. This advance is mainly caused by the reported light stocks in all parts of the country. We have repeatedly stated in these columns that the supply of good wheat would be found to be light this spring, notwithstanding the assertion occasionally made in the papers that western farmers were holding a large amount in reserve. The advance in wheat in Milwaukee in the last eight days has been fully 20c. per cental. The advance in flour in the Boston market during the same time was from 50c. to $1 per bbl. on the various grades. At St. Louis and Chicago the market has advanced, and wheat is in active demand.

There are some reports that the late cold weather injured the growing wheat somewhat, at the West and Southwest, but most of the statements we have noticed, and those from sources we deem most reliable, concur in representing the prospect unusually fair for a large yield of wheat the coming fall.

BUTTER.—The price of butter has tended downward for some time. At the East the lower grades are in large supply. It is generally believed that there is a pretty good supply of butter in the country, and therefore speculators have not evinced a disposition to purchase largely for the last week or two at current rates.

DRY GOODS.—Eastern jobbers continue to report small sales for the season. Western buyers are very much delayed, and very few are yet in market. Jobbers are realizing small profits, and are obliged to be content with a very small margin or keep their goods. Retailers, also, we believe, throughout the country, are selling at less than half the profit they realized two years since.

Rochester Wholesale Prices Current.

Flour, Feed, Grain, Etc.		Fruits, Vegetables, Etc.	
Flour, w't wh't.	$16,00@16,50	Apples, green,	$0,75@1,25

Best Hive for Bees.—Best Book for their management. Bee-Keepers' Almanac and Circular for 1867 sent free.

K. P. KIDDER, Burlington, Vt.

NO PIANIST WILL FAIL TO ADMIT that of the hundreds of Books of Instruction in Piano-forte Music published, Richardson's New Method takes the lead. Twenty-five thousand copies of Richardson's method are sold every year. It is adapted alike to the youngest and to the oldest, to the beginner, for first lessons, and to the amateur, for general practice. Price, $3,75. OLIVER DITSON & CO., Publishers, Boston.

BARKER'S CORN SHOCKER was PatENTED DEC. 19, 1865.—It works to entire satisfaction, saving much time. The corn is set around the Shocker and held in position by the springs, as seen above. When the shock is completed it is easily removed, the springs yielding as it passes from the shock. The legs are movable, consequently are not liable to be obstructed by fallen corn or vines. It is durable and cheap; can be sold at retail at $2; when not in use, may be shut up like a knife, and occupies but little space. Read what one neighborhood think and say of it:

We, the undersigned farmers of Jefferson, Hillsdale Co., Mich., hereby say that we consider L. S. BARKER'S PATENT CORN SHOCKER a useful invention, and cheerfully recommend it to the public.—Elisha Hubbard, J. W. Coffin, J. H. Bailey, W. L. Johnson, H. J. Cole, Joseph Cheeney, James A. Cole, R. J. King, S. P. Fuller, John W. Tiffany, Jonathan Green, Geo. W. Ramsey, Wm. Way, M. Ramsey, Zela Hadley, Willett Green, Henry E. Crane, H. H. Herring.

For Farm, Town, County or State Rights, apply to the undersigned, at Pittsford, Hillsdale Co., Michigan.

ANSON BACKUS.

WANTED—FARMERS, MECHANICS, BUSINESS AND PROFESSIONAL MEN—To solicit orders and collect on subscriptions for

The American Farmers'
HORSE BOOK:

One Octavo Volume of 600 Pages, with numerous illustrations, by

ROBERT STEWART, M. D., V. S.

☞ *Sold exclusively by subscription.*

It embraces in addition to the subjects usually treated of in similar works, a full description of the Causes and Nature of several Diseases peculiar to the American Horse; together with original, simple, and effective modes of treatment, including those of some diseases heretofore considered incurable. Embodying the results of twenty years' original investigation and successful Veterinary Practice in our own country. It also contains a neat, timely and sensible Treatise on Stock Management; including Breeding, Food, Stable Management, Gentling, Breaking, the Marks of Age, Abuses, Shoeing, &c.; written in plain, simple language, straight out with the quill of a master.

One great and leading feature of the work is to teach all how to prevent disease and unsoundness in the Horse, which, if strictly observed, would prevent more than one-half the losses sustained by a lack of such knowledge; which losses are not only needless but criminal, in view of the great sufferings unnecessarily endured by that noble animal.

This work is not a reprint or rehash from European works, but purely American, as the title indicates; which, with the great celebrity of the author, commends it to the confidence of every owner of a horse in the country, however many old, cheap, or unsatisfactory works he may possess, and secures to it a POPULARITY AND SALE NEVER HERETOFORE ATTAINED BY ANY SIMILAR PUBLICATION.

One Agent reports 24 subscribers the first day; another 9 the first half day; another 85 out of the first 100 solicited; another 20 out of the first 35; another an average of 10 per day for the first week; another 10 from the first 11 solicited.

Veterinary Surgeons speak and write of the work in terms of the most *unqualified approval*. Thousands of copies have been delivered. Patrons are highly pleased with it. Orders will be filled promptly, as arrangements are effected to supply the increasing demand.

Now is the time to secure desirable territory, and a lucrative business for the whole year. Certificates issued, granting sole right of sale. Apply personally or address C. F. VENT & CO., 28 West 4th-st., Cincinnati, O.; R. H. CORRAN, Main and Water-sts., Rochester, N. Y.; or J. S. GOODMAN & CO, 5 Custom Place, Chicago, Illinois.

THE UNIVERSAL CLOTHES WRINGER

AND

DOTY'S CLOTHES WASHER.

THE UNIVERSAL WRINGER was awarded the First Premium by the unanimous vote of the Committee of the GREAT NEW ENGLAND FAIR of 1866, after the most scrutinizing trial of the various machines of numerous competitors. It was pronounced superior to all others at the

World's Fair in London, 1862.

Took the First Premium at the last two Great Fairs of the AMERICAN INSTITUTE in New York City, 1863 and 1865. At each of the following State Fairs it also received the FIRST PREMIUM:

New York, 1862, 1863; *Vermont*, 1863, 1866; *New Hampshire*, 1865; *Pennsylvania*, 1863, 1864; *Ohio*, 1865; *Michigan*, 1864, 1866; *Indiana*, 1863, 1864, 1865; *Illinois*, 1863, 1864, 1865; *Iowa*, 1863, 1864, 1865; *Wisconsin*, 1864, 1865, 1866; *Minnesota*, 1866; *Missouri*, 1866; *Kentucky*, 1865, 1866; *Conn. River Valley Fair*, 1864; *Champlain Valley Fair*, 1864; *Mechanics' Institute, Boston*, 1865; and at most of the County and Institute Fairs throughout the country where it was exhibited.

The manufacturers WARRANT it FAR superior to all others. This is the only Wringer which is allowed to use the Patent "STOP GEAR" or "regulator," without which cog-wheels are almost useless. In selling the Universal Wringer, we found a large demand for a good Washing Machine, and knowing

DOTY'S WASHING MACHINE

to be the best; we bought the patent, and now offer it to the public, knowing that it will give satisfaction wherever used. Doty's Clothes Washer was awarded the FIRST PREMIUM at the GREAT NEW ENGLAND FAIR OF 1866, after the most thorough trial with numerous competitors. It has taken the FIRST PREMIUMS at the State Fairs of *New York, Pennsylvania, Vermont, Michigan, Wisconsin, and Iowa*. Also, at the last *Great Fair of the American Institute*.

A supply of the Wringers and Washers is always kept on hand in Chicago, Cincinnati, Cleveland, Louisville and St. Louis, boxed ready for shipment, at about New York prices. Circulars, giving wholesale and retail prices, sent free. Large profits are made selling these Machines. Exclusive right of sale given, with no charge for the patent right. C. E. BROWNING, General Agent, No. 32 Courtland St., N. Y., (Opposite Merchants' Hotel.)

Itch, Salt Rheum.—Wheaton's Ointment will cure the itch in 48 hours,—also cures Salt Rheum, Ulcers, Chilblains and all Eruptions of the Skin. Price 50 cents. Free by mail by sending 60 cents to Weeks & Potter, Boston, Mass.

For sale by all druggists. 855-52t

Additions to Clubs are always in order, whether in ones, twos, fives, tens, twenties, or any other number. Subscriptions can commence with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless specially directed otherwise. Please note this.

OUR ADVERTISING RATES.—Hereafter the price of advertising on the last page of the Rural New-Yorker will be Seventy-Five Cents a Line, each insertion. The price for inside pages will continue at Fifty Cents a Line for advertising, and One Dollar a Line for Special Notices, until otherwise announced.

FOREIGN NEWS BY TELEGRAPH.

Berlin, March 23.—King William of Prussia, has just succeeded in effecting an offensive and defensive treaty with the Kingdom of Wurtemburg. It is understood that one of the features of the treaty is, as in the treaties with Baden and Bavaria, that in times of war Prussia is to command the consolidated armies of both countries.

Berlin, March 23.—The recent conclusion of a treaty between the Kingdoms of Prussia and Bavaria and the Grand Duchy of Baden has engendered a bitter feeling in France. It is believed that the effort of the Emperor Napoleon to form a combination of France, Holland, Belgium and Switzerland against Prussia is traceable to this cause.

Vienna, March 23.—Assent to the proposition of the great powers of Europe relative to the session of the island of Candia to the Grecian Government has been emphatically refused by the Sublime Porte.

London, March 25—Noon.—Consols to-day opened at 91¼ for money. American securities quoted at the opening as follows:—U. S. 5-20's, 74½; Illinois Central, 73½; Erie, 39.

Liverpool, March 25—Noon.—Cotton market opened firm to-day with considerable activity. Sales to-day will probably reach 10,000 bales. The following are authorized quotations:—Middling uplands, 13⅜; middling Orleans, 13½.

Breadstuffs generally quiet.

Grain—Corn has declined to 40s6d. per quarter for mixed western. Oats are steady at 3s.3d. per 45 lbs.

Provisions quiet and unchanged. Lard dull at 50s.6d. per cwt. for American. Prime mess pork at 77s.6d.

DODGE'S
PATENT REAPER AND MOWER,

AND SELF-RAKER,

OHIO AND BUCKEYE PATENTS COMBINED.

Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:

L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

This Machine embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a Revolving Rake, and does its own reeling, saving the expense and trouble of a Reel. It makes a Perfect Separation, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED

The Special Diploma and Grand Medal of Honor,

AS THE BEST

COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the Saint Louis Agricultural and Mechanical Association, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a Gold Medal as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and First Premiums, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some Great Improvements for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (20 gal.,) $16; No. 2, (¼ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¾ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. Moore, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—Solon Robinson, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it first and commended it highest of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. Edwards Todd, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The Seneca Falls Churn Manufacturing Co. is organized under the General Manufacturing Law of the State of New York, with a capital of $100,000, and have extensive facilities for manufacturing Churns and the patented fixtures. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. Moore, Editor Rural New-Yorker.

☞ The Michigan Churn Man'f'g Co., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

REAL ESTATE AND LOAN AGENTS.—The undersigned will attend to the purchase and sale of Real Estate in Western New York. Also, pay taxes, collect rents, notes, accounts and mortgages, negotiate loans, &c. All communications enclosing stamp for return postage, will receive prompt attention.

MALTBY HOUSE,

A. B. MILLER, PROPRIETOR,

BALTIMORE, MD.

GOOD NIGHT.

BY T. B. ALDRICH.

Good night! I have to say good night
To such a host of peerless things!
Good night unto that fragile hand
All queenly with its weight of rings;
Good night to fond uplifted eyes,
Good night to chestnut braids of hair,
Good night unto the perfect mouth,
And all the sweetness nestled there—
The snowy hand detains me, then
I'll have to say good night again!

But there will come a time, my love,
When, if I read our stars aright,
I shall not linger by the porch
With my adieus. Till then, good night!
You wish the time were now? And I.
You do not blush to wish it so?
You would have blushed yourself to death
To own so much a year ago—
What! both these snowy hands? ah, then,
I'll have to say good night again.

The Story Teller.

From London Society.

HOW I LOST MY WHISKERS.

"Do you object to smoking, sir?"

This I asked in my blandest manner of an old gentleman who sat, with his face hidden by a newspaper, opposite to me in a railway carriage.

All the seats in the carriage were filled; I and four others were on our way from Cambridge to enjoy the Christmas vacation. Our spirits were high, for there is a delight in banishing for a time all thoughts of conic sections, Newton's "Principia," and the little-go, and entertaining, in exchange, visions of "hops," skating-parties, and all the orgies which every right-minded family hold at this season in honor of King Christmas.

But I must introduce you to my chums, for chums we were, although our tastes did not all lie in the same direction. Jack Stirrup is (or rather was at that period) a riding and hunting man, and was not unfrequently to be seen in Newmarket; Stretcher, on the other hand, loved boating, and preferred the sight of a well-developed biceps to that of the best bred hunter, and would often remark to Jack, "How on earth can you say that you would rather see the 'Two Thousand' than the 'Time race' in the 'Colquhoun Sculls,' I cannot for the life of me make out." Edwards was a poor and reading man, but whose wit and talents rendered him a universal favorite; whilst Davies was a rich, open-handed, good hearted fellow as ever lived. For my own part I do not think I had any well-defined peculiarity, but did a little of everything. I read a little, rowed a little, hunted a little, had a fair income—in short, if I had any characteristic at all, it was a love of laziness and practical jokes.

We congratulated ourselves in getting a carriage to ourselves (with the exception of the old gentleman I have named,) for we intended to keep out the cold, and beguile our journey with sundry pipes and cigars. We had our cases out, and were preparing to light up, as a matter of course, when we were astonished by my *vis-a-vis* dashing away the newspaper which had hidden his face.

"Do I object to smoking? Yes, sir, I do object, very strongly, sir! and beg that you will instantly replace your cigars in your pockets. I insist on having no smoking in this carriage!"

We looked aghast at this sudden burst of old-gentlemanly wrath.

"Might I ask if you intended traveling far on this line, sir?" inquired Edwards, in his comically-polite tone.

"What is that to you, sir? What business is it of yours where I am going to?"

"I merely wished to suggest, in case of your traveling far, that, pleasing and delightful as it would be for us to enjoy your agreeable society, yet, nevertheless, we would try to bear the loss, should you prefer to change carriages at the next station."

"No doubt you would wish to get rid of me, but no, sir! I do not move my seat, and the first one that smokes, I report to the guard."

"In that case I fear we shall be obliged, painful though it be, to tear ourselves away," I said, as we drew up at a small station.

Fortunately we found the next compartment empty, and as we started again we pulled out our cigar-cases, this time to light their contents.

"The old boy has certainly got out of bed the wrong side this morning," said I, puffing away.

"Or has made a mistake in his betting-book," remarked my sporting friend. "We'll give him a benefit now, at any rate; I vote we take it in turns to puff smoke through the lamp-hole. Let's look at him; ha! cooled down a little, is about to compose himself to sleep. I'll trouble you for his nightcap; come and look at it, Fred."

I did so, and roared on seeing a red, woven cap of conical shape, which added very considerably to the irascibility of the wearer's features.

With perseverance which deserved a better cause, we each made a tube of paper, and putting the end through the lamp-hole, took our turn at "smoking him out;" and I blush as I now think how heartily we enjoyed the enraged state in which he paced up and down the empty carriage, like a caged tiger.

The next time we stopped, however, the guard put his head into our carriage window and said, with a wink:

"Gentl'm in next compartment complains of your smoking, sir."

"Smoking!" we exclaimed, with mock indignation. "Do we look as though we'd been smoking? What nonsense!" and added in a mysterious manner, "You see there's one vacant seat; of course we're not going to tell tales of the man who occupied that."

"All right!" said the guard, laughing, "I wasn't born yesterday." And after a slightly confidential transaction of a pecuniary nature, he left us in peace.

The snow, which had been falling heavily all day, now lay thick all around. Our eyes ached again, as we looked out of the window (which was itself all frosted over,) on the dazzling snow which covered all the landscape; and as we stamped our feet on the floor of the carriage we began heartily to wish ourselves at our journey's end, and by the fireside.

* * * * * *

"Hallo! what are we stopping for now? I wonder whether we're going to do an upset, or anything exciting of that kind," said Davies, looking out of the window. "I don't see a train anywhere that we can have a friendly collision with."

"Get out here, gentlemen," said the guard, passing the window; "the line is snowed up, and we shall have to wait till it is clear."

The grumbling which this pleasant announcement caused was immediately stopped by our hearing the voice of our disagreeable companion in the next compartment.

"Line snowed up, is it?" said that gentleman, trying to appear calm in his fury, "and we get out here? Oh! and do you suppose I am quietly going to submit to this? The line ought to have been cleared ready for us. I shall bring an action."

"But sir?" I said, "how on earth could they——"

"Might I request to know who spoke to you, sir? I consider your remark and interference excessive impertinence."

This was a little too bad, and I turned to Jack and whispered that we would devise some plan of giving our friend a lesson demonstrative of the evils attending bad temper at Christmas time.

We were fortunately stopped at a distance of only two hundred yards from a station; but a very poor station it was, without any waiting-room or refreshment-rooms.

The station-master, who was a pleasant sort of a fellow, said we should have to wait but a couple of hours, and gave us a room, where we made the best of a bad job, and having sent for some beer from the nearest "public," became, as Edwards mathematically observed, approximately happy. The old gentleman, however, had not yet vented all his wrath, but kept on anathematizing the snow and the railway people at intervals. After we had warmed ourselves Stretcher proposed that we should have some songs; but as no one volunteered, I suggested that we should get on our way sooner if we all went out and helped to clear away the snow from the line. To this all agreed (with the exception of our amiable friend of course.)

We had worked away merrily for about an hour, and were congratulating ourselves on being able to start again, when Jack came running up with a very pleased expression of countenance, and as he tapped me on the shoulder I remembered that he had not been with me for the last half-hour.

"Fred," he said, "I've an idea."

"Keep it then," I replied, "for it is so rare a commodity with you that I would not deprive you of it for the world."

"Don't chaff, and I'll tell you all about it. I went up in the room at the station just now, and found our friend the old boy fast asleep in his chair, completely collapsed under the soporific effects of the fire and a glass of brandy and water. I immediately ran into the village and bought these," he said, showing me a handful of screws, a gimlet and a screwdriver.

"What in the name of everything ridiculous do you want these for?" I asked.

"Don't you see? we shall be able to start directly, now that the line is clear; we meanwhile run up stairs, and screw the old gentleman firmly into the room—the train goes on—we are revenged for his surly behavior to us, and he will then learn that 'old gentlemen should not be ill-tempered at Christmas-time.'"

"Capital!" I said, always ready to fall in with a practical joke; "let us be off at once."

We certainly found the old gentleman in as Morpheau a torpor as we could wish. His feet were propped up on a chair, whilst his boots were drying, and he was breathing with his mouth wide open in a rather apoplectic manner.

"Shall I put a snowball into each of his boots?" I said.

"No! that would be too much of a good thing, but I'll tell you what you shall do; you're rather a swell at drawing, aren't you? I'll just burn the end of that beer-bottle cork, and you shall artistically adorn his face."

"That is splendid," he whispered, as I finished off with giving him a mustache, which turned up in a facetious manner. "Just move that looking-glass, and put it so that he may admire himself directly when he wakes; and now let us be off."

We walked on tiptoe to the door. The hinges began to creak; and cold as the weather was, a faint perspiration began to develop itself on my forehead, as I noticed the old gentleman move in his chair; it was, however, only to turn his head on to the other shoulder, and we closed the door in safety.

"Give me the screws, quick," I said, "and go to the bottom of the stairs and prevent any one coming up."

I bored hole after hole as noiselessly as I could, and having made the door as fast as eight good screws would make it, I ran down stairs and whispered "All right!"

"Is there a gentleman up-stairs, sir?" said the station-master, walking towards us. "He asked me to wake him in time for the train, and it is just ready to go."

"Oh! he won't like to be disturbed till the last moment, you may be sure," said Jack. "By-the-by, I wish to talk to you of a plan by which I think your station might be much improved."

Now architecture happened to be one of the station-master's hobbies, and they were soon deep in discussion. I beat a hasty retreat to the guard, and producing a sovereign, said:

"If you get us off in five minutes from now, waiting for no one, and ring your bell at the very last minute, this is yours."

"All right sir! the luggage is all in, and most of the passengers. Take your seats. Going on!" he shouted, whilst I stood with my watch in my hand.

"One minute left! Ring the bell now!" I said. "If they undo those screws in one or even five minutes, I'll eat them."

We jumped into a carriage, the guard gave the final whistle, and the train moves slowly on. We anxiously watch the result of our plot, with our heads out of the window. After waiting one or two minutes, we noticed a figure gesticulating at the station window. The train then passed into a deep cutting, and we lost sight of it.

I think that I have forgotten to say that I was going to spend the Christmas with a college friend. He had gone down a few days before, and had promised to meet me at C—— station.

You may imagine that I was not sorry to find myself arrived there, nor yet to see my friend Tom stamping his feet on the platform, no doubt thoroughly tired of waiting for the train. As he drove me up he began talking of the different arrangements he had made for our mutual amusement. "To-morrow," he said, "I've set aside for a skating party; I have had the pond in the park swept, and invited all *les jeunes demoiselles* within reach, and as they have all accepted, it will give you a very fair idea of our 'native beauty.'"

Now, of all jolly things in the world, I think a skating party is the jolliest. Tom says that I am fond of showing my skating off; but I deny that this has anything to do with it. In the first place, the frosty weather (and the mulled claret) induce high spirits; then there are the tumbles to laugh at, and the ladies' skates to strap on, (which last, in my mind, is not the least pleasant part of the entertainment.)

We had by this time reached the house, and, after having accomplished our toilets, Tom took me into the drawing room.

"The guv'nor isn't at home; but let me introduce you to my sister Minnie."

Miss Minnie rose, and held out her hand at once; but, for my own part, I was too dumbfounded to utter a single word. I am told that I am far from eloquent when describing female beauty, so I will not attempt it here; but I must say that I had never, and have never since, seen such a pretty and merry face. When dinner was announced, however, I had recovered my equanimity sufficiently to offer her my arm, and after a short time we got to know one another thoroughly.

The dinner (perhaps it may have been the port wine) had opened my heart, and when we removed to Tom's sanctum to smoke (where, by-the-by, Miss Minnie insisted on joining us, saying that she "liked the smell of tobacco, and found it so dull by herself,") I began to relate my adventures with the old gentleman.

Peal after peal of laughter arose as I proceeded with my narrative. I warmed with my subject, quite outdoing myself in the description of the old gentleman's angry face, and his irate behavior.

"Here!" I said, in triumph, "is my trophy!" and I held out the nightcap.

Never shall I forget that moment — brother and sister stared at it for one second, and then Tom, looking vacantly at me, immediately went into an hysterical fit of laughter. His face began to grow quite black, and the tears rolled down his cheeks.

My face presented anything but a laughing appearance, for I was struck with amazement at his behavior. At last, with what little breath he had left, he managed to get out the words—

"It's—the—guv—nor's—night—cap!"

As he said this he pointed to a small label inside the cap, which I had not noticed before, and there, sure enough, were the words,

T. GRUMBLETHORP, Esq.,
Grumblethorp Hall.

Reader, have you ever wished the earth to open and swallow you up? How heartily did I wish it at that moment. I saw the whole affair at a glance;—I had been playing a practical joke upon the gentleman in whose house I was sitting, and had been describing him in the most ridiculous light to his daughter. How I hated Tom for laughing (his sister was nearly as bad, by-the-way,) whilst I sat turning alternately red and pale, considering what on earth was to be done. At this moment a servant entered the room.

"A telegram for Miss Grumblethorp."

She hastily looked over it, and read it aloud to us:—

"Shall come by the 8-30 to-morrow morning. Some young jackanapes have played a practical joke, and caused me to miss the last train to-night."

At last I found words. "Tom," I said, "I must fly. Miss Grumblethorp, I cannot sufficiently apologize to you for——"

"O! you need not apologize to me, nor must you go, either. Tom, you must devise some escape out of the dilemma."

"It would certainly never do for the governor to recognize you; he'd never forgive you, and would cut me off with a shilling. Oh! I have it; I sentence you, in punishment, to cut off those whiskers and mustache—he'll never know you, then."

"Never!" I said, with determination. "I am not a vain man, but I will never voluntarily make a fright of myself."

"O! I'm sure you'd look much better without them," said Miss Grumblethorp; "besides, remember the skating party to-morrow; I want you to teach me so much. You really must not go."

I was not proof against this. The adorable Miss Minnie actually wishing me to stay! Again I recollected that I had no other invitation for Christmas, and all my family were spending the winter abroad. Under these circumstances I determined to risk all, and stay where I was sure to enjoy myself.

Next morning I rose early, had a "clean shave," and borrowed a pair of light blue spectacles. When I met Miss Grumblethorp on my way to breakfast she declared the disguise was capital, telling me at the same time, that her father had arrived, and was in the breakfast-room. I was formally introduced, and by the way that he received me it was evident he had not recognized me in the least.

"Always glad to see Tom's friends," said the old boy, in quite a cheerful tone. "Thank goodness he doesn't choose for companions such puppies as those who insulted me yesterday. I wonder whether they consider themselves gentlemen?"

In this strain he continued to talk all breakfast time, whilst I answered with perfect gravity, not daring to look at Minnie, for I felt sure she was enjoying the joke.

My story is nearly over. I enjoyed the skating party thoroughly, for I spent most of the day in teaching Minnie. I also accompanied her the next evening to a ball, where I found she could move much more quickly and gracefully than on the ice.

* * * * * * *

I am now married; and though I have since grown my whiskers, yet my father-in-law has never suspected that I was "the young jackanapes that made him late for the train," (he has never mentioned the burnt cork business,) and has always been so kind to me that I have heartily repented of it.

New Advertisements.

THE

GREAT AMERICAN TEA COMPANY

Have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

All goods sold are warranted to give satisfaction.

PRICE LIST OF TEAS.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₱ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ₱ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ₱ lb.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.

Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by Post-office money orders, or by Express, as may suit the convenience of the club. Or, if the amount ordered exceed thirty dollars, we will, if desired, send the goods by Express, to "*collection delivery*."

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

WILLIAMSTOWN, Orange Co., Vt., Jan., 1867.
TO THE GREAT AMERICAN TEA CO.,
Nos. 31 and 33 Vesey Street, N. Y.

GENTLEMEN:—The Tea I ordered before gives good satisfaction, and I send you another order amounting to $41.60, which you will please fill and send to my address by Express. Many thanks for the complimentary package.
Respectfully yours,
ALEXANDER SMITH.

THE

CENTRAL PACIFIC RAILROAD COMPANY

Having completed, equipped, and put in operation nearly one hundred miles of their Road, from Sacramento, California, to within twelve miles of the summit of the Sierra Nevada Mountains, continue to offer for sale, through us, their

FIRST MORTGAGE BONDS,

Issued in conformity with the Acts of Congress and the laws of the State of California, upon the division of their Road located in the State of California, and extending one hundred and fifty-six miles from Sacramento City to the California State line.

The Bonds have Thirty Years to run from July 1, 1365, and are secured by a

FIRST MORTGAGE,

Constituting an absolute prior lien on the portion of Road above named, with all the Rights, Franchises, Equipments, &c., pertaining thereto.

The amount of these First Mortgage Bonds to be issued per mile is limited by law to the amount of United States Bonds allowed and issued to aid the construction of the Road, and the Mortgage by which they are secured is *declared by Act of Congress to constitute a lien prior and superior to that of the United States Government.*

Interest at the rate of Six per cent. per Annum, payable Semi-Annually, on the First days of January and July.

Principal and Interest payable in

UNITED STATES GOLD COIN,

in the City of New York.

The price of the Bonds is fixed for the present at 95 per cent., and accrued interest from January 1st in Currency, the Company reserving the right to advance the price whenever it is their interest to do so.

The Road forms the Western part of the

MAIN TRUNK
OF THE
Great National Pacific Railroad,
authorized, adopted and aided by
THE UNITED STATES GOVERNMENT.

It runs through the heart of the richest and most populous section of the State of California, connecting the

Extensive Mining Regions of Nevada, Utah and Idaho

with Sacramento and the Pacific Coast, from whence their supplies must be drawn; and the earnings of the portion already running are very heavy, *and largely in excess of the interest upon the Company's Bonds.*

Having been for some time familiar with the operations of the Central Pacific Railroad Company, we are satisfied that they are conducted with rare ability and prudence, and that the energetic and economical management of the Company's affairs entitles them to the confidence of Capitalists and of the public. We have carefully investigated the progress, resources, and prospects of the Road, and have the fullest confidence in its success, and in the value and stability of the Company's securities. The attention of Trustees of Estates, Institutions, and individuals desiring a long, safe and remunerative investment, is especially invited to these First Mortgage Bonds.

Orders may be forwarded to us direct, or through the principal Banks and Bankers in all parts of the country.

Remittances may be made in drafts on New York, or in Legal Tender Notes, National Bank Notes, or other funds current in this city, and the Bonds will be forwarded to any address by Express, free of charge Inquiries for further particulars, by mail or otherwise will receive punctual attention.

FISK & HATCH,
BANKERS & DEALERS IN GOVERNMENT SECURITIES,
No. 5 Nassau St., New York.

N. B.—All kinds of Government Securities received at the full market price in exchange for the above Bonds. Also,

☞ All descriptions of Government Securities kept constantly on hand, and Bought, Sold, or Exchanged.

☞ Gold Coin and United States Coupons bought, sold, and collected.

☞ Deposits received on liberal terms, subject to check at sight.

☞ Collections made throughout the country.

☞ Miscellaneous Stocks and Bonds bought and sold at the Stock Exchange on commission for cash.

☞ Special Attention given to the Exchange of *SEVEN-THIRTY NOTES* of all the Series for the New *FIVE-TWENTY BONDS* of 1865, on the most favorable terms. 896-2t

$150 PER MONTH TO AGENTS to Sell the best cheap Licensed Sewing Machine in the United States. Address, with stamp, PAGE BROS., Philadelphia, Pa., or Toledo, Ohio. 896-4t.

FRUIT FARM FOR SALE—25 ACRES. Address the subscriber, at Gaines, Orleans Co., N. Y. [om] D. J. B. HOYT.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless directed otherwise. Please note.

Keep a List!—If each agent will keep a list of all the names sent us, with dates and amounts of remittances, it will greatly facilitate the correction of any errors which may be made at either end of the line.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

READER,—Please act as Club Agent for the Rural, or induce your Post-Master or some other influential person to become a recruiting officer for the "Rural Brigade."

Notice of Spring Campaign on News page.

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

HINTS FOR THE MONTH.

THROUGHOUT the Northern States the sowing of spring grains is chiefly done in the month of April. This is the most important work of the month. Every effort should be made by the farmer to sow his grain early, and have the land in good condition and do the work well. All spring grains need a well pulverized seed-bed; their growth is necessarily rapid, and the soil should be fine and well worked in order to furnish its elements to the plants freely. Every practical farmer knows that it wont answer to work land when it is very wet; yet sometimes one waits too long for it to become dry. The oat crop may be sown on land worked in a moister condition than would answer for any other spring grain. Barley ground should be dry and warm. All spring grains should be rolled immediately after sowing. This operation compacts the soil around the seed, and smooths the surface for the reaper in harvest time.

Stock.— In all localities where foddering must be continued through April, it is one of the most perilous months of the year for stock. It is poor economy to stint in feed or care; on the other hand, both should be increased. The cows have calves and the sheep lambs by their side, and they need rich and abundant food and good shelter from storms. The horses are hard at work and they need judicious feeding and thorough grooming. There is no better feed for teams than fine-cut hay, wet and sprinkled with ground corn and oats. A feed of carrots occasionally is highly relished by horses, and is beneficial to their health.

Meadows — Should be cleaned up early—the stone picked off and roller applied. Stock should not be allowed on meadows or pastures when the ground is filled with water. Their treading injures the land, and their roaming does them no good.

The Wood Pile.—This should be finished and a year's supply cut and piled under cover to season. At any rate don't quit this work until you have enough fuel prepared to last until the leisure days of early winter. Use the soft, light wood and all old rails, &c., for summer fuel. The corn cobs are handy in warm weather to build light fires with.

Ditches and Drains.—If you have neglected to act upon our hint of last month in respect to these, read it again and see if you cannot work out some profit by heeding it.

Haul Out Manure.—Improve every opportunity to put manure on the planting ground. It forwards the work and will be better for the crop.

Repairs. —There will be some time in this month for repairs, and there will be great need of them. Gates, fences and buildings need looking to. Oil the harness; be sure the tools are in working order.

Plant Trees.— First some choice fruit for family use. Prepare to grow a full supply of berries; you can have them fresh on your table every day for three months in the summer, and by canning and drying enough you need not eat a single meal in the whole year without fruit. Settlers on new farms should plant berries the first year and supply themselves from this source with fruit while waiting for the apples and pears to come on. Plant screens for shelter around your buildings, and trees for shade along the road-side.

FIRE BLAST OR SMUT ON CORN.

THIS curious vegetable growth—plant it can be hardly termed—familiar to farmers and sometimes destructive to their corn crop, is of the order *Cryptogamia* or *Thallogens*, as termed by recent botanists. The smut on other cultivated grains, truffles, mushrooms, puff-balls, lichens, and those curious spongy excrescences found on trees and decaying wood, familiar to all observers, belong to the same order. They constitute the lowest order of vegetable life, and are supposed by some to have been the source of all vegetation, and to have produced vegetable mould by their decay, which afforded nutriment for a higher order of plants. Their reproductive organs can generally only be distinguished by the aid of a microscope; they are simple cells without pistil or stamen, no ovary or flower in the ordinary sense of the word. Yet they multiply themselves to infinity and with prodigious rapidity. There are some mushrooms that produce sixty thousand cells per minute. Probably various mildews and blights which are so pernicious to the interests of the cultivator are but forms of this vegetable growth.

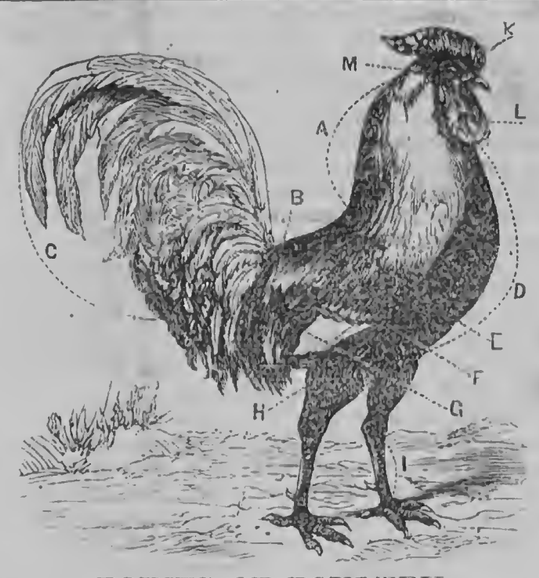
FIRE BLAST OR SMUT ON CORN.

The cause of this blight or fungus appearing on corn is not clearly known. Doubtless the plant must be in favorable condition or the spores of the smut which float invisible in the air are harmless. This condition may be a diseased state, consequent on bruises made by careless cultivation, or it may be a want of vitality and health of the plant, due to a poor or uncongenial soil, but oftener, perhaps, the exciting cause exists in the atmosphere and unfavorable weather. Various remedies or preventives have been recommended for smut on grain. Most farmers are familiar with them; washing the seed grain in brine, chamber ley, or mixing it with brine, ashes, &c., have all been extensively tried,—sometimes with apparent success, oftentimes without. The use of sulphur on the vine fungus is probably the most uniformly successful application of a destructive agent to this vegetation.

HINTS TO STOCK BREEDERS.

IN the Annual Report for the year 1865 of the N. Y. State Agricultural Society—which we have just received and will notice at length in another column—there is an interesting article on the reproductive powers of domesticated animals, written by Prof. HENRY TANNER of Queen's College, Birmingham, England. We make some extracts from it of interest to the stock breeder.

"An enfeebled condition of the breeding organs," he says, "is one of the first sources of trouble to the breeder. It seldom precedes, but often accompanies, a delicacy of constitution, brought about by too rich food and too much pampering. The breeding powers are most energetic when the animals are in moderate condition, uninfluenced by extreme fatness or leanness. Some very well bred heifers which had been condemned as barren, were placed upon poor, hilly pasture, to bring them down in condition, and immediately after this they bred without difficulty. The fat condition of the male animal, and his want of constitutional vigor, are frequently the chief causes of difficulty." Prof. TANNER states that sugar or molasses fed to the female in considerable quantities and at regular periods, will totally prevent breeding, and if this feed is continued any length of time, it is doubtful if the stock will regain its breeding power. Molasses is recommended as food for fattening animals, but its use should be avoided in those kept for breeding. Food of any kind, rich in saccharine matter, should not be given to the breeding stock. The moderate use of salt is stated to have a powerful effect favorable to the breeding powers of animals. Bulls show a greater inclination to cover when fed largely with salt, and females are rendered less productive by want of salt. Rich, juicy, succulent vegetation is very generally favorable to breeding. Food containing a large large amount of albuminous matter is favorable, and that rich in phosphorus, as peas, beans, vetches, &c., is also especially valuable.



POINTS OF POULTRY.

THE technical terms used by poultry fanciers, in describing the points of a fowl, are not always understood by the uninitiated. For the benefit of such we give an illustration, taken from the Canada Farmer, with a lettered reference, which will supply the necessary information on the subject:—A, Neck hackle; B, Saddle hackle; C, Tail; D, Breast; E, Upper wing coverts; F, Lower wing coverts; G, Primary quills; H, thighs; I, Legs; K, Comb; L, Wattles; M, Ear lobe.

TRAINING HOPS—POLES vs. STRINGS.

HOP culture, in this country, has received a great impetus, from the high prices and increasing demand for the product, during the past few years. The interest manifested in it amounts almost to a "fever," and we believe more acres will be planted with hops during the present spring by American farmers than ever before in a single season. And while the demand for the hop crop is likely to prove a large and increasing one in the future, yet the growers should not forget that in the most extensive hop growing districts of Europe, the profits of this culture have been so fluctuating as to cause it to be compared to the stock gamblers' occupation—one employment being about as certain of bringing ultimate wealth or competence as the other. It will be wise in those beginning the business to figure on the basis of average prices only, and of a total failure of the crop one year in three.

There are now two systems of training hops prominently before the public—one the Collins patent of training to low poles and strings, and the other the time-honored method of using long poles. A communication having appeared in our columns in which the writer took ground against the horizontal method and in favor of the long pole system, Mr. COLLINS sends us a rejoinder, which we are compelled to abbreviate, giving, however, the chief points of his argument. And we remark here that we set our rules aside in allowing a patentee free space in our columns to advance the interests of his monopoly. After asserting that the horizontal or string system of training hops is the cheapest now in use, Mr. C. answers the objection of our correspondent "that he had to ride on horseback through his yard to trim the vines," by stating that poles of too great length were used (ten feet being the length.) He says:—'The stakes should be cut eight feet in length, and set in the ground one foot; the twine is then less than seven feet from the ground." It is inferred that the training can then be done "on foot." In the complaint of our correspondent that he could not make the vines run on the strings, Mr. C. replies that probably he did not train them round the twine the right way. It is a well-known fact that the hop vine will only run "with the sun," or from left to right, and it is inferred that the operator "half the time attempted to force them over the wrong way." To the complaint of too much shade from the vines on twine, the reply is that "only four vines should be allowed to run up one stake, and the remainder should be buried in the ground. One vine from the top of the stakes to each string will not shade the ground too much." To the assertion that only 600 lbs. per acre were gathered from the yard the rejoinder is that "500 was an average yield last year from pole yards." Mr. C. argues that picking can be done more easily and expeditiously from the twines than from poles. Perhaps the best argument he uses in favor of his system is that the vines need not be cut when the crop is gathered, and thus the copious bleeding which follows this operation is avoided. This bleeding, he thinks, is a prolific cause of the degeneracy and total failure of so many poled yards. We will further state that the horizontal system has received high commendation in this country, and has been looked upon with favor by some English hop-growers.

Bearing upon the other side of the question is the following communication from S. F. TOOLEY, Oneida Co. He writes:—"There is no section, perhaps, in the State where hops are grown with better success, or where there is more interest manifested in the culture of the crop, than here in southern Oneida; and poles are almost universally used. The Collins patent has been thoroughly tried, and while it has not been pronounced a failure, it has been generally discontinued; because it will not produce as large a yield of hops as poles. Nor is this the only reason; hops trained on the horizontal plan seem to be more easily affected with vermin, and an entire failure of the crop is often the result. The argument used, that the horizontal plan is cheaper, is in my opinion a wrong one. Of course this plan does not cost so much in the beginning; but take a term of years—the average length of time a pole lasts, which is twenty years for a Canada cedar—and compare the relative expense of producing hops on these two plans. It will cost to pole an acre of hops with cedar, at sixteen dollars per hundred, two hundred and twenty-five dollars. It costs fifteen dollars each year to string an acre of hops. The cost for twenty years is three hundred dollars. Add to this the patent fee, seventeen dollars, and the short poles which must be used, and one can readily determine which plan is the cheaper. I cannot admit that the Collins patent affords greater facilities for cultivating and harvesting the crop. It is more expensive and troublesome to tie vines horizontally. In spite of precaution strings will break from the weight of vines. They stretch and settle also, and are in the way of the horse and cultivator. It is more expensive harvesting the crop, and you find the whole method surrounded with difficulties which are not met in the long pole system. The fact that over 400,000 hop poles have been contracted for in Canada, to be used in this section next season, is evidence that the old way is considered preferable."

PROFITABLE POULTRY KEEPING.

EDS. RURAL:—Having had good success for the past four years, and unusually good, as I think, in the last year with a small flock of chickens, I give you the result. I commenced the year with one dozen hens and one cock. Breed, mixture of Shanghai and Brahma. Raised during the season eighty-two chickens. The roosters, large, nice fellows and fine eating, were sacrificed for the table during the fall and early winter, and the flock reduced to thirty hens and one cock, all of last summer's raising. A few eggs were gathered daily during September. For the five succeeding months the result, as to the number of eggs, was as follows: October, 140; November, 230; December, 276; January, 204; February, 398; making in all, for five months, 104 dozens. Though the number of egg producers has been since the close of February reduced to fifteen, on account of six setting and others killed, the production of eggs so far during March is fully up to the average of the five preceding months. Seventy-five dozens eggs have been sold at an average of 34 cents per dozen, making

For the 104 dozens gathered in five months....	$35 36
Eighty-two chickens raised, worth 50c each....	41 00
Total.....	$76 36
Cost of feed not to exceed.....	20 00
Leaving balance of.....	$56 36

The feed used until chickens were grown was principally mill screenings, which were rich, as our wheat was poor and shrunken. Have, during the winter, fed on corn; in addition fed occasionally during coldest weather, when the ground was covered with snow, cracklings. Used in all but 25 pounds. Have no hen house. Chickens are locked in my barn at night during winter and summer. And during the day in summer the grown ones are confined to the barn and cow-yard, 18 feet square, the safety of the garden making this necessary. I attribute my success to the fact of *having the young chickens brought out early*,—say in March and early in April. They mature before the cold of winter. Then being well protected and well fed, good returns may be expected.

CITIZEN.

Indianapolis, Ind., March 16th, 1867.

BEES—HOW SHALL THEY BE FED?

EDS. RURAL: — What are we to do in this section of the State with our bees? It is a fact not as well understood now as it will be next May, that bees are very short of feed and a share of them will be lost unless they are fed. This is the case in all the high lands in Oneida, Madison, and Herkimer counties. The last summer and spring were the hardest for bees that has been since 1842. They were in very good condition when the spring opened; if they had not been we should have lost the most of them in June. As it was, all my best stocks of bees killed off their drones and regularly went into winter quarters from the 15th to the 25th of June. In July I had some fifteen swarms, but none of them were from the first class of hives, and not one of them has honey to carry them through April, I think. All through the honey season the weather was cold, with high winds, so much so that when the honey season is usually at its best here from the middle of July and after,—when the basswood and white clover are both in blossom, — I found by weighing that good, fair hives were only making about one pound a day, and the best hive I weighed only made two pounds. If you have noticed the Utica market you have seen honey quoted at "30 to 35 cents, and none on the market."

Now, if the RURAL can help us out of this fix, if we don't take off our hat to it we certainly will make our best bow with it on. What can we feed with, and how? HARVEY HALL.

Paris, Oneida Co., March 12th, 1867.

REMARK. — Let us hear from some experienced bee keepers on this subject.

COMSTOCK'S ROTARY SPADER, from which much was expected, as a substitute for the plow, does not seem to be adapted to small farms, nor to those in which there are any stumps or stones. It is liable to choke with weeds or grass, and does not prove to be sufficiently substantial.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

THE N. Y. ANNUAL SHEEP FAIR.

The third Annual Fair of the N. Y. State Sheep Breeders' and Wool Growers' Association will be held at Auburn, May 8th, 9th and 10th. A cordial invitation to attend is extended to all persons, in or out of the State, who feel any interest in sheep husbandry. All, too, are invited to bring pens of sheep for exhibition—the more the better. The premiums, it is believed, are larger and more numerous than have ever been paid by any other Society or Association in our country, and they are open to all comers. The citizens of other States or countries compete on the same terms, in all particulars, with citizens of New York. We hope to see the breeders of Canada on the ground with their splendid Long and Middle Wools—the breeders of Vermont, Ohio, Pennsylvania and other States, with their renowned Merinos and English sheep. We cultivate no clannish policy. New-Yorkers have been repeatedly beaten for leading prizes at our previous Fairs. He who carries a prize out of the State does us more of a favor than we do him, for he places a higher standard before our breeders, shows them that improvements can be made in their stock, and exhibits to them what those improvements are. This information is immeasurably more valuable to us than the money we could make or save by shutting out foreign competition.

Our farmers can in like manner learn from each other. He who has the best sheep of his neighborhood or county, and goes not abroad to examine other flocks, is very apt to imagine himself at the top of the ladder, when in fact he may be many rounds below. By placing his best animals side by side on the Fair ground with those of the eminent breeders of a State, he has the best possible opportunity to learn his own inferiority and in precisely what that inferiority consists. This cannot be done half as accurately by visiting widely separated flocks at home, and making comparisons from memory. Sometimes the thing works the other way. A gentleman exhibited sheep at one of our Fairs who did not dream that they were equal to those he had read so much about. But he took them there to learn wherein he could improve them, and, like a public spirited man, to swell the show. He won several, and some first prizes, and sold a ram for eight hundred per cent. more than he had repeatedly offered him for at home. He went to the Fair without any public reputation as a breeder—he left it a breeder of reputation, and has since derived all the benefits of that reputation in his sales of sheep. His exhibition was worth $10,000 to him.

The present Fair is held in one of the finest farming regions of New York, and in the outskirts of one of its pleasantest interior cities. The Fair grounds are within a short walk of its principal hotels, and not far from the freight depot of the N. Y. Central Railroad. Covered pens and hay will be provided for the sheep on exhibition and good water is easily accessible. The grounds will be watched at night by a police force. Every assistance which is practicable will be rendered to exhibitors by the active and efficient General Superintendent, A. M. CLARK. The New York Central Railroad will carry sheep to and from the Fair free of charge. Owing to a mistake, freight was collected last year, but it was subsequently refunded to every exhibitor who presented, on the published call of the Treasurer of the Association, the proper receipts and certificates, within the time specified — and the time given for presentation was an ample one. To show the mode in which the business will be conducted, this year, the official letter of the Superintendent of the Road is given:

NEW YORK CENTRAL RAILROAD,
General Superintendent's Office,
ALBANY, March 19th, 1867.

HENRY S. RANDALL, Esq.,
Pres't N. Y. S. S. B. & W. G. Assoc'n:

DEAR SIR:—In relation to the transportation of *sheep* to and from your Annual Fair to be held at Auburn on the 8th, 9th and 10th days of May next, I beg to say that the sheep intended for exhibition at that Fair will be shipped by this Company at the regular freight rates—the charges to be paid at Auburn. On the return of the sheep, the owners or persons in charge shall exhibit to the Freight Agent of that place (to whom the charges were paid) a certificate from the Secretary of the Society that the sheep have been on exhibition, and have not changed ownership. Then the charges previously paid will be refunded by the said Freight Agent; and the sheep will be billed *free* to the place of shipment, at the owner's risk of loss or damage from any and every cause. No claims for refunding will be allowed unless made within ten days after the close of the Fair.

Respectfully yours, JULIUS A. SPENCER,
Assistant Sup't.

It is understood that all the hotels at Auburn will charge only their usual rates during the Fair. The ladies of one of the City Benevolent Societies will provide meals on the show grounds

Owners of agricultural and household machines and implements are invited to exhibit them on the Fair grounds, subject to the directions of the General Superintendent, on the same terms as the exhibitors of sheep. For permission to introduce on the grounds any machine or implement, or any article for sale, except those above specified, or any animals except horses, mules, neat cattle and sheep, application must be made to the President.

The terms of admission will be as follows:—To Exhibitors, $1; to a single person, 25 cts.; to a person riding or driving a horse, 50cts.; to a two-horse carriage, containing not more than two persons, 75 cts. Every additional person to the number above specified in a one or two-horse carriage will pay 25 cents. Wagons or drays, bringing animals or articles entered for exhibition, will be admitted, with driver, free; but will not be permitted to remain unnecessarily on the grounds without permission of the General Superintendent. Clergymen, Editors, Reporters and their wives, and the ladies of the Benevolent Association who provide provisions on the grounds, with their necessary assistants and conveyance wagons, will be admitteed free.

Meetings of the Association will be held on the evenings of the first and second days of the Fair. One of the subjects brought before it will be the rules and recommendations in regard to the preparation of wool for market, and in regard to the buying and selling of wool, adopted at a late Western New York meeting of wool buyers. A general attendance is invited.

THE SELECTION OF CUSTOM HOUSE SAMPLES OF WOOL UNDER THE NEW TARIFF.

We learn from a letter received from Hon. HUGH MCCULLOCH, Secretary of the Treasury, that his Department "has been fortunate in securing the services of GEORGE W. BOND of Boston, in the preparation of the samples of Wool and Hair required under the act of March 2d, 1867." He further states: "The samples when prepared will be open to the criticism of all parties interested, and should it be discovered that, from any cause, a mistake has been made in the classification or arrangement of the distinctive samples of wool and hair, the Department will not be slow to correct it."

Without in the least impugning the good faith of the Secretary of the Treasury, or the integrity and other qualifications of Mr. BOND, we have to say that so far as *we* possess any information in the premises, no accredited agent of the wool growers was consulted in making this appointment; and that when the tariff on wool and woolens was drawn up by the Committees of Growers and Manufacturers, and one of the Commissioners of Revenue, in the winter of 1865–6, that Commissioner (Hon. STEPHEN COLWELL,) assured us that both interests would be represented, and equally represented, in the Committee to select samples—that it would only be necessary to apprise the Secretary of the understanding to ensure its adoption by him—and that he (the Commissioner) would see that he was so apprised. As the bill did not pass during the Session of 1865–6, it is very probable that Mr. COLWELL did not inform the Secretary of this understanding, and Mr. C. had nothing to do with the matter during the last Session of the Thirty-ninth Congress. But, without knowing the fact, we take it for granted that the members of our Committee in Washington called Secretary MCCULLOCH's attention to the arrangment.

Secretary MCCULLOCH will be asked to submit the samples prepared by Mr. BOND to the examination and revision of a Committee of Growers and Manufacturers, selected by themselves, *before the samples are adopted as standards;* and if he accedes to this, his plan will have the same effect with the original one. We cannot suppose that Secretary MCCULLOCH will refuse to comply with a request so palpably just and reasonable. His language which we have quoted ought to be understood as substantially implying so much. His decision in the matter will be placed before our readers as soon as it is received.

We think that we cannot misapprehend the views of the wool growers of the country in acting on the hypothesis that they will not rest satisfied with having the entire selection of the custom house samples of wool confided to one man, whatever his qualifications—or to any body of men in which the growers are not equally represented with any and all *opposing* interests. If we are wrong in this supposition, let the agricultural press of our country and our own correspondents set us right. We call for their opinions on the subject.

Condensed Correspondence, Items, &c.

WOOL GROWERS' AND BUYERS' MEETING.—We published last week the resolutions and recommendations of a Wool Buyers' Convention held in Rochester on the 19th ult. in regard to the mode of preparing wool for market and to the rules which should prevail in buying and selling it. The Convention adjourned to meet in Rochester, May 6th, extending an invitation to the growers to meet with them. As this Convention will precede the State Sheep Fair but two days, it is obvious that the attendance of the growers must, at best, be but local and limited—and not include anything approaching to a representation of the State. Under these circumstances, we respectfully suggest that the buyers again adjourn, and that they meet the growers at Auburn on the evening of May 8th, (the first day of the Fair,) When the subject will be taken up by the State Sheep Breeders' and Wool Growers' Association. The wool buyers of the whole country are invited to attend and participate in the proceedings. It is to be hoped that a fair comparison of views and discussion of facts may lead to an amicable understanding and to some salutary reforms on both sides.

SHEEP FOR MISSOURI.—W. M. BANES, Metamora, ——, asks us "What kind of sheep would be best for the southwest part of Missouri—what priced sheep—and where would be the best place to buy 500?" For wool growing on a large scale, and in a situation so remote from mutton markets, we have no doubt whatever that the best kind of sheep is the Merino. Five hundred full bloods would however cost far too much to start a flock with. We recommend Mr. BANES to buy grade or common ewes as near as practicable to the point where he intends to settle, where he must of course pay the ordinary prices of the country. But let him under no circumstances use any but full blood and *good* Merino rams. He will find that his flock will "cross up" and increase in value rapidly.

FINE MERINOS AT THE FAIR.—We regret to learn that owing to the absence of Mr. HEYNE, the manager of Mr. CHAMBERLAIN'S flock of Silesian Merinos, these sheep, which have so successfully competed in the class of "Fine Merinos" at our previous State Sheep Fairs, will not be represented at Auburn. Mr. HEYNE goes to Germany to purchase sheep. We hope other enterprising breeders will endeavor to see that this class is fully sustained, in numbers and quality, at the Fair.

SHEEP IN MINNESOTA.—It is stated in a Western paper that in 1860 there were in Minnesota 13,123 sheep producing 22,740 lbs. of wool. In 1865 the number of sheep was about 500,000, and the export of wool about a quarter of a million pounds.

Dairy Department.

THE DAIRY BUSINESS—OHIO.

At a recent convention of the dairymen of Ohio, ANSON BARTLETT, Esq., an experienced member of the fraternity, delivered an address on the subject of dairying which met the warm approval of the Convention. We have room to notice only a few points touched upon in the address. He deprecated the practice of importing dairy stock from the Southwest, as it introduced an inferior grade of animals, often infected with diseases fatal to much of the stock raised at the North. Home raised cows he asserted would produce at least one-third more butter and cheese than the others, while they were free from the diseases incident to those bred in the section referred to.

Alluding to cheese making, Mr. B. said that success in this depended greatly on the character of the rennet used. He thought the practice of using the curd in the rennet bag, as some did, was erroneous as it affected prejudicially the flavor of the cheese. Among the older and most skillful dairymen it is deemed best to kill calves for rennet at about five days old — not suffering them to take food on the day of killing. With respect to cheese making various suggestions are made which we find condensed in the Utica Herald:—"The use of whey is recommended in soaking rennets instead of water. He says rennets soaked in whey will keep perfectly sweet any length of time, while it is difficult to keep the rennet sweet and clear of taint, if water is used.

Whey which flows from the press is as good as any for the purpose of salting rennets, Salt should be added same as if water is used.

In working milk in which putrifactive fermentation exists, or when milk is tainted, or if milk is fresh from the cow and is perfectly sweet, he recommends half a gallon of very sour whey to be added with the rennet for every 100 gallons of milk.

The whey should be two weeks old, and should have a clear vinegar taste; would take the requisite quantity of rennet and requisite coloring material and mix with the sour whey; then dilute with an equal quantity of water and stir all into the milk together. When cheese is made twice every day, and the milk is to be made up fresh from the cow, would have the temperature 86 degrees to 88 degrees when the rennet is added, instead of a lower temperature."

SPRING MANAGEMENT OF COWS.

As the "season" is at hand when cows begin to drop their calves, a few hints about their management may not be out of place. I will not pretend that the suggestions are *new* to every one, but they may be to some. In the first place an ordinary cow should go dry at least six weeks. Commencing about two weeks before calving, she should have half a bushel of potatoes, or other roots, each day, until she drops her calf. If roots cannot be had, a few quarts of good mill-feed (not corn meal,) wet up with boiling water, and fed as warm as she will eat it, will be a good substitute.

As soon as she drops her calf, she should be milked as clean as possible — add a little warm water to the milk and stir in about a quart of rye meal, canel, or shorts, and give the mess to the cow. If she has been *well brought up*, she will eat any kind of slop, but if she is dainty, give her milk alone. She will always drink that. If you take this course, my word for it, you will rarely have trouble about your cows not "*cleaning.*" If the cow is very weak, great care must be taken for a few days not to *over-feed* her.

After recovering from the effects of calving, the feed should be liberal, and at least one feed each day should be roots. If you have potatoes, feed them—if not, give carrots, beets or turnips—if you have neither, buy potatoes, if you have to pay seventy-five cents per bushel. They will pay well, even at that price. Potatoes that are partially diseased or those that have been frozen, if fed in moderate quantities, are good for cows, much better than to keep them on dry feed altogether. If cows are out to *grass*, of course *roots* are not so indispensable; but they are good at any time. A very common mistake is made by many farmers in wintering cows *poorly*. They should have the pasture in good condition, and have the *best feed on the farm* all winter. If this course is taken, the reward will be sure to come in the brim full pail and the rich cream at a season of the year when butter generally brings the best price. Two good cows well kept will do you more good than a half dozen half starved *frames*.

Another very important matter is to have a *good milker*. But that opens another branch of the subject of too much consequence to be put off with a few lines. Perhaps I may touch upon this point again. P. P. B.

GARGET IN COWS.

In response to a correspondent's inquiry, E. MINK, Vet. Surgeon, Lyons, N. Y., sends us the following article:

"'Garget,' 'Inflammation of the Udder,' or 'Mammitis' has one of the following terminations—resolution, induration, suppuration, gangrene, or mortification. *Treatment.*—In the early stage give an active cathartic—1½ oz. Epsom salts, 1 oz. ginger, ½ pint molasses dissolved in one quart of warm water. If the inflammation is superficial, bathe continuously with cold water. If it is deep seated warm fomentations are best. Take a large cloth, through which holes should be made for the teats; place it over the udder; fill in with wool or cotton, and keep constantly wet with warm water in which a few hops have been infused. If, after the inflammation has subsided, *induration* (cake) is left, then rub daily with iodine ointment, and give iodine potassium, internally, twice a day, 20 grains at a dose, dissolved in a pint of water, for ten days or two weeks. If suppuration occurs, lance the parts freely, and bathe with a solution of chloride of zinc—1 scruple to 1 pint of rain water."

COWS LEAKING MILK — PREVENTION. — "A Reader," Gardner, Mass., wants to know "what will prevent a cow from leaking her milk." We do not know of anything more effectual than to milk three times, instead of twice a day—unless it be to consign her to the custody of the butcher. If any of our readers know of a better plan than this, let the public be informed of it through the columns of the RURAL.

Rural Notes and Items.

ABOUT BLOWING OTHER PEOPLE'S HORNS.—We beg to state, for the information of all our readers interested, that this journal was not established for, and never has been used as, a puffing machine or free advertising medium for anybody. Publishers, patentees, and all others who are anxious for us to *benefit our readers, by commending their wares*, are respectfully advised that we have expended over Fifty Thousand Dollars in Advertising, Premiums, &c., &c., to secure the circulation and influence which the RURAL NEW-YORKER has attained, and hence submit that those who use it for their *personal benefit* should pay therefor. For example, If the RURAL benefits a patentee to the amount of $1,000, it is but just that he should pay it a tariff of $100. Yet it has gratuitously benefited many to the amount of thousands of dollars, *and never charged a farthing for any editorial notice or expression of opinion.* Though it does charge for publishing cuts and descriptions of *patented* machinery, etc., any editorial endorsement that can consistently be given in connection is always free, albeit often of great benefit to the patentee or manufacturer.

— The above paragraph is given for the benefit of all who are trying to fill the RURAL'S reading pages with what we denominate free advertising—such notices of their wares as ought to be given in special notice or advertising columns and paid for accordingly. Almost daily we are bored by requests to publish this or that in reading columns, ostensibly for the benefit of the public, but really to promote the interests of individuals. A few days ago a company owning a certain patent for preserving fruit took us to task for not blowing their horn gratis, and gravely asked us to define (by letter) our position in regard to our duty to the public concerning "scientific inventions." By reading the RURAL carefully (including this article) our friends will be likely to ascertain our platform—one plank of which is that it is *not* our DUTY to enrich any man or company, tho' the public may be incidentally benefited. If inventors will forego patent royalty the RURAL will freely do its full share toward introducing all useful improvements to the public. Next to patentees, publishers and authors are apparently the most benevolent mortals on earth. In their view it is of the utmost importance to the public that certain books and periodicals should be strongly and *longly* commended, including price and much other legitimate advertising matter—all *pro bono publico.* For example we cite one of the RURAL'S latest *invites* on this subject:—The wealthy publishers of the new Horticultural Journal in Boston write us a letter (not the first of the kind from the same source) saying they have sent us the March No. of that remarkable monthly, and modestly inclose a notice (the insertion of which in our special notice column would cost forty dollars) with this request—"Should the ideas of inclosed notice meet your approval, will you be so kind as to embody them in your review of the same?" We should be glad to be "kind" to our friends, could we do so consistently, but they ask a little too much—especially when they desire us to announce among their contributors a prominent horticultural writer and author who repudiates any connection with the magazine! And, beside, we really don't think the journal, though it emanates from "the hub," merits the praise of its manufacturers. This is only one of numerous instances of combined brass and benevolence we might cite in this connection,—but we must leave the matter, like the Ledger's stories, "to be continued."

ABOUT SHEEP BOOKS.—(A. G. P., Ohio.) You are right in your inference, for *The Practical Shepherd* is Dr. RANDALL'S latest and best work on sheep husbandry. The work advertised by JUDD & Co., and others, as "Randall's Sheep Husbandry" is really Dr. R.'s "Sheep Husbandry *in the South*," first published over twenty years ago, and of course not adapted to the present time, or the wants of flock-masters. We have heard of several instances in which persons have been "sold" (as well as the book) by purchasing this old work with an abbreviated title. Of course we need not add that Dr. R.'s *Practical Shepherd* is the best work on American Sheep Husbandry extant, as it contains the gist of his former ones and the result of his life-long observation, experience and research pertaining to the subject.

GROWING BROOM CORN—INFORMATION WANTED.—J. D. K., Wallonia, Ky., writes us as follows:—"I want to ask for information as to the best mode of growing broom corn—the soil most suitable—how prepared—how planted—how cultivated, cut and got ready for market? Would it not pay the raiser better to manufacture into brooms than send to market? If so, at what price could machinery sufficient to make brooms on a small scale be fitted up? Will some kind friend give me the result of his experience in the management of broom corn, also model of machinery necessary to make up what might be raised by one farmer and what he could buy on reasonable terms from his neighbors?" Will some of our readers reply to some or all of these queries?

A GOOD SAMPLE OF SILESIAN WOOL.—Some time ago we received from THEODORE N. DAVISSON of Jeffersonton, Culpepper Co., Va., a sample of grade Silesian wool of excellent quality. If a fair sample of the wool of his flock, Mr. D. is on the track of improvement.—(The sample should have been forwarded to the Editor of our Sheep Husbandry department on receipt, but being mislaid has just turned up, and we notice here to prevent further delay. If flock-masters will send samples direct to Dr. RANDALL, Cortland Village, N. Y., they will be likely to receive early attention.)

THE ADDRESS OF HON. T. C. PETERS, our Southern Corresponding Editor, is *West Friendship, Howard Co., Md.* Those who have written us about this, and all others interested, will please note.—We expect to visit brother P. in a few days, and if so may "make a note" of his surroundings.

A GOOD AGRICULTURAL ADDRESS.—Our spicy Special Contributor, Maj. H. T. BROOKS of Wyoming, occasionally delivers an agricultural address, and always succeeds, we imagine, in both pleasing and instructing his auditors. We are in receipt of a pamphlet copy of his address at the last Fair of the Niagara Co. Ag. Society, which is pleasing from the quaintness of many of the expressions used, and convincing from the evident mastery of the subjects discussed. Alluding to the institution of Fairs Maj. B. says:—"Formerly men came together to witness expensive ceremonials, tournaments, grand military displays, beastly and bloody exhibitions of strength and skill. Now, a pastoral people meet in these fields, forgetful of war, unmindful of kings and courts, to exchange friendly greetings and wise counsels, each one expecting to carry back more than he brought, without robbing anybody." Among the important points in farm education are those of being able to detect the faults and excellencies of the various kinds of farm stock, and to determine as to their relative value. On these points we quote:—"To be a critical judge of farm stock should be a part of every farmer's education; and since all the professions and trades occasionally deal in domestic animals, this knowledge should be extended to all. Some men miss no opportunity of canvassing the merits and demerits of different kinds of property. Others give very little attention to such matters. They don't know *sweeney* from *heaves* by sight; they can appreciate a dead pull, they have a horror of a baulk, but style and action are beyond their care or comprehension. As a consequence they ask too much for an indifferent animal and so lose the sale they wish to make, and balance the account by selling a good one for half its value." The address, as a whole, is replete with practical ideas germain to the subject of farming operations, and highly creditable to the judgment, observation and good taste of its author.

TRANSACTIONS N. Y. STATE AG'L SOCIETY.—We have received from Col. B. P. JOHNSON, Secretary, the volume of the State Ag'l Society's Transactions for the year 1865. It is a decided improvement on preceding Reports of the Society; it reflects great credit on the Secretary, and, in the execution of the work and value and interest of contents, ranks far above the publications of any other State Agricultural Society. It is a book that should be in the hands of every farmer in the State. We have not space to give even a brief synopsis of its contents, and can only mention a few of many valuable articles it contains. The Report of the State Fair, held at Utica, is admirably done by X. A. WILLARD, Esq., who also furnishes a paper on the Comparative Profit of Butter and Cheese Factories, and his observations among the butter makers of Orange Co.—an article of great importance to dairy farmers. There is also an excellent article on Cheese and Butter Manufacturers, by Mr. POWELL of Herkimer. A report on machinery for manufacturing flax cotton is furnished by Dr. J. STANTON GOULD. The subject of "Forests—their influence, uses and reproduction," is discussed by WINSLOW C. WATSON, Esq., of Essex. Col. E. C. FROST of Schuyler, contributes a very valuable illustrated article on "Rural Homes and Surroundings," and Dr. S. J. PARKER, Tompkins, one on "Training, Pruning and Improving Grapes." The agricultural discussions during the evenings of the Fair—the closing address by the retiring President, Hon. T. C. PETERS — Hon. LEWIS F. ALLEN'S discussions of the "Fruits of Western New York"—the synopsis of the State Census, and the reports of the county and town associations are not the least intersting portions of the volume.

TRIAL OF HORSE HAY-FORKS.— We have received a full report of an exhibition and trial of these implements which took place at Rye, Westchester Co., March 4th and 5th, under the auspices of a Committee of the American Institute Farmers' Club. We regret being unable to find space for the full Report; the prizes awarded were as follows:—First award in Class No. 1, to "Palmer's Excelsior Sickle-tined Fork," entered by Palmer & Wakerhagen, Hudson, N. Y.; second prize, Class No. 1, to John H. Chapman, Utica, N. Y. Second Class—First prize, Harpoon Forks, to C. C. Blodgett, Watertown, Jefferson county, N. Y.; second prize, to S. C. & L. B. Spront, Muncy, Pa. From the report of the trial, we learn that there were 18 entries, including the more prominent patents before the public. The Committee consisted of Messrs. S. Edwards Todd, Chairman; Wm. S. Carpenter, Josiah H. Macy, P. T. Quinn, Hicks Field and Wm. H. Smith, assisted on the first day by Mr. Nathan C. Ely, Chairman of the Farmers' Club.

TO ADVERTISERS.—We are again compelled to defer several advertisements for want of space. That advertising in the RURAL generally pays all parties—advertisers, readers and the publisher—is true, yet we must not give "too much of a good thing," all at once.

DOINGS OF AGRICULTURAL SOCIETIES.

Erie Co. Ag. Society.—Officers for 1867: *Pres't*—L. C. P. VAUGHN of Springville. *Vice Pres'ts*—Allen Potter of East Hamburgh; Carnes Hopkins of Sardinia. *Sec'y*—B. Chafee of Springville. *Treas.*—Pliny Smith of Springville. *Directors*—B. F. Challicott, C. White and Alexander Scobey.

Cattaraugus Co. Ag'l Society — The officers of this Society for 1867 are: *Pres't*—CHAUNCEY A. SNOW. *Vice Pres't* — Lorenzo D. Cobb. *Sec'y*—Horace S. Huntley. *Treas.*—Erastus N. Lee. *Directors*—Samuel R. Homer, Halsey Safford, Zino Dudley, Samuel S. Huntley, Joseph Smith, Cyrus A. Fuller.

Oswego Co. Cheese Manufacturing Association.—The officers of this association for 1867 are: *Pres't*—HIRAM WALKER of Union Square. *Vice Pres'ts*—Alvin Lawrence, Joseph Tuttle, Henry Summers, Stephen Griffith, Horace J. Trumbull, Simeon Coe, T. H. Austin, Alvin Moon, Mr. Stevens. *Sec'y and Treas.*—J. C. Taylor of Mexico.

The Lenox Farmers' and Mechanics' Association, Madison Co., has elected the following officers for 1867: *Pres't*—NEWELL M. CHAFFEE. *Vice Pres'ts*—E. C. Saunders and J. L. Manefield. *Treas.*—T. F. Hand, *Sec'y*—E. F. Lewis. *Executive Com.*—C. B. Crouse, D. P. Lamb, G. D. Davis, J. Watkins, O. E. Messenger, S. B. Johnson. F. M. Whitman and R. H. Avery honorary members.

Lancaster (Pa.) Hort. Society.—*Pres't*—LEVI S. REIST. *Vice Pres'ts*—J. B. Garlear, E. M. Hasteller, W. L. Diffenderfer, Casper Hiller. *Sec'y*—H. M. Engle. *Treas.*—H. L. Landis.

East Pa. Ag'l Society.—*Pres't*—JOHN KENNEDY. *Vice Pres'ts*—S. E. Hartranft, P. M. Hunter. *Treas.*—Charles Hurst. *Sec'y*—S. K. Stout.

Bucks Co. (Pa.) Ag'l Society.—*Pres't*—WILLIAM STAVELY. *Vice Pres't*—Adrian Cornell. *Sec'y*—Henry T. Darlington. *Treas.*—Cyrus Hillborn.

HORTICULTURAL.

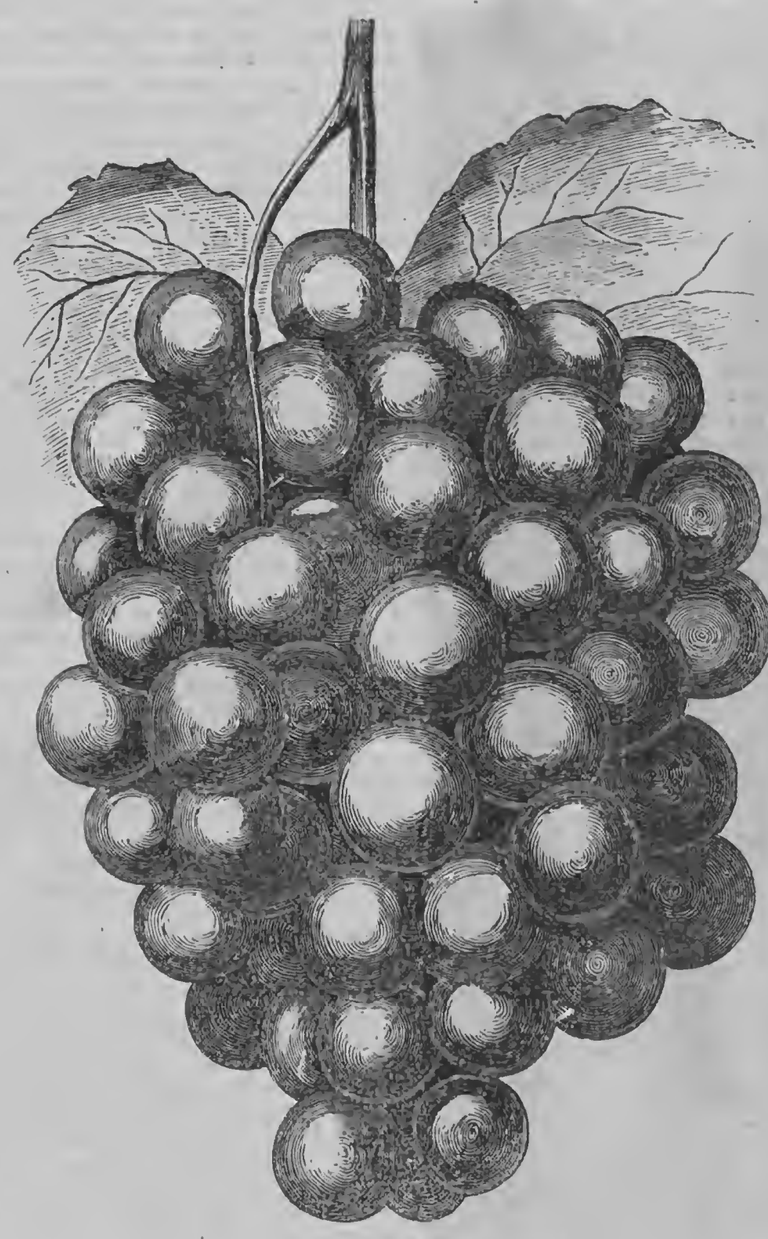
A NEW WORK ON FRUIT CULTURE.

THE AMERICAN FRUIT CULTURIST, containing Practical Directions for the Propagation and Culture of Fruit Trees in the Nursery, Orchard and Garden. With Descriptions of the principal American and Foreign Varieties cultivated in the United States. By JOHN J. THOMAS. Illustrated with four hundred and eighty accurate figures. New York: WILLIAM WOOD & Co.

THE frequent appearance of new horticultural books is a good sign of the times. During the two years last past, we have not only had a good sprinkling but a perfect shower of them. We can count up at least a dozen, following one another in such rapid succession that we have scarcely had time to examine one until another was announced; and there are still others under way, as we are informed by the enterprising publishers. Well, let them come; the more the better! As we say about the fruits, some are "good," some "very good," and some "best," while a few are *indifferent*, but even the poorest will do more good than harm, and we welcome them all. It is a pleasant thing for people of rural tastes to step into a bookstore and find a goodly array of horticultural books, decked out in elegant green, blue, crimson and gold covers and gilt edges, with the finest of paper and most inviting type—rivaling in that respect the books of the boudoir. In this the publishers are manifesting both good judgment and good taste. Horticulture is one of the fine arts, and its literature is fully entitled to its share in all the improvements of the day known to the art of book-making.

Among the new books it gives us peculiar pleasure to announce the appearance of the "American Fruit Culturist." The old edition, published nearly twenty years ago, was an excellent, useful and popular work. This new edition is greatly enlarged, carefully revised, written fully up to the present time, and is beautifully printed and illustrated. The impression one gets in opening it, is, that it has *an honest look about it*. There is not that large type, leaded lines and broad margin that we see in some of the flashy volumes recently issued, and which, at first sight, suggest an effort to make much out of little, or rather to make a little go a great ways. As in the old edition, the work is divided into two parts, the first treating of General Principles and Practice, and the second of the Different Kinds of Fruits. The same classification of fruits is also retained, with slight alteration. A monthly calendar of work in the Nursery, Orchard and Fruit Garden is briefly given, and there is a "Descriptive List and Index of Fruits," which contains a complete alphabetical list of all the fruits noticed in the work. Those embraced in the body of the work are merely referred to, and others are briefly described. For instance, in apples about 200 kinds are described in the body of the work, and 400 more in the descriptive list, making the total number of varieties of apple noticed about 600. Of pears 215 varieties are described in the body of the work, and 367 varieties more in the descriptive list, making in all 582 varieties. This statement will show the scope of the book in this direction. The most popular varieties are designated by the names being printed in capital letters. Of the 400 varieties of apples about 80 are thus distinguished.

We cannot at present go into a critical examination of the work, but advise all who feel an interest in fruit culture to put themselves in possession of it at once. B.



THE DIANA GRAPE.

FULLER says "there is probably no one variety of grape in cultivation in regard to which there is greater diversity of opinion, than the Diana, and its variableness fully warrants all that is said about it. In one section it is really excellent, while in another, perhaps near by, it is entirely worthless." True, perhaps, yet we think the Diana is yearly growing in public favor. Its wine has been pronounced by good judges the best made in this country, east of the Rocky Mountains. Perhaps when we learn the wants and nature of the vine fully, cultivators will be able to attain more uniform success.

It will not bear rich soil, nor manures; it is a strong, vigorous grower, productive and hardy. The fruit ripens about the last of September in this latitude. Owing to its thick skin and perfect clusters, it is one of the *very best* long keeping grapes we have. The bunches are medium in size, compact, and not generally shouldered. It is said sometimes to ripen unevenly, but it has been asserted that this unevenness is in the color and not in the taste. It possesses a musky odor when first gathered, which disappears, in a great measure, after being kept. Our readers are tolerably familiar with the qualities of this grape, as it has received a due share of attention from grape growers in these columns.

GRAPE CULTURE ON THE SOUTH SHORE OF LAKE ERIE.

MOST persons have heard something of the grapes of Kelley's Island and a few other points in that vicinity, but few have any definite idea of the extent and progress of vineyard planting on the islands and south shore of Lake Erie, and the magnitude which this business is likely to assume in that seemingly favored district—extending from Port Clinton at the west to near Dunkirk at the east—about 200 miles in length and 5 miles in width, where, owing to the influence of the lake upon the atmosphere, the grape is found to flourish and ripen remarkably well; some old vineyards in different parts of the district having borne fruit for 15 or 20 years with scarce an instance of failure. From the returns of the assessors, and from careful inquiry in the different townships and neighborhoods, it is found that there are not less than *seven thousand* acres of vineyard now planted within the above-named district—the rate of planting having averaged not less than 1,000 acres per year for five years past.

As might be expected, much of this planting has been done by persons having very little knowledge of grape growing, hence mistakes have been made in the selection of soils and locations, as well as in planting and cultivation, hence some failures have occurred and more will follow. Still, as a whole, the success has been such, thus far, as to justify the most sanguine expectations in regard to the future, especially now that special means are employed for diffusing information among those who are engaged in the business.

The meetings and exhibitions of the Lake Shore Grape Growers' Association have been very successful in bringing together the grape growers, not only of this district, but many from other parts of the country; and the interchange of sentiments and opinions has been instructive to all. The summer excursions of the Society, too, have not only been very pleasant to the large numbers who have participated, but afforded lessons of practical value to both the visitors and the visited. The annual meeting of the Association, held at Cleveland the past month, was very well attended, and although the past season was quite unfavorable for the grape crop, there was no abatement of interest in the discussions, and the appearances indicate that the amount of planting the present spring will be nearly or quite as great as the average for several years past.

Of the varieties of grapes planted in the lake shore region, the Catawba constitutes full seven-eighths of the vineyards, especially on the islands and around Sandusky, though some of the oldest in that vicinity, as well as in the eastern part of the district, are of the Isabella—the Catawba not ripening as well at the east end as at the west. The Delaware has been considerably planted the past five or six years, and is growing in favor in all parts of the district, both for market and for wine. The Concord, too, has its advocates, but there are few bearing vineyards of it, and planters generally seem to think it must be superseded in all places where the finer varieties can be so successfully grown as here. The same is true in regard to the Isabella and the Ives, though the friends of the latter claim that it will be found everywhere profitable for wine. The Diana and the Clinton are grown to a limited extent, especially in the eastern parts of the district where considerable wine is made. But, after all, none of the varieties at present fully tested are in all respects satisfactory, so that the important question with planters is—*What varieties shall we plant?*

This is a difficult question to decide; more so now than a few years ago, when the majority of planters were better satisfied with the Catawba; and also in view of the greater number of varieties before the public, and the discovery that some kinds are better adapted than others to certain soils and localities. The anxiety of planters to make the most judicious selection of varieties for their location and purpose, is manifested in the large number of letters I have received within a month or two past asking for my opinion or advice upon this point. Some of these I have answered by referring them to the reported discussions at recent meetings of grape growers; but the reply is made, "we find the opinions so conflicting that without more knowledge of the soil and location of the different speakers, we cannot judge whether their teachings are adapted to our circumstances." Others go further and say they are afraid to accept the opinions of A, B and C, because they are extensive propagators of vines, and will be likely to recommend such as they have most of for sale! This I regard as a most unjust aspersion of as honorable a class of business men as can be found in this country. From long personal acquaintance with most of the leading ones and occasional dealings with many of them, I am free to say that as a class they are deserving of the confidence and good will of the public, and some of them are entitled to the lasting gratitude of the whole country for their successful labors in disseminating improved varieties of grapes and instruction on grape culture.

I have repeatedly known these men to give advice directly contrary to their own pecuniary interests. For instance, at the Grape Growers' Meeting in Sandusky, in Oct., 1865, Mr. GRIFFITH, who is a very extensive propagator of Concord and Catawba vines, but has not grown of the Iona for sale, spoke very strongly in commendation of the Iona, and said he could not recommend the Concord, though he had a large stock of the latter vines on hand and hoped somebody would buy them! And now he tells everybody he is convinced that the Iona is the best of all grapes for the lake shore region, and he is planting it in vineyard by the ten thousand, though he has to buy the vines of Dr. GRANT, much against his present interests; for he has not even wood enough to raise a large stock of the plants for next year, while he expects to have a million of Concord and Catawba.

For my own part, in deciding what to plant, I prefer to follow the example of such men as Mr. GRIFFITH, who has devoted nearly twenty years of study and observation to the subject of grape culture on this lake shore, and as his opinion coincides with my own observations of the past few years, I have decided to plant the present spring 2,000 Iona vines, and as many Delaware, with a few Diana and Israella, in a vineyard for market purpose only. If for wine, I should put the Iona first of all, in view of the emphatic testimony of such men as MOTTIER, GRIFFITH and MASSON, than whom no more competent judges can be found. M. B. BATEHAM.

Horticultural Notes and Queries.

GREEN CORN AND PEAS—CANNING.—"Mrs. J. C.," Dawn, Mo., wants to know how to "can" green corn and peas. Will some of our readers furnish the information sought?

LARGE APPLE TREE.—G. W. McC. writes that "an apple tree, now broken down, grew on a farm in Lebanon, Ohio, which measured, 2 feet from the ground, ten feet and eleven inches in circumference. I measured it twice, and know it to be so."

TREES GIRDLED BY MICE.—B. H., Middlefield, Ohio, writes us that he has been successful in saving trees that have been girdled by setting them deeper in the ground, or banking up enough to cover the girdled portion. In many cases new roots start from the edge of the gnawed bark when covered with soil.

NORWAY SPRUCE SCREENS VS. CATTLE.—("J. A. P.," Troy, Penn.) It will *not* do to set Norway Spruce for screens or hedges and allow cattle free access to them. They would serve your screen as they do your trees on the lawn—break them down. When the screen is fifteen or eighteen years old, if well grown, it may turn cattle, but not sooner. Such hedges are for shelter and ornament, not for fences; however they will make a fence sooner than the famous white willow.

BOXES FOR PACKING GRAPES.—("R. V.," S. C.) As popular and good a package in the market for grapes as any, is a square box made of thin stuff—pine is good—and slightly nailed. The capacity may be from five pounds to twenty-five. If wanted extensively they can be made with profit near where the grapes are grown. FAIRCHILD & BROTHER, Hammondsport, N. Y., manufacture for the grape growers of Pleasant Valley, but it would scarcely pay you to transport them to South Carolina.

CATALOGUES, &c., RECEIVED.—SAMUEL T. THORBURN'S Annual Descriptive Catalogue of Vegetable and Agricultural Seeds, embracing every standard and improved variety, also tested Novelties. No. 46 Hudson St. Albany, N. Y.——A Catalogue of the Goodrich Seedling Potatoes, describing twenty-one varieties, illustrated, issued by D. S. HEFFRON, Utica, N. Y.——Circular from FRANCIS BRILL, Newark, N. J., with Price List of Strawberry Plants, Japan Lilies, Garden Seeds, Fruit Trees, &c.

NEW MODE OF LABELING TREES—*A Valuable Discovery.*—At a recent meeting of the Society of Arts (Institute of Technology) Boston, the Hon. M. P. WILDER made a statement relative to a new method of labeling trees, accidentally discovered by him. In the use of zinc labels, which were the most durable in character, an indelible ink was used, but not having the ink at hand on one occasion, he wrote upon the zinc with a lead pencil. This writing, although it could be rubbed off when first made, grew more distinct and durable with age, and after several years could not be erased except by scraping.

Domestic Economy.

SENSIBLE TALK—RECIPE WANTED.

EDITOR:—I was disappointed last week in finding no Domestic Column in the RURAL. Now I think that we, the daughters of EVE, are the losers in every instance when this occurs. Mr. Editor, if you have a license to exhort the women to diligence, do stir up their pure minds, by way of remembrance, and tell them that, to a certain extent, they are Editors of this Department. If they would usher forward the day so long foretold, when men shall cook the cakes, wash the dishes, tend the babies, they must unite their energies as *one man*, strike while the iron is hot, and contend earnestly for the mastery.

What I want especially this morning is a recipe from some of these good housewives for Orange Marmalade. Our minister, who often gives us a good thing, and occasionally takes a good thing when set before him, and is a judge of both, says it is delicious, and we will feel obliged for the recipe. More anon.—M. N. P., *South Onondaga.*

VARIOUS ORIGINAL RECIPES, &c.

WHITE POTATO PUDDING.—A quarter of a pound of butter, ½ pound of sugar, 4 or 5 eggs, 1 pound of potatoes mashed exceedingly fine, with a little cream and salt through a colander, 2 tablespoonsfuls of brandy, 1 grated nutmeg with ½ a teaspoonful of cinnamon. Beat the butter and sugar to a cream, then add the potato, eggs, brandy and spice. Line your plates with paste and bake in a quick oven. When done and cool, slip into plates suitable for the table, and sift white sugar over them.

TO KEEP MEAT FRESH.—As farmers generally reside at a distance from regular meat markets, the following directions for keeping meat may be of use to those that try it:—Cut the meat in slices ready to fry; pack it in a jar, in layers, sprinkle with salt and pepper just enough to make it palatable; place on the top a thick paper or cloth, with salt half an inch thick; keep this on all the while. Meat can be kept for three weeks in the summer, and the last will be as good as the first.

PARING POTATOES.—Many persons, in preparing potatoes for cooking, pare off a thick slice from the surface instead of digging out the eyes. Prof. BLOT, in his lectures on the potato, says this skinning process is all wrong, as the strength of the vegetable lies near the surface—the starch growing less abundant as the center is approximated. The starch, near the surface, contains the nutriment—which is not more than seven or eight per cent.—the balance being mainly water.

MENDING BROKEN VESSELS—CEMENT.—To half a pint of milk put a sufficient quantity of vinegar in order to curdle it; separate the curd from the whey, and mix the whey with the whites of four eggs, beating the whole well together; when mixed add a little quick lime through a sieve until it acquires the consistency of a paste. With this cement broken vessels or cracks can be repaired; it dries quickly, and resists the action of fire and water.

BEDBUGS—SALT THEM.—A lady writes the Texas Christian Advocate that salt is a sure thing on bedbugs. Wash the articles and places infested with the bugs with salt and water, and fill cracks and crevices where the vermin hide—they will give no more trouble. They cannot abide where salt is.

HONESTY THE BEST POLICY.—This old adage has proved true in the case of *Best Chemical Saleratus*, being always *full weight* and perfect goods.

New Advertisements.

STRAWBERRIES—Triomph de Gand, Russel's Prolific, Wilson's Albany, extra good plants, for sale low. Address H. KINGSBURY, Lockport, N. Y.

The Pears are low-branched, chiefly Duchess and Louis Bonne, with 15 other varieties in small quantities. The Peaches are chiefly Crawford and Hale's Early, a few of 10 other varieties.
GRAPES—A few choice 2 year old vines, layers mostly, of the principal leading varieties, new and old, for sale cheap, quality considered. Address
E. WARE SYLVESTER, Lyons, N. Y.

TO LOVERS OF FLOWERS.—I have a choice variety of Flower Seeds, comprising the finest Asters ever grown of every sort—Everlastings, Double Zinnias, Carnation Pink, Dianthus, Primrose, African Marygold, Mexican Poppy, Henderson's Perfection, and many other choice kinds. For 25 cents and postage stamp, I will send six kinds; for 50 cts. and postage stamp, 12 kinds. Mrs. H. C. KENT, Seipioville, N. Y.

O. ORDER K. EARLY OF *Montclair,* **B. E. WILLIAMS,** *New Jersey.* **B**
We consider this berry the VERY BEST that has come under our observation, and recommend it to the notice of Blackberry growers and amateurs.—*Am. Inst. Farmers' Club Com., N. Y.*
The berry is quite as large as the Lawton and the fruit is perfectly sweet when ripe, melting in the mouth and leaving no core.—*P. T. Quinn, N. J.* 897-3t

MONROE COUNTY NURSERIES, SPRING 1867.

We offer for sale a general assortment of *all* kinds of Nursery stock. Would call *special attention* to our stock of Peaches, Standard and Dwarf Cherries, 2 years old. *Roses on their own roots,* and a fine assortment of Evergreens. We also have a few thousand Standard Apple Trees, 4 years old, slightly injured by the hail, which we will sell very low.
897-4t GOULD, BECKWITH & CO., Rochester, N. Y.

ROCHESTER CENTRAL NURSERIES. C. W. SEELYE.

The subscriber, having purchased the interest of his former partner in this Nursery, would call the attention of old customers and all persons desiring to purchase
First class Fruit and Ornamental Trees, Shrubs, Vines, Plants, &c.,
to the stock of this establishment. Particular attention is given to filling orders directly for PRIVATE USE, and it will be found by all who order in this way, that they can deal more satisfactorily and at *lower rates* than when ordering through a third party. Correspondence is solicited from those interested in planting
Orchards, Vineyards, Private Grounds, Cemeteries, &c.
☞ Descriptive and Priced Catalogues will be sent on receipt of 10 cents.
☞ Special terms will be given to all who may make inquiry upon bills, in which all the articles and quantities of each are distinctly specified. Address,
C. W. SEELYE, Rochester Central Nurseries,
897-2t Rochester, N. Y.

IONA AND ISRAELLA VINES FOR SALE. Extras, Double Extras, 1 and 2 years, at *very low rates.* Send early for Price List, before buying elsewhere. J. L. WARING, Amenia Vineyard, Amenia, N. Y. 896-1t

BERRY BOXES! Berry Boxes!—The subscribers, having enlarged their facilities for the manufacture of Berry and other Fruit Boxes, are now fully prepared to furnish the material in any quantity at short notice. 100 samples sent on the receipt of $1 (two kinds.) Prices range from $7,50 to $10 ₱ M; a discount of 10 ₱ cent. where 10,000 or more are ordered. Send for Circular and Price List. Address WARREN & RIX, Jeddo, Orleans Co., N. Y. 897-tf.

FRUIT and ORNAMENTAL TREES FOR THE SPRING OF 1867.

ELLWANGER & BARRY have the pleasure of offering for Spring planting their usual large and well grown stock of
Standard and Dwarf Fruit Trees,
Ornamental Trees, Shrubs and Plants,
Green-House and Hot-House Plants.
Bedding Plants—Including the splendid large-leaved Cannas, Colocasia, etc.
Pear, Quince and Cherry Stocks.
Each of these Departments contain all of real value, old and new.
The following Catalogues, which give full particulars, will be sent, pre-paid, upon the receipt of postage stamps, as follows:
No. 1. A Descriptive and Illustrated Catalogue of Fruits, 10 cents.
No. 2.—A Descriptive and Illustrated Catalogue of Ornamental Trees, Shrubs, Roses, &c., &c., 10 cents.
No. 3.—A Catalogue of Dahlias, Verbenas, Petunias, and select new Green-House and Bedding Plants, published every Spring, 5 cents.
No. 4.—A Wholesale Catalogue or Trade List, 3 cents.
894-3teo ELLWANGER & BARRY,
Mount Hope Nurseries, Rochester, N. Y.

ALL NURSERIES IN ONE.—L. L. WHITLOCK, Office 97 Park Row, New York City. I will fill selected orders of over *one hundred dollars* at the lowest wholesale prices, among which are:

Apple Trees	6	cents each.
Pear Trees	20	" "
Currants	3	" "
Gooseberries	2½	" "
Grapes	3½	" "
Blackberries	1	" "
Raspberries	1½	" "
Strawberries (Wilson's Albany)		$3 per 1,000
Shade Trees	20	cents each.
Shrubs (6 to 10 feet,)	5	" "
Roses	5	" "
Bedding Plants	4	" "

☞ Send stamp for Price List. 896-2teo

FLOWER GARDENS FOR EVERYBODY!—WM. WEBSTER'S New American Style of FLOWER GARDENS. The most exquisite Designs in this Elegant Style, sent by mail to any part of the United States. Enclose 25 cts. and a 3 ct. stamp, and receive by return mail a sample bed with list of Seeds.
Address WM. WEBSTER,
891-tf Landscape Gardener, Rochester, N. Y.

FLOWER SEEDS! FLOWER SEEDS!
IMPORTED THIS SPRING.

No. 4. Wholesale Catalogue or Trade List, 5c. each.
No. 5. Catalogue of Flower Seeds, 5c. each. [896-1t

A NEW WINTER PEAR.—WINTER DUCHESSE.—Duchesse D' Hiver, or Tardif de Tourase—I am pleased to announce that this new and valuable pear is now offered to the Fruit Growers of this country. Notices and descriptions of it have appeared from time to time in the horticultural journals, and the public have been made acquainted to some extent with its qualities. It still enjoys the high reputation in France which it acquired several years since as a winter pear, and it is believed will fill a want which has always been felt for a first-class, long keeping winter fruit suitable for profitable orchard culture and marketing. Its qualities may be described as follows:—Trees, strong growers, very vigorous, and of early fruitfulness, and succeeding well on either quince or pear stock. Fruit, in size, form and color, bearing a great resemblance to Duchesse d' Angouleme. Color, at maturity, a pale yellow with red cheek. Flesh, melting, juicy, sweet and perfumed. Time of ripening—keeps well until March. A comparatively small number only are offered for sale. Three Dollars each for fine standard trees. Address, C. W. SEELYE, Rochester Central Nurseries, Rochester, N. Y. 897-2t

GRAPE VINES FOR THE LAKE SHORE. Catawba, Isabella, Diana, Iona and Israella—grown by Mr. GRIFFITH, Dr. GRANT and others, for sale at lowest current rates by M. B. BATEHAM, Painesville, O.

Ladies' Department.

Written for Moore's Rural New-Yorker.

ROSE BUDS.

BY ALVAH BEEMAN.

Around my door spring rose buds grew,
Opening buds of promise fair,
Over my heart their sweetness threw
And left their fragrant memories there.
Over the snow I wait and weep:
Under the snow my rose buds sleep.

I named my rose buds—dear names yet—
Nelson, Scottie and Emma, sweet
"Little Laura," the household pet—
(O why, my heart, so wildly beat?)
Over the snow I wait and weep;
Under the snow my rose buds sleep.

By blighting frost my rose buds riven,
Their opening petals closed for aye;
Sweet zephyrs bore their breath to heaven—
Their cherish'd perfumes pass'd away.
Over the snow I wait and weep;
Under the snow my rose buds sleep.

SPRING FASHIONS.

In the always interesting article of crinoline there is a most gratifying change. The "tilters" are acknowledged by their wearers to be just what the newspapers called them from the first, an abomination, ridiculous in form and vulgar in idea. They are to be followed by a much smaller hoop, graceful, becoming and convenient for both out and in-door wear.

The fashion for bonnets is still oscillating and fails to indicate definitely the style that is to prevail. Those who venture to purchase have the mortification of seeing something else entirely new the first time they appear in their costly nothingnesses. One thing, however, seems to be pretty certain, and that is that there will be no such radical change in regard to size as has been anticipated. The small bonnet is what the late Artemus would have called "a success." Handsome women, and those who consider themselves so, have no notion of again hiding their beauty in bonnets of the old coal-scuttle style; and those not included in these two classes are too insignificant in numbers to influence the fashions materially. Seriously, we believe that for summer wear the small bonnet is the true idea; and we are glad to see it perpetuated.

The gored dress, so long in fashion, will be the prevailing style for the coming season. It is made plain at the top—or with plaits at the back, according to taste. For the house the skirt is very wide at the bottom, with a long train. For receptions this skirt is very suitable. In street dresses, there is a decided and apparently popular change. The short dresses, with petticoat to match, are a great improvement upon the looped-up dresses, with trains which would sometimes escape from the best of loopers to sweep the streets. These short dresses require a saeque or jacket to be worn with them, and are generally made *en suite*. Shawls cannot be worn with them; they have too heavy a look, and are not graceful with the new short dress. The short dresses for the street are made plain at the top, or with plaits at the back, both of which are fashionable. The skirt is usually cut with points around the bottom, and is worn over a plaited petticoat of the same material—but the petticoat is now often made plain, and when trimmed with graduated bands of velvet is very pretty, and many prefer it to the plaited. Everything in the way of dress is elaborately trimmed.

WOMAN'S MISSION.

Is it to repine when not appreciated, to mourn when betrayed by those she has trusted, find fault with her lot and wish she had more power? Nay, verily; it is to love and be loved again, to use the power of love, kindness, patience and forbearance, with which God has endowed her, for the upbuilding of His cause and for His glory.

If, as Franklin says, "man's happiness is God's glory," surely woman's power is unlimited; for from the cradle to the grave she watches over man. As a mother she presses the first kiss on his infant brow, watches him as he takes the first step, sympathizes with him in his first sorrow, chides her wayward boy for his first wrong-doing, telling him the sin or folly of such a course, shares with him his hopes and fears, strives, by example and precept, to teach him to do right, and overlooks and forgives what the world would condemn.

As a sister, she may watch over the brother so loved, and be so kind and loving to him, sharing his confidence and never betraying it, that, for her and his mother's sake, he will respect all womankind.

As a friend, how wide the scope! A friend, oh how much is comprised in that one word! Friend, warning, advising, telling him truths which man dare not tell man; yet he will hear and heed them from woman's lips till, for her sake, he leaves the wine cup, the dissolute companion, the gambling saloon and all other places where his character is blackened and his soul ruined.

As a wife, how much stronger the tie! The twain one—neither perfect without the other—partner with him in every care, joy or sorrow—never doubting. Though the world forsake him and cast him out as evil, she can still find some redeeming trait in his character, ever hoping, trusting and clinging to him, till he partake of her hope and faith and come off conqueror.

And when sickness or age has bowed the stalwart form, who like woman can minister unto him? Let her come in either guise, mother, sister, friend or wife, whose hand so soft to press the throbbing brow? Who can so sweetly whisper words of cheer? And when the last, last hour has come, and the spirit is leaving its casket, who can so gently close the eyes and press the last kiss on lip and brow of him she loved in life and mourns in death? Ah! is not woman indeed man's guardian angel? Is not her mission a noble one, if she but faithfully perform it? God help her to do her work well!

Una of Clay.

LITTLE RED RIDING HOOD.

From a Picture by Sir Edwin Landseer.

THE BEAUTY OF OLD PEOPLE.

Men and women make their own beauty or their own ugliness. Lord Lytton speaks of a man who "was uglier than he had any business to be;" and if he could but read it, every human being carries his life in his face, and is good looking or the reverse as that life has been good or evil. On our features the fine chisel of thought and emotion is eternally at work. Beauty is not the monopoly of blooming young men, and of white and pink maidens. There is a slow-growing beauty which only comes to perfection in old age. Grace belongs to no period of life, and goodness improves the longer it exists. I have seen sweeter smiles on a lip of seventy than upon a lip of seventeen. There is the beauty of youth, and there is also the beauty of holiness—a beauty much more seldom met, and more frequently found in the arm-chair by the fire, with the grand-children round its knees, than in the ball-room or promenade. Husband and wife, who have fought the world side by side, who have made common stock of joy and sorrow, and grown aged together, are not unfrequently found curiously alike in personal appearance, and in pitch and tone of voice—just as twin pebbles on the beach, exposed to the same tidal influences, are each other's second self. He has gained a feminine something, which brings his manhood into full relief. She has gained a masculine something, which acts as a foil to her womanhood.

SWISS BRIDAL CUSTOM.

I learned yesterday a bridal custom of this region so sensible and proper that I shall mention it for the young folks at home. The custom of making gifts to the bride prevails here, as everywhere, but it is better regulated. The bride makes out a written list of things she will require in beginning to keep house, especially those things that are over and above what would naturally be furnished by her friends, and one of them says, "I will give her this," and marks that as provided for, another will give her that, and sometimes two or three more will combine and furnish a more expensive present than any one would give alone. After the wedding, the couple usually start off on an excursion, and on their return they find their dwelling filled with these presents, each marked with the giver's name. At the hotel where I lodged in St. Gallen, a bridal party of the town had the wedding breakfast when I was there, all the relatives and friends making a larger party than a private house could entertain.—"*Irenæus*" *in N. Y. Observer.*

A lecturer was dilating upon the powers of the magnet, defying any one to show or name anything surpassing its powers. A hearer demurred, and instanced a young lady who used to attract him thirteen miles every Sunday.

What is the difference between a pretty girl and a night-cap? One is born to wed, and the other is worn to bed.

Choice Miscellany.

ABOUT CAREERS.

A word is generally defined as "the sign of an idea;" but there are a few words in common use for which we have never been able to discover any corresponding ideas. In some instances, perhaps, there was originally a tangible idea, whose flame has survived it; but oftener, we suspect, the word stands for a fanciful creation which only a certain class of minds are able to conceive of, and even they have never attempted to define sharply what they mean by the term. One of the most fanciful and mischievous of these is that pet word of the female novelist, "career." All of their heroes, and some of their heroines, must have "careers." And the side characters, who are killed off at intervals through the story, are made pathetic chiefly from the fact that they have died without having a "career," which was their darling ambition.

What is a "career?" Is there any such thing? We speak of the career of a wise statesman, or a great general, and there is a definite meaning attached to the word; so, too, a great artist, and sometimes a literary genius may have a career; and the daily papers too often entertain us with the "career" of a cut-throat or a swindler, and describe minutely "the fatal knife" and "the fatal spot." But what "career" can an ordinary mechanic, farmer, merchant or student have that does not excite a smile on being called by such a name?

Women frequently entertain exaggerated and altogether erroneous ideas of a man's opportunities for "making a mark in the world." They see that from the very fact of his being a man he enjoys a larger liberty in certain directions than they can ever hope for; his sphere of action is wider than theirs, and the possibilities of his future more numerous. They imagine what glorious things they might achieve if they were "only a man," and see no reason why all their brothers may not become powerful and famous among men. And so those of them who write fiction take a country boy going to town to be one of ten thousand clerks in a thousand stores, or a youth just entering college, and make a hero of him and talk romantically about his "career"—which, in sober fact, means measuring calico or weighing cheese for a dollar a day, or studying four years to find out at the end of that time that your studies have just begun. Sometimes, though less often, they talk about a young lady's "brilliant career"—which means simply that for "a season" she has spent as many nights as possible displaying her kaleidoscopic wardrobe, uttering and listening to flippant nothings, making herself an advertisement for a dancing master, and finally selling herself for a good price to be somebody's wife and passing to oblivion.

But these fallacies are not altogether confined to women. One of the botchers of American literature says, in a production which he calls a poem, "It is a great thing to be a man"—and to prove it he instances the fact that men build railroads, steamboats, &c. Now, the men who invented the locomotive and the steamboat were undoubtedly great, in one sense; but those who merely build them after patterns are no more great than the men who make shoes or the women who make dresses. It is true that man's field is wider than woman's and his opportunities greater; but his responsibilities and the difficulties to be overcome are in proportion, and the balance is preserved. He who possesses a million is still poor if he owes a million.

It is impossible to say how many boys, getting their ideas of life from such sources, have started out with the expectation of having a "career," and in a few years, sickened and disgusted with failure, have settled down to drudgery and moroseness, instead of becoming the bold, hardy and comfortable men they ought to have been. Young man, you don't want a career, even if it were what female novelists tell you it is, and if you could have it. Suppose you gain a reputation in political, social or literary circles. Tomorrow you die, and next week you are forgotten. There is a new sign over the store, a dozen candidates are ready to fill your vacant office, your book goes to the mill and is ground up and made over into a clean sheet to receive the effusions of a newer bard. Any fame that is not world-wide and enduring—anything less than Shakspeare's or Lincoln's—considered in itself, is contemptible. You had better govern you energies with the purpose of simply making as much of a man of yourself as possible, regardless of reputation, and make the possession of a quiet and pleasant home the limit of your ambition. In the ordinary sense of the word, a "career" is a trivial affair at best; and in its true sense it is impossible to any but a towering genius or a man chosen by Providence for some special work.

THE MYSTERY OF EDITING.

The world at large do not understand the mysteries of a newspaper; and, as in a watch, the hands, that are seen, are but the passive instruments of the spring, which is never seen; so, in a newspaper, the most worthy causes of prosperity are often least observed and known. Who suspects the benefits a paper derives from the enterprise, the vigilance, and the watchful fidelity of the publisher? Who pauses to think how much of the pleasure of reading is derived from the skill and care of the printer? We feel the blemishes of printing if they exist, but seldom observe the excellencies.

We eat a hearty dinner, but do not think of the farmer that raised the materials thereof, or the cook that prepared them with infinite pains and skill. But a cook of vegetables, meat, pastries and infinite *bon-bons* has a paradisiacal office in comparison with an editor! Before him pass in review all the exchange newspapers. He is to know all their contents, to mark for other eyes the matters that require attention. His scissors are to be alert, and clip with incessant industry all the little items that are to gather in the news department. He passes in review, each week, every State in the Union, through the newspaper lens; he looks across the ocean and sees strange lands, and following the sun, he searches all around the world for material. It will require but one second's time for the readers to take in what two hours' research produced. By him are read the manuscripts that swarm the office like flies in July. It is his frown that dooms them. It is his hand that condenses a whole page into a single line. It is his direct sternness that restricts sentimental obituaries, that gives young poets a twig on which to sit and sing their first lays.

And the power behind the throne, in newspapers as in high places, is sometimes as important as the throne itself. Correspondents, occasional or regular, stand in awe at that silent power which has the last chance at an article, and may send it forth in glory or in humility. And, in short, as the body depends upon good digestion, so the health of a paper depends upon the vigorous digestion which goes on by means of the editor.

Ought they not to be honored? And since little fame attends them, they should at least have their creature comforts multiplied. From that dark and dismal den in which they have so long had purgatorial residence, they are at length translated!—*Henry Ward Beecher.*

WIT AND WISDOM.

Where boasting ends, there dignity begins.

Forgiveness, after the heart is broken, is pardon after execution.

If a man empties his purse into his head, no man can take it from him.

The violet grows low, and covers itself with its own tears. Such is humility.

The brain and the stomach seem to be in opposition to each other; when the latter is empty the former is most active.

Mankind have been learning for six thousand years, and few have learned yet that their fellow-beings are as good as themselves.

A leveler perceiving two crows flying side by side, said:—"Ay, that is just how it should be; I hate to see one crow over another."

There are 370 churches in Moscow, and all the bells were rung at one time on the occasion of a royal marriage. The clanging was fearful.

A writer called at a printer's and accused the compositor of not having punctuated his poem, when the typo earnestly replied, "I'm not a *pointer*—I'm a *setter*."

"Are them all Bibles?" asked a man the other day in the register's office, pointing to the big volumes of wills upon the shelves. "No, sir," answered one of the clerks, "those are testaments."

All's for the best! be sanguine and cheerful,
Trouble and sorrow are friends in disguise,
Nothing but folly goes faithless and fearful,
Courage forever is happy and wise.

All's for the best! if a man would but know it,
Providence wishes us all to be blest;
This is no dream of a pundit or poet,
Heaven is gracious, and—all's for the best!

Sabbath Reading.

Written for Moore's Rural New-Yorker.

THE LAND OF LIFE.

BY ELIZA O. CROSBY.

An old man stands by the river side,
The winds of winter are chill
And toss o'er his brow his hoary hair,
Like the fleecy snow, at will:
"Art still in the land of the living?"
One cries, 'mid bustle and care;
The old man gazed beyond the tide—
"Oh, no! but I'm almost there."

Almost in the land of the living!
The waters of Death roll near,
No murky tide enveloped in cloud,
But shining and crystal clear.
He hears but softened echoes
From the far-off earthly strife,
And light gleams o'er from the land beyond—
The beautiful Land of Life.

Almost in the land of the living!
He thinks how the angel dim,
With his blighting hand has made the earth
A vale of shadow to him;
Yet ever over each gloomy cloud
The light of God's mercy played;
And near him now lies the land of life
Where never shall fall a shade.

The chilling winds of winter shall ne'er
Blow there by the crystal stream:
A crown of glory in Heaven's own light
The snow of his hair shall gleam:
With full fruition of holy hopes
The beautiful realm is rife.
Patient and calm by the tide he waits—
Almost in the Land of Life.

Orangeport, N. Y.

ONLY A NEIGHBOR.

She was only a neighbor, so why should I linger by the window overlooking the deserted cottage, with tear-dimmed eyes, and sighs of real heart sorrow welling up from my inmost soul? So asked another neighbor. But why? Aye, she was in heart and deed more than a neighbor, and we had that morning parted, perhaps forever; and a sense of loneliness and sorrow pervaded my being. Only a neighbor but to all her fellow beings a loving, gentle sister, in all save the kindred tie. She could stand by the bedside of suffering with words of hope and comfort; and with healing in the touch of her gentle hand bathe the fevered brow and smooth the snowy pillow for the restless, aching head. Her step is light, her voice low and sweet, and her presence brings a smile of welcome to the invalid's countenance, nor can one feel gloomy in her society. The ill mother rests contented and happy, when she takes upon her knee the little, noisy, neglected boy, and combs out with a gentle hand his tangled curls, and tells him stories in a soft, calm voice that causes him to forget his noisy play, and the weary mother rests in quiet. She is ever ready to lend a helping hand; and in the social circle or the house of mourning she is a welcome guest, to comfort, to aid, and to encourage. No selfishness finds a lodging in her breast, which is filled only with compassion for the suffering and the needy. Like the good Samaritan, she stops and binds up the wounds and encourages the faint-hearted. Her neighbors' interests are her own, and she shares with the needy her prosperity. She is only a neighbor, it is true; but there is sufficient reason to gaze with sorrow over to the deserted cottage, that will never more be cheered with her gentle presence. J. M. I.

Written for Moore's Rural New-Yorker.

BETHLEHEM.

What sacred emotions fill the soul at the mention of Bethlehem! What deep prophetic truths are uttered concerning the nativity of our Saviour. "And thou Bethlehem in the land of Judah, art not the least among the princes of Judah: for out of thee shall come a Governor, that shall rule my people Israel." More than eighteen centuries have rolled away since the shepherds of Judea watched on the plains of Bethlehem, listening to the angelic strains, "Glory to God in the highest, and on earth peace, good will toward men." Since then the name of Jesus, dear to millions, has bowed the heart wherever it has been proclaimed. And at this period, sublime with the march of Christianity, the name of Jesus, upheld on the starry banner of the cross, pours the oil of healing on the stricken, the suffering and the oppressed with magic power. The pilgrim goes and comes from this sacred spot deeply impressed with the sanctity of the place. The Christian grows strong in faith, expecting the fulfillment of the divine prophecy when the Son of God shall appear in all his glory descending to judge the nations of the earth.

Wm. D. Ensign.

Deceiving Ourselves.—Oh! how easy it is to deceive ourselves, and to sleep and wish that heaven may fall down into our lap! Time, custom, and a good opinion of ourselves, our good meaning and our lazy desires, our fair shows, and the world's glistering lusters, and these broad gaudy ornaments and deckings of religion that bear bulk in the church, is that wherewith most satisfy themselves; but a pillow watered with tears for the sins of the land, is rare to be found among us.

Present to an ordinary man the maxim, "Love your enemies;" you may hear him sigh as he answers that the saying is divine; and he fears that he will never practice it. The reason is that he has an enemy and fully understands what it is to love him, and also what it is to hate him.—*Ecce Homo.*

Educational.

EDUCATING YOUNG LADIES.

FIRST ARTICLE.

ANY education which proceeds upon the idea of mere adaptation to a particular sphere or work must necessarily be defective. In theory it degrades a human being into a mere machine, it subordinates the man to his work; and though it is impossible that such a result should be reached practically, yet the system has its effect in stunting the growth of the individual. It may safely be assumed, as a general rule, that the more knowledge one has acquired, from whatever source, the more mental discipline he has received, of whatever kind, the better he is fitted for the duties of any position in which he may be placed. Only a slave, a subjugated man, is the better slave for being ignorant.

If, then, it is unwise to narrow down a man's education approximately to the routine of the business by which he is to earn his bread, when he can choose his own calling and follow it at will, how much more unwise is it to narrow down the education of a young lady, when it is uncertain to what position in life she may be called. The latest cant on this subject is that as most women are destined for marriage they should be educated for wives and mothers; which is little more than a truism. The social status of the wife must follow that of the husband; and the duties of wives and mothers are as widely varied as the positions of men. Moreover, the bride of a millionaire may become the widow of a bankrupt. And a mother might be able to instruct daughters in all sorts of needle-work and household economy, and be compelled to send sons to school to learn their letters.

In our eventful American life each generation begins a new account with Fortune; and it is unsafe to educate a child for any special position until his powers are so far developed as to show a decided bent in some one direction. The best and safest foundation for success in life is broad and liberal culture, a symmetrical expansion of all the capacities of the mind. With this to start on, one may the more easily turn to any work and be the better prepared to execute it.

Another kind of cant is that which harps forever upon the necessity of a knowledge of kitchen work, and stops there. Cooking and dish-washing are like writing a plain hand; there is no particular credit in understanding them, but it is a great shame not to. And the duties of the kitchen are no more the end of a woman's existence than the mere counting of dollars and cents accurately is of a man's. If a man so far loses sight of the ultimate object of his labor as to take delight in the mere processes of his business and in casting up columns of figures, we say he has degraded the highest part of his nature, stunted his manly growth and become of no more account than the tools with which he works. But the same thing is true of a woman chained down to house-work and taught to keep her thoughts from rising above it. The cooking of dinners and scouring of pots and kettles must necessarily be done, and the work properly falls to woman. But it is mere drudgery, after all, and the sooner she can get through with it and be released, the better. There are schools for young ladies in which, with the idea of educating them practically, the pupils are required to take turns doing different parts of the house-work. For instance, one will have the care of all the lamps for a month, and spend perhaps an hour a day trimming and filling them. Now, any one can learn in fifteen minutes to fill and trim a lamp as well as it can be done; and beyond that all the time spent at it by these young ladies was wasted; the work might better have been done by a servant, leaving the pupil to pursue her studies or practice something at which she was not perfect. When one has learned to perform any task as well as he is capable of doing it, further repetition is mere drudge-work, and contributes nothing to the growth of the individual. The art of housekeeping, then, though indispensable to the proper education of a young lady, is not the whole, nor, indeed, any considerable part of it.

GOVERNMENT.—Good government in school is universally recognized as a desirable thing, but most teachers look upon it as a *means*, rather than as, in itself, an invaluable end. "There must be good order," they say, "so that the proper work of the school may go on without interruption; but our chief concern is the instruction of our pupils." There can surely be no fact more clear to an observing mind, than that good government is, in itself, a thing of supreme importance, involving, as it does, the right use of all acquired power, and consequently determining the happiness of the individual and his value to society. The standard of order in our schools is low, a result both of an underestimate of its importance, and of the proper means to be employed in securing it.—*Michigan Teacher.*

GEOGRAPHY.—A gentleman once called at a school where an enterprising teacher was explaining the form and motions of the earth by the aid of an original tellurian. The sun was represented by a turnip and the earth by a potato. After the class had received their lecture, and answered in concert, a series of geographical and astronomical questions, the teacher turned to the visitor with a proud self-satisfied air, as much as to say, "You see they know all about it," and asked him to question the class. Being requested, he asked the class, "What is the sun made of?" "A turnip!" was the reply.

THE longest word in Elliott's Indian Bible is in Mark i: 10, and is "Wutteppesittukqussunnooowohtunkquah," which signifies "kneeling down to him."

MORNING IN SPRING.

CURIOSITY.

How curious and inquisitive most of people are. You can hardly take a trip on the cars, without going through more or less of a cross examination, "Traveling far mister?" "Going out West, I suppose?" "Let's see, do you live in York State?" "Seems to me I have saw you before." "Didn't you used to live down east somewhere?" "Got your family along?" "Mebbe your'e on a visit," &c., &c., till a man almost wishes it were against the law to speak on a railway train. Why can't people let a fellow "go in peace" and not keep bothering him with a whole catalogue of useless and impertinent questions? If "some folks" only knew that people who ask the most questions generally know the least, I am sure they would be more inclined to attend more particularly to their own affairs. It is all well enough to be inquisitive so far as the proper investigations of art, science, mechanics, &c., are concerned; but the trouble is, there are people who are unable to discriminate between sensible inquisitiveness and idle curiosity. Now, readers, one and all, the next time you travel abroad, please don't worry every verdant country youth whom you happen to meet with a host of solicitous queries, as to "how his health is," and "if the baby is sick," and whether he is "traveling far." Why, in the name of common sense, what difference does it make to you whether he is traveling east or west, or whether his grandmother has black hair or brown hair? And, above all, don't ask your female companion *du voyage* "how old she is;" for that is the "unkindest cut of all."

March, 1867. JULE.

TYPOGRAPHICAL HORRORS.

A NEW YORK letter-writer says:—One day last year Mr. Greeley wrote an editorial entitled "William H. Seward." Imagine his rage when it came to him in proof headed "Richard the Third!" Yet anybody familiar with his chirography, if his inky jerks can be so designated, will readily see not only how such a mistake could be made, but how it probably would be. Again he wrote about "three men in buckram," and the prosaic type-setter got it "three men in the back room." And this, notwithstanding the fact that two compositors of sagacity and experience are hired at an extra salary, because they can read his copy. George Ripley has been the victim of the grossest outrages in this line. In one of his book notices he took the liberty of quoting from Shakspeare:—"'Tis true, 'tis pity; and pity 'tis, 'tis true." And the wretched bunglers got it:—"'Tis two, 'tis fifty—'tis fifty—'tis fifty-two!" This is some worse than James F. Babcock's martyrdom, when he wrote, "Is there no balm in Gilead?" and read next morning, to his consternation, "Is there no barn in Guilford?" Mr. Crawford, a member of Parliament, recently sent to India the message, "The news from America favors the holders," and it arrived there with the information that "News from America savors of soldiers!"

RIGHT INSTRUCTION FOR PEASANTS.

M. CHANCHARD reported to the French Legislature upon the subject of primary instruction in the departments of France. He directed attention to the fact that the law of 1850 had placed agriculture upon the list of primary studies, explaining that by this was intended simply instruction in the most elementary, undoubted and practical facts of that science. But some doubts have been entertained as to the propriety of this action. There can be none, thinks M. Chanchard, if for agriculture we substitute gardening. Almost every peasant's cottage has a few acres of ground around it, which he calls his garden; but it is commonly a tangle of poor herbs, and poorer trees. Let the peasant's children be taught at the primary school how to prepare the ground, how to sow, how to raise good vegetables, how to plant and trim, and graft trees, and it is contended that the cottages will become comfortable and pleasant homes, where the peasants will be content to stay, instead of crowding, as they now do, to the great towns.

IF we would have powerful minds, we must think; if we would have faithful hearts, we must love; if we would have muscles, we must labor.

A MENAGERIE OF DRUNKARDS.

THE most foolish predicament a man can get into is to get drunk. In drunkenness every man shows his strongest and most ardent passion. There are six kinds of drunkards, and if you go into a city drinking place where there are a dozen men under the influence of liquor, you will be sure to find these six different animals.

The first is ape-drunk. He leaps and slugs and yells and dances, making all sorts of grimaces and cutting up all sorts of "monkey shines" to excite the laughter of his fellows. O, terribly silly is the drunken clown.

The second is tiger-drunk. He breaks the bottle, breaks the chairs, breaks the heads of fellow carousers, and is full of blood and thunder. His eyes are fired with vengeance, and his soul raves with murderous fury. Of this sort are those who abuse their families.

The third is hog-drunk. He rolls in the dirt on the floor, slobbers and grunts, and going into the streets makes his bed in the first ditch or filthy corner he may happen to fall into. He is heavy, lumpish and sleepy, and cries in a grunting way for a little more drink.

The fourth is puppy-drunk. He will weep for kindness, and whine his love and hug you in his arms, and kiss you with his slobbery lips, and proclaim how much he loves you. You are the best man he ever saw, and he will lay down his money or life for you.

The fifth is owl-drunk. He is wise in his own conceit. No man can differ with him, for his word is law. He is true in politics, and all matters must be taken as authority. His arm is the strongest, his voice the sweetest, his horse the fleetest, his turnips the largest, his town the finest, of all in the room or land.

The sixth and last animal of our menagerie is the fox-drunk man. He is crafty, ready to trade horses and cheat if he can. Keen to strike a bargain, leering around with low cunning, peeping through cracks, listening under the eaves, watching for some suspicious thing, sly as a fox, sneaking as a wolf, he is the meanest drunkard of them all.

FACTS NOT GENERALLY KNOWN.

THE origin of the portrait of the Goddess of Liberty upon our coins is of great interest. Mr. Spencer, the inventor of Spencer's lathe, used by the American Bank-Note Company, was the artist who cut the first die for our American coin. He cut an exact medallion of Mrs. Washington, the wife of General Washington, and the first few coins were struck with her portrait. When General Washington saw them he was displeased, and requested the figure to be removed. Mr. Spencer altered the features a little, and putting a cap upon its head, called it the Goddess of Liberty. If future artists will bear this in mind, they will always take Mrs. Washington's portrait for their guide, when wishing to produce the goddess.

South Carolina was one of the first States to issue paper money, and the first one to repudiate it.

The Bank of England depends upon the watermark in its notes as security against counterfeiters. When the United States entered into competition with Europe to secure the order for printing bank notes for the Italian Government, it was demonstrated to the satisfaction of the Italians that the English people could not produce a note which would defy the counterfeiters—their water-mark being easily imitated, and their steel engraving quite inferior to American.

NICKNAMES.—The island of Portland off the southern coast of England is famous for its stone quarries and for a class of people who know each other only by nickname. An officer once had occasion to serve a process in chancery upon one of the quarrymen, and meeting a lad about fourteen years of age asked him where Arthur Bright lived. "I dun know," he replied, bewildered. The officer then described the man, and gave the name of the quarry he owned, upon which the boy brightened and answered, "Oh—a you manes Longshanks; he be in thick ere ouse ther—why, he be my fayther." "Well, there your name is Bright, isn't it?" "No-a, they do cale me Buckets."

THE Buffalo Board of Trade has recinded its former action in adopting the cental system; also, in declaring that a barrel of flour should contain two hundred pounds; thus it practically returns to the old system. The Cleveland Board of Trade has taken similar action.

Reading for the Young.

ORIGIN AND SEALS OF THE STATES.

NUMBER THREE.

IT is said that a Florentine named VERRAGANO, sailing in the service of France, discovered New York bay in 1524. In 1609 HENRY HUDSON, an English navigator in the employ of the Dutch East India Company, who had set out to discover a north-east passage to the Indies, failing in that, sailed southward and discovered the mouth of the river that now bears his name. He ascended it as far as the present site of Albany. He found the adjacent country inhabited by two tribes of Indians, the Mohawks and the Manhattans—from the latter of whom, by the way, the great metropolis should have received its name, instead of its present inelegant and absurd title.

NEW YORK.

The Company soon afterwards established posts on the river for trading with the Indians. Various small colonies now came over, settling at different points on the coast between the Connecticut and Delaware rivers. In 1626 Manhattan Island was bought of the Indians for $25; and the colony established on it was called New Amsterdam. The Government consisted of a Director and a Council of Five. For the next fifteen or twenty years there was continual trouble between these settlers and the colonists of New England, and a war also arose with the Indians, who looked with suspicion on the growing encroachments of the whites. In 1664 the colony was captured by the English; and as the territory had been granted by the King to the Duke of York, the name was changed to New York. It was re-captured by the Dutch in 1673, and the name changed to New Orange; but by the terms of a treaty made in the following year it was restored to the English.

On the 12th of March, 1777, a constitution for the State of New York was reported by a committee of the Provincial Congress, and on the 20th of the next April it was adopted. GEORGE CLINTON was elected first Governor. In 1791 a society was organized for the promotion of agriculture, arts and manufactures. In 1807 ROBERT FULTON made his trial trip with the Clermont, the first steamboat. The Erie and Champlain canals were commenced in 1817 and completed in 1825. The first railroad in the State was commenced in 1835. It was by these internal improvements, as well as by her natural advantages, that New York increased so rapidly in wealth and population and gained the place which she still holds as the first State in the Union. The motto on the seal, as you probable know, signifies "higher." The State contains 46,085 square miles; and the present population is 4,000,000. It is called the "Empire State."

NEW JERSEY.

From the first part of this article you will learn the origin of the first settlements in New Jersey. In 1664 the Duke of York sold it to LORD BERKELY and SIR GEORGE CARTERET. PHILIP CARTERET was first Governor of the colony. A large number of Quakers came over in 1680, and in 1682 a company of Scotchmen headed by the EARL OF PERTH. In 1702 it was united with New York under one government, but was separated again, on the petition of its inhabitants, in 1708. A State constitution was adopted, and the first Legislature met at Princeton in 1776.

Some of the most memorable incidents of the Revolution took place in New Jersey; and Trenton, Monmouth and Princeton have become classic names. Though the State has a great deal of sea coast, it has few good harbors. The soil is various, differing widely in different localities. There are beds of marble and very valuable zinc mines; and iron and copper are found to some extent. The area is 8,320 square miles, and the present population 675,000.

PENNSYLVANIA.

Pennsylvania is the only State in the Union named after a private individual. The name signifies "PENN'S woods." WILLIAM PENN was a Quaker and came to America for the enjoyment of religious freedom. His charter conveyed to him all the tract of country extending westward five degrees from the Delaware river and bounded south and north by the 40th and 42d parallels of latitude. This grant interfered with the claims of Connecticut on the east and those of Maryland on the south; and hence arose disputes which disturbed the colonies for a century. In 1682 PENN published his "Frame of Government," by which the power was vested in a Governor and General Assembly. The latter consisted at first of the whole people, and afterwards of a House of Representatives. This constitution was drawn up in England, and was somewhat modified by an assembly convoked by him soon after his arrival, the same year, with 2,000 settlers. Undoubtedly the future prosperity of the colony was owing in a great measure to the broad principle then proclaimed, that "none acknowledging one GOD, and living peaceably in society, should be molested for his opinions or practice, or compelled to frequent or maintain any ministry whatsoever." Another peculiarity of PENN'S course was his buying the land of the Indians. The city of Philadelphia, the name of which signifies "brotherly love," was founded early in the history of the colony. In 1692 Pennsylvania was annexed to New York, but remained so only two years, at the end of which time a new Governor was appointed. The internal history of the colony from that time to the Revolution is but a series of petty disputes. PENN died in 1718.

Pennsylvania is now the second State in the Union. Coal and iron are found in immense quantities in its mountainous regions; and in the north-western part is situated the "oil region," of which you have heard so much during the past four or five years. The State contains 46,000 square miles, and has a population of 3,000,000. By a wide span of the imagination the original thirteen States were conceived as an arch, of which Pennsylvania, being the seventh, was the keystone. Hence it is called the "Keystone State."

BIG BOYS AND LITTLE BOYS.

JEMMY and Willie came in crying, and with a new sled, too. The tears were almost frozen into little icicles on their fat cheeks. What is the matter? "The big boys will not let us slide. They drive us off the hill."

This is not the first complaint against the big boys. The big boys would not let them work on the snow-fort. The big boys would not let the little boys go on the grand sleigh-ride the other afternoon. I am sorry the big boys love to tyranize so over the little boys. Sometimes they hardly allow the little boys any comfort at all. It is so mean and selfish. It is bigness so badly used.

Well, Jemmy and Willie, I cannot help you. But this I want to say to the little boys: when you grow to be big boys, if God lets you live, try to make the little boys feel comfortable and happy. Do not stretch so very far above them; do not talk big; do not scare and torment them. Always keep in mind that you were once a little boy yourself, and how you felt when the big boys troubled you and made you cry.

That in time will cure the difficulty, and make the little boys in the future have a better time of it.

TARDINESS.—Who ever saw a boy late at a circus? How eager children are to go early to all kinds of public meetings! How they run when they once get started! If school were a place where the children are happy, comfortable in body and contented in mind, if their minds were excited and their curiosity awakened and gratified, children would less often be tardy.

SPRING CAMPAIGN
OF THE
RURAL BRIGADE!

A NEW QUARTER OF THE RURAL

Begins April 6,—a good time for new clubs or additions to old ones to commence, though we can still furnish back numbers from Jan., or subscriptions may date from Feb. or March 1st. March is a good month in which to fill up Premium Clubs already begun, and also to form new ones. There are hundreds of localities in which clubs may yet be organized and Rewards of Merit secured. Our former Premiums are continued, and several new ones added,—(see part in RURAL of 9th, and full list in Supplement.)

☞ All whose subscriptions expired last week (March 30.) will find the number, **897**, after name on address label, and will of course understand that, unless promptly renewed, their papers will be discontinued under our advance payment rule. We trust all will renew, and that each will, if convenient, induce at least one new recruit to join the Rural Brigade.

ANOTHER SPLENDID PREMIUM!—By request we have added LAMB'S FAMILY KNITTING MACHINE to our list of Premiums. For 65 Yearly Subscribers (at least 50 of them being *new*) at club rate, $2.50 per copy, we will give a Lamb Knitting Machine, the Cash Price of which is $65.00.

MORE YET.—We have also added DOTY'S WASHING MACHINE, price $14, and will give it to every person remitting for 30 subscribers (20 of them *new*,) at club rate;—and the CHAMPION CLOTHES WRINGER, price $9, which we will give for a club of 15 subscribers (10 of them *new*,) at club rate.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., APRIL 6, 1867.

NEWS OF THE WEEK.

From Washington.

THE City Council has passed a resolution instructing the Board of Education to procure school houses and mature a plan for the free education of colored children.

The Congressional excursion to Dakotah, under the escort of Dr. Burleigh, proposed for the coming summer, is likely to fall through in view of the present occupancy by hostile Indians of the country proposed to be traveled over.

WASHINGTON, March 29.—The Senate has adopted a resolution to adjourn to-morrow at noon until the first Wednesday in July, and then until the first Monday in December, unless a quorum in each house shall otherwise direct.

The House has passed the Senate bill to reimburse the States of Indiana and Ohio for moneys expended for the United States in enrolling, equiping and provisioning militia forces, to aid in suppressing the Rebellion; also, the Senate bill to grant to the American Atlantic Cable Telegraph Company at New York, the right, power and privilege to lay, land and operate a submarine telegraph cable on the Atlantic Coast of the United States, except the coast of Florida, and to establish telegraph communication between the United States and Europe, via the Bermudas and Azores.

Mr. Clark of Kansas, submitted a question of privilege, a resolution reciting the facts as to the reference of the impeachment resolution to the Judiciary Committee of the last session, the report made by the Committee and the recommittal of the subject to the Committee, declaring that it would be dangerous to the public interest and a failure of duty on the part of Congress to adjourn and abdicate its practical control over the administration of the government, by surrendering its destinies in the present critical condition of affairs into the hands of those thus impeached before the nation, and well known to be not only hostile to the policy of Congress, but to entertain the opinion that all the acts of this Congress looking to the restoration of the Union are unconstitutional, and therefore resolving on an adjournment from to-morrow at three o'clock until the first Monday in June, for the purpose of receiving the report of the Judiciary Committee, and taking such order thereon, as well as other matters of interest, as the exigencies of the Government might demand.

A substitute was offered by Mr. Broomall for Mr. Clark's resolution, and adopted. It provides for an adjournment to-morrow at three o'clock till the first Wednesday in July, when, if there be no quorum present in both houses, they shall adjourn from day to day for five days, and in the continued absence of a quorum adjourn until December.

WASHINGTON, March 30.—It is believed that all the public bills which passed both houses have become laws by the President's signature. Among those which he approved to-day is the one to give the American Atlantic Telegraph Company of New York the privilege to establish stations anywhere along the Atlantic coast, Florida excepted; also, that appropriating one million dollars for the relief of the destitute of the South, and prohibiting payments under awards for slaves enlisted in the army.

How to Collect U. S. 7.30 Bonds.

FARMERS are said to be large holders of U. S. seven-thirty bonds, one series of which are for redemption in August of this year. The RURAL and other papers, recently informed us that Government would, up to March 31, pay the express charges both ways on these bonds sent to Washington for conversion into five-twenties. Since then I have read a circular from the Treasury Department, Washington, saying that Government will pay express charges till May 1. Now farmers can send on their bonds to Washington, D. C., for conversion, themselves, without incurring any expense of brokers' commissions, or otherwise—as I have proved by successful experiment—by observing the following directions:

If the seven-thirty notes are payable to blank indorse on their backs "Pay to the Secretary of the U. S. Treasury for redemption," and sign your name. Then estimate the difference in interest between the 7.30 notes, on which interest has accrued since Feb. 15, and the 5-20 bonds, on which interest has accrued since Jan. 1, both in currency, and send that difference along with the seven-thirties by express. In the same package send a letter containing your post-office address, also your express office address, also informing what you have sent, and what kind and denomination of 5-20 bonds you want in exchange, $50, $100, $500 or $1,000 bonds, and whether you want coupon or registered bonds; and if you want registered bonds, where made payable.

Immediately on the receipt of your package in Washington at the Treasury Department, a receipt will be mailed to you, signed by a clerk. In course of time, if you have sent too much interest, another letter will be sent you, from another branch of the department, remitting to you the balance due you. These two departments of the Treasury will carefully abstain from giving you any tidings when you may look for the bonds, which, if you have far to travel to the post and express offices would be a comfort, when the roads are bad, and might be given in five printed and two written words. However, when the department gets ready—which in my case was twelve days after the receipt of the seven-thirties—a third branch will express to you the five-twenty bonds, with a blank letter of receipt for you to fill up, sign and send back, at an expense of three cents for the postage on this last letter.

If the 7.30 notes are payable to order, then evidence of the signature of the indorser must accompany them. And if these notes are held by administrators, an attested copy of the administrator's authority will be required. On the outside of the express package write, "To the Secretary of the U. S. Treasury, Washington, D. C.;" also, the amount of bonds and money, and "For Government account."

Milan, Erie Co., O. PETER HATHAWAY.

An Important Acquisition.

ON Saturday, the 30th ult., the President communicated to the Senate the fact that a treaty had been negotiated with Russia, by which for the consideration of $7,000,000, that Government cedes to the United States all the country known as Russian America, together with the adjacent islands. The territory ceded comprises the whole of the continent of North America west of longitude 141 degrees. It is bounded by British America and the Pacific and Arctic oceans. The area is about 400,000 square miles, or nearly nine times as large as the State of New York.

The arrangements for this important acquisition of territory by the United States have been conducted so secretly that even the reporters and correspondents at the Capital are taken by surprise. Sir Frederick Bruce, who represents the English Government at Washington, has telegraphed to Earl Derby for instructions to protest against the ratification of the treaty by our Government. The country ceded is valuable for the fur trade, besides including naval stations and fishing grounds of great importance.

It is regarded as significant of Russian policy in view of impending European complications on the Eastern question. Russia cedes her American territory for the same reason that induced France to sell Louisiana. In the event of a war, Russia would probably lose this territory, and by parting with it the Czar secures the friendship of our Government.

The price to be paid is merely nominal; more than one private citizen of this country could pay it without impoverishing himself.

As the RURAL goes to press, reports from Washington say it is doubtful whether the Senate will ratify the treaty; they are not fully reliable, however.

From Albany.

THE following bills have passed the Senate:

Allowing persons charged with crime, except in case of capital offences, to testify in their own behalf.

For Geneseo and Cortlandville Normal Training Schools.

Incorporating the New York Homœopathic Medical College and Hospital.

Making appropriations for the support and maintenance of the canals for the ensuing year.

Authorizing the formation of corporations to secure the parsonages and other property for the presiding elders of the Methodist Episcopal Church.

Mr. Wolcott called up the resolution calling for the consent of the State for the United States to build the Niagara Ship Canal. Adopted—ayes 17, nays 7.

The following have passed the Assembly:

To amend the revised statutes relative to trial by jury.

Providing for vacancies in the office of Supervisor.

To amend the banking laws, making eight hours of labor a legal day's work. The vote stood 73 to 41.

The Constitutional Convention bill, as it finally passed the Legislature, provides that there shall be four delegates chosen from each senatorial district, and thirty-two at large, sixteen on one ticket. The election is to be held April 23d.

The Central Railroad fare bill has passed both houses.

From the South.

NEW YORK, March 28.—The Southern Famine Relief Commission yesterday sent 12,000 bushels of corn to Charleston. The people are suffering terribly in Northern Georgia. The Commission is informed from a reliable source that many of the people have no bread and nothing to buy it with. Dealers in corn and bacon will not sell either without the cash, and money in small sums cannot be procured short of five per cent. a month on the best security. In one family near Dalton four children actually died of starvation in February.

A letter from General Swayne, dated Montgomery, Ala., March 23d, says of the amount of supplies which should be sent, the only true limit is found in the means of the purchasers.

The ship Purveyor has sailed with 18,000 bushels of corn for Alabama.

NASHVILLE, Tenn., March 28.—The leading Conservatives propose that the colored voters be invited to participate in the political meeting and send delegates to the Convention which meets in this city next month, to nominate a candidate for Governor. The proposition is encouragingly received, and will probably be adopted. The colored voters are invited to send representatives to the Republican Congressional Convention, called to meet in Nashville on the 16th of May next.

From Mexico.

NEW ORLEANS, March 28.—Rio Grande dates to the 23d have been received.

General Miramon has issued a proclamation declaring a war of extermination. The following are the closing paragraphs:—"Soldiers, the gauntlet has been thrown at us for a duel unto death. Let us do the coward enemy the honor to pick it up.

"But listen to the voice of the unfortunate General Oscala who, in 1858, said, woe to the vanquished."

Vera Cruz papers say Porfirio Diaz has only 3,000 men, and is almost besieged at Huaman county. He ordered the shooting of Mr. Franco, Imperial Commissioner, and several other prisoners.

NEWS PARAGRAPHS.

RESOLUTIONS declaring sympathy with Ireland and asking the Government to recognize that country's belligerent rights have been adopted in the Nevada Senate.

THREE hundred and fifty Texan emigrants bound for Brazil, remain in New York city till the 22d of April, and are entirely destitute. An appeal is made for relief.

THE English savans refuse to believe that Dr. Livingstone is dead. They think that his dishonest and frightened servants have abandoned him, and told the story of his murder to conceal their own cowardice.

THIS has been the severest winter ever known in the far West. The snow on the Sierra is over twenty feet deep, and the thermometer at Salt Lake, for about a week recently, ranged from thirty-five to forty degrees below zero.

SEVERAL workmen came forward as candidates for election to the Parliament of Northern Germany, but only one was successful, a turner in wood, named Bebel of Leipsic, chosen in the 17th Saxon circumscription, at Glanchan-Meerane.

THE recent act changing the time of assessing the annual taxes from May to March does not affect the time for which special taxes are payable. The year for which special taxes are due commences and ends May 1st as heretofore, although the return and assessment are made earlier.

LETTERS from Havana, dated the 20th inst., state that the Imperial Mexican Consul at Havana is enlisting Spanish soldiers to defend Maximilian's cause at Vera Cruz. They are offered a bounty of twenty dollars and one dollar a day from the moment they land at Vera Cruz. About three hundred men had landed.

THE Comptroller of the Currency gives notice to holders of circulating notes of the First National Bank of Newton, Mass., the Tennessee National Bank of Memphis, Tenn., or the First National Bank of Medina, N. Y., that such notes will be paid in lawful money of the United States upon presentation at the Treasury of the United States.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, April 2, 1867.

GOLD was not as firm last week, though sales were not made much below 134. The total amount of shipments of specie from New York, on Saturday, was $445,088. United States 5-20s have advanced in the European market, and sales were reported at the close of the week in London at 75. Governments are very firm on this side, and prices of most descriptions have improved.

The general money market was considerably affected last week by the near approach of the time for making the quarterly statements of the National Banks, which were made yesterday. In New York, on Saturday, the call for money was very active, and rates high, in consequence of the banks declining to lend freely. The quarterly statements now having been made, greater ease may be anticipated. Congress has adjourned, and no immediate financial legislation will be apprehended; we shall therefore have an opportunity to see how matters will work with the fear of monetary legislation removed.

Business in New York and Boston continues rather dull. The floods at the West, the stagnation in business industries at the East, and the general depression at the South, have had a tendency to check business. The Journal of Commerce says "the last few days have brought in more of nearby custom, and a week's pleasant weather would do more for the trade than the most skillful system of drumming." The papers and dealers who visit New York, report an absence of the rush and excitement that formerly existed at this season of the year. The Boston Commercial Bulletin says:—"Buyers have held off with unusual persistency thus far, thinking, probably, that something might be gained, and that nothing could be lost be delaying to take their usual supplies of goods."

The year's business of pork packing in the West shows: Total number of hogs packed, 2,495,254; against 1,705,956 last season. Shipment of hogs east, on the Baltimore and Ohio, and Pennsylvania Central Railroads during the season, was 512,181 head; against 40,562 head last season.

Pennsylvania has recently consolidated her 5 per cents to the amount of $30,000,000.

The grain business of Davenport, Iowa, last year amounted to 3,484,059 bushels.

In Philadelphia gas has been reduced to $3 ₱ thousand.

The Government has just made an official statement of receipts and expenditures for the fiscal year ending June 30, 1866. Total receipts, $323,977,389 96, against $475,734,259 36 in 1865. Total expenditures, $323,086,215 46, against $1,095,179,207 87 in 1865.

The accounts published at the West in regard to the prospects of the winter wheat crop continue favorable.

WHEAT AND FLOUR.—The wheat and flour markets are firm. As yet there are no indications of larger receipts of wheat at Western ports.

WOOL.—The Journal of Commerce of Saturday says: "The market is not as active as last week though holders are asking former prices." The sales in Boston during the week were only about 800,000 lbs. The Boston Commercial Bulletin says:—"Wool buyers complain bitterly that the present rates of raw material leave them no margin on the manufactured article.' Letters from South America say the wool markets there are much depressed, owing to the absence of the usual demand from the United States, and that good lots of Mestiza wool are now offering to shippers at 15 to 18c. ₱ lb., which is a material reduction. The last London sales of Colonial wool showed a reduction of fully two cents per pound.

COTTON.—The demand at the East for cotton for shipment has been fair for the week, without material change in prices.

897-2t 46 Washington Street, Boston.

GRAPE VINES FOR SPRING PLANTING.

My stock of vines for spring planting comprises a general assortment of the different varieties; all of which have been grown with the utmost care and with special reference to producing healthy, well-matured roots.

Long experience has proved my system of growing vines to be the best in practice, and by devoting my energies entirely to this one department, I am enabled by past experience and, with the aid of extensive and perfect facilities, to produce better vines and in larger quantity than any other propagator. In an eminent degree is this true of my present stock of

IONA AND ISRAELLA VINES.

These two varieties have very justly received the highest commendations everywhere, and the Iona has come to be acknowledged the best American wine grape. Read the following:

"The Iona and Israella Grapes, originated by Dr. C. W. Grant, at Iona Island, are the best grapes in America"—*N. Y. Tribune.*

"The Iona is unequalled by any native, and is probably unsurpassed by any foreign kind."—*Am. Agriculturist.*

PLEASANT VALLEY, Jan. 1867.

DR. C. W. GRANT:—I have tried the Iona wine by the severest tests that could be furnished, and all of the trials have been very satisfactory.

Taking the best Catawba wine that has been made as "*very good*," I should place Delaware next above it in rank; Diana, for some qualities, next above that; and Iona above all.

Placing Iona by the side of the finest wines of Germany, that are not excelled in the world, it does not suffer in comparison in any respect, while it has some important characteristics entirely its own, that, in my estimation, place it above that of all other grapes with which I am acquainted. I intend to plant largely of it, and of that only, and from my own experience and extended observation, confidently recommended the same to my friends. Inclosed find order for 10,000 Iona vines, No. 1, Vineyard Class.

C. D. CHAMPLIN,
Secretary Pleasant Valley Wine Co.

The great popularity of these two most valuable varieties has induced their extensive propagation from immature wood, and thus thousands of vines have been produced and disseminated, which will only serve to injure their well merited reputation and to disappoint those who have purchased them.

Being in possession of the original vines, and also of many of the first propogated from them, I have been supplied with an abundance of mature wood to grow a large stock for market, and now offer at low rates vines of such extra quality as will not disappoint the planter.

☞ Great inducements are offered to clubs. Send stamp for Price Lists of Vines, with engravings of Iona and Israella, and ask your neighbors to join with you in forming a club. MANUAL OF THE VINE (a thorough treatise,) sent for 50 cents. Address

C. W. GRANT, Iona, (near Peekskill,)
896-4t Westchester Co., N. Y.

New Books for Farmers, Gardeners and Lovers of Country Life.
PUBLISHED AND FOR SALE BY
ORANGE JUDD & CO.,
41 PARK ROW, NEW YORK.

Gardening for Profit;
IN THE MARKET AND FAMILY GARDEN.
BY PETER HENDERSON.

A new, finely illustrated work on Market and Family Gardening, and the first ever prepared by a Market Gardener in this country. The author is well known, and he here records his successful experience of eighteen years.

The Louisville (Ky.) Journal says of this work:

"We know of no manual on any subject that surpasses this. Every part of it displays the hand of a man thoroughly at home with his subject; it is full of sound, excellent sense, expressed in clear and concise language. We say a great deal when we say that Mr. Henderson is as complete as a writer on gardening as he is a practitioner in his gentle but laborious art."

William Saunders, Esq., of the Department of Agriculture, Washington, writes:

"It is the most practically useful work of any on the same subject. In these days of book-writing, it is refreshing to meet a work that has common sense and practical experience for its basis."

Hon. Horace Greeley thus speaks of this book in the New York Tribune:

"Reading for Boys.—This work would probably not be selected by most boys as the book for their money, wherein they would evince their usual greenness. There are marvels of transformation and rapid production recorded therein, which might well shame the dull fancy of the author of Aladdin or of Kaloolah. To know that a few rods of good land may well employ and will surely reward the constant labor of a stout man—that there are choice gold-mines all around us for those that know how to dig—that $1,000 may be wisely and profitably expended in draining, subsoiling, fertilizing, and deeply pulverizing a single acre—that he who would get rich by gardening must pile on manures by the hundreds of tons—that great crops always pay; half crops never—such are a few of the important truths succinctly set forth and tersely enforced in Mr. Henderson's little volume. There is no theory about it—one who has made himself rich by market-gardening, plainly tells our young men how they can get rich as easily as he did, and without wandering to California or Montana for it either."
Price, $1,50.

Grape Culturist.
NEW EDITION, REVISED AND ENLARGED.
BY ANDREW S. FULLER.

Mr. Fuller's work met the general want of a plain and practical treatise on grape culture. As it was based upon established principles, it at once took rank as a standard work. Most of the treatises that have appeared since are nothing more than Fuller modified and diluted. When the structure and mode of growth of the vine is once understood, all systems of training become plain, and one may be followed as readily as another. Mr. Fuller gives this knowledge of the vine most clearly, and illustrates it so plainly that no one can fail to understand it, and for this reason his book has become remarkably popular, and has not been, nor is it likely to be superseded by any other work on the same subject. The teachings of the work are all from actual practice, and the illustrations are mainly from growing vines. To bring this work up to the times in respect to varieties, a considerable portion of the matter has been re-written. An additional list of varieties, including synonyms, has been given, and important additions have been made all through the volume. Garden culture is treated as well as that of the vineyard, and the book is equally adapted to the owner of a single vine, or the one who has thousands of vines. Well illustrated. Price, $1,50.

The American Horticultural Annual,
FOR 1867.
A Year Book for the Gardener, the Fruit Grower, and the Amateur.

It is a beautifully illustrated volume of 168 pages. It contains an Almanac and Calendar for each month, giving hints for work in the various departments, with useful tables, and an article on Growing Grape Vines from cuttings, by William Patrick; How Horseradish is Grown for Market, by P. Henderson; Home Decorations, by A. Bridgeman; The New Apples of 1866, by Dr. J. A. Warder; New or Noteworthy Pears, by P. Barry; Small Fruits in 1866, by A. S. Fuller; Rarer Valuable Evergreens, by T. Meehan, with valuable contributions by other writers. Price, fancy paper covers, 50c; cloth, 75c.

The American Agricultural Annual,
FOR 1867.

A companion volume to the Horticultural Annual, and containing, besides an Almanac with hints about work for each month, an Essay on Draining, by Col. Geo. E. Waring, jr.; articles on the Culture of Sorghum, by Wm. Clough; Some of the Newest and Best Potatoes, by Wm. S. Carpenter; How to Train a Horse, by S. F. Headley; Essential Features of a Good Barn, with Plan, by Dr. F. M. Hexamer; Recent Scientific Progress in Agriculture, by Prof. S. W. Johnson, of Yale College; The Culture of Wheat, by Joseph Harris, and other valuable essays upon subjects of interest to agriculturists. Finely Illustrated. Price, fancy paper covers, 50c; cloth, 75c.

Hints to Horsekeepers,
By the late HENRY WILLIAM HERBERT, (Frank Forester.) Beautifully Illustrated.
A Complete Manual for Horsemen.

This is unquestionably the most comprehensive and valuable work of its size to be found upon the subject treated. The "Hints" are intended to include every subject of interest to those who, for pleasure or business, own or use a horse. Price, $1,75.

New Book of Flowers.
By JOSEPH BRECK, Practical Horticulturist.

We have no work which is so safe a guide to the novice in gardening, or that imparts the necessary information in a style so free from technicalities. Not the least interesting part of the work is the author's personal experience, as he tells not only how he succeeded, but the mistakes he committed. Beautifully Illustrated. Price, $1,75.

The Miniature Fruit Garden,
BY THOMAS RIVERS.
The Culture of Pyramidal and Bush Fruit Trees.

Directions are given for growing Dwarf Apples, Pears, Cherries and Plums, Figs and Filberts. Nothing is more gratifying than the cultivation of Dwarf Fruit Trees, and this work tells how to do it successfully, in City Yards or extensive Gardens. Price, $1,00.

Saunders' Domestic Poultry.
BY S. M. SAUNDERS.

This is a new edition, revised and enlarged. It contains with other articles, complete Instructions for Breeding and Fattening Fowls, and Preparing for Exhibition at Poultry Shows. An account of Poultry Breeding on a large scale, as practiced in the neighborhood of Paris, is given in an appendix. Price, paper, 40c; cloth, 75c.

Peat and Its Uses as a Fertilizer and Fuel.
A NEW WORK ON PEAT.
By Prof. S. W. JOHNSON of Yale College.

An invaluable work to those having Peat or Muck swamps, or who wish to know more of this subject, which is now interesting so many farmers and land owners. It gives a full history of Peat, Muck, etc., telling what they are, where found, and how to estimate their value. Price, $1,25.

COPELAND'S COUNTRY LIFE.
BY ROBERT MORRIS COPELAND.
A Compendium of Agricultural and Horticultural Practical Knowledge.

An elegant octavo volume, bound in beveled boards, and containing 926 pages and 250 engravings. It is adapted not only to those owning large estates, but contains directions for the best arrangement of the smallest Plots, down to the City Yards, the Roof or Window Garden, or the simple Flower Stand. Price, $5,00.

Any of the above will be sent, post-paid, on receipt of the price.
ORANGE JUDD & CO., 41 Park Row, N. Y.

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.

First Put'd Aug. 1863. *Improvements Put'd April*, 1865 *and Nov.* 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¼ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¾ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. Moore, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—Solon Robinson, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it first and commended it highest of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. Edwards Todd, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The Seneca Falls Churn Manufacturing Co. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the patented fixtures. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

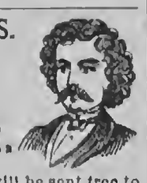
Agents Wanted.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. Moore, Editor Rural New-Yorker.

☞ The Michigan Churn Man'f'g Co., at Farma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

CURLS! CURLS.

SAMPLES

SENT FREE.



A sample of Prof. Robb's Curlique will be sent free to any address. The Curlique will curl the straightest hair on the first application, (without injury) in soft, luxuriant, beautiful flowing curls. Address, with Stamp,
895-5t Prof. R. H. ROBB, Parkman, Ohio.

Agents Wanted—$10 to $15 per Day—Male and Female, everywhere, to sell our new and improved (upper and under feed) $18 Family Sewing Machine, "The Celebrated Common Sense Improved and perfected." This machine will stitch, hem, fell, tuck, quilt, cord, bind and embroider beautifully. Every machine fully warranted for 5 years. Send for descriptive circular and terms to Agents. Address
DARROW & CO., Box 588, Detroit, Mich.

Caution.—Beware of parties advertising the sale of this machine, as they can be obtained only from us, directly or indirectly. Hence, if you buy of any one else but us, or our duly authorized Agents, you are sure to be imposed upon. 895-4t

The Children's Hour—Edited by T. S. Arthur, Philadelphia, Pa. $1,25 a Year. Sample copies 10 cents. "*Its exquisite beauty surpasses our anticipations.*"—Ladies' Book. 894-8t

Farmers and Flock-Masters.—A sure cure for Ticks and Lice on Sheep and Cattle. Try N. W. Batchelder & Co.'s celebrated Sheep and Cattle Powder. For Circulars, embodying full directions and testimonials of its efficiency from the principal flockmasters, apply to N. W. BATCHELDER & CO., Proprietors, No. 12 Broad St., Boston, Mass. 894-4t

$25 a Day!—Fifteen New Articles for Agents. O. T. GAREY, Biddeford, Maine.

Italian Queen Bees—For Sale throughout the summer. Send for Circular. Address
891-13t M. QUINBY, St. Johnsville, N. Y.

Portable Steam Engines— Combining the maximum of efficiency, durability and economy with the minimum of weight and price. They are widely and favorably known, more than 500 being in use. All warranted satisfactory, or no sale. Descriptive circulars sent on application. Address
891-13t J. C. HOADLEY & CO., Lawrence, Mass.

A Valuable Medicine.—Dr. Po- land's White Pine Compound, advertised in our columns is a successful attempt to combine and apply the medical virtues of the White Pine bark. It has been thoroughly tested by people in this city and vicinity, and the proprietor has testimonials to its value from persons well known to our citizens. We recommend its trial in all those cases of disease to which it is adapted. It is for sale by all our druggists.—*Independent.*

THE GREAT NEW ENGLAND REMEDY!
DR. J. W. POLAND'S
WHITE PINE COMPOUND

Is now offered to the afflicted throughout the country, after having been proved by the test of eleven years, in the New England States, where its merits have become as well known as the tree from which, in part, it derives its virtues.

THE WHITE PINE COMPOUND cures Sore Throat, Colds, Coughs, Diphtheria, Bronchitis, Spitting of Blood, and Pulmonary Affections generally. It is a remarkable remedy for Kidney Complaints, Diabetes, Difficulty of Voiding Urine, Bleeding from the Kidneys and Bladder, Gravel, and other complaints. For Piles and Scurvy, it will be found very valuable. Give it a trial if you would learn the value of a good and tried Medicine. It is pleasant, safe and sure. Sold by Druggists and Dealers in Medicine generally. 1866
GEO. W. SWETT, M. D., Proprietor, Boston, Mass.

Batchelor's Hair Dye.—This splendid Hair Dye is the best in the world. The only *true* and *perfect Dye*—Harmless, Reliable, Instantaneous. No disappointment. No ridiculous tints. Natural Black or Brown. Remedies the ill effects of *Bad Dyes.* Invigorates the hair, leaving it soft and beautiful. The genuine is signed *William A. Batchelor.* All others are mere imitations, and should be avoided. Sold by all Druggists and Perfumers. Factory 81 Barclay St., N. Y.
☞ Beware of a Counterfeit. 882-26teo

Ingersoll's Cotton and Wool Presses.
Ingersoll's Hay and Straw Presses.
Ingersoll's Rag and Paper Presses.
Ingersoll's Hide and Hair Presses.
Presses, both Hand and Horse-Power.

For baling all kinds of material, on hand and made to order. Also, a practical machine for sawing down trees. Price $25. For price list and full information, call on or address the manufacturers, INGERSOLL & DOUGHERTY, Greenpoint, (Brooklyn,) N. Y. [869-12tom

THE HOWE LOCK STITCH

THE HOWE MACHINE COMPANY,
(Elias Howe, Jr., President, and original inventor of the Sewing Machine,)
Proprietors and Manufacturers of the world-renowned
HOWE SEWING MACHINES,
FOR FAMILIES AND MANUFACTURERS.
They were awarded the highest premiums at the World's Fair in London, and six First Premiums at the New York State Fair of 1866.
☞ **Send for Circular. Agents Wanted.**

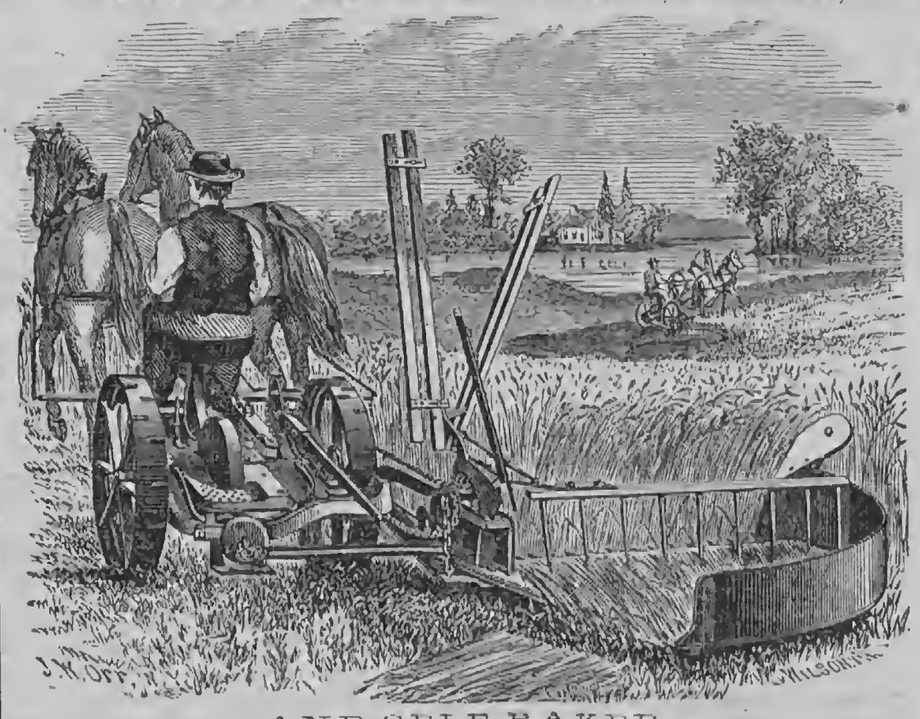
Maltby House,
A. B. MILLER, PROPRIETOR,
BALTIMORE, MD.

DODGE'S PATENT REAPER AND MOWER,



AND SELF-RAKER,
OHIO AND BUCKEYE PATENTS COMBINED.
Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:
L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

This Machine embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a Revolving Rake, and does its own reeling, saving the expense and trouble of a Reel. It makes a Perfect Separation, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED
The Special Diploma and Grand Medal of Honor,
AS THE BEST
COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the Saint Louis Agricultural and Mechanical Association, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a Gold Medal as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and First Premiums, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some great improvements for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the
DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.

South Down Companies' Patent

SheepWashTobacco

THE BEST KNOWN REMEDY FOR
TICKS, SCAB, VERMIN AND FOOT-ROT,
SHOULD BE USED BY ALL FARMERS ON
SHEEP, ANIMALS and PLANTS.

☞ This pure preparation has been successfully used for years, and never fails to produce the desired effect when used according to directions.

It will not injure the most delicate animal.
It will improve the Quality and Quantity of Wool.
It kills Ticks on Sheep.
It cures Scab on Sheep.
It cures all Skin Diseases on Animals.
It kills all Vermin that infest Animals, Trees, Plants and Vines.

☞ For Foot-Rot it is a sure cure, used as a poultice.

☞ **ONE POUND of this Extract will make TWELVE GALLONS of Wash, and contains the strength of EIGHT POUNDS of Tobacco, as prepared by Farmers.**

Sold by all Druggists and Country and Agricultural Stores.

JAMES F. LEVIN,
23 Central Wharf, Boston, Mass.

Peruvian Guano Substitute!
BAUCH'S RAW BONE
SUPER-PHOSPHATE OF LIME.

BAUGH & SONS,
Sole Proprietors & Manufacturers,
DELAWARE RIVER CHEMICAL WORKS, Philadelphia, U. S. A

For Wheat, Rye, Barley, Corn, Oats, Potatoes, Tobacco, Buckwheat, Sorghum, Turnips, Hops, Garden Vegetables, and every Crop and Plant.

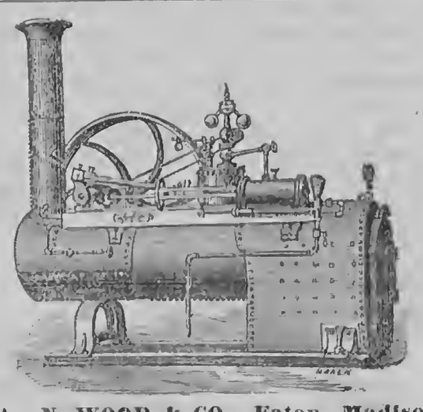
Especially recommended to the Growers of
STRAWBERRIES, RASPBERRIES, BLACKBERRIES, AND ALL SMALL FRUITS.

BAUGH'S RAW BONE
SUPER-PHOSPHATE OF LIME,

Is eminently a success as a Substitute for Peruvian Guano and Stable Manure—and is offered to the Agriculturists of the Northern and Eastern States as a fertilizer that will cheaply restore to the Soil, those essentials which have been drained from it by constant cropping and light manuring.

IT is very prompt in its action—is lasting in effect to a degree unattained by any commercial manure in the market, and is afforded at a much less cost than *bought* Stable Manure, or Peruvian Guano. The Labor involved in its use is far less than that of applying stable manure, while there is no risk from the introduction of noxious weeds.

Our NEW PAMPHLET, "How to Maintain the Fertility of American Farms."—90 pages, giving full information in regard to the use of manure, &c., will be furnished gratis, on application.
BAUGH BROTHERS & CO.,
GENERAL WHOLESALE AGENTS,
No. 181 Pearl St. and 4 Cedar St., New York.
☞ For sale by Local Dealers in all parts of the United States and British Provinces. 892-6teo



A. N. WOOD & CO., Eaton, Madison County, N. Y., continue to manufacture their
Improved Portable Engines,
From 4 to 35 horse power, for Farm and Mechanical purposes. They are particularly adapted to driving Threshing Machines, Circular Saws, Mills of all kinds, Printing Presses, Wood or Iron Lathes, Machinery in Cabinet or Wagon Shops, Boring Artesian Wells, Pumping Water, Corn-Shellers, &c., &c. We warrant our Engines to be what we represent them, and to give unqualified satisfaction in all respects. A. N. WOOD & CO.

The Best Machine in the World for Separating Oats and Wild Seeds from Wheat

Agents wanted throughout the United States, to sell machine and territory. Machines furnished on application to [886-13t] W. C. QUIMBY, Rochester, N. Y.

50 Per Cent Saved By Making Your Own Soap

Using B. T. Babbitt's Pure Concentrated Potash or Ready Soap Maker.—Warranted double the strength of common Potash, and superior to any other saponifier or ley in the market. Put up in cans of 1 pound, 2 pounds, 3 pounds, 6 pounds and 12 pounds, with full directions in English and German for making hard and soft soap. One pound will make 15 gallons of soft soap. No lime is required. Consumers will find this the cheapest Potash in market. B. T. BABBITT, Nos. 64, 65, 66, 67, 68, 69, 70, 72 & 74 Washington St., New York. 898-39t

Written for Moore's Rural New-Yorker.

LINES SUGGESTED ON READING "WHEN I AM OLD."

BY A. MORSE.

She'll care for you when you are old,
And withered grown and gray,
Who in life's morning shared your love
And blessed your early day.
When you are old, and roses long
Have faded from your cheek,
She then will listen to your voice,
And answer when you speak.

A child will love you when you're old
And early friends are fled,
When cherished hearts that loved you well
Are numbered with the dead.
When you are old will Edith choose
Close at your side to stay,
She then will list to hear your steps
And guard you when you pray.

Jesus will cheer you when you're old,
Should you in sorrow sigh,
And on his bosom you can lean
When you are called to die,
And when you're dead will brighter shine
The life that lingered here,
If Christian faith and virtue blend
Around affection's bier.

River Falls, Wis., Feb., 1867.

The Story Teller.

Written for Moore's Rural New-Yorker.

LILY MILL'S SLIPPER.

BY CLIO STANLEY.

It was at the close of a clear, autumn daylight; and a bright coal fire was sparkling in the grate, throwing its warm, red light in among the gathering shadows by a far window where three young girls were sitting, talking in eager, pleasant chit-chat, and now and then pausing to cast an inquiring glance into the street.

"Well, I must say I think it is shocking, really, for Ned to stay down town so long to-night, when he knows, too, that Lily is here!"

Aggie Jennings echoed what her sister had said; for it was always Bess who made the assertions, and always Aggie who acquiesced. Yet she would have thought it almost an insult if any one had told her that she had no mind of her own! The truth was, Aggie was wofully lazy, and it had become an exertion even to utter her own thoughts, though some of them really were well worth the hearing.

"Yes," Bess continued, "I don't care if he is my own brother, I think it's heartless in him to disappoint me so, after promising to be here before the clock struck five; and it's six now, I declare; so there is no use in flattening my face against this window-pane any longer."

The girls moved away; Aggie lingered last to drop the curtains, and then, following them, she threw herself down in the depths of a great cushioned chair, drawn up invitingly before the fire.

"I left that chair purposely for you, dear Aggie. I knew you would relish it;" and she laughed merrily as she took a low stool, and, bringing it to the corner of the hearth, sat down by her friend Lily.

"And I left the footstool for *you*, darling," retorted her sister, moved just a little out of her usual quiet.

Bess jumped up, and taking Aggie's fair face between her two dimpled hands, kissed her heartily, saying, "There! then, that's for thanks!"

Lily touched Bessie's red cheek with the tip of her finger as she said, "You've leaned against that window-glass too long. It has left a mark."

"Oh! that 'makes me think,' as the schoolgirls say," said Bess. "Do you remember Hiram Westcott, Lily?"

"Certainly I do, and I have been wondering that I did not hear his name mentioned. Why, he was so devoted to you last winter that no one of us could get a glance," replied Lily, smiling archly.

"And what do you suppose cured him?"

"I am sure I cannot guess; do tell me."

"Well, it was just the day after we came home, and he had promised me a sleigh-ride; so every five minutes I was at the window, looking out, until he came. I saw him cast a sort of horrified look toward the window, as he came up the steps, but he gave no explanation; and it was not until quite a while afterward that I heard what he had said of me."

"What was it, Bess?" came from both the girls; for Agnes had often wondered to herself what had broken off the friendship between these two.

"He told Alida Harcourt that he had always thought me beautiful as an angel or a peri, or some such foolish thing," laughed Bess; "but that when he saw me with my face pressed up against the window, nose and lips and eyes all flattened out of shape, he was so shocked he could never get over it; that he could never look at me since without recalling my face as I looked that day."

"Well, if that is his character," said Aggie, sharply, "I am sure you're better off without him, Bess; I should pity the woman he marries!"

"I only hope he will wait long enough to marry some woman who wears false teeth or false hair," replied Bess, merrily shaking her own brown curls; then, in a little tone of penitence, "but all men have their whims."

"Even your brother Ned?" said Lily.

"I am sure *he* has not, whatever you may say of others," returned Aggie, who had somehow become roused from her love of repose.

"Yes he has, Aggie! *All* of them have; and we shall find him out, too, one of these days."

"Just then they heard the front door close; and a moment later Ned came into the room, with a flushed face and a tiny parcel in his hand.

"Half past six," exclaimed Bess, pointing to the little French clock on the mantle; "and Ned, here is Lily Mills. My brother Ned, Lily."

"You must forgive me for being so negligent; but you see I went to the depot intending to meet Miss Mills and escort her to the house; but the train had been in ten minutes, and she was gone. Then, as I was walking slowly, out through the ladies' room, I found this," and he unfolded the tiny parcel and brought to view a little black kid slipper, with dainty rosette and buckle, and the charming little heel, stitched in white, which only a French artiste could send us.

"What a little beauty," exclaimed Bess, "where is the other?"

"There was only this one. Some one has lost it; and I will not rest until I find the owner. Why, I would marry her to-morrow, if I could," he said, earnestly.

"There, Aggie, what about Ned's whims?" asked Bess, as she hastily drew off her own little gaiter and endeavored to put the slipper on. "Oh dear! my foot is too chubby; you try, Lily."

"Not for the world!" said Lily, flushing scarlet,—"I mean, it would be of no use for *me* to try!"

Ned Jennings looked down at the sweet, young face, with the swift blushes coming and going on the fair cheek, and wished—yes, he really wished she could have worn the slipper; and then he sighed softly to himself as she went out of the room.

Whether Lily, too, wished it would have fitted her foot, we do not know; but certain it is she thought Bess had not been a bit extravagant in the praise she had always bestowed on her handsome brother. His eyes *were* the largest and darkest she had ever seen, his teeth the whitest, and his smile!—well, she *dreamed of that!*

The next morning she was up before either Bess or Aggie was awake; and when they came down to their late breakfast, they found her sitting at the window, with cheeks as rosy as if she had been walking a mile or two in the fresh air.

After breakfast, Ned came to the door with a carriage and took them all to ride, growing every moment more and more bewitched with the beautiful face opposite him. All unconscious of his glances of admiration, though, Lily sat with her hands folded on her lap, and her eye-lids drooping over the shy, blue eyes. This was only the beginning of their enjoyments. Rides and walks innumerable; for, of course, Lily must see every beautiful spot in their vicinity; concerts and lectures, too, for the evenings, when of course, brother Ned was happy to be of some use; and then, better than all, the long, quiet evenings at home, when Lily somehow made such a pleasant addition to the home circle that Ned found himself wondering how it would seem if he were sitting by his own fireside with that bright, pleasant face opposite him. Ah, Ned, you had forgotten about the little slipper!

At length the very last week of Lily's visit came; and Bess was not the only one who carried a sober face thro' the house. Agnes had already learned to love her sister's friend; and Ned asked himself a hundred times a day what they should do without her, even while he still pretended to hope for the discovery of the mate to his slipper, saying he knew well enough that the owner *must* have a beautiful face and a beautiful mind.

The night before Lily's return to her own home, as they were running up the steps on their return from a ride, Lily stumbled, lost her balance and fell. Bess cried out, with a face almost as white as her own, and startled Ned, who was just driving off. In a moment more he was at her side again, had her in his arms, and, carrying her in as gently as if she had been a wee, helpless child, put her down among the cushions on the lounge. Then, as she declared she had not hurt herself, but had only torn her gaiter, Agnes ran for her mother's slippers, while Lily herself removed the torn shoe. Ned was on his knees beside her, when the torn shoe, a genuine "number four," was thrown down on the floor right in front of him. Bess and Aggie had inconsiderately vanished; and he could no longer keep silence.

"Ah, little one, I thought you would never open your sweet eyes again. Perhaps I do wrong to speak now, yet I *love* you so, dear Lily."

The words were sweeter than music to her ears; yet she would not look up yet.

"Tell me, darling, is my love in vain; or do you care for me a little?"

"O, Ned," said Lily, half laughing and half crying, "you have not looked at my shoe."

"Your shoe, pet!" he exclaimed in a tone of slight astonishment, "that can be mended; but my heart will be broken forever, if you cannot love me."

"But," with a sorrowful little sigh," it is *number four?*"

"What do I care? Ah, Lily, dear one, forgive that foolish jest; it is your own dear face and loving heart that I have loved all along. Will you not grant me one word of hope?"

Lily's face sank lower and lower until it rested on his shoulder; and her answer was in so soft a whisper that no one but Ned could have heard it; but he was content, I think, for he leaned down and left a tender kiss on her red lips.

Bess came back to rejoice and add her kiss and caress; then, turning to her brother, she said, "You may give *me* the slipper now, Ned;" but Lily, with a bright blush on her cheek, said, "No, Bess, give it to me, please," and she had her way, carrying it off in triumph to her own room.

A few months later, as Ned and Lily sat down at their own fireside for the first time, and Ned, pulling off his boots, drew on the slippers which Lily had embroidered for him with her own hands, Lily drew from her work-basket the lost slipper and its mate, saying, with a little laugh that sonded like a note of triumph, though a very loving one, "I think it is time *my* slippers are worn, too. I bought them just eight months ago to-day; and they have lain idle all this time."

"Lily, Lily! Was it really yours then?"

"Really and truly, my dear husband; but I wanted to see if your 'whim,' as Bess called it, was *only* that, or something more."

"And what have you decided, darling?" said Ned, quietly.

She understood his look.

"Yes, you *did* marry her after all; but I cannot be jealous of myself, you know."

Lily's feet have only left their print on sunny paths thus far; and the tiny slippers are among Ned's choicest treasures.

STRANGE SIGHT TO A CITY MAN.

Visitor from Town.—"And what's in this field?"
Farmer.—"This? why, this is what we call a fine field of Rye. Don't you know Rye yet?"
Visitor.—"Oh yes, I know Rye well enough; *but I never saw it in that shape before.*"

Corner for the Young.

For Moore's Rural New-Yorker.

BIBLICAL ENIGMA.

I am composed if 47 letters.
My 33, 27, 24, 36, 29 was one of the Apostles.
My 11, 4, 43, 45 is a name given to the Saviour by himself.
My 5, 25, 29, 41, 21, 5, 12, 31, 47 is a name of the Deity.
My 1, 26, 12, 28 was one of the Prophets.
My 2, 28, 5, 22, 26 was another of the Prophets.
My 3, 24, 22, 35, 6, 8, 25, 20, 12, 26, 18 is one of the books of the Pentateuch.
My 15, 16, 24, 5, 32, 37 was a Prophetess.
My 44, 42, 11, 13, 8 was a king of Israel.
My 7, 18 was a city that the Israelites destroyed.
My 14, 10, 19, 29 was a murderer.
My 9, 17, 20, 30, 45, 39 was a servant of the Lord that was tried by fire.
My 40, 46, 29, 25, 23 was a High Priest.
My whole is the middle verse of the New Testament.

Geo. J. Battey.

A RIDDLE.

When Caroline first became mine
Our years were proportioned as three is to nine:
But since our union—three-fourths of a score—
The proportion is now as two is to four.
Say, can you by science of numbers, define
At our marriage, the age of my Caroline?

East Troy, Wis. L. D. Sawyer.

ANSWERS TO ENIGMAS, &c., IN No. 896.

Answer to Miscellaneous Enigma:—We can't all be Presidents.

Answer to Arithmetical Problem:—At the rate of 5 for $2 he takes 3 of A's and 2 of B's. When he has taken all of A's, B. has 10 left, equal to $5. A's 20, $10. B's 20, $10+10 left, $25.

Answer to Anagram:

Where'er in life I roam or rest,
'Mid scenes by love or beauty blest,
One hallowed spot the soul reveres,
Though humble be the roof it rears;
It is the heart's own happy dome,
That thrills us with the name of "Home."

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2.70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, May be mailed at his risk.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins April 6th, a good time for club or single subscriptions to commence. See head of News page.

The Best Way to obtain subscribers for the Rural is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

READER,—Please act as Club Agent for the Rural, or induce your Post-Master or some other influential person to become a recruiting officer for the "Rural Brigade."

Notice of Spring Campaign on News page.

RESTORE YOUR SIGHT!

THE GREAT AMERICAN TEA COMPANY

Have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

All goods sold are warranted to give satisfaction.

PRICE LIST OF TEAS.

OOLONG (Black,) 70c., 80c., 90c., best $1 ℔ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ℔ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ℔ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ℔ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ℔ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ℔ lb.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.

Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by Post-office money orders, or by Express, as may suit the convenience of the club. Or, if the amount ordered exceed thirty dollars, we will, if desired, send the goods by Express, to "*collection delivery*."

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

Williamstown, Orange Co., Vt., Jan., 1867.

To the Great American Tea Co.,
Nos. 31 and 33 Vesey Street, N. Y.

Gentlemen:—The Tea I ordered before gives good satisfaction, and I send you another order amounting to $41.60, which you will please fill and send to my address by Express. Many thanks for the complimentary package. Respectfully yours, ALEXANDER SMITH.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

Hon. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

Hon. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

ECONOMY IN FEEDING.

NECESSITY sometimes compels farmers to conduct their operations with greater skill and closer economy than they are ordinarily in the habit of practicing; this usually results in larger profits likewise.

We are led to this remark by reflecting that very many farmers are, at the present season, anxiously taking an inventory of the amount of fodder on hand, and a very great number are feeling somewhat dismal over the prospect of having to purchase largely in order to put their stock on to grass in good condition. From widely separated portions of the country complaints reach us of scarcity of fodder. One correspondent from Wisconsin writes that there is not enough feed in that section to carry the stock through. In Western N. Y. we know that a large percentage of the farmers will be compelled to purchase, and largely too, if the season is ordinarily late. It is a fact that the Northern States have experienced an unusually severe and protracted winter, and a scarcity of fodder this spring is one of the results thereof.

Naturally, farmers who are thus short of fodder resort to means for saving it, and for feeding it with greater profit; which, had they practiced all winter, would have left them now well filled mows of hay to sell to their more unthrifty neighbors. When the prospect of having to buy stares one in the face, it is curious how soon he will discover that clean, well kept straw, cut fine and sprinkled with ground oats and corn, and wet, is cheaper and better feed for horses than hay alone; even cut hay, fed with ground grain, is found to be more economical than the pure hay diet. And the teams apparently feel as well, and lose nothing in flesh under the new system.

"I must go to cutting my fodder or buy hay," is the frequently uttered remark among farmers this spring. And we will predict that those who do cut fodder will get their stock through to grass in as good condition as those who feed a much larger quantity of long hay. The point is this; by cutting, all the fodder is cleanly eaten, more easily digested, and by a judicious admixture of finely ground grain, more nutriment is extracted from a given amount of food than would be if it were fed coarse, or without any preparation.

The same course of feeding pursued with cattle in stables will result in equal saving. Roots should be added to the diet of all animals in the spring, and especially with cut feed. It is economy, doubtless, for farmers who have potatoes to feed some. Coarse mill-feed can also be used with profit on cut hay or straw.

If farmers can resort to a method of feeding in the spring, when circumstances compel them to use their best judgment in order to make their fodder as available as possible, which in point of economy and profit is an improvement on that they usually practice, then why not adopt it for the entire foddering season? Put your system of cutting fodder and feeding ground grain and roots into practice all winter. Feed in stables or, at least, from good mangers; nothing is then wasted; the manure is richer, and you may have hay to sell instead of to buy; or, what is better, you can winter more stock, make more manure, and as a consequence increase your crops.

ROTATION OF CROPS—GERMAN SYSTEM.

OUR attention has been called to an address, recently delivered before an agricultural convention at Springfield, O., by JOHN H. KLIPPART, Esq. It reviews at great length the system of farming as practiced in Europe—especially in Germany—intimating that American farmers have much to learn and more to forget before they can arrive at the excellence of the former. The cause of the difference observable between these two classes of farmers, is asserted to be this: The German makes farming his sole business, while the American has numberless irons in the fire, outside of his agricultural operations. The one expends the surplus of one year's productions in enriching and improving his lands for succeeding crops, till their highest productive capacity is reached. The other devotes that surplus to the purchase of bank, railroad or oil stock, leaving the farm to its own resources. The consequence is the grounds of the one increase yearly in productive power, while those of the other are starved for the lack of due preparation and nourishment. Among the German farmers more attention is paid to a systematic rotation of cropping than is customary among the same class here. On this point we quote from the address as follows:—"In Europe there is a regular rotation of crops adapted to the soil—a three course system, a four course system, a six, eight, ten or twelve course system—according to the size of the farm and quality of the soil. The farm is divided into as many fields as there are rotations in the course, or else into multiples of the rotations; then, the kind of crop which was grown in field No. 1 last year, is grown in field No. 2 this year, and will be grown in field No. 3 next year, and so on till the course is completed; this ensures a crop of wheat every year on a different field, and has many advantages; it has the advantage of having the soil properly prepared by previous crops; it is very much less liable to insect depredations, and the crop is every year on a comparatively new soil, and there is, as a rule, a good wheat crop every year."

The closing portion of that from which we quote, is intensely political—advocating the prohibition of foreign products and the formation of a great "*Farmers' Party.*" This is a field we do not propose to cultivate at present, hence leave it to the occupancy of those to whom the labor may prove more congenial

RURAL FARMERS' CLUB.

About New Potatoes.

JONATHAN TALCOTT, Rome, N. Y., asks RURAL readers for facts concerning the qualities of the Early Sebec, Early Goodrich and Shaker Fancy varieties of potatoes. He remarks—"I wish to get the best for general cultivation, but do not wish to pay too dear for the whistle. It is only by farmers comparing notes that they can find out what is the best, unless they choose to purchase all that are brought to notice, and devote their farms to experiments." We have long recognized the necessity which exists for farmers to freely compare notes. It is to aid in this that we have established this Rural Farmers' Club; so please forward your "notes."

Growing Corn.

"AN Eastern Pennsylvania Farmer" sends us a communication commenting on a Western Pennsylvania Farmer's method of growing a large crop of corn, given in a late number of the RURAL. He says:—"I fully agree with him in a liberal application of manure, either long or short. In taking some exceptions to his theory I would first inquire where the short manure is to come from as soon as the snow is off the ground—sufficiently short not to interfere with preparing the ground for planting? And I am unable to understand how that amount of manure can be used for corn alone without some disadvantage to other crops.

I think it would be proper to take into consideration the variation in depth of soil, for if my experience is worth anything it is certainly a very important matter, for I believe that some soils will admit of plowing much deeper than others, especially for corn.

I very much approve of 'home-made guano,' made of ashes, hen manure, &c., but prefer putting in the bottom of the hill at planting, and I would suggest that in this section we consider it of great advantage to blacken the grains pretty well with gas tar, to prevent the birds from taking it up by the roots. The remedy proves very effectual. I fully approve of thorough culture, and also agree with him when he says "all the scare-crow you want in the field is yourself." And now the only point I make against the system of our western farmer is, that more corn can be raised by not having quite so many stalks in a hill."

The Large Variety of Clover.—(*Trifolium Pratense.*)

MR. STORY, an astute farmer near Waterloo, Seneca Co., N. Y., has this winter thrashed forty bushels of the seed of large clover from the hay grown on 7½ acres of land, which seed he sold at $10 per bushel—$400. The hay, which, although over-ripe and coarse, is much richer in nitrogen than wheat straw, and is worth more for cows. Mr. S. has abandoned growing the small clover, as it is a very uncertain crop for seed unless the season favors; but the large variety he has found never fails to give a fair crop of seed, if instead of cutting it for hay in June, it is only pastured until late in May, and then suffered to grow and mature its seed early in the fall; it will then stand both wet and drouth, and give a much larger crop of seed than the small kind cut first for hay, and the second time for seed. The seed of large clover is now worth $11 a bushel. This variety is a great favorite with the farmers on the dry hill side calcareous clays near Aurora, Cayuga Lake, as it stands continued drouth much better than the small clover. Another advantage is that it ripens later and on that account it is better to sow with timothy. The seed is not as large as that of the small clover.—S. W.

Are the Salts of Manure Lost by Filtration.

PROF. WAY says, as the result of his patient experiments, that the salts of ammonia will not filtrate through clay; but that much of this fertilizer in solution will escape through a silicious sand. This might induce a belief that a sandy soil loses by leaching; but while a siliclous sand contains no aluminous earth, a sandy soil rarely contains less than ten per cent. of alumina, which is all sufficient to enable the soil to hold its organic matter until it is absorbed by the roots of growing plants. A sandy soil that will not form a crust after a shower, undoubtedly loses some of its nascent ammonia which passes off from the loose surface in the form of a gas, but when in solution the soil retains it for the use of plants. LXXVI.

Remedies for Smut in Wheat.

A. PICKETT, Winnebago Co., Wis., writes us that in his experience of twenty years as a wheat grower, he has "not found brine of any use to prevent smut in wheat; it is good to take out oats, and light grain and other substances, and perhaps facilitates the growth of wheat. The remedies I have found for smut are ley, lime and vitriol. Ashes answer when sifted on the seed while it is moist. The wheat will not hurt if it remain some hours after being coated with either of these substances, before being sown."

L. T. WILLIAMS, Troy, Pa., soaks his seed in strong brine, then sifts over it slaked lime; he puts it afterward in a box and lets it stand a day or two before sowing.

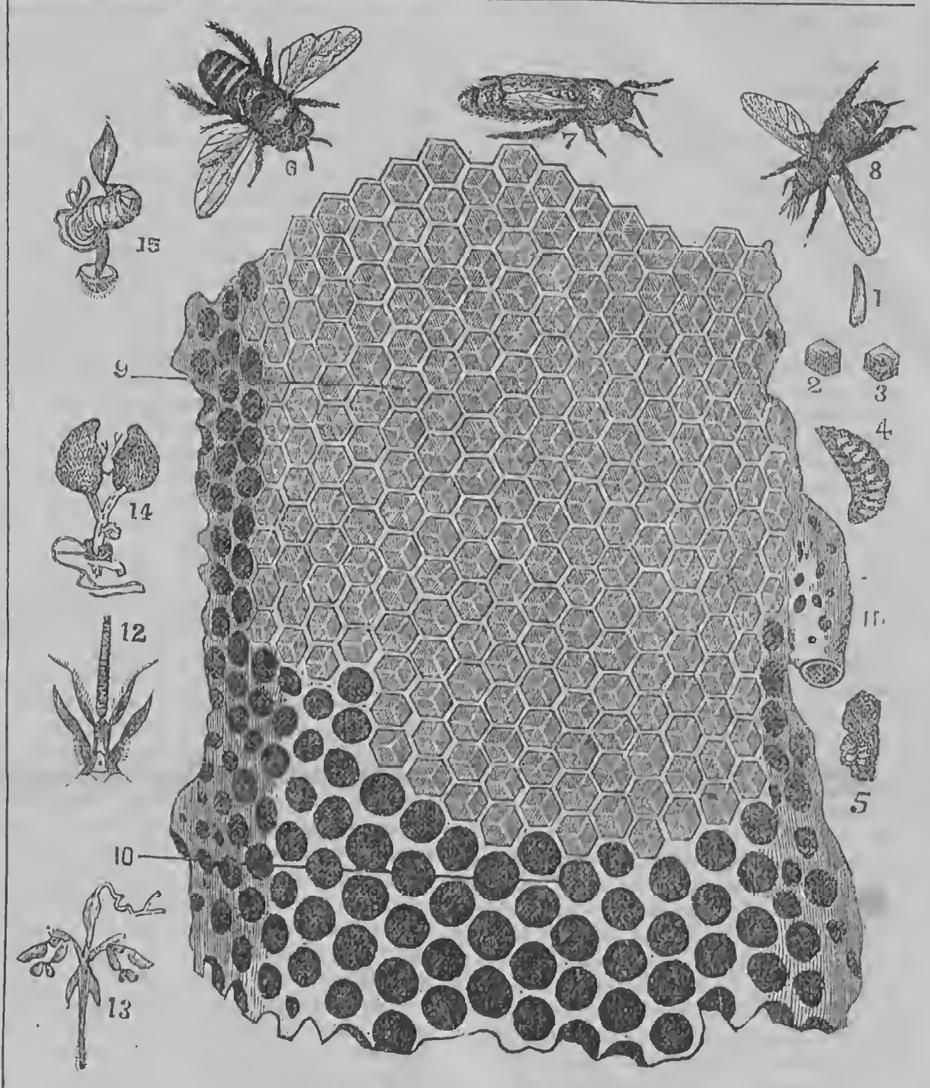
Plaster on Corn.—An Experiment.

D. R. NEWTON, Cooper, Mich., sends us this record of an experiment:—"On the 13th of last June I sowed six bushels of plaster on two-thirds of nine acres of corn, putting a handful on each hill in sixteen rows, and skipping eight. The corn was cut up in September, putting eight rows in a row of stooks. The rows were all alike, being forty rods long; the rows plastered yielded from three to six bushels of ears more than those unplastered, and the corn was sounder. I shall try the same experiment again this year. The corn was planted on a heavy clover sod, and the soil was very wet at the time the plaster was put on."

Cures for Poll Evil.

J. E. COLE, Steuben Co., N. Y., says he never failed to cure poll evil by first "washing the sore clean with warm soap suds, and then sprinkling on a teaspoonful of saleratus once a day until a cure is effected, which will be speedy."

L. P. W., Troy, Pa., says, "take four quarts of mandrake roots, boil them in water to get a strong decoction, then add one pint of hogs' lard and simmer it down to a salve. This is rubbed on once a day and heated in with a warm shovel. I have tried it for twenty years and never knew it to fail."



EXPLANATION OF ENGRAVING.

FIG. 1 denotes an egg magnified; 2, an egg as laid in the bottom of a cell; 3, a young larva at the bottom of a cell; 4, a full-grown larva; 5, a pupa; 6, a drone, or male (perfect insect;) 7, a queen, (perfect insect;) 8, a neuter, or working-bee; 9, cells of working-bees; 10, cells of drones; 11, cell of a queen; 12, proboscis and mandibles, magnified; 13, the sting and its appendages; 14, the ovigerous tube, spermatheca, and their appendages; 15. the honey-bag, crop, or sucking stomach, and second stomach.

BEES—PROPAGATION AND MANAGEMENT

THE preceding illustration is designed to present the honey-bee in its several stages, from the egg to its perfected state, whether as a drone or male, queen or mother of the colony, and the neuter or working and honey-making division of the same. It will be seen, by the illustration presented, that the working bee is the smallest of the three divisions, constituting a perfect hive or colony, but nature has made amends by imparting to the worker a restless activity and industry which more than supplies the deficiency as to size. In numbers, too, the latter preponderate greatly, numbering in a strong healthy colony, from thirty to forty thousand, while a few hundreds comprise the force of the non-producers. The queen takes the post of honor, however, being the mother of every bee in the colony and the object of their unceasing care and solicitude. If this head of the household meets with a mishap, the family is at once thrown into confusion. Labor is suspended and the workers may be seen coursing wildly about in search of the lost one. This kind of breaking up continues till a new queen is developed, when order is restored in the disorganized household. According to the authority of writers on bee culture and management, a fertile queen, during the better portion of the honey season, deposits about three thousand eggs per day, and if she has been fertilized, the product of these will be working bees. It will be seen that the three divisions, constituting a perfect colony, vary in size, form and color.

The queen has an elongated body with short wings and of a darker hue than either the drone or worker. The Italian queen is, however, lighter colored than either the drone or the worker, much of her body being of a golden yellow. The queen is said to live from three to four years. The Messrs. KING, in their work on the honey bee, speaking of the drones, say that they "are more bulky, though somewhat shorter than the queen, and, unlike her, their wings are long enough to cover the entire abdomen." They are clumsy and uncouth in appearance, and when flying may be distinguished by their boisterous hum. They are destitute of the sack for carrying honey or of grooves on their thighs for pollen, hence they are unfitted for the labors of the hive. Their function seems simply fertilizing the queens, or, in other words, "to propagate and rot,"—for, when their functions are performed, the workers drive them forth to perish. These last are prodigies of industry and have been cited, for long ages, as examples worthy of being imitated by man.

As an incentive to some of our readers, competent to discuss the bee question, we quote a paragraph from a friendly letter just received. The writer says:—"Bees you do not discuss very much. These I also fancy. But real good articles are scarce,—most of our rural papers having only the old ideas re-vamped over and over again. Please tell us of the Egyptian Bee, the Russian, the bee of Hindoostan and the bee of Northern China,—said to be a bee like a cross of the Russian and Italian. Probably we have at least five types, and, as in architecture, we settle America with the old French and Romanesque, both barbarous, and have had to uproot our old ideas, so in bees, we got the 'black' and poorest of all. As in political matters, we must get the —— out. So in the bee." As the season of working is approaching, it is a good time to discuss the bee, and it is hoped that some of our readers, having the experience requisite to do the subject justice, will avail themselves of our columns for this purpose.

QUANTITY OF SEED PER ACRE.

WE give the following for reference:

Grain Drilled.—Wheat, 1½ to 2 bushels; rye, 1¼ to 1½; oats, 2½ to 3; barley, 2½ to 3; barley and oats, 1 bushel of oats to 2 bushels of barley; peas, 2 to 3 bushels; buckwheat, half to two-thirds of a bushel; corn, in hills, 6 to 8 quarts; in drills, for fodder, 2 to 3 bushels; broadcast for fodder, 3 to 4 bushels; broom corn in drills, half to three-fourths of a bushel; beans, 1 to 1½ bushels; sorghum, half to three-fourths bushel.

Grasses.—Timothy, 8 to 12 quarts; orchard grass, 1¾ to 2 bushels; red-top, 12 to 16 quarts; Kentucky blue grass, 2 bushels; white clover, 4 to 6 quarts; red clover, 6 to 8 quarts; millet, half to three-fourths; lucerne, 8 to 10 pounds.

Vegetable and other Seeds.—Beets, 4 to 5 pounds per acre; carrots, 2 pounds; ruta-baga, three-fourths to one pound; tobacco, two ounces; cotton, two to five bushels; turnip, one to two pounds; onions, three to four pounds.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

IS IT SCROFULA?

J. S. STANGER, Oregon, Illinois, wrote us some two months since:—"We have a disease among our sheep here which commences with a swelling or swellings on the jaws (more frequently the lower one,) about the size of a pea, increasing in size and number until the jaw and lips become full of sores. On opening or squeezing them, a thick, tenacious pipe of matter or pus will come out and emit an offensive smell. The sheep lingers on several weeks, getting weaker from inability to eat, which it tries to do to the last, and then dies. I have, personally, never known one to get well. I have been told by others that they have had them recover, but on closer questioning the fact seemed doubtful. My opinion is that none get well with the treatment given them here. I think four-fifths of the cases are wethers."

We have received a number of accounts apparently pointing to a similar disease, from other Western localities, within the past year; but they have generally contained such a vague and limited description of symptoms, that we could form no definite idea and scarcely form a conjecture of the nature of the malady. Mr. STANGER does not describe a combination of characteristic symptoms which indicate, with any degree of certainty, a disease which we recognize,—but his statements, taken in connection with others received, would seem to show the presence of a formidable enzootic, apparently of recent origin in our country, and now, so far as we know, limited to the western portions of it. Unfortunately none of our correspondents have mentioned the extent of its ravages. But it is to be inferred from what Mr. STANGER writes that it is, or has been, prevalent in the flocks of his immediate region. And if this is so, and if the other accounts point to the same malady, it has certainly obtained sufficient foothold to create alarm, and to demand serious and careful investigation. This is especially true, if the imperfectly described symptoms indicate, what they seem to bear some appearance of indicating, the presence of scrofula. This disease, so fatal to sheep, and assuming an enzootic (epidemic) form throughout a wide extent of country, would prove a scourge indeed! But we trust that our fears are excited by casual resemblances, and that further observation will show that the described indications which most resemble those of scrofula, will be found to be characteristic of some local malady—new to us—and of a far less formidable description.

Scrofula has not been a prevailing disease among sheep, even in England, where all ovine diseases congregate. YOUATT, who wrote his great work on sheep but thirty years ago, does not, we think, mention it,—and certainly does not give it a place by name on his long catalogue of maladies. We have never *known* of its existence in the United States. But it has been distinctly recognized in England since Mr. YOUATT's day, and experience demonstrates that as our flocks increase and our systems of management become more artificial, one after another of the ailments of the old world, which were unknown to our fathers, appear among our sheep. It may become our bad fortune to develop the one under consideration more extensively than it has been developed elsewhere. At all events we advise all discerning flock masters in the region where it prevails, to study the facts very closely, in order to ascertain its true character.

SPOONER wrote seven years later than YOUATT, and he thus describes scrofula:

"A hard swelling of the glands under the jaws is first observed; after a time small pustules appear about the head and neck, which break, discharging a white matter, then heal, and are followed by others more numerous. This gradually robs the animal of flesh, and slowly pining, it becomes at length quite useless, and in this state is destroyed. It seldom attacks a great number at a time, but selects generally a few individuals from a flock."

It will be seen that this description does not correspond exactly with that of our correspondent. The cervical glands where the swellings first appear, are not situated *on* the jaws, but *under* them, behind them, and down the sides of the neck; and these enlargements do not appear in the small detached protuberances "about the size of a pea," but involve considerable surfaces. We *fear*, however, the discrepancy is due to a want of close examination. The parts occupied by the affected glands are covered with wool and the swellings might not be noticed unless specially looked for; whereas the secondary small pustules, occurring on the unwooled parts of the head, would be visible at the first glance. The diseases resemble each other in their general course and in their extreme mortality; and we know of no other ovine disease but scrofula to which the one under consideration presents so many analogies.

Mr. SPOONER's description is deficient in details* which would serve materially in identifying scrofula in a written statement of the symptoms. Even the swellings and ulcers of that disease present distinctive characteristics which any intelligent person, however unskilled, could ascertain from observation, and which no one familiar with the malady, either from practice or reading, could easily mistake in an account of them drawn up with reasonable fidelity. But no attempt will be made here to supply SPOONER'S omissions. We will put no leading questions. Let us have the facts as they are—not hewed down to the line of a theory, or warped by an unconscious attempt to establish or disprove the presence of a particular disease.

We once lost a number of valuable sheep by hydrophobia, and considered ourselves well repaid by the opportunity of personally studying that dreadful malady. We would very gladly submit to the same sacrifice to secure the same advantage in the present instance. There is but one thorough way, among those who are not experts, to study the characteristic symptoms of an unknown disease. It must be done book and pencil in hand—every observation recorded on the spot—and the particulars and history of each case kept separate. The last is easily done, if the sheep are numbered. He who depends upon his memory to preserve *all* the facts of only a single case, will forget some of the minor ones, and will certainly confuse the order of their occurrence, which of itself is a very important fact. And when memory is relied on to preserve the consecutive symptoms of a number of cases, they become a mere jumble, "without head or tail," and of very little comparative value. These remarks do not apply to practiced *physicians* educated to understand the nature and importance of symptoms, and accustomed to weigh and determine their bearings in each succeeding stage of the malady—and the business of whose life is to keep in mind the history of each case submitted to their treatment—but they do apply to all other persons. And here let us suggest, as we have repeatedly done on other occasions, that *educated* and *practiced* physicians, either veterinary physicians or those whose practice is among human patients, be called in whenever it is practicable. Such men ought to be able to determine readily the presence of so well marked a malady as scrofula.

But to direct the observations of non-experts into proper channels, we ask for the following facts: the time of year when the disease appears; the previous feed and shelter of the sheep; the situation of the farm and shelters, and especially whether dry or humid; the age and condition of the sheep attacked; the first observed indications of the malady; the locality of the swellings or tumors (extending the examination to the parts under and behind the jaws, down the sides of the neck, as well as to all parts of the head)—the size, form, and appearance of the tumors which *first* appear and of those which *continue* to appear—how far they are firm and elastic under moderate pressure—whether they, particularly the glandular enlargements (if such appear) under and behind the jaws are slow of growth, comparatively cold, colorless and insensible to pressure, and exhibit little active inflammation, or whether they develope themselves rapidly, are hot and tender, and show a red and inflamed surface extending to surrounding parts—whether the glandular enlargements suppurate, and if so the color, consistency and odor of the discharges at different stages—the appearance of the ulcers or sores, and their tendency to heal or the contrary—and the same particulars in respect to the "small pustules" on other parts, mentioned by SPOONER; and the other symptoms which attend the development of the tumors, such as the degree of appetite, of rumination (chewing the cud,) the respiration as indicated by the heaving of the flanks, the frequency of the pulse, the coolness and moisture or hotness and dryness of the nose, the appearance of the eyes and their surroundings and of the countenance generally, the state of the bowels, the urinary discharges, the movements of sheep if there are any peculiar ones, the rapidity with which emaciation and loss of strength proceeds, and the circumstances of death. The variation of these symptoms in different stages of the malady should be noted. Let us also be informed of the remedies applied and their apparent effects.

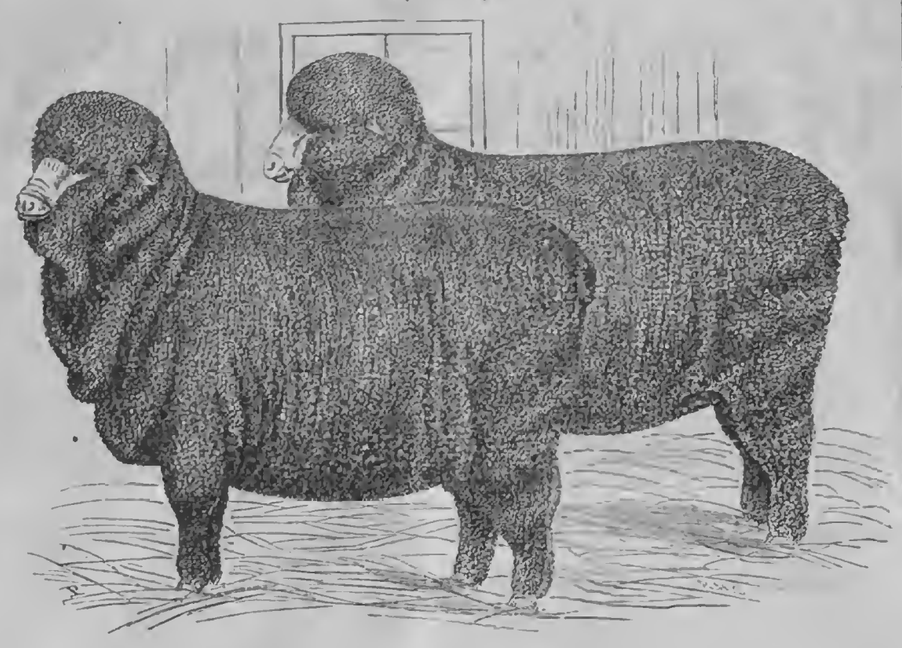
We have given prominence to this topic because it *may* prove a very important one. Time will settle that point. If the disease continues and extends in the Western States, sheep farmers cannot be too early or thorough in the investigations we have recommended.

In regard to the treatment of scrofula SPOONER says:

"The writer, though he cannot say that he has perfectly succeeded in effecting a cure, has done so to a certain extent, so that the tumors disappeared and the animals improved in flesh and health, but afterwards relapsed. This he has accomplished by administering four or five grains of hydriodate of potash daily in gruel, and rubbing the parts likewise with ointment of iodine of mercury. As soon as the animal is considerably better it should be sent to the butcher."

This is all well enough, doubtless, excepting the closing *infamous* recommendation. But we should be disposed to test a good many other equally legitimate remedies, and also *preventive measures*, before abandoning the contest. It will be time enough to suggest these, when the identity of the malady is made apparent.

*We adopted that description in the Practical Shepherd, because we had not seen the disease in sheep; because no other veterinary work in our possession contained even so full a description; and because the matter did not then seem very important, as scrofula was not known to have appeared in the United States.



BELL BRANDON—GREEN MOUNTAIN MAID.

THESE Infantado Ewes were bred by J. & E. D. HINDS of Brandon, Vermont, and are now the property of E. D. HINDS. Bell Brandon was got by Wrinkly, dam "an old Hammond ewe." Wrinkly by Green Mountain, by Hammond's Cross Tom. Green Mountain's dam was bred by W. R. SANFORD. Green Mountain Maid was got by Green Mountain, dam by Haumond's Old Greasy, grand dam a Hammond ewe. E. D. HINDS writes that he has bought out all of his father, J. HINDS', share of their valuable flock, but four, and that he now owns one hundred and fifty breeding ewes, and fifty-five ewe tegs, "all of thorough bred Atwood and Hammond stock."

Condensed Correspondence, Items, &c.

DUPLICATING NAMES of SHEEP.—There is a strong objection to this practice, from the fact that without precautions which are often forgotten, confusion is introduced into pedigrees. Thus, for example, the ram "Green Mountain," mentioned above in Mr. HIND's pedigrees, bears the same name with another ram of great celebrity in Vermont, and although the pedigree given by Mr. HINDS shows that they are two different animals, that fact would not be known or noticed by many persons. He who appropriates a name first, is entitled to its use—and if any other person uses it, the *breeder's* name should be prefixed. Thus, if Mr. SMITH first names a ram Greasy, and Mr. THOMPSON wants to use the same designation for an animal bred by himself, he should invariably write his name "Thompson's Greasy." We know not which of the Vt. "Green Mountains" first received that name.

While on this subject let us make another remark. We think it in very poor taste to run parts of names and imitations of names so completely "into the ground" as has been done in many cases. Since the advent of Mr. HAMMOND'S Gold Drop, for example, we have had *gold* enough put into ram's names to furnish material for eave-spouts and perhaps a few door-knobs to Middlebury College! These imitations do not enhance the value or reputation of the animals a particle. They lend to confusion. The English vocabulary of proper names is quite extensive, and when sheep breeders have exhausted that, they can, as we have done in naming our towns, resort to the proper names of other countries—the sonorous ones of Spain, the soft ones of Italy, the grand ones of Germany, and so on! We *think* the supply will hold out. Should it fail, we can do as MOORE, the proprietor of the Trenton Falls Hotel did in the case of his children. They came rather fast, and M. was very busy. So he *numbered* them!

INFLAMMATION OF THE LUNGS.—A. G. PERCEY, Newark, N. Y., writes us that in last November he discovered one of his ram tegs "badly afflicted with very labored breathing, a short hacking cough and a catching hitch every time he breathed as though he could not draw a full breath." Mr. P. immediately administered "a large dose of pure tar, and repeated the dose in two or three days, which entirely cured him." He writes that he lost a very fine ram teg two years ago by congestion of the lungs, brought on by severe fighting, during very cold weather. He administered no remedies, because he did not discover that anything was amiss until it was too late. Mr. P. refers to our omission to mention a remedy for Pneumonia, in a recent article. He will find our remarks on the subject in the Practical Shepherd, p. 326.

NEW YORK CENTRAL RAILROAD.—We mentioned in our issue of 6th inst. that, owing to a mistake, freight was collected by above named road on sheep sent to the State Sheep Fair last year, but that the Company subsequently refunded it "to every exhibitor who presented, on the published call of the Treasurer of the Association, the proper receipts and certificates, within the time specified," and that "the time given for presentation was an ample one." We have since learned from the Treasurer, that prior to our publication of these facts, the Railroad Company had paid all the claims, of *later* presentation, accompanied by proper vouchers. The conduct of the Company therefore has not only been just but generous.

SAMPLES.—F. H. MASON, West Andover, Ohio, forwards three samples of wool taken in February. That of the 4 year old ewe bred by GEO. KINGSLEY is of fine quality and style; that of the yearling ewe out of her by BAKER & HARRIGAN'S Gold Drop is not equal in quality and style, but is longer, indicates greater weight of fleece, and has more of the character of what is termed "American Merino wool;" that of the ram teg is a shade too deficient in style, and compared with the last, lacks in length. His age however may excuse the latter defect. All have a good supply of the right colored, i. e. bright, golden-tinted yolk.

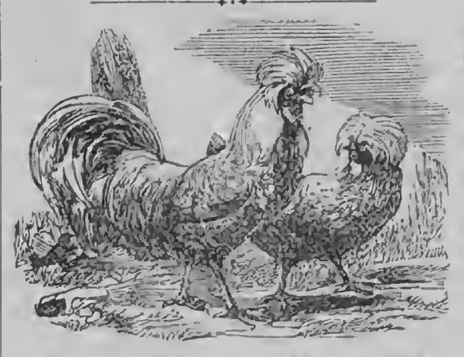
HOTEL CHARGES AT THE FAIR.—The Auburn hotels will charge as follows during the State Sheep Fair: the American and Exchange hotels $3 per day—the other hotels $2 per day. All of them have agreed to this arrangement.

Communications, Etc.

CISTERNS FOR STORING SAP.

IT may not be generally known that cisterns for the storage of sap may be constructed with less expense, and still be much more efficient and durable than the present mode of using barrels and troughs for that purpose. But such is the fact. It has so happened, the present season, that most of the runs have been on Saturday and Sunday, rendering it necessary to work upon the Sabbath to gather the sap and boil it down on that day, or lose most of it. Now all this difficulty, of boiling at least, may be obviated by constructing a cistern in the ordinary way of making them for catching water, of any desired capacity. They should be made small at the bottom, so that all the sap may be readily pumped out. A cistern, holding from twenty-five to forty barrels, may be constructed at an expense of from ten to fifteen dollars, which will last for years, and keep the sap sweet and clean much longer than when stored in barrels or troughs. An ordinary tin pump may be used for pumping the sap from the cistern. With such a cistern one can choose his own time for boiling his sap, and not be obliged to work upon the Sabbath, or during nights and stormy weather. Sap stored in cisterns will not sour so soon as when kept in barrels or troughs. Besides there is no wasting by leakage, which frequently amounts to no inconsiderable sum in large sugar camps.

Rochester, N. Y., April, 1867. J. S. TIBBETS.



SILVER POLAND TOP-KNOT FOWLS.

SINCE advertising eggs of the Silver Poland Top-knot fowls, in the RURAL, for sale, I have been asked all manner of questions relative to them; and deeming these queries of sufficient importance, I am induced to give my observations (with others,) after an experience of four or five years with this particular variety of fowls. BEMENT says that "they are exceedingly good layers, and continue a long time without wanting to sit." This has proved my experience, for I have had but one hen in three years which was at all inclined to sit; and not then until she was three years old. As far as my experience goes they have proved almost perpetual layers.

Mr. MOWBRAY, the great poultry breeder, in describing the characteristics of these fowls, says:—"They are not only kept as ornamental, but they are of the most useful varieties, particularly on account of the abundance of the eggs they lay, being least inclined to sit of any breed, whence they are sometimes called *everlasting layers*, and it is usual to sit their eggs under other hens. They fatten as quickly as any other breed, and in quality similar to the Dorking; their flesh perhaps a little more juicy and of a richer flavor. They are a quiet, domestic fowl, neither quarrelsome or mischievous, and their eggs of a good size, fine flavored, and thin shells."

BEMENT says of them, in the "The American Poulterer's Companion," that "the hens are much more ornamental than the cocks; though even they are sure to attract notice. They may certainly be ranked among the very choicest and most beautiful of fowls, whether we consider their beauty or their variety. They lay medium-sized white eggs, much pointed at one end, in tolerable abundance, and when they sit acquit themselves respectably."

After having experimented with many of the leading varieties of fowls—commencing in 1851—I am decidedly of the opinion that the Silver Poland Top-knots are the most profitable as layers. They are easy keepers, and the "chicks" are hardy under any ordinary care. The fowls have beautiful plumage; large top-knots, covering the heads, and are great pets with us, have no inclination to roam, and are perfectly tame. Their qualities for fattening and eating I have never tried, but should place implicit confidence in the opinion expressed by MOWBRAY.

Time to Sit Hens.—Chicken breeders are far apart in their opinions as to the proper time for sitting hens; some think the earlier in the spring the hens are sit the better. This I think is a mistake; early sitting hens are apt to leave their nests more frequently in cold weather than in warm, and in so doing their eggs become chilled in a very short time, and a natural consequence will be a great majority of the eggs will not hatch. Those that do hatch will produce puny "chicks," which will need extra care to rear. My experience has been that the best time for sitting hens is from the middle or last of April until the latter part of June or July. Chickens hatched at this time prove hardy, and with proper care will be ready for fattening for market in early fall; the hens will make early layers for the winter. If I were to advise at all, it would be not to sit any eggs until after the middle of April, unless there be artificial heat in the hen-house to keep the temperature of the same as near uniform as possible. WM. M. LEWIS.

Rochester, N. Y., 1867.

THE plan of planting a few acres with forest trees, to be used as fuel, and allowed to grow up again, thus furnishing a perpetual supply, is strongly recommended to prairie farmers by some recent writers.

Rural Notes and Items.

THE WEATHER—PROSPECTS, &c.—April came in with the mantle of March over its shoulders, and has evinced all the irascibility of its rasping, biting predecessor. There is a prospect, as we write this, of a letting up, as the roads in the country are drying up rapidly and the plows begin to move. According to the predictions of the experienced in weather matters we are to have an uncommonly fruitful season. When flour sells for $17 per barrel there ought to be something of promise in the immediate future to keep hope alive in the hearts of those whose sole dependence for the support of their families rests upon their daily earnings.

APPRECIATION OF THE RURAL.—A business note, from a subscriber in Dodge Co., Wisconsin, closes thus:—"It is of no use for me to think of trying to get along without the RURAL. It is worth $25 per year to me in my farming operations."

ADVERTISING PAYS.—A patentee who advertised his machine—and also had it illustrated and described—in one of the January numbers of the RURAL, writes us:—"I will state that I have already made several thousand dollars which I can trace direct to the RURAL."

THE ILLINOIS STATE FAIR.—We have received the premium list of the Illinois State Agricultural Society for 1867. The Fair will be held at Quincy, and commences Sept. 30th, and ends Oct. 5th. Persons desiring further information concerning the Fair, or copies of the list of premiums, should address H. D. EMERY, Chicago, Ill.

SHEEP SHEARING FESTIVAL.—A Sheep Shearing Festival will be held on the first day of May, at the house of J. P. MILLENER, Esq., at Adams Basin, on the Niagara Falls road. Wool growers generally are invited to attend. A good time is anticipated. Mr. M. desires us to say that lunch will be set, and that "the latch string hangs outside the door."

THE NEW ENGLAND HOMESTEAD—A JOURNAL *Concerning the Farm, Orchard, Garden, and the Fireside*—Is the title of a 16-page monthly just started at Northampton, Mass., by HENRY M. BURT & Co., at 50 cents per annum. The initial number contains a variety of valuable articles, and the advertising department looks like a paying business.

STATE SOCIETY'S PLOW TRIAL.—The trial of plows, ditchers, harrows and cultivators, to take place under the auspices of the N. Y. State Ag. Society will begin on Tuesday, May 7th, near the city of Utica. Entries must be made at least two weeks in advance of that date. The programme, giving all requisite information may be procured by addressing Col. B. P. JOHNSON, Albany, N. Y.

CHURN WANTED ON TRIAL.—Seeing the Seneca Falls Patent Churn advertised in the RURAL NEW-YORKER, I wish to inquire if one of those churns can be got on trial without territorial right. There is a good deal of inquiry in this section for a good patent dash churn. I am a farmer and keep but four cows. —C. F. V. BARBER, *Hemlock Lake, N. Y.*

We presume the Seneca Falls Churn Manuf'g Co. will be glad to let any one have their Adjustable Dash Churn, on trial, but the best way to ascertain is to address the Superintendent, Mr. H. P. WESTCOTT.

LARGE SALE OF SHORT-HORNED CATTLE.—We learn that JAS. O. SHELDON, Esq., of White Spring Farm, Geneva, N. Y., has purchased the entire herd of SAM'L THORNE, Esq., Thorndale, Dutchess Co., with the exception of two bulls, the 6th and 12th Dukes of Thorndale. It is rumored that about forty thousand dollars were paid for forty animals. This is the largest single sale of Short-Horns that ever took place in this country, and puts Mr. S. in possession of the leading herd.

OUR SEWING MACHINE PREMIUM.—Among the many acknowledgments lately received from club agents the following tells its own story. How many of our readers will "follow suit" by forming a club and securing a Sewing Machine or other valuable Premium?

ST. JOSEPH, MICH., March, 22, '67.

HON. D. D. T. MOORE, Rochester, N. Y.:

Dear Sir:—I have the honor to acknowledge the receipt of a beautiful WHEELER & WILSON SEWING MACHINE (*ne plus ultra*) from your generous hand—which came a few days since, all O. K., and "runs like a top." Getting up the club I sent you cost me no time nor money. A little talking and showing of the RURAL did the thing—as any one may do if he will but TRY—and receive as fine a present as you have been pleased to send me. May success attend you, my dear D. D. T. M., and believe me ever the friend (energetically) of the RURAL.

HENRY W. GUSTIN, *Ass't P. M.*

HOW TO SECURE A PATENT.—We have an inquiry before us respecting the proper means to be taken to secure a patent, and whether it is absolutely necessary to pay an agent from $25 to $40 for the aid he renders. We have not space to give detailed information on the subject; it is sufficient to say that this business, like most others, cannot be successfully carried on without the requisite experience and knowledge. The best plan we think is to solicit advice from proper persons. An application consists of a model, drawings, petition oath, and full specifications. Various official rules and formalities must also be observed, and the efforts of an inexperienced person to compass all this himself results generally in failure, and greater cost ultimately than if he applied to a patent agent in the beginning. Those wishing to employ an agent, or to procure drawings are referred to the advertisement of Mr. GEORGE FRAUENBERGER, in this paper.

THE FARMER'S JOURNAL.—We have often urged farmers to keep systematic book accounts of their business transactions and farm operations. Most farmers admit the advantages of doing so, and it is indeed a necessary work to enable them to render correct returns of annual income to the Assessors. One serious objection to keeping accounts has been the lack of books adapted to the farmers business. Such a book is now furnished in the one with the above title, compiled and published by A. DE LANCEY BRIGHAM. In turning its pages we find plain heads over them, showing at a glance for what accounts they are intended. First, to begin the work, is an inventory of property; then the family expenses and for what purpose; next incidental expenses; expenses for cultivating farm, for permanent improvements, register of employees, sales of farm products, record of all crops cultivated, live stock register, cash received and paid out, general accounts, bills receivable and payable, various summaries, forms of contracts with employees, and several pages for memoranda. The work is handsomely gotten up, and is designed for three years. For sale at this office. Price $3.50.

THE RED BOOK.—We are indebted to Hon. HENRY CRIBBEN of the Assembly, and Prof. A. A. HOPKINS, for copies of the Red Book.

HORTICULTURAL.

THE SCUPPERNONG GRAPE.

A WRITER (Mr. VAN BUREN) in the January number of the Southern Cultivator, advised the farmers of the South to engage in the culture of the Scuppernong grape, and based his estimate of profits on a yield of 1,750 gallons of wine per acre. We criticised this as a "wild goose estimate"—as one which the common sense of farmers should teach them was wholly unreliable. The April number of the same journal contains another article from a correspondent, in which occur these sentences: "That Mr. VAN BUREN is correct in his conclusions relative to the production of the Scuppernong grape, as well as its exemption from disease, there can be no doubt; but his estimates are certainly too low. One hundred vines, at ten years old, will yield twice as much as he calculates, and will bring in market five times as much." The Editor of the Cultivator appends these remarks to his correspondent's article: "Our friend MOORE, it seems, is not exactly posted on Southern products. He is a clever gentleman, and the RURAL NEW-YORKER is really a first-class family and agricultural paper, which, if not quite reliable on Scuppernongs, is first-rate authority on sheep. Our advice, therefore, to him is, '*qu il revienne a ses moutons.*' Let him go back to his sheep."

One would suppose from the confidence with which our Southern friends assert that the Scuppernong grape is capable of yielding the remarkable quantity of 1,750 or even 3,500 gallons of wine per acre, that they are able at least to maintain the statement from the results of bearing vineyards of considerable extent. Mr. MOORE is now making a tour in the South, partly with the view of becoming "posted on Southern products," and if there is a vineyard of Scuppernong grapes, three acres or even one acre in extent, which has produced the lowest of the above named quantities of wine as an average yield for three years in succession, he would be very glad to see it, and would, doubtless, describe it to the RURAL readers as one of the most notable sights of his journey. We challenge Southern horticulturists to show it.

We suspect that the above estimates of yield of wine per acre have been made in each instance from the product of single vines only. Every experienced fruit grower understands the utter wildness and worthlessness of such estimates. As well might we estimate the probable yield of apple orchards by that of a single tree from which 20 barrels have been picked; or a dwarf pear orchard from the product of two or three trees in a gentleman's garden. And not only in the Northern States and California, but in all the vine growing districts of the world, single vines are, in general, far more prolific in comparison to the space they occupy than those in thick set vineyards. No wine district in the world can show a record of average yield equal to that claimed for the Scuppernong grape, and what reason is there for us to believe that this is such a notable exception to the rule?

When the Editor of the Cultivator gave the gratuitous advice "to go back to his sheep," he evidently forgot that while the RURAL is "first-rate authority on sheep," it is not less on other subjects pertaining to Agriculture and Horticulture. The RURAL did not go outside of its province in criticising the merits of the Scuppernong grape. Furthermore, we are glad to see grape culture engaging the attention of farmers at the South. Grapes and wine are, doubtless, destined to become important and valuable products of a large part of those States; their climate and soil are adapted to the culture, and a diversified production will bring larger prosperity. Perhaps, too, the Scuppernong will prove the most profitable variety they can plant. There will be ample profit in grape culture if a yield equal to the average of other favored districts can be obtained. But is the Cultivator consistent with its reputation for candor, its desire to impart reliable information, and its standing as the best Agricultural and Horticultural journal in the South, when it endeavors to influence farmers to undertake a new culture, by holding up a prospect for profit which has no foundation in fact, and is at variance with all the sound horticultural experience of centuries? That we may not be in debt to our contemporary for advice, we suggest that it "go back" to grapes and get upon a sounder basis.

PEACH CULTURE.

ISAAC PULLEN of Hightstown, N. J., is reputed to have had much experience in peach culture and worthy of being an authority on the subject. In an article embodied in an agricultural report, he says:—"In all cases, peach trees should be planted when of one season's growth. The time of planting, whether fall or spring, is immaterial," except in very severe climates, when spring may be preferable. "In orchard planting the ground should be furrowed from eighteen to twenty feet apart and the trees set at about the same depth as when in the nursery. The side limbs and tops should be cut off, leaving a straight stem of the desired length for forming a head. This should be done in the spring. When the heads begin to form, all the unnecessary shoots should be pruned away, leaving three or four limbs in a suitable position to form the tree. Shortening about one-half the growth for two or three years is all that is necessary till bearing commences—except the removal of the borers, for which the knife will be found the most certain and effective instrument. Any soil which will produce corn and potatoes liberally will answer for the peach with the bestowal of about the same amount of cultivation. Wood ashes and guano are good fertilizers for the peach."

NEW APPLES.

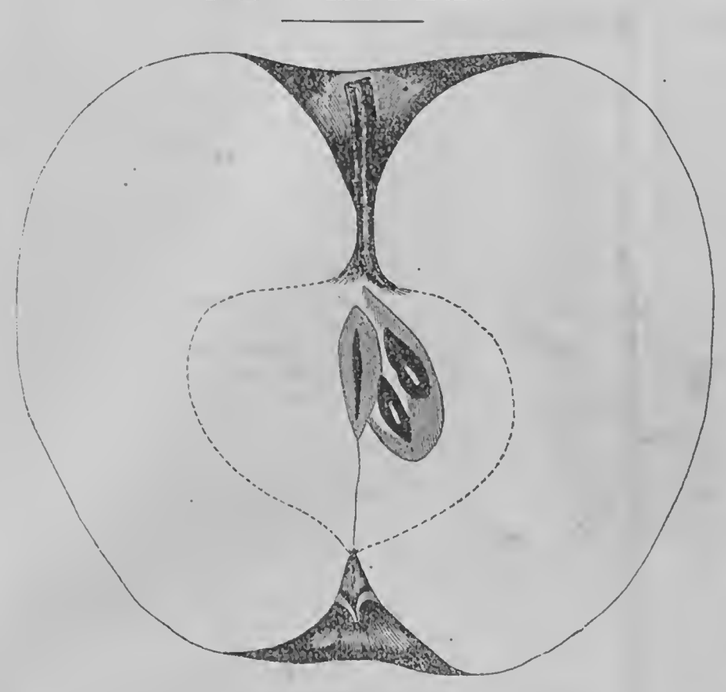


FIG. 1.—RAGAN'S RED.

We are sometimes requested to publish selected lists of fruits to assist fruit growers in choosing varieties to plant. But such lists published in so widely a circulated journal as the RURAL would be of little value to the majority of its readers, unless we undertook the lengthy and laborious task of selecting the varieties adapted to each State or locality in reference to the soil, climate and season. We prefer to give descriptions of fruits, and refer our readers to their nearest horticultural societies, and to careful and experienced fruit growers for information respecting their adaptability to particular localities. The following cuts and descriptions are from the forthcoming work of Dr. WARDER on American Pomology:

RAGAN'S RED APPLES.—Tree, large, vigorous, spreading, productive; fruit, handsome, large, fair, globular, somewhat conical, regular; surface, smooth, yellow, covered with mixed red, and splashed crimson; dots, numerous, minute, yellow; basin, deep, regular; eye, small, closed; cavity, deep, acute, green; stem, medium, slender; core, medium, regular, open, meeting the eye; seeds, numerous, long, angular; flesh, yellow, fine-grained, juicy; flavor, sub-acid. Use, market, table and kitchen. Season, October. Quality, very good. A very profitable market and amateur variety.

CLUSTER PEARMAIN.—Tree, upright, twiggy, productive, bearing in clusters at the ends of the spray; fruit, handsome, of medium size, roundish, flattened, regular; surface, not smooth, light yellow, partially covered with mixed carmine, and splashes of dark, dull crimson; dots, numerous, large, fawn color; basin, wide, shallow, regular; eye, small, short, closed; cavity, medium or deep, brown, rough; stem, long, slender; core, small, regular, meeting the eye; seeds, numerous, small, very short, dark, plump; flesh, yellowish, breaking very fine grained, juicy; flavor, sub-acid, aromatic, rather rich, exceedingly agreeable. Use, table and kitchen. Season, from September to October. Quality, almost best.

This fruit may take the place of the Rambo, to which it is preferred by some, but it is only introduced as an amateur fruit, and cannot be recommended for general cultivation. The fruit is apt to fall from the tree; when, from its extreme tenderness, it bursts open.

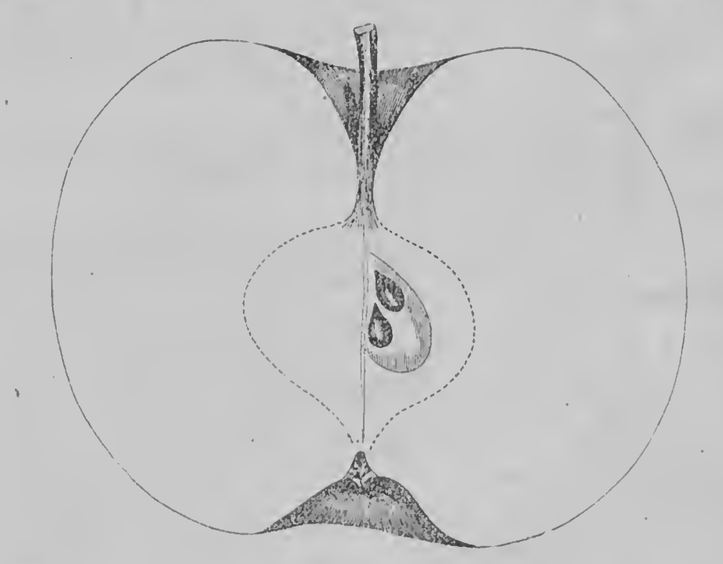

FIG. 2.—CLUSTER PEARMAIN.

HORTICULTURE, &C., IN SOUTHERN UTAH.

EDS. RURAL NEW-YORKER:—So often finding your excellent and interesting journal before me is a reminder that some time has elapsed since using pen for the benefit or amusement of your readers. The mildness of the winter here, giving continual and free opportunity for labor, reduces the opportunities of correspondence and gives room for more than usual excuse,—especially as this colony is quite young, "help" difficult to be obtained, and every one earnestly busied in building, fencing, grading, terracing, planting vineyards, orchards, seeds, grain, trees, ornamental flowers and vegetables.

The crops most usually grown here are, wheat, corn, oats, barley, sorghum, cotton, castor-oil beans, broom-corn, sweet potatoes, onions, beets, carrots, parsneps, &c. In fruits we could not expect much in five years, yet we have produced of grapes and peaches quantities not insignificant, and we have rapidly coming on apples, pears, plums, cherries, apricots, almonds, figs, &c., all of which we have fruited in greater or less quantity. Also, gooseberries, currants, raspberries and strawberries, which do well.

It seems very well established in the minds of our citizens that the grape will eventually be the great crop here, and that wine and raisins will be our heaviest articles of export. Our mountains are volcanic; the vine grows luxuriant, is fruitful, and the fruit possesses an exalted flavor. The climate is dry, and as yet no enemy or disease has attacked either the fruit or vines. The sweet potato grows luxuriantly here and yields well, and our sorghum and imphee produce a sirup of superior quality.

Cotton grows well and yields only moderate; irrigation expensive and fields small. So if we produce enough of that fiber for home use we shall consider we are doing well. President BRIGHAM YOUNG has erected and is about putting in operation at Washington, five miles distant, a cotton mill of no mean proportions, and another of considerable capacity is in operation at Springville, while still another less pretentious is located at Parowan.

Our roses, lilacs, currants, gooseberries, willows, and many other shrubs, look quite verdant with early growth, and the peach and apricot are bursting their fruit buds. Spring is fairly upon us. The birds tune their songs daily and the hum of insects is audible. So we must to labor.

St. George, Southern Utah, Feb. 25, 1867. J.

THE RURAL—PROPAGATING GRAPES.

MR. RURAL.—*Sir:* I do not wish to make you vain or puffed up, but I wish to speak the truth and *lie not.* Fourteen years ago, when the RURAL was a little one, it was introduced to me by a neighbor. I took it by the hand and bid it welcome to my humble home. I have taken some pains and time to introduce it to others, and the result is that I now stand *Godfather* (Agent) to more than fifty of its offspring. And now that it has become a mighty one, such a giant in the land that some are getting afraid that it will take away their place and nation,—therefore has it come to pass that some of the BALAKS, (White Willow and sheep painting agents,*) are casting about them to find some BALAAMS to curse thee.—But fear thee not, for a just, honest and upright man, upholding the right and denouncing the wrong, will always be sustained by the good and virtuous everywhere, and their curses will only be turned into blessings on thy head.

Now, as it has come to pass that the RURAL has waxed great and strong, it is presupposed that it has wisdom as SOLOMON, patience as JOB, faith as ABRAHAM, and meekness as MOSES. Hence, I would like to ask it a question, but I am afraid and timorous,—for unfortunately I was born away back in old fogyism. But I will "out with it." As the Iona grape is *the* grape now,—it being conceded that wine made from that is better when two years old than any European wine ten, fifteen, or twenty years old—can I take eyes of the Iona grape, place them in little baskets, (a boy or girl can make from twenty-five to fifty per day of black ash splits,) fill with the right kind of vegetable mold, and sprout them in hot-beds by steam or artificial heat in the ground and have them equal to one year's growth ahead? The object of the little basket is, that when the weather is right I can take it up and transplant without disturbing the roots.

Mr. RURAL or gentlemen grape propagators, speak out through the RURAL, and do not think your craft in danger, for we are to assist each other—that is the *command.*

Western, Pa., 1867. A NORTH-EASTER.

* We know more of this in Pennsylvania than you do in Rochester.

POMOLOGICAL GOSSIP.

PEACHES IN OHIO.—At a recent meeting of the Cincinnati Horticultural Society the prospective peach crop was made the subject of remark. The prospect was reported to be quite flattering for a good show of peaches the present season, except on very low grounds. Here the frost has settled the question adversely.

BEST APPLES FOR IOWA.—E. K. ROBINSON of Moravia, Iowa, mentions some twenty varieties of the apple which he has cultivated with more or less success. Among the particular favorites of the writer may be mentioned the White Winter Pearmain, Roman Stem, Wine Sop, Rawles Janet, Jonathan, Rambo and Red June.

BLACKBERRIES.—A report was recently made by a Committee appointed by the West Jersey Fruit Growers' Association on the subject of blackberries, in which the comparative merits of the Dorchester, New Rochelle, Wilson's Early and Kittatinny were discussed. These were all commended as having a family resemblance, of good qualities, differing somewhat in the season of maturing. The last two had the advantage in this respect, being several days earlier than the others, but all desirable for the succession of fruit they furnish.

GRAPES IN PLEASANT VALLEY, N. Y.—At a meeting of the Pleasant Valley Fruit Growers' Association, held on the 26th of March, the question of the best six varieties of grapes, for culture in that locality, was up for discussion. A vote was taken and the varieties decided upon in the following order:—Catawba, Iona, Diana, Delaware, Isabella and Concord. The following Committee was chosen to get up a work on grape culture in that locality:—C. D. CHAMPLIN, T. M. YOUNGLOVE, Dr. C. VAN KEUREN, E. P. SMITH, A. Y. BAKER, A. J. SWITZER, J. M. MCLAWRY, Rev. D. E. LOVERIDGE and J. N. CRANE.

HEADING THE CANKER WORM.—THOMAS ELLIS of Rochester, Mass., writes to the N. E. Farmer concerning the course he pursued to head off the canker worm in his apple orchard. He put one or more bushels of clean common saw-mill dust—varying the quantity according to the size of the tree—about the trunk of the trees, forming a symmetrical mound, piled as high as it would stand. No creeping insect succeeded in mounting this barrier. These mounds were examined every evening during the spring months for the purpose of putting them in proper shape if any had become deranged. The protection was perfect the first year, and has continued so ever since. The pests were frequently seen making a desperate effort to climb the slope, but failed in every case.

CATALOGUES, &C., RECEIVED.—HOVEY'S Illustrated Guide to the Flower and Vegetable Garden for 1867. A finely illustrated and printed pamphlet of 148 pages, with colored frontispiece; price, 25 cts. HOVEY & Co., 53 North Market-st., Boston.—Catalogue of Fruit and Ornamental Trees, &c., cultivated and for sale at "The Evergreens," La Moille, Bureau Co., and Mendota, La Salle Co., Ill., by SAMUEL EDWARDS.

Domestic Economy.

OUR SEWING MACHINE PREMIUM.

IN answer to recent inquiries from housewives and others, we would state that our offer of the WHEELER & WILSON SEWING MACHINE No. 3 (price $55) for fifty yearly subscribers to the RURAL NEW-YORKER (at least 40 of them being *new*) at club rate, $2.50 per copy, [or, for 30 subscribers, 20 of them *new*, at $3 each,] is still in force and will be continued until July 1st. Subscriptions can begin the first of January or July, or any time between those dates. We have already awarded many of these machines, and believe they give universal satisfaction. As a sample of acknowledgments recently received, read the following from our club agent at Avoca, Steuben Co., N. Y., and then, if so disposed, see if you cannot do likewise:

D. D. T. MOORE, ESQ.—*My Dear Sir:* The Wheeler & Wilson Sewing Machine, sent by you as a premium for the RURAL Club, I received all right in due time, and I must say it is a splendid machine, fully equal to my most sanguine expectations. Knowing as I have for several years past, by experience, that you always "fill the bill" to the letter in regard to premiums—that you always give exactly what you promise (or a little better)—still I scarcely looked for so valuable a machine as I received. It works well, making a beautiful stitch, alike on both sides, and is particularly adapted to family sewing, doing all work done on any machine,—such as to sew, stitch, hem, fell, braid, bind, quilt, tuck, &c.

Please accept my most sincere thanks for the favor, and "don't forget to remember" to consider me as your permanent agent for this vicinity for the future. But one thing I wish to know—How can you afford to give us a paper fully worth the subscription price and even more, when compared to other papers, and in addition give such valuable premiums? Where does the profit come in? [In having a large circulation. We could not afford the Rural at $3 a year, if we only had 10,000 or 20,000 subscribers.—ED.] Each year for several years we have considered the RURAL as having arrived at *par excellence* as improvement after improvement was added, but this year has eclipsed all former years; it is now perfectly splendid. *Vive la Rural!*

PURE CIDER VINEGAR.—(H. F., Terre Haute, Ind.) Pure and good cider vinegar can be made only from pure and good cider. The main point is to expose the liquor to the air as freely as possible, at a temperature at least 80°; if warmer, it would be better. Casks half filled and placed in the sun with the bungs out will soon furnish vinegar. But much is lost in this way by leakage. The best way is to leach the cider slowly through a long box or cask, filled loosely with sweet, hardwood shavings. This should be done in a warm room or in the hot summer sun. The cider gets the requisite air and heat and turns quickly to vinegar.

BED BUGS—SALT THEM.—A lady writes the Texas Christian Advocate that salt is a sure thing on bed bugs. Wash the articles and places infested with the bugs with salt and water, and fill cracks and crevices where the vermin hide; they will give no more trouble. They cannot abide where salt is.

PRESSED MEATS OR CHICKEN.—In response to an inquiry about the preparation of pressed meats or chicken, in a recent number of the RURAL, NELLIE L. COOK of Rockford, Ill., responds by saying:—"Cook the chicken until very tender, and until the water is nearly boiled out. Season highly with butter, salt and pepper; remove all the bones; pack very tightly in a narrow, deep dish, and set where it will become cold. When used, slice about three-quarters of an inch thick. Or, if preferred, chop the chicken—not very fine—before packing, and the white and dark meat will be more mixed. I prefer the first method of preparation."

NOTHING LIKE IT.—Full weight and uniform perfect goods, such is *Best Chemical Saleratus.*

No. 5. Catalogue of Flower Seeds, 5c. each. [896-4t

GRAPE VINES FOR SPRING PLANTING.

My stock of vines for spring planting comprises a general assortment of the different varieties; all of which have been grown with the utmost care and with special reference to producing healthy, well-matured roots.

Long experience has proved my system of growing vines to be the best in practice, and by devoting my energies entirely to this one department, I am enabled by past experience and, with the aid of extensive and perfect facilities, to produce better vines and in larger quantity than any other propogator. In an eminent degree is this true of my present stock of

IONA AND ISRAELLA VINES.

These two varieties have very justly received the highest commendations everywhere, and the Iona has come to be acknowledged the best American wine grape. Read the following:

"The Iona and Israella Grapes, originated by Dr. C. W. Grant, at Iona Island, are the best grapes in America."—*N. Y. Tribune.*

"The Iona is unequalled by any native, and is probably unsurpassed by any foreign kind."—*Am. Agriculturist.*

PLEASANT VALLEY, Jan. 1867.

DR. C. W. GRANT:—I have tried the Iona wine by the severest tests that could be furnished, and all of the trials have been very satisfactory.

Taking the best Catawba wine that has been made as "*very good,*" I should place Delaware next above it in rank; Diana, for some qualities, next above that; and Iona above all.

Placing Iona by the side of the finest wines of Germany, that are not excelled in the world, it does not suffer in comparison in any respect, while it has some important characteristics entirely its own, that, in my estimation, place it above that of all other grapes with which I am acquainted. I intend to plant largely of it, and of that only, and from my own experience and extended observation, confidently recommended the same to my friends. Inclosed find order for 10,000 Iona vines, No. 1, Vineyard Class. C. D. CHAMPLIN, Secretary Pleasant Valley Wine Co.

The great popularity of these two most valuable varieties has induced their extensive propogation from immature wood, and thus thousands of vines have been produced and disseminated, which will only serve to injure their well merited reputation and to disappoint those who have purchased them.

Being in possession of the original vines, and also of many of the first propogated from them, I have been supplied with an abundance of mature wood to grow a large stock for market, and now offer at low rates vines of such extra quality as will not disappoint the planter.

☞ Great inducements are offered to clubs. Send stamp for Price Lists of Vines, with engravings of Iona and Israella, and ask your neighbors to join with you in forming a club. MANUAL OF THE VINE (a thorough treatise,) sent for 50 cents. Address C. W. GRANT, Iona, (near Peekskill,) 896-4t Westchester Co., N. Y.

Ladies' Department.

Written for Moore's Rural New-Yorker.

SONG—"PUT THE BRIGHT SIDE OUT TO MOTHER."

BY KATE WOODLAND.

"Put the bright side out to Mother,"
Thus a youthful prisoner said,
To the comrade who was gently
Pillowing his dying head.
"Do not tell her all I've suffered
Since they brought me to this pen;
It would grieve her sore to know it,
Do not let her bear it then.
"Put the bright side out to Mother;
It would break her heart to know
All that I have borne and suffered—
All the misery, want and woe."

"Put the bright side out to Mother,
Tell her gently what you must,"
And his pallid face grew radiant
With a look of holy trust,
And his spirit, held no longer
By a guarded prison door,
Hastened to the Father's Mansion,
There to hunger nevermore.
"Put the bright side out to Mother;
It would break her heart to know
All that I have borne and suffered,
All the misery, want and woe."

Soon the glad release was given;
And that comrade sought with joy,
In her home, the widowed Mother
Of the brave young soldier boy;
And he pondered, as he journeyed,
On the words of him who died,
And he said "Amid such misery,
Who could find a brighter side?"
"Put the bright side out to Mother;
It would break her heart to know
All that I have borne and suffered,
All the misery, want and woe."

Then a voice appeared to whisper,
Softly, gently in his ear,
"Tell that Mother thou art seeking,
That her brave boy knew no fear,
Tell her of his patient spirit,
How unmurmuringly he died,
Tell her, too, his dying message;
This will show a brighter side."
"Put the bright side out to Mother,
It would break her heart to know
All that I have borne and suffered,
All the misery, want and woe."

Van Buren Co., Mich.

Written for Moore's Rural New-Yorker.

MAIDIE'S PARLOR.

A RESTING place! Rest, that for which we strive all through our weary lives, and are satisfied if, at the close, it be granted us. Is there, then, no rest for us this side the gates of pearl? Are there no places where "Heaven is begun" on earth? Ah, yes! Where CHRIST'S "little ones" dwell, there we find the resting places.

MAIDIE grew beautiful there. Others too could not resist the sweet influences of that little room. It was a little room; but it does not take great places to fatten souls in; they often flourish best in lowly ones. Its walls were low, but they were white and pure as MAIDIE'S heart; and all about hung pictures, little bits, most of them, like MAIDIE herself, some in pencil, the work of her own hand. In all really pretty parlors the carpet is a sub-servant; thus it was in this one—one of the old-time carpets when dreams and hopes followed the swift shuttle and were woven with every thread. Perhaps its delicate tints were a little faded; I think they must have been, therefore, the more valuable; for when a carpet comes to be something more to us than a covering for our floor, then it becomes a part of our home. MAIDIE loved the old carpet; for it became a part of the parlor before herself; and she would not have it removed. Then there were full white curtains of fine texture for the windows. Mother liked them, and MAIDIE thought they contrasted prettily with the green of the blinds. The chairs—they were not common chairs: many loved forms had rested in them, leaving behind a touch of consecration. The sofa—could MAIDIE ever separate it in thought from the fragile little figure which had rested there many summers ago, when *she* was only a child? A cousin who had traveled far in search of health came here at last one summer's day. With the consuming fire brightening her eye and burning in her cheeks, her long curls floating over the white pillow placed by kindly hands, she lay upon the sofa in the cool parlor. How well MAIDIE remembers that afternoon as she sat on a little stool by the side of the invalid. The white curtains were softly swaying in the gentle breezes which wafted in the sweet perfume of flowers and made low music in the tops of the tall pines without. At last the weary one closed her eyes, murmuring, "How beautiful! How beautiful! I can rest here."

MAIDIE'S child-heart pondered long her words. Beautiful to her who had seen so much? But MAIDIE had begun her life-lessons, and as she grew strove to make herself and her home beautiful that she might give the weary rest. Oh, blessed privilege! More weary ones have rested, more hearts gained strength, in MAIDIE'S parlor than she knows.

A few books are scattered here and there—pure and beautiful thoughts of pure authors; and one can but think how sweetly the noblest utterances of these gifted minds harmonize with the little room and its appointments. There are many other books in the house and a musical instrument, but not here; this is the parlor, that part of the house in all country homes devoted to company; not exclusively in many homes, but too often destitute of any educational element, any help in its suggestions.

Chandeliers in MAIDIE'S parlor? Oh, no! only one little astral lamp and the pair of silver candlesticks that used to be grandmother's, to hold the waxen candles. But the friends who gathered there on winter evenings think the blaze of the hickory fire on the hearth far preferable to gas light.

I believe some city friends were snow-bound here once, and for many days communed with their own hearts with these sweet influences about them, to their own great good.

MAIDIE trails her silks over velvet carpets in other parlors sometimes; she does not wear jewels, (moss roses and lilies do not need them) only her soft laces, and carries her bright young head as gracefully within those lofty walls as in her own lowly home. She is always graceful because always forgetful of self.

You may not know MAIDIE when you meet her; but if you have studied well your own heart you certainly will. Ah, my pure MAIDIE, my true-hearted little woman, many hearts bless thee; many whose hands thine have never clasped thank GOD for thy being?

East Bloomfield, N. Y., 1867. M. L. S.

SHORT DRESSES.

THE reign of trained dresses cannot last forever, and at least one advantage will result from the impossibility of their adaptation for a a walking costume, and this is, that short dresses will be the prevailing fashion for spring. It is a most sensible and useful fashion, and in short dresses ladies can walk, or ride, or travel with great ease and comfort. They should be tastefully suited to the style of the wearer, made of nice material, and gracefully trimmed. For those who are of "frugal mind" we add the following directions:

"The lower skirt should by no means touch the ground, but should be of sufficient length to appear well when walking. It is composed of eight breadths, the back and front being without seam down the center. The front width measures thirty-nine inches in length, is twenty-four inches wide at the lower edge, and slopes on each side up to the waist where it only measures six inches. The back breadth is precisely the same width, but is forty-one inches long. The three intermediate ones are alike, being twenty-one inches wide at the lower part, and sloped on one side up to three inches. The breadths are sewed together so that the gored side is always nearest the back of the dress. The upper skirt is composed of eight smaller gores, and as in the lower skirt the front and back widths are without seam down the center. These breadths are the same in width, sloping on each side from nineteen inches to the waist, which is but six inches. The front breadth is thirty-one inches long, and the back thirty-three. The other widths are thirty-three inches long, and slope from eighteen to three inches. The edge of the upper skirt is notched or dentated in fancy notits of designs. For instance, points with the ends cut off, forming squares, turrets, slanting teeth, scallops, lozenge-shaped ends, graduated steps, the sharp points known as folies, and many other inexplicable designs, that fancy alone dictates. The tips of the points or ends are generally finished with fringe or jet trimming made on the material, with bugles and beads."—*Paris Cor.*

THE EFFECT OF MARRIAGE.

DOUBTLESS you have remarked, with satisfaction, how the little oddities of men who marry rather late in life are pruned away speedily after marriage. You have found a man who used to be shabbily dressed, with a huge shirt-collar, frayed at the edges, and a glaring yellow silk pocket-handkerchief, become a pattern of neatness. You have seen a man who took snuff copiously, and who generally had his breast covered with snuff, abandon the vile habit. A wife is the grand wielder of the moral pruning knife. If Johnson's wife had lived, there would have been no hoarding up of bits of orange peel; no touching all the posts in walking along the street; no eating and drinking with a disgusting voracity. If Oliver Goldsmith had married, he would never have worn that ridiculous coat. Whenever you find a man, whom you know little about, oddly dressed, or talking ridiculously, or exhibiting eccentricity of manner, you may be sure he is not a married man; for the little corners are rounded off, the little shoots are pruned away, in married men. The wife's advice is the tiller that keeps the ship steady. She is like the wholesome, though painful, shears, nipping off the little growths of self-conceit and folly.—*Frazer's Magazine.*

NOT QUITE BANKRUPT.

"In the time of adversity consider," says the wisest of men, and experience has shown that under such circumstances it is wise to consider our blessings that are left. How happy for one who has a bosom friend who will point him to such an improvement of misfortune:

A bankrupt merchant, returning home one night, said to his noble wife:

"My dear, I am ruined; everything we have is in the hands of the Sheriff."

After a few moments of silence the wife looked calmly in his face, and said:

"Will the Sheriff sell you?" "O, no!" "Will the Sheriff sell me?" "O, no!" "Will the Sheriff sell the children?" "O, no!" "Then do not say we lost everything. All that is most valuable remains to us—manhood, womanhood, childhood. We have lost but the results of our skill and industry. We can make another fortune if our hearts and hands are left us."

A LADY about to marry was warned that her intended although a good man was very eccentric. "Well," she said, "if he is very unlike other men, he is more likely to be a good husband."

BENEFITS, like flowers, please when they are fresh.

Choice Miscellany.

DRIFTING.

BY T. BUCHANAN READ.

My soul to-day is far away.
Sailing the Vesuvian Bay;
My winged boat, a bird afloat.
Swims round the purple peaks remote:—

Round purple peaks it sails, and seeks
Blue inlets and their crystal creeks,
Where high rocks throw, through deeps below,
A duplicated golden glow.

Far, vague and dim, the mountains swim;
While on Vesuvius' misty brim,
With outstretched hands, the gray smoke stands
O'erlooking the volcanic lands.

Here Ischia smiles o'er liquid miles;
And yonder, bluest of the isles,
Calm Capri waits, her sapphire gates
Beguiling to her bright estates.

I heed not, if my rippling skiff
Float swift or slow from cliff to cliff;—
With dreamful eyes my spirit lies
Under the walls of Paradise.

Under the walls where swells and falls
The Bay's deep breast at intervals
At peace I lie, blown softly by,
A cloud upon this liquid sky.

The day, so mild, is Heaven's own child,
With Earth and Ocean reconciled;—
The airs I feel around me steal
Are murmuring to the murmuring keel.

Over the rail my hand I trail
Within the shadow of the sail.
A joy intense, the cooling sense
Glides down my drowsy indolence.

With dreamful eyes my spirit lies
Where Summer sings and never dies,—
O'ervelled with vines, she glows and shines
Among her future oil and wines.

Her children, hid the cliffs amid,
Are gamboling with the gamboling kid;
Or down the walls, with tipsy calls,
Laugh on the rocks like waterfalls.

The fisher's child, with tresses wild,
Unto the smooth, bright sand beguiled,
With glowing lips sings as she skips,
Or gazes at the far-off ships.

Yon deep bark goes where traffic blows,
From lands of sun to lands of snows;—
This happier one, its course is run
From lands of snow to lands of sun.

O happy ship, to rise and dip,
With the blue crystal at your lip!
O happy crew, my heart with you
Sails, and sails, and sings anew!

No more, no more the worldly shore
Upbraids me with its loud uproar!
With dreamful eyes my spirit lies
Under the walls of Paradise!

REMINISCENCES.

REMINISCENCES are old—what *is* new? Ours are like the jagged ends of a broken stick—uneven and fragmentary, culled from stray gleams of the "Long Ago" of our childhood. Thought and imagination are with that childhood now; and again are we in the little red school house, where the opening years of our life were passed, mingling again with those who are not of earth, and with others who are far distant. Many a merry shout goes up from its well-known precincts even now; but the faces and forms of *our* childhood are not there—of course not; weird looking children would they be had they stood still while Time strode onward. Yet even now, while sober reason almost dethrones imagination, we are with them once again. Happy MARY, somber NELLIE, noble-hearted HENRY, studious HARRY, wide-awake NETTIE, mischief-loving DICK and loving JENNIE and ELIZA, are all with us, and their blue, black and brown eyes are looking into our grey ones; and voices of many different tones are calling our name; and, in spite of reason's warning voice, we are at last again all playing gleefully together, with an occasional quarrel for variation. Thus stormily or quietly we played on; and stormily or quietly the years have rolled onward, and it is to-day. The haunts that knew us once know us no more. The little joys and sorrows that we all together experienced are blotted and blurred by the greater ones of to-day. We wonder, idly perhaps, if this or that one of our number still sojourns on earth, and if on earth, where they are. Of some we know; others are lost sight of in the mist of years. Wide-awake NETTIE and gentle MARY are training their own children in a Western State, far from the haunts of their school days. ELIZA quietly sleeps; the struggle of life was not for her, and one bright October day we laid her to rest. The DICK of yesterday is the man of to-day; ambition is urging him onward, and he is seeking after the god gold. Success in life, never failure, for the studious HARRY. HENRY M., the most loved and also the noblest of our band, came to an untimely death one bright autumnal day, while nature was all jubilant and glad and cheery brightness around. As falls the sturdy young oak, so fell he; and the autumn leaves were his dying pillow, and the mossy earth his resting place. Peacefully he sleeps in a sequestered yard, a short distance from where we so often had congregated. One week from HENRY'S death, JENNIE died—lovely in mind as in person, but frail in constitution; consumption, that fell destroyer, fastened its iron grasp upon her, and she died. Little did we realize, when we coupled their names in the old school-room, that they so soon, and together, would wear the golden crown of immortality. "Surely, the ways of Providence are past finding out."

Some of the "boys" of yesterday sleep in Southern graves, and some in their home graveyards. Immortalized are their names, by the daring deeds of the army of blue. Others, with shattered limbs, have come back to us, and tell the tale of captivity, war and bloodshed most pitifully; while others there are who have come unmaimed and with the firm elastic bearing of true soldiers, and many "large stories" have they to tell of soldierly prowess and honorable deeds.

Yesterday is fast drifting into to-day; and yet what are we but "children of a larger growth?" Now, as then, we have our likes and our dislikes, our work and our play, our friends and our enemies, our hopes and the fulfillment of hope, sorrow and joy commingling. To-day is not so very far distant from yesterday, after all that has intervened. Our capabilities have grown with our growth and strengthened as strength has been given us. We feel more intensely than we did then, in proportion with our strength. But no sorrow or joy, however great, can blot the memory of these happy, care-free days from our recollection. QUEER.

"SO COMMON."

"It's a quite pretty flower—but then it's so common; you see it is in everybody's garden." Yes, would-be dainty lady, it *is* common, thank GOD for that! His imperishable love to all shines forth from that flower. You that set yourselves in the high places of the earth cannot drink in all beauty—the flower is common, but beautiful also, and it is open and free to all. Its perfume is sent forth in the poor man's garden as sweetly as in the more highly cultivated grounds of the wealthy. It imparts its lessons of purity and beauty, and a love for GOD'S beautiful creation in the one place as well as in the other—and so it is classed under the species of "common." Who tinted it and gave it life and beauty? Who placed it here for all to enjoy? Who gave it its brilliant color to please our eyes and perfume to refresh our senses? And what of the rising and setting of the sun, the beautiful panorama that is spread before us every clear night, the countless lives that exist in air and water, our own living and dying, our characteristics and habits? Tinted and molded are we no more than that flower, the same and no more "common" are we. GOD pronounced all "good," and all is *uncommon* and a mystery. The dandelion by the roadside is as full of uncommonness as the most costly foreign flowers, and is also just as "good." We earnestly protest against this custom of calling all beautiful things "common" that come under the limited resources of all to purchase and therefore are for all to enjoy. S. J. C.

Le Roy, Genesee Co., N. Y.

MISTAKEN DUTY.

MANY a noble and useful life is actually wrecked for the sake of some self-created or, at best, strongly exaggerated duty, into which circumstances had drifted the individual, and for which all other duties (including the one, not to man but to God, to preserve for His utmost service the mind and body which He bestowed) are completely neglected. A mother will sacrifice all her children, and herself, upon whom her whole family depends, to save some one child who happens to have more influence over her than the rest; a sister will strip herself of every penny, and perhaps come to subsist upon charity in her old age, to supply the wanton extravagance of some scapegrace brother, for whom a workhouse crust of his own earning would be a salutary lesson; or—though of this evil let us speak with tenderness, for it verges on the noblest good—a daughter will waste her health, her strength, all the lawful enjoyments of her youth, perhaps even sacrifice woman's holiest right—love and marriage—for the sake of some exacting parent or parents, who consider that the mere fact of having given life constitutes the claim to absorb into themselves everything that makes life pleasant or desirable. These are hard words, but they are true words; and though it may be a touching and beautiful sight to see one human life devoted—nay, even sacrificed—to another, woe be to that other—ay, even though it were a parent—who compels the sacrifice!—*Author of "John Halifax."*

LIFE'S PERSPECTIVE.—In this strange landscape of our mortal existence there is but one true and safe point of sight, and that is neither from self within us nor from the world without us, but *from above*. The man who feels, humbly yet proudly, that his life is owed to Him who gave it, to be fashioned according to the clearest vision he has of His pattern, possesses in himself a permanent center whence he can judge of all things with an equal eye. He is like what David says of "a tree planted by rivers of water;" he grows firmly on his own root, and every development of his character, every act of his life, is in due proportion.—*Miss Mulock.*

THE LUNCH.

A gothic window, where a damask curtain
Made the blank daylight shadowy and uncertain;
A slab of agate on four eagle talons,
Held trimly up, and neatly taught to balance;
A porcelain dish, o'er which in many a cluster
Plump grapes hung down, dead ripe, and without lustre;
A melon cut in thin, delicious slices;
A cake that seemed mosaic work in spices;
Two china cups, with golden tulips sunny,
And rich inside with chocolate like honey;
And she and I the banquet scene completing
With dreamy words and very pleasant eating.

[*T. B. Aldrich.*

A GENTLEMAN, who takes a business view of most things, when recently asked respecting a person of quite a poetic temperament, replied, "Oh! he is one of those men who have a soaring after the infinite and diving after the unfathomable, but who never pays cash."

Sabbath Reading.

THE DYING CHRISTIAN FATHER.

My day is dippin' in the West, it's gloamin wi' me noo,
I hear the sough o' Jordan's waves, that I maun travel through;
Yet tis na Jordan's wave I fear, nor trouble at the strife,
But oh! this sunderin' o' hearts, this leavin' weans and wife.

What tho' we ken o' better things—a fairer world abune,
Whaur lost frien's are a' waitin' us, an' a' maun travel sune.
This rendin' o' the siller strings that tether heart to heart,
Oh! it tries puir human nature sair, an' makes us laith to part.

Gae rax me bye the Bible, wife, while yet I'm fit to see,
Ere death creep o'er my cauldrife back, and flap my failin' e'e.
An' let us sing a 'e partin sang, before we sunder'd be,
For ye canna hae' me lang noo, I haena, lang to dree.

There pit the pillow to my back, an' ease me up awee,
An' bring them a' to my bedside to see their father dee;
Noo raise the Bible up a thocht, its ower laigh on my knee,
An' shift the licht a hennin back, its ower strong for my e'e.

He wale'd, he sang the partin' sang, his voice was firm and clear,
And read the fourteenth o' St. John, nor did he shed a tear;
Sae is it wi' the man o' God when life's day's darg is syne,
Nae future fears disturb his mind, nae rueful' looks behin'.

Oh but it gies me great relief, the singin' o' that sang,
My clay is crumblin' fast awa', my spirit noo grows strang;
My wife, my weans, we a' maun part sae dinna sab sae sair;
But dicht the tears frae aff your face, and let us join in prayer.

And let us join in prayer to Him that's wantin' me awa',
That He may be a faithfu' frien' and Father to ye a'—
He turned his glazin' e'e to Heaven, and raised his wither'd hand,
Noo safely thorough Jordan's wave he's reach'd the better land.

LOVE.

BY REB. RAYMOND.

Is it worth that wins, in this dark, cold world of ours? Worth of morals, intellect, or gold, the people's god? Oh! weary, aching heart of ours, thou knowest these can never fill the void so deep and wide, can never still the yearning cry for love, for sympathy, that binds us here to life and duty. For friendship dost thou plead? A cold, unfeeling word. A dreary life to live, if that were all.

Duty, friendship, and moral worth may claim respect, yet who would choose to tread life's pathway with these alone? With wealth 'twere barely possible. With love, such as our Heavenly Father teaches, pure, ennobling, holy, it were beauty, peace, and joy. Our Father gives us love divine, not cold, indifferent friendship; and He asks our love again, is satisfied with nothing else. Within each heart He builds a censer filled with love, a holy light, destined to rise beyond the petty *likes* of life, yielding sweet perfume o'er the cares and toils around us, making *life* worth living for. And should we spurn this lamp He gives us, extinguish the light forever? Ah, no, we cannot! Pride may keep it down, or the stern realities of life quench the flame that should blaze forth; but the smothered embers glint and flicker, blackening and charring the walls that surround it, till the weary, aching heart, with all its yearning tenderness, is stilled forever. Till GOD in pitying love has gathered the lone lamb to His arms—to love that knows no ending, we may not learn the wealth of love abounding in the truest heart. There is a future where the dust of earth shall be swept from the surface; then it will be heart to heart; and love, the sweetest flower, will bloom in perfection in the sunlight of a Saviour's approbation.

RELIGIOUS MISCELLANY.

RELIGION is the only metaphysics that the multitude can understand and adopt.

THE trimmer to popularity is a traitor to God. His presence destroys unity and zeal of action.

IN the spirit of the Christian there is a perpetual spring tide, and in the wintry valleys he hears the ripple of ever-flowing streams.

THE god of metaphysics is but an idea; but the God of religion, the Creator of heaven and earth, the Sovereign Judge of actions and of thoughts, is a power.

BROTHER, religion is not a jumble of principles thrown together without system, order, affinity, and completion! They form a complete zone to encircle you round about.

LET us be men with men, and always children before God; for in his eyes we are but children. Old age itself, in presence of eternity, is but the first moment of a morning.

THIS life is but the cradle of the other. What avail then sickness, time, old age, death—different degrees of a metamorphosis which doubtless has here below only its beginning?

WE should speak to men of destruction only to make them think of duration, and of death only to make them think of life; for death runs into life, and destruction precipitates itself into duration.

The Reviewer.

ECCE DEUS. Essays on the Life and Doctrine of JESUS CHRIST. With Controversial Notes on "Ecce Homo." [16mo.—pp. 363.] Boston: Roberts Bro's.

MEN are at once so tenacious and so tender of their doctrinal beliefs that whenever anything startling in the way of a religious book appears it immediately awakens a hundred discordant echoes and opens a controversy in which each side is so confident of the impregnability of its own position and the utter untenableness of its opponent's that it should seem their fate must be like that of the cats in the fable, the devil devouring the cheese. Renan is always refuted, and Colenso always crushed, a dozen times over. In the present instance, however, we have a notable exception; and it is to be hoped that the appearance of "Ecce Homo" and "Ecce Deus" is the dawn of a new era in religious discussions. The former was published about a year ago, and at once attracted attention from the clearness of its reasoning and the purity and suggestiveness of its style. The author of "Ecce Deus" declares that it is not a reply to "Ecce Homo," and pays an unequivocal compliment to the intellectual stimulus which that book has infused into discussions of fundamental truth. But he believes that "the non-recognition of the mystery of the incarnation is the cardinal error of the book." The style of "Ecce Deus," as compared with that of "Ecce Homo," is not so completely free from those meaningless metaphors which seem to run so naturally into all language on religious subjects; but its author is scarcely the less a profound thinker and a close reasoner. Sold by E. Darrow & Kempshall.

PLAYED OUT. A Novel. By ANNIE THOMAS, author of "On Guard," "Walter Goring," "Playing for High Stakes," "Denis Donnev," "Theo. Leigh," &c. [8vo. pp. 159.] New York: Harper & Brothers.

THIS is No. 288 of "HARPER'S Library of select novels." The scene of the story is laid in that Arcadia of modern romance, English high life; and the characters are mostly of that class of persons who have nothing to do in the world but walk through the plot of a fashionable tale. This book has the first and most important requisite for a novel, that is, it is deeply interesting. The characters are distinctly drawn, and the author has imagination enough to put life and reality into their talk and actions. However, we think some of them "err 'gainst honest Nature's rule," and consider the views of human life and human nature here presented rather distorted. "Played Out" contains so many of the characteristics of modern novels, good and bad, that we regret that want of space prevents an extended notice of it as a representative of its class. Yet we cannot dismiss the book without a protest against the low standard of morality found in it and many of its comrades. Miss THOMAS and some of her contemporaries seem altogether devoid of moral sense. There is no excuse for holding up to admiration and finally dismissing to happiness such a character as MAURICE BYRNE. If there is a propensity in the human mind to exalt such men into heroes, it is the writer's duty to scourge the base proclivity to death, instead of fondling it. For sale by STEELE & AVERY.

THE POSTHUMOUS PAPERS OF THE PICKWICK CLUB. By CHARLES DICKENS. With Original Illustrations by S. EYTINGE, Jr. [16mo.—pp. 464.] Boston: Ticknor & Fields.

BLESSED be the man who invented diamond editions! Not only do they bring standard literature, in an elegant form, within reach of those who are compelled to be economical in these days of high prices, but they enable the more extensive book buyer to possess the complete works of voluminous authors without burdening his shelves with so many clumsy volumes. "Diamond editions," as some of our readers may not be aware, are so called because they are printed in "diamond" type, the smallest size manufactured. Ticknor & Fields propose to issue the entire works of CHARLES DICKENS in twelve or thirteen volumes, of which this is the first. It is beautifully printed; the type, though small, is so sharply cut as to be more legible than much that is larger. They will be issued in two styles of binding, one with and the other without illustrations. These, by the way, are some of the best we have seen, and are quite distinct in character from the so-called illustrations of many otherwise elegant books. Everybody wants DICKENS' novels; and now everybody may possess them.

THE STORY OF A TROOPER. With Much of Interest Concerning the Campaign on the Peninsula, not Before written. By F. COLBURN ADAMS, Author of Chronicles of the Battle; Our World; The Outcast; Adventures of Major Roger Sherman Potter, &c., &c. [12mo.—pp. 416.] New York: Dick & Fitzgerald.

THE wide extent of country over which the late war was waged, and the great numbers of men engaged, together with the peculiar nature of the conflict, make it a fruitful source of stories of adventure. When these tales are related by actual participants who have any skill at all in the use of language, they can hardly fail of being interesting. The present volume relates in a pleasant style, the experience of a cavalryman in the scenes that followed the first call to arms and during the first year of the war—a period that had its singular and interesting features, many of which we are likely to forget in contemplation of the more important and decisive military movements of the later years. For sale by E. DARROW & Co.

VENETIAN LIFE. By W. D. HOWELLS. [16mo.—pp. 401.] New York: Hurd & Houghton.

VENICE is pre-eminently the city of romance. Every poet sings about it at one time or another; and every tourist of Europe makes it a point to stand, with BYRON, "on the Bridge of Sighs." Mr. HOWELLS was United States Consul at Venice until recently, and has given us in this book a most entertaining account of life therein at the present day, with chapters on its commerce and notable buildings. His style is remarkably lively and pure, and his criticisms sharp but evidently just. He strips off a good deal of the fabulous romance that has clustered about the popular idea of this ancient city, but portrays vividly its interesting historical, social and architectural features. For sale by DEWEY.

SYBIL'S SECOND LOVE. By JULIA KAVANAGH, author of "Beatrice," "Nathalie," "Adele," "Queen Mab," etc., etc. Three volumes in one. [12mo.—pp. 432.] New York: D. Appleton & Co.

BESIDES the genuine novelists, there is a class of writers calling themselves such who are really mere plotsters, constructing and piling up incidents without portraying character, or, indeed, seeming to comprehend anything but its superficial phases. Their books may be got through by those who merely wish to kill time, but are insufferable to the critical reader. The one under consideration is of this sort. For sale by ADAMS & ELLIS.

"To do justly, love mercy, and walk humbly before God," are three things that business precedent, and business excitement cannot set aside.

SCENES IN SWITZERLAND—CATTLE GOING TO PASTURE.

Various Topics.

A RAIL-CAR AT DAYBREAK.

WHOEVER has traveled by rail at night will appreciate the following admirable sketch. We find it without any name attached; but it is safe to credit it to B. F. TAYLOR, of the Chicago Journal:

Long before we hear the roar of wheels we see the glimmer of a glowing light. Brighter and broader it opens, like the Cyclopean unwinking eye it is, the head light of the train. Then the steady jar, then the mingled clank as of a thousand shaken chains, and the cars are here. "All aboard," and "all right," follow each other in quick succession, and we are breathing the close and heavy air of a crowded dormitory. The car lamps have gone out disgusted, the little wakefulness of the sleepers has subsided, and frightened looking heads, flecked here and there, like a troubled sea, with white, compose the landscape; while over all, like pendulums, swing plethoric carpet bags slowly to and fro, and little satchels, brisk as mantle clocks, and bonnets made of nothing, dance up and down like blossoms in a rain; all timed to the motion of the train. But the dim gray turns to an old-eyed white, and the breathing bundles begin to stir; out of an egg-shaped package is hatched a woman, with locks dishevelled, like Venus from the sea. A three or two, and a rougher form emerges from cloak and shawl and shakes itself awake. A shapeless heap turns out a man, bearded like a pard. A pair of boots thrust out like bowsprits, go out of sight as the owner comes in view. One is soothing an irritated hat with gentle touches of his elbow; another pulling at his wilted collar. Disordered tresses are smoothed with hasty touches of the hand, and crumpled sleeves persuaded into shape. One lady has learned her lesson from Grimalkin, and makes her toilet precisely like a cat.

The cold, clear light of early morning is always trying to human beauty; there are no tints to be borrowed, no softening shades to be worn; a plain, cold stare that looks one out of countenance. But in a railroad train the order is appalling. If a face ever looks faded it is then; if the hair has any gray in it, it is sure "to show," wrinkles are read, like a sign-board, afar off. If there be discontent in the heart, it comes into the mouth, and everybody looks like people after a masquerade, or Richard after he became "himself again."

EIDER DOWN.

A CONSULAR Report of this year on Iceland gives an account of the way in which down is exacted from the eider duck. Early in June the bird, always repairing to the same spot, comes to some small holme or inlet in a bay or fjord and lays its eggs, after lining its nest with the down plucked from its own body. As soon as the eggs are laid, the owner of the hatching-ground robs the nest of the down and a part of the eggs, both of which the poor bird replaces a second and a third time, when she is left in peace to complete the process of incubation, but with her body completely denuded of down. This method is adopted because the down of the dead bird loses its elasticity, and is of comparatively little value. The hen bird gives eight or nine ounces of down to a nest, but when cleansed the weight is diminished by half. The value of the cleansed down is about 19*s.* per lb. The annual produce in Iceland is valued at about 5,000*l.* In some instances one small holme will give its owner an annual income of 150*l.* Such is the care taken of these birds, that during the hatching season no guns are allowed to be fired in their vicinity; foreign vessels arriving are forbidden to fire salutes.

HOW TO GO TO EUROPE.

THE New York Evening Post gives the following hints to those who purpose visiting Europe the coming season:

"Americans intending to visit Europe this spring will find abundant accommodations at reasonable prices for the voyage out and back. Several steamship companies announce a system of excursion tickets at rates ranging from $140 to $300 in gold for a stay in Europe.

"Thirteen lines of European steamers are now running regularly from this port. Of these, six issue excursion tickets. The fare on the steamers of the London and New York line is $200 in currency to London or Brest and back; tickets available for six months; by the steamer Havana, $250 to $300 in currency, out and back—passengers being allowed six weeks' time in Europe; by the Great Eastern, $100 to $140 in gold, with a reduction of $20 to passengers returning before August; by the Bremen line, out and back, $210 in gold; by the Antwerp line, out and back, $170 in gold; by the Inman line, out and back, $200 in gold—tickets available for twelve months.

"The regular fares by the lines which do not issue excursion tickets, are as follows:—Cunard, $150 in gold; New York and Havre (American line,) $120 in gold; New York and Havre (French line,) $160 in gold; Liverpool and Great Western, $90 in gold; North German Lloyd, $125 in gold; National Steam Navigation Company, $90 in gold."

THE HERDSMEN OF THE ALPS.

THE herdsman of the Alps leads a life peculiar to his race and land. The pastures whereon his cattle graze have no resemblance to the broad prairies of our own land, or to the almost boundless pampas and sheep-walks of South America and Australia. He has no use for horses or weapons of defence; formidable beasts of prey have long since disappeared before the prowess of the hardy Alpine hunter, and the narrow valleys, precipitous mountain paths, and elevated plateaus hemmed by almost unfathomable gorges, afford too precarious a footing for the horse.

During the summer the mountains yield plentiful pasturage, but spring does not come at the same time on all the pasture lands. The grass on the lower valleys and slopes starts first; then the herdsman leads out his cattle from the *chalet* where they have wintered, and commences his season of migratory life. The cattle, as the accompanying illustration shows, are led across streams by rude bridges, they snuff with keen enjoyment the mountain air from the summits of rocks, and repose at ease when their appetites are satisfied on the luxuriant grass. As the summer advances the higher pastures are approached, and in July and August the herd feeds on slopes that are but just below the eternal snows. Autumn comes and the herdsman turns homeward, and when the winter storms are reveling above, the cattle are grazing again in the lower valleys.

The herdsman loves his mountain life as the sailor loves the sea. Setting forth in the spring, he carries on his broad shoulders his household furniture, holding in one hand the milk pail, and grasping in the other the iron pointed *alpenstock*. A large basket on his back contains his milk strainer, some straw, a milking stool, a cheese mould, the stand on which the cheeses are placed to drain, and the kettle in which the curd is made. Seldom, until winter, can he revisit the *chalet* where his family lives, and as he ascends the rugged mountain path he casts an affectionate, lingering glance below. His life, in reality, is not an idle one, nor to him is it romantic; he has to collect eighty or ninety cows daily to be milked, and it requires hardiness and vigor to traverse the valleys and rugged mountain sides and gather in the herd. Besides this he has to make the cheese and keep the utensils scrupulously clean. Of cheese factories and the modern appliances of dairying he never dreamed. Hardy, robust and indefatigable, inured to exposure from early childhood, his weather-beaten frame is indifferent to the vicissitudes of climate. He is wild and uncultivated, ignorant of and undesirous of learning the usages of other people, but simple, honest and uncontaminated by the vices too common among the laboring population of most other districts.

THE SWISS HERDSMAN.

THE BANKS OF ENGLAND.

THE following anecdote will show with what nice precision the accounts are required to be kept in the great private banking houses of the English metropolis. After closing the doors to customers, every clerk makes up his accounts, and a general balance is struck, which must tally to the veriest farthing before the clerks separate. It happened on the occasion in question, that in one of these great establishments, there were two shillings and tenpence minus in the balance. Every clerk was ordered to revise his account, the silver and copper money in the vast vault was recounted, but there was no solution of the cause of the deficit. This was repeated over and over again, still there wanted two shillings and tenpence; the resident partner would not suffer the clerks to depart without a correct balance. Gladly would each clerk have paid the difference ten times out of his own pocket. The affairs remained unexplained until the next morning, when, on the arrival of one of the non-resident partners, he recollected taking that exact sum out of the till for the payment of the postage on a foreign letter, but without making the usual memorandum of the same.

FALSENESS of mind comes from falseness of heart; it proceeds from one's having secretly for aim one's own opinion, and not the true opinion. The false mind is false in everything, as a squinting eye looks always obliquely.

A LORD OF THE SOIL.—The Duke of Rutland's estate embraces one-sixteenth of the county of Leicestershire, England.

Reading for the Young.

Written for Moore's Rural New-Yorker.

ORDER.

ORDER! Ah me, what a regiment of performances follows that little warder of five letters—Order. So thinks the indolent young lady as she sits wearily down on the first seat that she comes in contact with; for it matters not to her where she sits, as all are alike to her in her present state of feeling. Now that she is left to her own thoughts, she indulges in them so freely as to speak aloud. "Order, what—what a horrid word it is. It is well enough in its place, I confess, for housekeepers and servants who are employed for that purpose. But for me to think of such a thing is perfectly absurd. Here I have just returned from school, and I ought to practice on the piano and draw and, in fact, do all that pertains to a lady's work; for I excelled in them when I was at school, and I do not wish to relinquish them now that I have returned. I cannot, for my part, see why mother should persist in saying that no young lady can be thoroughly educated unless she understands all the different parts of housekeeping. She says that it is woman's sphere; but I do not feel disposed to think so; for if ever I marry (it will be no fault of mine if I don't) I intend keeping enough help to do that part of the work for me. Just imagine myself washing dishes in the kitchen, sweeping and scrubbing floors, dusting and cooking! Pretty looking object to entertain callers, if perchance they should call at that time. No, no! not so for me. If I say anything to mother respecting my thoughts on this subject, she very quickly replies that my portion of this world's goods may be very small. However, time will prove. Ah me, I wish I knew! But there is mother calling, and I must obey."

HAZEL.

A GRATEFUL TIGER.

A CAGED tiger had a live dog thrown to it, one day, for its dinner. Not being very hungry, the usually fierce creature did not touch the trembling little victim. This quietness gave the dog courage, and he began to lick the tiger's eyes, which were sore. This act seemed pleasant to the wild beast, and the dog continued it, from time to time, till the eyes of this savage animal got well. The tiger from that time took his tiny, four-legged doctor under his patronage, looked upon him kindly, and allowed him to eat when he chose of the food thrown into his den. Henceforth they lived like bosom friends.

Thus, you see, even a fierce tiger can be grateful for a little favor. How much more, then, should children learn to be grateful to their friends for the great favors they have received? When I see boys and girls unkind and insulting to their parents, who have done and suffered so much for them, I tell them the story of the tiger and the dog, and say, "Children, don't be less grateful to your parents than the tiger was to the little dog."

USEFUL SPORT.

ROBERT STEPHENSON was very fond of reducing his scientific reading to practice; and after studying Franklin's description of the lightning experiment, he proceeded to expend his store of Saturday pennies in purchasing about half a mile of copper wire at a brasier's shop in Newcastle. Having prepared his kite, he sent it up in the field opposite his father's door, and bringing the wire insulated by means of a few feet of silk cord, over the backs of some of Farmer Wigham's cows, he soon had them skipping about the field in all directions with their tails up. One day he had his kite flying at the cottage door as his father's galloway was hanging by the bridle to the paling, waiting for the master to mount. Bringing the end of the wire just over the pony's crupper, so smart an electric shock was given it, that the brute was almost knocked down. At this juncture the father issued from the door, riding whip in hand, and was witness to the scientific trick just played off upon his galloway.

"Ah! you mischievous scoundrel!" cried he to the boy, who run off.

He inwardly chuckled with pride, nevertheless, at Roberts's successful experiment.

TAKE CARE OF THE MINUTES.

As in money, so in time, we are to look to the smallest portions. Take care of the minutes, and the hours and years will take care of themselves. Gold is not found, for the most part, in great masses, but in little grains. It is sifted out of the sand in minute particles, which, melted together, produce the rich ingots which excite the world's cupidity. So the small moments of time, its odds and ends, put together, may prove a beautiful work. Hale wrote his contemplations while on his law circuit. Mr. Mason Good translated "Lucretius" in his carriage, while as a physician he rode from door to door. One of the Chancellors of France penned a bulky volume in the successive intervals of daily waiting for dinner. Kirke White studied Greek as he was going to and from a lawyer's office. Barney learned French and Italian while riding on horseback; and Benjamin Franklin laid the foundation of his wonderful stock of knowledge in his dinner hours and evenings, while working as a printer's boy.

ALEXANDER SMITH says, "there is even handed justice in time; for what he takes away, he gives something in return. He robs us of elasticity of limb and spirit, and in its place he brings tranquillity and repose,—the mild autumnal weather of the soul. If he takes away hope, he gives us memory?"

SPRING CAMPAIGN
OF THE
RURAL BRIGADE!

A NEW QUARTER OF THE RURAL

Began April 6,—a good time for new clubs or additions to old ones to commence, though we can still furnish back numbers from Jan., or subscriptions may date from Feb. or March 1st. March is a good month in which to fill up Premium Clubs already begun, and also to form new ones. There are hundreds of localities in which clubs *may* yet be organized and Rewards of Merit secured. Our former Premiums are continued, and several new ones added,—(see part in RURAL of 9th, and full list in Supplement.)

☞ All whose subscriptions expired last week (March 30,) will find the number, **897,** after name on address label, and will of course understand that, unless promptly renewed, their papers will be discontinued under our advance payment rule. We trust all will renew, and that each will, if convenient, induce at least one new recruit to join the Rural Brigade.

ANOTHER SPLENDID PREMIUM!—By request we have added LAMB'S FAMILY KNITTING MACHINE to our list of Premiums. For 65 Yearly Subscribers (at least 50 of them being *new*) at club rate, $2.50 per copy, we will give a Lamb Knitting Machine, the Cash Price of which is $65.00.

MORE YET.—We have also added DOTY'S WASHING MACHINE, price $14, and will give it to every person remitting for 20 subscribers (20 of them *new*,) at club rate;—and the CHAMPION CLOTHES WRINGER, price $9, which we will give for a club of 15 subscribers (10 of them *new*,) at club rate.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., APRIL 13, 1867.

NEWS OF THE WEEK.

From Washington.

THE proposed Russian treaty will unquestionably be postponed till December, and the chances are very strong that it will then be defeated. No good reasons have yet been stated for its approval.

The joint resolution for the relief of the destitute in the Southern and Southwestern States, does not contain a specific appropriation of one million dollars, as originally proposed, but was passed in the following form:—That the Secretary of War he and hereby is empowered and directed to issue supplies of food, sufficient to prevent starvation and extreme want, to any and all classes of destitute or helpless persons, where failure of the crops and other causes have occasioned wide-spread destitution; that the issues be made through the Freedmen's Bureau, under such regulations as the Secretary of War shall prescribe; and to that end the Secretary of War is hereby authorized and directed, through the Commissioner of the Freedmen's Bureau, to apply so much as he may deem necessary for the purpose aforesaid, of unexpended moneys heretofore appropriated to supply freedmen and refugees with provisions or rations; provided that the expenditure shall not extend beyond the present appropriation already made for the Freedmen's Bureau.

The Department of State has received a dispatch from the U. S. Legation at the Hague, dated March 16th, which says:—"Since my last letter the rinderpest has spread in Belgium and France. The report of its progress in Holland from the 5th of January to the 17th of February shows a decline from week to week. The number of cases in that period was nearly 18,000; deaths, 7,175; slaughtered, 4,441; being a total loss of 11,616."

The commissioner of the General Land Office received returns showing the aggregate disposal of 18,824 acres of public lands during the month of March last, at the following local offices, viz: Tallahasse, Fla., 8,866 acres, under the homestead act of June 21st, 1866, which confines the entry to 80 acres each; East Saginaw, Mich., 6,192 acres; Ironton, Mo., 1,785 acres; Ionia, Mich., 1,681 acres. At the three last named offices nearly all the land disposed of was taken for actual settlement and cultivation. Since the opening of the office at Tallahasse, Fla., 1,385 farms have been added to the productive force of the State.

The Senate has confirmed Henry G. Thomas to be Major-General by brevet; and Major-Generals (Volunteer) Swayne, Thos. L. Crittenden, D. E. Sickles, J. J. Reynolds, B. H. Grierson and Nelson A. Miles to be Brigadier-Generals by brevet in the Regular Army.

The Senate has confirmed the nominations of E. M. Norton to be Marshal of the District of West Virginia; and P. H. Winter, Marshal of the Southern District of Mississippi. Major-General Edward McCord to be First Lieutenant in the 4th regiment U. S. cavalry.

In the case of Nicholas Carr, convicted of manslaughter and sentenced to be branded, an order has been received from Gen. Sickles prohibiting the branding on the ground that it comes within the law of Congress against maiming. The judgment of the Court was amended and the prisoner was fined two thousand dollars and imprisonment for the space of twelve months.

The Russian Treaty, it is thought, will be ratified in a few days.

From the South.

THE breaking of the levees on the Mississippi, in Louisiana, is producing great devastation in the river counties of that State and great suffering among the poor whites and freedmen. One break alone has overflowed seven parishes, and others almost as damaging in their effects have occurred. Thousands of acres of fertile land are thus rendered useless for this season, and the laborers who were to have cultivated it are deprived of the means of earning their subsistence.

The Superior Court of Maryland has refused to issue an injunction to restrain the holding of an election of delegates to the Constitutional Convention, illegally called by the Legislature of that State.

The Memphis Bulletin has the following: "We could scour the pine woods of Mississippi and Alabama to-morrow, and drive before us hundreds and thousands of active, stalwart young white laborers, who are wasting their time in utter and entire idleness, because they are too proud or too lazy to work. Many of the families to which these young vagabonds belong are in a starving condition, some of them being the actual recipients of charity from the Freedmen's Bureau."

Judge Sharkey of Mississippi is making arrangements to bring the Re-construction act before the U. S. Supreme Court for the purpose of testing its validity.

The explosion in the Virginia colliery caused the death of one hundred persons. The cause of the explosion is still a mystery.

Edwin B. McGuire, Internal Revenue Collector in the 1st district of Arkansas, has been detected in an endeavor to secrete Government funds for his own personal use. Over $200,000 of the amount has been recovered. He fled to Texas and was arrested there.

From Albany.

THE bill for the enlargement of the Champlain Canal was lost in the Senate; also, that for the enlargement of thirteen locks in the Erie Canal west of Syracuse.

The bills to facilitate the construction of the New York, Oswego & Midland Railroad and the Southern Central Railroad, have passed the Assembly.

The bill appropriating $30,000 for the Armory at Rochester has passed both Houses.

A shooting affray occurred in Albany on the evening of the 5th inst. Two young men named Buttrie and McLaughlin, while walking together, were accosted by a third named Ellis, who had had some misunderstanding with Buttrie. Approaching he said to Buttrie, "I'm going to shoot you!"—whereupon Buttrie ran off and fell just as Ellis fired. The shot missed its aim when Ellis, turning, fired his second shot at McLaughlin who had not moved. The ball struck, penetrated one of his lungs, and, it is reported, he cannot recover. Ellis has been arrested.

From the Far West.

IDAHO advices of March 26th say that Indian outrages in the Snake and Borse River Valley are numerous. Hardly any stock has been left by the savages to work the farms. The Indians had attacked the Owhegee stage and killed the driver and two passengers. The other passengers escaped.

A dispatch from Virginia city announces the adjournment of the special session of the Legislature, which had been called together to provide for a revenue bill. This object was accomplished though not to the satisfaction of many of the people of Nevada.

ST. LOUIS, April 5.—The reported massacre at Fort Buford is not credited here. Letters have been received from Fort Sully by a gentleman of this city of a later date than the one upon which the story is based, which report all well and make no allusion to any disaster. Gen. Sherman has received no advices of a massacre, and disbelieves the report.

The winter has been, as generally reported, one of unprecedented severity. Thousands of cattle, horses and mules, and some few families, have perished with cold and hunger. The stations on the overland mail line have been kept supplied with provisions at great cost and labor, the snow in many places rendering the roads impassable for miles.

In the vicinity of Salt Lake City the thermometer ranged from 33° to 40° below zero for several days during March.

From Europe.

THE news from Europe is of a highly interesting character. There is an appearance of threatened imminent war between Russia and Turkey, and an indication that the much mooted "Eastern Question" may be very speedily brought to a final issue. The Czar is collecting troops along the Southern frontier of Russia, and the Sultan is concentrating his military strength at Constantinople. The Viceroy of Egypt, nominally subject to the Turkish Government, cautiously holds aloof, and evinces no hearty sympathy with the cause or the fortunes of the Sublime Porte. Should the war actually commence, it could hardly fall short of involving a good share of Europe, with the added element of all Turkey's available strength in Asia and Africa. The result of it will decide the tenure of Moslem rule in Europe.

News from Paris is to the effect that the Prince Imperial is not likely to live long, as his present illness has greatly prostrated him.

Herald's Vienna correspondent says:—The most marked official attentions are being paid to the Italian Minister, while the coolness shown toward the Russian Representative was just as decided.

It is thought that the Austrian Empire will go to a speedy and complete dissolution should it not be immediately knit together by a sharp war with either Russia or Prussia, a contest with Russia on the Eastern Question being the most likely.

It seems to be now settled beyond all reasonable doubt that there will be no Reform bill carried during the present session, and that another appeal will be made to the present constituency of Parliament before the representatives finally decide how many of the unrepresented millions may be safely admitted within the pale of the constitution. Lord Derby has declared that if his bill is rejected by the House of Commons he will appeal to the country, and, judging from its reception by the House on the evening of Monday, the 18th of March, the measure is already hopelessly condemned.

In the House of Lords the Duke of Buckingham, Colonial Secretary, said that the prospective transfer of the Russian North American possessions to the United States was a matter of indifference to England.

From California.

A DISPATCH from San Francisco of April 6, says:—The California Steam Navigation Company and the California, Oregon and Mexican Steamship Company, the latter known as Ben Holladay's line, have been combined and obtained the withdrawal of the Anchor line of steamers on the Oregon route. The price of freight has been raised to the old figures.

Leading bankers and capitalists of this city have purchased the steamships Idaho, Montana and Oregonian, for the purpose of placing a line of steamers between this city and New York via Panama. It is understood that the vessels are ready to make the connection on the Atlantic side.

An enthusiastic meeting was held Thursday night in this city in aid of the destitute people of the South. Governor Low presided. Over $11,000 were subscribed, and arrangements were made to take up collections throughout the Pacific States. The Express, Navigation, Railroad, Stage and Telegraph Companies, have all offered their gratuitous services.

Russian America.

THE telegraph brings an array of evidence in support of the pending treaty between the United States and Russia, by which the latter cedes all her possessions on the American continent to the former. In a dispatch to the Secretary of War from San Francisco, dated April 4, Major-General H. W. Halleck says, "I learn from a gentleman who has recently visited many parts of Russian America that its value has been greatly under-estimated. The rejection of the treaty would cause great dissatisfaction, especially in California.

From Canada.

TORONTO, C. W., April 5.—The whole of the volunteer forces which were recently ordered to hold themselves in readiness have been placed under martial law and the authority of the Queen's regulations. The different corps in the district have been placed under command of Major-General Stisted.

From Mexico.

THE latest Mexican news discredits the rumored defeat of Escobado by the Liberals. The city of Vera Cruz is closely besieged by a strong force, preluding the speedy capture of the city and the Imperial forces in it. It is said that Santa Anna is organizing a fillibustering expedition against the Liberals.

Foreign News—By Telegraph.

THE news from the continent is to the 6th inst. Napoleon is said to hesitate about releasing Holland from her engagement with respect to the cession of Luxemburg.

A new Italian Cabinet is to be formed immediately.

A dispatch from London states a general distrust, political and financial, prevails all over Europe.

The Liberal members of the English Parliament have had a meeting and resolved to defeat the Government Reform bill. If successful it is said that the Derby Cabinet will tender their resignations.

United States bonds show an upward tendency in the London market. The same is true with respect to Paris. Cotton was heavy with a downward tendency. Middling Uplands, 12½; Orleans, 13. No change in breadstuffs. Provision market dull.

A war between France and Prussia, it is reported, is not improbable.

RIOT IN LUZERNE CO., PA.—A large body of miners are on a strike in Luzerne county, and refuse to allow any work to be done till wages are raised. The Sheriff has applied to the Governor for military aid.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, April 9, 1867.

THERE was an active call for money in this locality early last week, but the banks were able generally to respond to the calls of their customers. In New York the pressure was quite severe, and continued nearly through the week. It was expected that immediately after the quarterly statements were made money would be plenty, and rates of interest on temporary loans considerably lower. But, to the surprise of almost everybody, money was very close for some days, and the stringency was almost equal to that which prevailed under the January panic. One cause of the tightness of the New York market was the fact that country and western bankers drew down their balances to a pretty low figure in order to make a good showing for the quarterly returns, and currency did not find its way east again as soon as was anticipated.

Stocks were depressed last week, particularly railroad securities.

Gold is something lower. The large amount of gold in the Treasury, and the sum to be paid out in May, have an effect upon the market. Sales were made yesterday at 135.

The statement of the public debt for the 1st of April has been published. The changes from the March statement are as follows:

The reduction of the temporary interest-bearing paper due in 1867 and 1868 was unusually heavy—in all, $52,748,100, to wit: $34,526,400 funded into gold-bearing stocks, and $18,223,700 paid in full out of the balances in the Treasury at the beginning of the month. The other changes in the statement result in a further reduction of the grand total of the public debt of $7,335,820. The total is now down to $2,523,428,070, and by the close of the fiscal year will probably be down to $2,500,000,000 of which nearly one-fifth will be free of interest, and the remainder interest-bearing.

The reduction in the greenback circulation is only $818,377. The gold in the Treasury has been increased $4,471,027, and is now larger than ever before. Deducting the amount of the gold notes out, there are over ninety-three millions of gold in the Treasury, at the disposal of the Secretary, to be sold or kept in the vaults as he shall decide.

WHEAT AND FLOUR.—The market is firm at the West. The receipts at the lake ports for the next two weeks will be watched with a good deal of interest.

The following will show the comparative receipts of flour and grain at the ports of Milwaukee, Toledo, Chicago, Detroit and Cleveland, from Jan. 1 to March 30, 1866 and 1867:

	1867.	1866.
Flour, bbls	747,492	570,602
Wheat, centals	1,274,151	1,507,939
Corn, centals	1,554,960	961,095
Oats, centals	350,688	412,072
Barley, centals	168,213	80,748
Rye, centals	119,124	66,528
Total grain, centals	3,467,996	3,033,382

WOOL.—There is no material change in prices, but fine fleeces are held very firmly, under the anticipation that the demand will soon be very large. The sales in Boston last week were about 600,000 lbs., at a range of 50@72½c. for fleece. The Boston Bulletin says:

In pulled wools the transactions have been considerable, and at slightly improved rates. The better grades are sold close up and command very full prices. We quote No. 1 at 35@40c., supers at 45@57c., extras at 55@63c., and double extras at 65@67c., the outside rate for choice brands. Included are 30,000 lbs. of super at 47½@52c.; small lots do. at 50@57c.; 20,000 lbs. Western extra at 57c.; and small lots country and Boston do. at 60@65c.

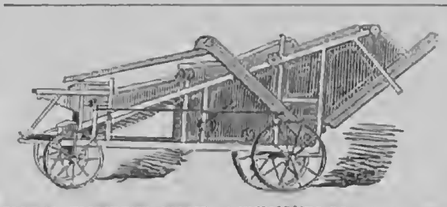
TO CAPITALISTS, MILLERS, &c.—The undersigned beg leave to introduce to your notice their PATENT COMBINATION WATER POWER. This Combination of water power is very simple and durable, and far superior to any other water power whatever. Our Combination insures a free movement both to wheel and water and, as the water is used three times, a considerable increase of power. For full particulars and engraving, send to our office, 137 Delancy-st., New York City, where we also are ready to take orders for putting up the Combination ourselves. We are also willing to sell the right of our patent by States and Counties, or the whole patent right. Address HENS & ZIMMER, Sole Agents, 137 Delancy-st., New York City. Or LOUIS KRATZER, Inventor, No. 10 Monument-st., Baltimore, Md. P. S.—Call or send for a Circular. 899-2t



WE INVITE THE ATTENTION OF ALL interested, to our improved Thrashing Machines, *both Steam and Horse Power*. Long experience in the business enables us to offer the very best of machinery. We build all sizes of Thrashers, Portable Engines, Horse Powers, &c. Send for our Circulars. Write to JONES W. YEO, Robinson Machine Works, Richmond, Ind.

AGENTS WANTED FOR THE BEST SELLING AND MOST USEFUL BOOK OF THE DAY.—Our Agents are making from $100 to $300 per month, in selling

DR. MACKENZIE'S UNIVERSAL ENCYCLOPÆDIA,

or **10,000 Recipes** in all the Useful Arts, such as Agricultural, Brewing, Wine Making, Cooking, Cements, Farriery, Medicine, Domestic Economy, &c., &c., &c. New, reliable, and useful discoveries added to each edition, making it the most complete book of the kind ever issued. No similar work has been published, equaling this in completeness, variety of matter, and reliability. No class of men once possessing it would willingly dispense with it. It is useful alike to the Farmer, the Merchant, the Mechanic, the House-Keeper, and the Professional man.

EXTRACTS FROM THE PRESS.

"One of the most important family works ever published."—*Rural American*, N. Y., Sept. 1, 1866.

"Is probably the fullest and most reliable book of its class extant."—*The Watchman*, N. Y., Aug. 4, 1866.

This last edition contains the decision of the Judge upon Farming Implements at the State Fair held at Auburn, N. Y., in July, 1866.

Circulars giving full description and terms to Agents, copies of letters from our Canvassers, showing what they are doing: recommendations and opinions of the press, *sent free* by the publishers. Price $4. T. ELLWOOD ZELL & COMPANY, (Established in 1819,) Nos. 17 and 19 South Sixth St., Philadelphia, Pa. 899-2t.

1867.

The Joseph Hall Agricultural Works,

GLEN & HALL, Proprietors,

ROCHESTER, N. Y.,

MANUFACTURE THE CELEBRATED

HALL THRASHING MACHINES,

With Iron Planet, Cary's Patent Double Pinion and Woodbury Horse-Powers, the Collins and Shattuck Clover Thrasher, Huller and Cleaner, &c., &c.

The Hall Machines of different kinds having been before the public for nearly FORTY years are too well known to require any description. For the season of 1867 we have added some improvements, and as now offered, we have no hesitation in pronouncing our Grain and Clover Thrashing Machines *unequalled* by any others in the market.

We shall, in a few days, issue our Descriptive Catalogues of Machines and Repairs, which will be sent free on all applications, made to our agents or ourselves.

We shall keep a full stock of both Machines and Repairs at our several general agencies from whence our friends may obtain them at manufactory prices, adding transportation only, or they can apply directly to us.

We have a branch Warehouse at 38 West Larned St., Detroit, Mich., represented by WM. SANBORN, and general agencies as follows:—J. D. EASTER, Chicago, Ills., RICHARD CROMWELL, Baltimore, Md., JONES & HEWLETT, Stockton, Cal., and WM. LYNE, San Francisco, Cal. 899-tf GLEN & HALL, Rochester, N. Y.

Crystal White Blackberry—A M Purdy.
Coe's Dyspepsia Cure.

The News Condenser.

— Philadelphia paved nine miles of streets in 1866.

— The locomotive now runs 450 miles west of St. Louis.

— Washington policemen have to sign temperance pledges.

— Another case of trichina is reported in Springfield, Mass.

— During March the National debt was reduced $15,000,000.

— The first edition of Victorin's new book has only forty copies.

— An "Anti-High Rent" Association has been formed in New York.

— In a Nevada hotel the wash-basin is made of half a pumpkin hollowed out.

— It has become popular for ladies to visit the Corps Legislatif in Paris.

— Cincinnati has taken the preliminary steps for forming an Art Association.

— During the present year from 1,000 to 2,000 buildings will be erected in Detroit.

— The negro suffrage bill has finally passed both houses of the Ohio Legislature.

— The Prohibitory Liquor law has been killed by the Minnesota Legislature.

— The dog tax of Mississippi produced $25,000 for the State treasury last year.

— General Grant has been made the recipient of a splendid rifle by Providence friends.

— The length of the proposed bridge at St. Louis will be 2,700 feet, and cost $5,000,000.

— There are one hundred and forty-three New York correspondents of "provincial journals."

— A submarine cable, uniting the island of Ceylon to the main land, has been successfully laid.

— A memorial is to be erected to Palmerston by the people of Tiverton whom he represented so long.

— A dangerous five dollar counterfeit on the People's National Bank of Jackson, Mich., is reported.

— The negotiations looking to the acquisition of Luxemburg to the French Empire have been stopped.

— At the North Carolina Union Convention 53 counties were represented equally by whites and negroes.

— Forty-two steamboats are advertised to leave St. Louis for Fort Benton, the head of navigation on the Missouri river.

— Secretary McCulloch has stated officially that the new Tariff bill went into operation the day of its passage, March 2d.

— In Mississippi there is but little suffering. During January no rations were issued by the Bureau, except to the hospitals.

— The ever-increasing import into this country of eggs from abroad reached in the year 1866 the enormous number of 438,878,880.

— The fact of next year being a "leap year" has added £13,000 to the estimates for the British army—one day's pay for the forces.

— The Portuguese Government has proposed the abolition of the penalty of death for a commutation into that of hard labor for life.

— It is said that the French Government intends to abolish, in the new law on the press, all punishment by imprisonment for press offenses.

— The House of Representatives has passed a bill making eight hours a day's work for all mechanics employed by the U. S. Government.

— The bill appropriating $50,000 for the Soldiers' and Sailors' Orphans' Home in the District of Columbia has passed both houses of Congress.

Special Notices.

The price for inside pages will continue at Fifty Cents a Line for advertising, and One Dollar a Line for Special Notices, until otherwise announced.

Keep a List?—If each agent will keep a list of all the names sent us, with dates and amounts of remittances, it will greatly facilitate the correction of any errors which may be made at either end of the line.

New Advertisements.

THE GREAT AMERICAN TEA COMPANY

Established, 1861.

THE IMMENSE PROFITS OF THE TEA TRADE.

THE PROPRIETORS OF THE GREAT AMERICAN TEA COMPANY became fully convinced, several years ago, that consumers of Tea and Coffee were paying too many and too large profits on these articles of every day consumption, and therefore organized THE GREAT AMERICAN TEA COMPANY, to do away, as far as possible, with these enormous drains upon the Consumers, and to supply them with these necessaries at the smallest possible price.

To give our readers an idea of the profits which have been made in the Tea Trade, we will start with the American Houses, leaving out of the account entirely profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Tea.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of abont 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same price (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₱ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ₱ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ₱ lb.
GUNPOWDER (Green,) $1,25, best $1,50 ₱ lb.

All goods sold are warranted to give satisfaction.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.

Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,

Post-Office Box, 5643 New York City.
No. 610 BROADWAY, corner Bleecker street.
No. 461 EIGHTH AVE., north corner 34th street.
No. 299 SPRING STREET.
No. 205 FULTON STREET, Brooklyn, cor. Concord St.
No. 133 GRAND STREET, Williamsburg.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by Post-office money orders, or by Express, as may suit the convenience of the club. Or, if the amount ordered exceed thirty dollars, we will, if desired, send the goods by Express, to "*collection delivery*."

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

WILLIAMSTOWN, Orange Co., Vt., Jan., 1867.
TO THE GREAT AMERICAN TEA CO.,
Nos. 31 and 33 Vesey Street, N. Y.

GENTLEMEN:—The Tea I ordered before gives good satisfaction, and I send you another order amounting to $41.60, which you will please fill and send to my address by Express. Many thanks for the complimentary package.
Respectfully yours,
ALEXANDER SMITH.

Post-Office Box, 5643 New York city.

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce throughout the United States the GENUINE COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, bind, braid and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made.
Address SECOMB & CO., Cleveland, Ohio.
CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured. 899-1t

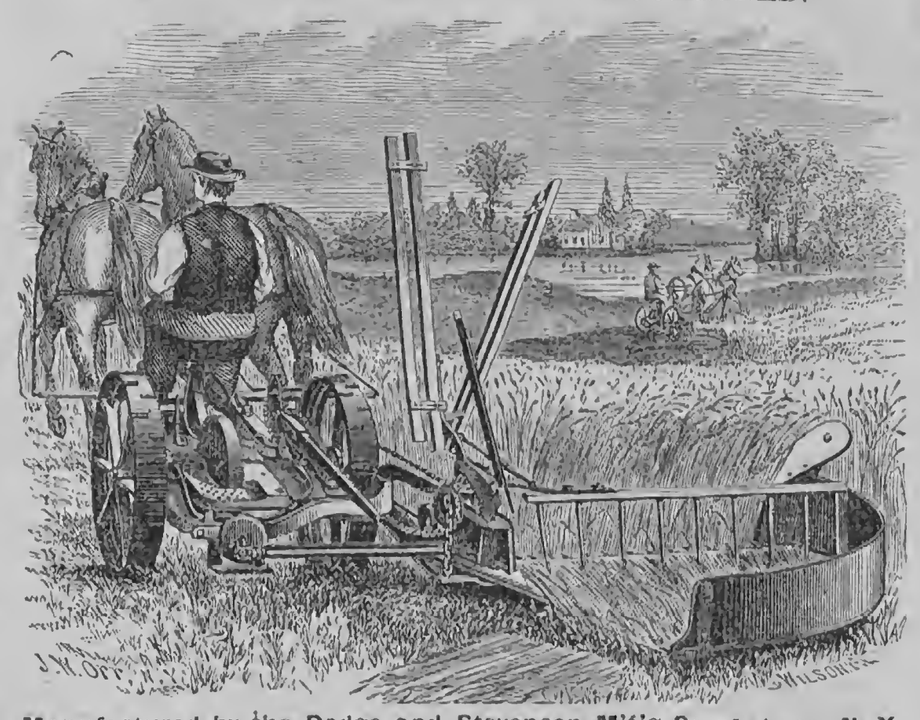
DODGE'S
PATENT REAPER AND MOWER,
AND SELF-RAKER,
OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:
L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a REVOLVING RAKE, and does its own reeling, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED
The Special Diploma and Grand Medal of Honor,
AS THE BEST
COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and First Premiums, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the
DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.

CHAMPION POTATO DIGGER.—This great improvement, patented March 12, 1867, is now offered to the public. Good responsible Agents and canvassers wanted. For State, County or Town Rights, address H. J. KINTZ, Patentee, Rochester, N. Y.

THE BOOK OF WONDERS tells how to make all kinds of Patent Medicines, Perfumery, Toilet Articles, Cosmetics, Candies, Wines, Cordials, Soaps, Dyes, and hundreds of other articles in daily demand. Easily made and sold at large profits. Sent postpaid for 25 cents, by O. A. ROORBACH, No. 129 Nassau street, N. Y. 897-tf

---

CANCERS CURED OR NO CHARGE—BY Dr. KINGSLEY of Rome, N. Y. Circulars sent free.

THE GATE AT LAST—Curtiss' Patent Improved Sliding and Self-Shutting Yard and Farm Gate. Simplest, cheapest, best. Never stands open; shuts by its own weight.

☞ Territory to sell and Agents wanted in every portion of the United States. Address
893-tf GEO. G. CURTISS, Rochester, N. Y.

CANCERS CURED WITHOUT PAIN, use of the knife, or caustic burning. Circulars sent free of charge. Address
886-tf DRS. BABCOCK & SON, 700 Broadway, N. Y.

MARYLAND AND SOUTHERN FARMS. Farms and Plantations, Coal, Timber and Oil Lands, Fruit, Dairy, Grain and Grazing Farms in Maryland, Virginia and other Southern States. Also, Country Seats near, and Dwellings and Warehouses in Baltimore, Washington and Richmond, for sale low. Accurate descriptions furnished gratis. JOHN GLENN & CO., 59 Second Street, Baltimore, Md. 886-tf

50 MAKE YOUR OWN SOAP PER CENT SAVED BY

USING B. T. BABBITT'S PURE CONCENTRATED POTASH or READY SOAP MAKER.—Warranted double the strength of common Potash, and superior to any other saponifier or ley in the market. Put up in cans of 1 pound, 2 pounds, 3 pounds, 6 pounds and 12 pounds, with full directions in English and German for making hard and soft soap. One pound will make 15 gallons of soft soap. No time is required. Consumers will find this the cheapest Potash in market. B. T. BABBITT, Nos. 64, 65, 66, 67, 68, 69, 70, 72 & 74 Washington St., New York. 836-896

THE HOWE LOCK STITCH

THE HOWE MACHINE COMPANY,
(ELIAS HOWE, Jr., President, and original inventor of the Sewing Machine,)
Proprietors and Manufacturers of the world-renowned
HOWE SEWING MACHINES,
FOR FAMILIES AND MANUFACTURERS.
They were awarded the highest premiums at the World's Fair in London, and six First Premiums at the New York State Fair of 1866.
☞ Send for Circular. Agents Wanted.
875-48t 699 Broadway, N. Y.

THE CHILDREN'S HOUR—Edited by T. S. ARTHUR, Philadelphia, Pa. $1.25 a Year. Sample copies 10 cents. "*Its exquisite beauty surpasses our anticipations.*"—LADYS' BOOK. 894-3t

---

ITALIAN QUEEN BEES—FOR SALE throughout the summer. Send for Circular. Address
891-13t M. QUINBY, St. Johnsville, N. Y.

LADIES AND GENTLEMEN EMPLOYED. Picture business. Very profitable. No risk. Seventeen specimen Pictures and Catalogue sent for 15c. postage. MANSON LANG, 207 Bowery, New York City.

---

500 AGENTS WANTED IN A NEW business. H. B. SHAW, Alfred, Maine.

H. P. WESTCOTT'S ADJUSTABLE
DASH CHURN.
First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (25 gal.,) $14; No. 3, (15 gal.,) $12; No. 4, (7½ gal.,) $10; No. 5, (3 gal.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*
"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*
Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.
"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*
"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*
"The very best Churn extant."—*Prairie Farmer.*
"It is perfectly common sense in its structure."—*Ohio Farmer.*
"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

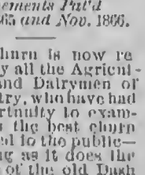
☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

CURLS! CURLS.

SAMPLES
SENT FREE.



A sample of Prof. Robb's Curlique will be sent free to any address. The Curlique will curl the straightest hair on the first application, (without injury) in soft, luxuriant, beautiful flowing curls. Address, with Stamp,
896-5t Prof. B. H. ROBB, Parkman, Ohio.

$25 A DAY!—FIFTEEN New Articles for Agents. O. T. GAREY, Biddeford, Maine.

PORTABLE STEAM ENGINES— Combining the maximum of efficiency, durability and economy with the minimum of weight and price. They are widely and favorably known, more than 600 being in use. All warranted satisfactory, or no sale. Descriptive circulars sent on application. Address
893-13t J. C. HOADLEY & CO., Lawrence, Mass.

MALTBY HOUSE,
A. B. MILLER, PROPRIETOR,
BALTIMORE, MD.

Written for Moore's Rural New-Yorker.

AT REST.

BY MERTELE CONO.

Peace for a troubled heart,
Time-tossed on darkening seas,
'Neath gloom of clouded skies,
And restless harmonies.
The tide that throbbed so long,
Up rock-ribbed lengths of shore—
To-day the waves are calm,
Their requiems are o'er.
Peace for a troubled brain,
From all the earth-strife drear,
From toiling schemes, and pain,
From ache, and doubting fear,
That wears the calm to-day,
That angel faces know.
A pure life, given back
Regrets—dead memories past,
All hushed beneath this mound,
Of daisied sod,—at last.

Rochester, March, 1867.

The Story Teller.

MY BOSOM FRIEND,

OR

YANKEE FAIRIES AT WORK.

I had been reading to my little ones the legends of the Northern lands, in which, to tell the truth, I had taken as deep an interest as the open-mouthed young folks themselves.

When the children had gone to bed, I lamented that the belief in fairies had died out.

"Alas!" said I, "that they have vanished!"

"Weel, I no ken that," replied my Scottish friend, Mellaggis; "I'm a thinkin' there are as mony giants and fairies in the world as ever there war! Gang yer gate to Waltham, as ye were talkin' o', and if ye dinna see a lot o' fairies there, and if it is na a giant that carries ye there, ye ken say I'm wrang!"

"A giant carry me?"

"Aye, mon!" said the Scot; "what auld giants that ye e'er read o' can be mated wi' an engine?"

And so, one day, I placed myself behind the great giant of the nineteenth century—a locomotive engine—and went to the pretty rural town of Waltham, Mass., in the United States—a town famous "not for a day, but for *all time*," for here a pair of great steam giants turn the wheels that again turn the wheels that mark the time for a continent. It takes a four-acre lot to hold these giants—each with a hundred iron arms and a thousand steel fingers; and this four-acre lot is built within and without and overhead with brick and iron and glass, and is called, "The American Watch Factory of Waltham;" and it was thereabout that Mellaggis said I should find the fairies.

But the fairies of our day—that is, the Waltham fairies—are not like those we read of. They don't play elfin pranks, for their every step is measured by the sun; and they have nothing to do with wings, but to mark the steady motion of those of old Father Time himself.

But to drop metaphor, and come down to the practical as well as the poetical part of this fairy hive of industry and order, let us walk through some of the long galleries of this fairy palace, and for guide and mentor we will take one of the managers.

"But first," said we to our guide, "will you please inform us how this great establishment originated?"

He informed me that the manufacture of watches by machinery is a distinctively American undertaking. For several generations a vast number of watches have been made in England, Switzerland and France; but the component pieces have been made and finished by hand in different factories, and even in different provinces, with no direct relation to each other. Here in Waltham, on the contrary, a watch is created in all its wonderful harmony and exquisite beauty from the original and crude materials—the brass, the steel, the enamel, the gold, the unwrought jewels—under one roof and one supervision, by a mechanism that never tires and never varies.

The task of competing with Europe in the manufacture of watches seemed at first sight to be hopeless. Europe had the market, the reputation, two centuries of experience, and the cheapest of human labor. To make matters worse, there was free trade in watches. A petty tariff of only seven and a half per cent. was all the "protection"—nominal or real—that existed fifteen years ago to foster native enterprise and genius. Ingenious men conceived the idea of manufacturing every part of the watch, and of performing every process of manipulation, by a succession of machines, each of which should execute one function only, and then pass its work over to another piece of mechanism. The only duty left to man in this daring conception was to superintend the work of the iron slaves whom he had created, to carry their products from one to another, and to put the watch together after all its parts had been completed. The scheme was an ideal one; there were no such machines in existence; but the plan was seconded by capital, and, in 1853, the experiment was tried. At that time, although the chief parts of a watch were made by machines, there were still a large number of pieces turned out by hand, and various important processes entrusted to manual skill, which are now done wholly by mechanism. The company of machines was quickly increased to a regiment, the regiment to a brigade, and now the brigade has become an army.

I asked how many watches were imported annually.

"Formerly about four million dollars' worth yearly," the manager said, "and it took about four millions more to make them go. At the present time, the English watch trade with the United States has nearly ceased, and the Swiss has greatly fallen off."

"How many watches," I asked, "are manufactured at Waltham now?"

"We turn out," said he, "at the rate of 250 a day, or 80,000 a year, of all varieties from good to best."

I asked as to the number of hands employed.

"We average," he replied, "700. We pay good wages, and require intelligent operatives. The situations are soon filled. You will see how we keep the factory; we intend that every room shall be as clean, comfortable, and pleasant as a parlor, and that is one reason why we always secure first-class help."

There is hardly any *work* in the factory. Iron muscles do everything of that sort. All that the operatives are needed for, after the machines are made, is to watch and guide them.

THE FAIRIES' HOME.

We now requested that he would show us something of the factory.

"With pleasure," he replied. "To begin at the beginning, here is the engine-room, where four boilers of 30 horse-power drive the two hugegenii that in turn drive a little army of iron fairies all day long to their several tasks. No cunning wee body of a screw maker or a pivot-polisher is so made that it can stop and waste its time in playing while these surly old genii in their dens are busy."

Dens! Why, is this neat room, which has its wall adorned with pictures and many pretty devices, and which, under its window that looks out on a green lawn, has several dozens of thrifty conservatory plants growing in pots—is *this* the Engine House? Sure enough, this is the place. There, sullen and silent, but beautiful, lies the grim power which drives half the factory fairies at work! Let us go up stairs. This long, clean room, filled with lathes and machinery, but neither odorous nor noisy, although the hum of mechanical and human industry never ceases in it—this is the basis of the whole factory: the machine shop. It is 165 feet long, and thirty first-class mechanics are kept at work in it, only in making and repairing the machines and tools which are, without exception, of the best and costliest character. Like all the rooms, this is light and pleasant. But in the next room—to use the words of the excellent Richard Swiveller—there was a staggerer. It was a little side room. It had a floor clean as any, walls entirely undisfigured with smoke, neat stalls and shelving for the assortment of steel and iron, and—I pinched myself to see whether I was asleep or awake—nice white curtains hanging at the windows. It was the blacksmith's shop. There were the forges, and the trip hammer, and the anvils, but there were those curtains. I felt that civilization was no longer a problem. The anvil and the Athenæum are wooing. We passed into another room.

FAIRY WORKMANSHIP.

"Look!" said my guide, "what do you suppose those are?"

He held up a little vial, such as homœopathic globules are kept in, which was filled with what seemed to be grains of coarse sand of the color of blue tempered steel.

I placed one of these grains under a microscope, and it proved to be a perfect screw.

"Now," said he, "you may note that it takes 300,000 of these screws to weigh a pound, and that they are worth from $3,000 to $3,500 a pound."

Again, they showed me a microscopic bit of steel, the points of which, under a glass, appeared to be exquisitely polished.

I took up a couple of screws and the balance staff by wetting my finger, and put them carefully into a piece of paper.

"Not that I wish to make you think that you are taking valuable property," said the manager, "but how much do you suppose that staff is worth?"

The foreman made the calculation.

"They are worth $20,000 a pound," he said, "or about 25 cents a piece. The screws are worth a dollar and a quarter a hundred. It takes fifty-two of them to weigh a grain!"

"Well," said S., "that doesn't seem much, for such workmanship. How do you make watches so cheap?"

"The use of machinery to its utmost limit, and the division of labor as far as possible, accounts for all," rejoined the manager. "Every machine in the factory does one thing only, and it can do nothing else. But it does that one thing incessantly, with incredible rapidity and with unvarying accuracy. Thus, all our watches of one style are precisely alike in all their parts. It is imperative that the watch should be entirely made in a single factory and under one superintendence. Now foreign watches—the cheaper sort—can have only a relative similarity. They are made in parts everywhere, and get together in Geneva and Paris and London. There are not a score of Parisian watches made in Paris any year. The pieces are made in the rural districts or in Switzerland, and they are sent on to Paris to be fitted together. Many of the English watches are made in the same way, ready manufactured on the continent, and put up in London. There is no great watch factory anywhere, excepting ours, where all the processes are conducted and the movements adjusted under the same roof. We produce a greater number of watches than any other establishment in the world."

"Are you quite sure?" I asked, "that this is the largest factory in the world?"

"There is no question of it," the manager replied, "and what is more, I am told we made more watches in Waltham last year than were made in all England."

FAIRY WORKSHOPS.

This is the press room. It is filled with presses, punches, dies, and rolling and slitting machines. Here long, thin ribbons of steel are passed under a die, which descends with a regular motion, and cuts out a balance wheel at every blow.

In the next room, the blanks—as the rough pieces are called—are prepared for advancement. The barrel blank is a wheel about three-fourths of an inch across, and 3-16ths of an inch thick. It is put on a lathe. Round and round it spins with great velocity, rubbing its rough edges against a series of immovable sharp tools which polish off its coarseness; make it thin and smooth; turn out a chamber for the main spring; drill a hole in the center to receive the barrel arbor, and turn a flange on the outer edge in which the teeth are cut. All this is done in a twinkling—faster than you or I could describe it in short hand. The machine sets itself.

The barrel is now taken to the dentist's—to have its teeth cut. It is placed in position. Quickly a little chisel spins on a cylinder, cut, cutting as it "swings round the circle;" and presently its sixty teeth are finished—all exactly uniform and equi-distant. This cutter is a sapphire ground down to the proper size and form by diamond dust and oil, and then fastened into a little wheel or disk. No other material could stand the wear and tear of eating all day long into this hard brass and steel.

Here, in another room, a little machine is splitting out screws, so small that you cannot see their threads.

What you do see at the first glance is a thin thread of steel, finer than the most delicate of pins, slowly pushing its way through a little hole in a machine, and being grasped by a tiny tool which runs round it, as if embracing it; and then, presto! change! out comes a knife and cuts off its head. All this is done so quickly that you have to wait and watch the operation, *after* you know what it is all about, before you can see the process I have described. The bits thus beheaded with a lug look exactly like little grains of powder. But they are screws. You notice that when you take a microscope and examine them. They are complete—*almost*. Not quite yet. The operative picks them up, one by one, with a dainty tool, and places them in rows, one in every hole in a flat piece of steel. This little plate, as soon as it is filled, is placed under another machine, and it would do any Irishman's soul good to see *it* work. It beats Donnybrook Fair "all hollow." I had never a more convincing proof of the superiority of the mechanical over the manual labor. For while a good hearty man with a stout bit of shillalah may break half a dozen heads in a day,—with fair luck,—this machine, without as much as saying "By your lave," comes out of its hole, and runs along each row, quietly splitting the head of each one of them exactly in the center. And now the screw is made.

Just this way is the Jewel-room, with rubies and sapphires neatly arraged in glass vials, and in another apartment the acclimating process is conducted. There is something like a large safe built into the wall, which is full of little drawers. Pull out the one on the right side and put in your hand, and you feel that the air is hot. On the left, the air is icy. Watches are first put in the tropical and then in the arctic zones, until they become citizens of the world. Then, to accustom them to the ups and downs of practical life, they are put away in other drawers and tested in different positions. One stands on its head for a day, when it is suddenly reversed; but no sooner does it become accustomed to that than it is laid flat on its back.

I examined the watch-case rooms. Every case is composed of more than thirty parts. In the lower rooms the bars are melted; and,—to be brief,—after a great variety of processes, up stairs and down, they are rapidly turned out, the models of beauty and elegance that we take to our homes and our bosoms. The different parts are soldered together under little tin, French-like roofs, which extend along the benches and prevent the room from being begrimed with smoke. Workmen, after tying two parts together with wires, fuse them by suddenly lighting up a tube, almost exactly like a snake, which instantly spits out a stream of fire, and plays on the detached parts until they are welded—"now and forever, one and inseparable."

I saw a hundred curious processes that I have no room to describe, and what I have written must be taken only as an outline sketch, not at all colored, of a wonderful picture of genius, applied to the development of mechanical skill. I saw the delicate steel nerve and brass muscle into which, by-and-by, the breath of life is to be breathed, until it beats true time in the passionless ruby heart of the perfect watch,—every tiny bone and visible joint is fashioned by these muscles, made visible,—polished, welded, and perfectly adjusted, as by no human hand! They were merely passed, in pretty trays, by skilled hands to infinitely more skillful mechanisms,—going as it were from nursery to school, from school to college, and from college to humanity; until after a hundred private tests, and public examinations not a few, they are finally put together, a diploma or guarantee that they will do their duty is given to each of them; and then they are sent to mark their prefect measure of the passing hours.

Who shall say that the American Watch Co. of Waltham, Mass., U. S. A., is not one of the fairy wonders of the century?—*Boston, Mass., Advertiser.*

Wit and Humor.

I'M GOIN' TO WORRY HIM.

One morning during the late war, an officer, riding through the woods of North Alabama, was attracted by a tall, lank countryman, who seemed to be using his best endeavors to reach the top of a large hickory tree. Scarcely had he gained the summit, when, rapidly descending, he started up another one a few yards further off. This strange proceeding was continued at least a dozen times, the countryman climbing and descending one tree after another for nearly a quarter of a mile. The officer, at length overtaking him, inquired the cause of his eccentric gyrations. "Wall, stranger," he answered, "I was lying' asleep under yon hickory when a darned squirrel dropped a shell bark into my eye. I'm goin' to worry him. I'm goin' to worry him till he leaves the settlement, if I die in the attempt."

Anecdote of Colfax.—When Schuyler Colfax was going up from Troy to Burlington to lecture a few weeks since, a gentleman entered the car and took a seat beside him. Disposed to be sociable, the stranger said:

"Going to the lecture?"

Mr. Colfax said he would probably be there.

"So am I. Did you ever hear Colfax?"

"Oh, yes, very often," was Mr. C.'s reply.

"Well, what kind of a man is he? Is he a good speaker? Does he know anything?"

"Well, really, I don't know as my opinion is worth much on that. My name is Colfax."

Strange man subsided.

The Jug with the Bottom Out.—In one of Dr. Tyng's travels he met with an emigrant journeying with his family to the fertile regions beyond the Mississippi. He had all his worldly goods packed on wagons, and on one wagon there hung a jug with the bottom out. He asked him why he carried that with him. "Why," said he, "that's my Taylor jug." "And what is a Taylor jug?" asked my friend. "Why," said he, "I had a son with General Taylor's army in Mexico, and the old General always told him to carry his whisky jug with a hole in the bottom; and since that I have carried my jug as you see it, and I find it is the best invention I ever met with."

A Slight Mistake.—The new style of short dresses are "mighty deceivin'." A benevolent old gentleman, a little near-sighted, came near getting into trouble over in Congress street yesterday, for remarking familiarly, "Well, sis, are your ears cold this morning?" The party addressed turned on the old fellow fiercely, with "insolent puppy," "brute," "old villain," &c., and he found that instead of accosting a school miss, he had addressed a lady in the full bloom of womanhood.—*Portland Argus.*

Wiggins was one day with a friend, when he observed a poor dog that had been killed lying in the gutter. Wiggins paused—gazing intently at the dead animal, he at last said:—"Here is another shipwreck." "Shipwreck, where?" "There's a bark lost forever." His companion growled and passed on.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,

IS PUBLISHED EVERY SATURDAY

BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins April 6th, a good time for club or single subscriptions to commence. See head of News page.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

READER,—Please act as Club Agent for the Rural, or induce your Post-Master or some other influential person to become a recruiting officer for the "Rural Brigade."

$150 PER MONTH TO AGENTS to Sell the best cheap Licensed Sewing Machine in the United States. Address, with stamp, PAGE BROS., Philadelphia, Pa., or Toledo, Ohio. 896-4t.

COLLEGE SCRIP! 58⅓ Cents per Acre. $94 FOR 160 ACRES.

Each piece of Scrip is for 160 acres, and entitles the holder to 160 acres of Land in any State where there are Government Lands subject to entry. We also buy and sell MILITARY LAND WARRANTS. For full particulars, send for the *ARMY HERALD*. Specimen Copies Free. WM. E. PRESTON, No. 1 Lyman's Block, near the Court House, Cleveland, O. 898-2t

BARKER'S CORN SHOCKER was Patented Dec. 19, 1865.—It works to entire satisfaction, saving much time. The corn is set around the Shocker and held in position by the springs, as seen above. When the shock is completed it is easily removed, the springs yielding as it passes from the shock. The legs are movable, consequently are not liable to be obstructed by fallen corn or vines. It is durable and cheap; can be sold at retail at $3; when not in use, may be shut up like a knife, and occupies but little space. Read what one neighborhood thank and say of it:

We, the undersigned farmers of Jefferson, Hillsdale Co., Mich., hereby say that we consider L. S. Barker's Patent Corn Shocker a useful invention, and cheerfully recommend it to the public.—Elisha Hubbard, J. W. Coffin, J. H. Bailey, W. L. Johnson, H. J. Cole, Joseph Cheeney, James A. Cole, R. J. King, S. F. Fuller, John W. Tiffany, Jonathan Green, Geo. W. Ramsey, Wm. Way, M. Ramsey, Zela Hadley, Willett Green, Henry E. Crane, H. H. Herring.

For Farm, Town, County or State Rights, apply to the undersigned, at Pittsford, Hillsdale Co., Michigan.

ANSON BACKUS.

SHEEP AND WOOL ARE GREAT AND paying institutions. If you wish to know all about the breeding, management and diseases of the former, and how best and cheapest to produce the latter, get and read **Randall's Practical Shepherd**, the best and latest work on American Sheep Husbandry. Large 12mo.—451 pages, illustrated. Price $2—sent post-paid. Address D. D. T. MOORE, Rochester, N. Y.

A COUGH, A COLD, OR A

SORE THROAT,

Requires immediate attention, and should be checked.

If allowed to continue,

Irritation of the Lungs, a Permanent Throat Disease, or Consumption,

is often the result.

BROWN'S BRONCHIAL TROCHES

have a direct influence to the parts, give immediate relief,

For Bronchitis, Asthma, Catarrh, Consumptive and Throat Diseases,

Troches are used with always good success.

Singers and Public Speakers

will find *Troches* useful in clearing the voice when taken before Singing or Speaking, and relieving the throat after an unusual exertion of the vocal organs. The *Troches* are recommended and prescribed by Physicians, and have had testimonials from eminent men throughout the country. Being an article of true merit, and having *proved* their efficacy by a test of many years, each year finds them in new localities in various parts of the world, and the *Troches* are universally pronounced better than other articles.

Obtain only "Brown's Bronchial Troches," and do not take any of the *Worthless Imitations* that may be offered. Sold Everywhere. 881-13teo

GOOD AND CHEAP BOOKS FOR

Ruralists and Others!

The following works on AGRICULTURE, HORTICULTURE, FLORICULTURE, &c., may be obtained at the Office of the **RURAL NEW-YORKER.** We can also furnish other Books on *RURAL AFFAIRS*, issued by American publishers, at the usual retail prices—and shall add new works as published.

Allen's American Farm Book	$1,50
Allen's Diseases of Domestic Animals	1,00
American Sharp Shooter	50
American Bird Fancier	30
American Fruit Grower's Guide (Elliott)	1,50
American Rose Culturist	30
American Horticultural Annual	50
American Agricultural Annual	50
American Weeds and Useful Plants	1,75
Annual Register of Rural Affairs (120 Engravings)	30
Architecture (Cummings & Miller,) 332 designs and 714 illustrations	10,00
Barry's Fruit Garden	1,50
Beautiful Leaved Plants (London Edition) 60 colored Illustrations	9,00
Bement's Poulterer's Companion (120) Illustrations	2,00
Bommer's Method of Making Manure	25
Browne's Field Book of Manures	1,50
Breck's Book on Flowers	1,75
Buist's Flower Garden	1,50
Carpenters' Hand-Book (new edition)	75
Chemical Field Lectures	1,50
Complete Manual on the Cultivation of Tobacco	30
Cole's American Fruit Book	75
Cole's American Veterinarian	75
Cultivation of Native Grapes and Manufacture of American Wine	1,50
Dana's Muck Manual	1,50
Dadd's Modern Horse Doctor	1,50
Dadd's American Cattle Doctor	1,50

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE.

With an Able Corps of Assistants and Contributors.

Hon. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

Hon. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

FARMER'S PREMISES—A CONTRAST.

IN passing through the country persons having a taste for, and observant of, rural affairs, will find contrasts in farm management which cannot fail to arrest attention. At one point will be encountered a farm dwelling and its surroundings so admirable in all their arrangements as to inspire a wish to make the acquaintance of the owner. The site of such a home was not chosen in a low, marshy or depressed place, because a spring chanced to bubble up there, but reference was had to aridity of soil and airiness of position, affording ample opportunity for cellar and other drainage. The dwelling, tasteful, commodious, but not ornate, is not crowded upon the highway, but is sufficiently removed from it to afford space for a neat front yard, enlivened and rendered cheerful by a judicious intermingling of shrubbery and fruit bearing trees. The grounds are properly graded, and the way or avenue leading to the dwelling so formed as to allow ready access to it at all times without wading in mud or filth. The domicil is always kept in order and never allowed to grow dingy for want of paint, or dilapidated for the lack of repairs. Internally its arrangements and aspects generally evince equal judgment, taste and care, for it almost invariably proves true that, what the man is to the farm and its surroundings, the wife is in her peculiar domain, the house.

But a home, however tasteful as to house and lawn, is incomplete without a liberal allotment of ground for gardening purposes. Much of the domestic comfort of a family is derived from the products of the garden, hence the importance of rendering it capable of producing the greatest variety of fruits and vegetables. These provided for, a taste for the merely ornamental and the beautiful may well be indulged as conducive alike to health and intellectual development.

The other farm buildings should be suitably placed and so arranged as to be easily accessible and suited to the uses for which they are intended. There is room here, as in the case of the dwelling, for the exercise of good taste in the matter of form and convenience of internal arrangement. There should be no dilapidation about them. The enclosures should always be in order, so that animals confided to their custody, may be forthcoming when wanted. Everything should betoken order. There should be a place for all kinds of farm implements, secure from the weather, and ready at all times for use.

Fences should be seasonably repaired and kept in order till all chance of damage to crops from roaming stock is cut off by the advent of winter. These are a few of the features pertaining to good farming, and which cannot be lost sight of without disorder and loss.

Not remote from this place of order and thrift—possibly adjoining it—may be seen a farm of another description. The dwelling is located amid filth and the debris of decaying matter. No airy yard and inviting avenue leads to its portals. There are no vestiges of shrubbery or fruit bearing trees near it. If paint was ever applied to it, all traces of it have disappeared, leaving it browned by age and the pelting of storms. Boards and shingles are detaching themselves here and there; window lights, long since broken, are replaced by old hats and dilapidated wearing apparel; doors are shaking and swaying about on a single hinge, or lying upon the ground. The out-buildings are in keeping with the house—all are out of repair and falling to ruin. A wagon, with a broken wheel, reposes in one place; a plow, eaten with rust, with the wood-work broken, in another; a hoe here and a shovel there—in fact, nothing is as it should be—nothing where it ought to be. Going into the dwelling, we find, ninety-nine times in the hundred, like filth and disorder prevalent there. Receding from the house to the fields, we find the latter without fences, drains choked up, stock pinched by famine, everything denoting disorder and impending ruin. This is another type or class of farmers, happily diminishing in numbers of late years, but still sufficiently numerous to challenge attention as examples to be reprehended and avoided.

SOWING OATS.

THE present season has not been propitious for early farming operations, but this month may make amends by allowing the preparation of the ground in time for a sufficiently early seeding to oats. Though early sown oats unquestionably produce a heavier return than late ones, still it is better to delay seeding for awhile than to cast the grain upon ground resembling a mortar bed. This is crowding nature and will be resented, in the shape of a stinted crop, when the time of harvest comes around. Get the ground in good tilth and then seed as soon as practicable. Formerly the early sowing of oats was objected to because it threw the oat, wheat and hay harvest so nearly into one as to render it difficult to secure either in proper season. Modern improvements, in harvesting implements, compressing the labor of a week into that of a day, have rendered this objection invalid. The mower and the reaper have rendered it easy to manage all the harvests, though the several crops mature simultaneously. With reference to oats, then, sow as early as the ground will permit without regard to the time of harvest. Late sown oats will grow and mature, but they are almost invariably less valuable than those produced from early seeding.

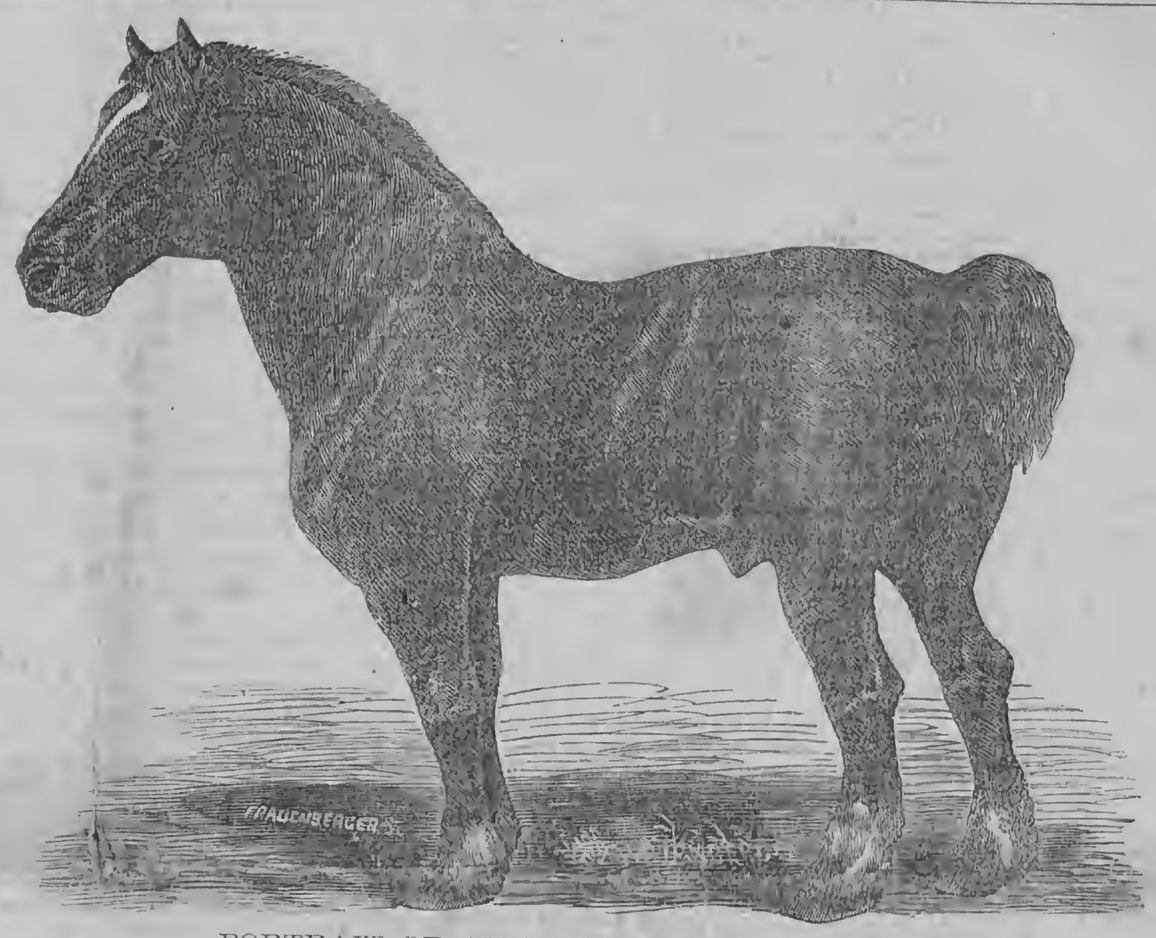
SPRING WHEAT.

THE present and prospective high prices of wheat and flour would seem to invite to a liberal sowing of spring wheat in this region. It is true that winter wheat promises well, but it has to run the gauntlet of a great many vicissitudes, and the yield may be less affluent than is now anticipated. Almost every farmer has a few acres which might be tested with a spring sowing of wheat, and, be the result favorable or the reverse, the loss cannot be great while the grain may be considerable. A clay loam, on a porous subsoil, is said to be well adapted to this grain. It should have had some previous preparation from the production of other crops unless the land has been newly cleared. Seeding should be done as early as possible. The Canadian Club and the Fife are said to be good varieties to cultivate.

LIME.—MANURIAL EFFECT ON SOIL.

MANY farmers suppose when they have a limestone soil, rich in the carbonate of lime, that lime applied to it is of no manurial use; but the fact is that a long, warm limestone clay is full of insoluble silicates, which burning or treating with quick-lime can alone make soluble and fit for the assimilation of growing plants. LIEBIG says that "all clays contain potash in an insoluble state, and that while some soils hold the mineral or inorganic elements of plant food in a constantly soluble condition, there are others in which the necessary amount of soluble silicate of potash for a single crop of wheat is not separated from the insoluble masses in the soil in less than two, three or more years;" hence the benefit of quick-lime to such a soil.

The burning or heating to redness of the most impracticable clays not only destroys their adhesiveness, making them ever after as pulverulent as the fine sand of the river bottom, but it also makes it the best mineral plant food,—a capital top-dressing for a light, exhausted soil. The theory that quick-lime destroys the organic matter in the soil has been long since exploded. It might expel a part of the ammonia from a manure heap, but the soil itself holds all soluble organic matter by a strong chemical affinity, and the lime only acts on the silicates and the inert vegetable matter in the soil. It is now a maxim among the best farmers in Eastern Pennsylvania, that the best manured soils are benefited most by the largest applications of lime, while a soil poor in the compound of nitrogen will bear but little liming. I never knew but one farmer who found that the application of lime to his limestone soil was no benefit; but his farm was one of the best Lake Shore intervales—so rich in mineral plant food in a soluble state that it brings continuous large crops of grain and grass with very light manuring.



PORTRAIT OF AN ENGLISH DRAY HORSE.

WHOEVER has seen the heavy, black dray horses drawing the brewers' wagons in the streets of London and Liverpool, will recognize the faithfulness of the above engraving. These heavy horses are bred chiefly in the midland counties from Lincolnshire to Staffordshire, and are trained and worked moderately until they are four years old, when they are sent to the large cities for sale. Many of them are over seventeen hands high and of proportionate weight. They are worth more on the hard pavements of the city than on the farmer's field; and their weight is of most use in the shafts of the dray to enable the animal to stand the unavoidable battering and shaking. This breed of horses, we believe, is the largest and heaviest known; and although too large and clumsy for the American farmer's use, a strain of their blood judiciously mingled with our lighter breeds, might produce a race of draft horses valuable alike for the farm and the road.

CULTIVATING YELLOW KNOLLS.

THE treatment of these must be different from other land. Let me give my experience, with remarks: The field was one of two acres, isolated from the rest of the farm by a gully, the soil on the opposite side being of a brown loam on a dry subsoil. It was a ridge once growing hemlocks—a good crop—which the mellowness of the soil favored. There was some rye raised among the first crops; and, I believe, some potatoes. But the yield after did not pay expenses, till a new treatment was given the land.

After having laid in commons for years, with but little profit to the vagrant cows, it was fenced off and fallowed. The first plowing was in June. The plow was run two inches deeper than it had ever penetrated. This brought up mellow ground, perfectly pulverulent. The reason why this ground was more mellow than the rest was no doubt, owing to several causes, namely, the original fertility which the roots had never penetrated (only the tree roots to improve it by decay); and the less susceptibility to abuse in cultivating, which is the case with yellow soil, stirring it when wet; and the benefit which lower soil receives when leechy, as was this to some extent, being more or less sandy.

When the land was plowed it was as mellow as it is possible to get soil. In August a coat of long manure from the barn-yard was given it. This was composed largely of straw in a half-decomposed state; the rest was the cleanings of the stables. In a few days it was plowed under, but lightly, probably not half the depth of the original plowing in June. But the ground pretty well hid the manure. The top soil now was composed largely of the mellow undersoil and manure. The ground was sowed,—and a miracle took place. The main object in applying the manure was to secure a foothold for the grass. It was sowed in rye. The grain came up in due time, and made the greenest and finest spot in the neighborhood. A mat was formed. The stock was turned on it in the dry, fall weather, and thrived. When spring came, there was the same green. Though bare all the winter, its coat of roots and manure afforded a protection. So at least it seemed. It lay favorable to the sun, and soon commenced to grow, and outstripped everything. It was tall and close, reaching above a high fence; and the berry was of the plumpest, best kind. It was the best crop of rye that was ever known in the neighborhood.

Clover was sown on in the spring, very early. In the fall there was as green a field of clover as of rye the fall previous. The spring following plaster was used plentifully. There was a crop of clover unmatched. The dry, well drained condition of the soil prevented the frost from having its usual effect, so that the clover retained its place. A crop was secured for hay, and the early harvesting induced us to try to secure another crop—one of seed. But as the seed failed, the cattle were turned in. The next summer a crop of young clover started up. This was the result of pasturing the fall previous, re-seeding the ground. Grass-seed had been sown with the clover, and this now also appeared. From this year dated the sod, which lasted for many years, reliance being put upon top-dressing. But the soil at last, partly thro' inattention, began to fail. It was re-plowed, deeply, and manured, and produced good hoed crops. It is now again in good grass. Manure applied to the surface, whether harrowed in or slightly plowed, and other fertilizers used, are the most profitable way of treating such land.

F. G.

SWEET CORN.

IT is a surprising fact that sweet corn is not abundantly grown among farmers. Every farmer thinks he must raise his five or ten acres of Indian corn every year, in order to have something to fatten his pork and to furnish fodder for his stock, &c. Now, if every farmer would grow three or five acres of sweet corn, his crop would prove of much more value in proportion to the number of acres than Indian corn for feeding purposes.

Last spring I planted six acres of sweet corn for the purpose of taking it into market green. But after the market became "glutted," I concluded to save the balance of my corn and cure it to feed. I cut and fed to my hogs corn (in the stalks) every day, and they would eat stalks and all as clean as they would green clover. Thro' the month of October and until the last of November, I fed husked corn. I can say I never killed so fat pork before. They seemed to be completely filled up with lard. I prefer the sweet corn stalks to anything else in the shape of fodder for stock, and especially for cows giving milk there is nothing equal to it. The stalk, husks, and leaves, are much more juicy and sweeter than any other corn fodder. I would recommend those that sow corn for fodder, to sow the sweet corn in preference to any other.

Be careful to trace up your seed in the fall and then you will not fail to have good seed when you come to plant or sow.

Monroe Co., N. Y. GEO. W. CURTIS.

THE CULTURE OF THE WHEAT PLANT.

MANY farmers who succeeded so early in growing a crop of wheat from the scarified virgin soil in the early days of Western New York, now think that the deterioration in that cereal is owing to the exhaustion of a mysterious pabulum in the soil. Yet, to grow a good crop of barley, requires a finer tilth and a less adhesive soil than for wheat.

J. B. LAWES, the prince of England's experimenters on the farm, avers "that he could supply fertilizers to the wheat fallow to produce a given crop of wheat to the acre, subject only to the risk of hail and violent storms." But in England the wheat plant rarely if ever freezes out, as it often does in winter and early spring in the United States, California and the South excepted. It is the freezing out of this plant that prevents the western farmers of Wisconsin, Illinois and Iowa from sowing winter wheat. But they have reduced the sowing of spring wheat, as a substitute, into a perfect system that rarely fails to succeed if well done. The rub is to plow and fallow in the fall, or before the ground is too hard frozen in winter, so that the wheat may be sown as early in April as the spring rains will permit. The reason why spring wheat growing is attended with such ill success in Western New York is that the fallow was not fall plowed, and consequently is sown too late in the spring.

LXXVI.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

THE WOOL SAMPLES UNDER THE TARIFF.

THE following correspondence sufficiently explains itself. We give it entire, as very erroneous impressions of the intentions and motives of the Secretary of the Treasury, in the matter, have been published in some of the public journals:

MR. RANDALL TO SECRETARY M'CULLOCH.

CORTLAND VILLAGE, N. Y., March 22d, 1867.

Hon. HUGH MCCULLOCH, *Secretary of the Treasury:*

SIR:—I had the honor to serve as Chairman of the Committee of the National Wool Growers' Association, which, with the Committee of the National Association of Wool Manufacturers and the Hon. STEPHEN COLWELL, one of the Commissioners of Revenue, prepared the draft of the clauses in regard to wool and woolens of the general tariff bill which passed the House of Representatives during the first session of the thirty-ninth Congress, and which, as a separate bill, passed both Houses and became a law during the last session of the same Congress.

When the portion of the bill requiring distinctive samples of the various kinds of wool to be selected and prepared under the direction of the Secretary of the Treasury to be deposited in the Custom House, &c., for the objects specified, was under the consideration of the Growers and Manufacturers Committees, it was proposed to insert a clause providing that the selection of the samples should be made by five persons, embracing two growers, two manufacturers, and one wool dealer, appointed by the Secretary of the Treasury—or to make some equivalent provision so that the Growing and Manufacturing interests should be fairly and equally represented in a matter of so much common concern. Mr. Commissioner COLWELL suggested that there was no use of such provisions,—for he said the Secretary of the Treasury would, as a matter of course, see that those interests were represented, and equally represented, in making the selection of the samples; and he expressed the opinion that the Secretary of the Treasury would unquestionably select such individuals as the official representatives of the two interests should agree on. He also thought that the absence of such provisions would better conform to previous custom in analogous cases, and would be more respectful to the Secretary of the Treasury.

Relying on the Commissioner's assurances, and influenced by the last consideration named by him, the proposed provisions were abandoned.

I have seen no official statement of your appointment of persons to select samples under the directions of the Act. Newspaper reports have prevailed on the subject, which have created an alarm and dissatisfaction among the wool growers of the country, which I trust are wholly unfounded. May I take the liberty respectfully to ask you, in behalf of the wool growers, what action you may have taken in the premises?

I have the honor to be, Sir,
Very respectfully, your obd't serv't,
HENRY S. RANDALL,
President of National Wool Growers' Ass'n.

SECRETARY M'CULLOCH'S REPLY.

TREASURY DEPARTMENT, March 27th, 1867.

SIR:—I have the honor to acknowledge the receipt of your letter of the 23d inst. in relation to the appointment of competent and impartial persons to select the distinctive samples of wool and hair required under the Act of March 2d, 1867, and in reply thereto beg leave to transmit herewith, a copy of a letter addressed, by me, under date of the 25th inst., to the Hon. LYMAN TRUMBULL, U. S. Senate, on the subject matter referred to by you.

I am, very respectfully,
H. MCCULLOCH,
Secretary of the Treasury.

To HENRY S. RANDALL, Esq., President of the Wool Growers' National Association, Cortland Village, N. Y.

COPY OF LETTER TO HON. L. TRUMBULL.

TREASURY DEPARTMENT, March 25th, 1867.

SIR:—In respectfully returning the letter of A. M. GARLAND, Esq., addressed to you under date of the 18th inst., I beg leave to say that this Department has been fortunate in securing the services of GEORGE W. BOND, Esq. of Boston, in the preparation of the samples of wool and hair required under the act of March 2d, 1867.

I feel very confident that Mr. BOND, who is well known to the wool growers and to the wool importers, will not permit himself to be influenced in the slightest degree by an undue consideration of any particular interest, but will aim wholly for an impartial and fair execution of the law.

The samples when prepared will be open to the criticism of all parties interested, and should it be discovered, that from any cause, a mistake has been made in the classification or arrangement of the distinctive samples of wool and hair, the Department will not be slow to correct it.

I am, very respectfully,
(Signed) H. MCCULLOCH,
Secretary of the Treasury.

To Hon. L. TRUMBULL, U. S. Senate, Washington, D. C.

MR. RANDALL TO SECRETARY M'CULLOCH.

CORTLAND VILLAGE, N. Y., April 1st, 1867.

Hon. HUGH MCCULLOCH, *Secretary of the Treasury:*

SIR:—I have the honor to acknowledge the receipt of your letter of the 27th ult.

Mr. BOND's appointment to select the wool samples required under the Act of March 2d, 1867, is the one which I alluded to in my previous letter as having created "alarm and dissatisfaction among the wool growers of the country." Probably no greater objections were felt to his appointment than would have been felt to that of any other person whose pecuniary interests in the premises antagonized with those of the grower, and who was supposed to be constituted sole judge in the matter. Your letter to Hon. L. TRUMBULL of March 25th, a copy of which you were so good as to enclose to me, shows the entire erroneousness of the latter supposition, and opens the way to arrangements which ought to be, and doubtless will be, satisfactory to all.

Will you allow me to suggest the mode of submitting the samples selected by Mr. BOND to the "criticism of all parties interested," which will be most satisfactory to the wool growers, and, I doubt not, to the manufacturers, viz: by the appointment, by the Secretary of the Treasury, of a committee composed equally of persons recommended by the National Associations representing those interests, which committee shall meet at such time and place as your Department shall direct, examine the samples selected by Mr. BOND, and report on their fitness for the objects intended, to your Department.

If such a committee meets, for example, at New York, where a great quantity and variety of foreign wools are always to be found, and where the opinions of a large number of experienced wool importers, dealers, government officials versed in such matters, and other experts can be readily obtained, if found necessary, I have no doubt that satisfactory and perhaps unanimous conclusions will be arrived at in every instance.

But if this examination is left merely to such individuals as choose to interest themselves in the matter—acting without concert—collecting ex parte statements—and receiving few of the facilities for obtaining full and accurate information which would be freely extended to an authorized committee, I cannot but believe that the investigation will fail to attain the desired objects, or to allay the suspicions and jealousies of the parties interested.

I have the honor to be, Sir,
Very respectfully your obd't serv't,
HENRY S. RANDALL,
President of National Wool Growers' Ass'n.

SECRETARY M'CULLOCH'S REPLY.

TREASURY DEPARTMENT, April 8th, 1867.

SIR:—I have the honor to acknowledge the receipt of your communication of the fifth inst. further relating to the wool samples, now in course of preparation by Mr. GEORGE WM. BOND of Boston, and suggesting a mode for submitting the said samples to the criticism of all parties interested.

In reply I would respectfully state that, as soon as the preparation of the said samples is reported by Mr. BOND to be completed, you will be duly notified of the fact, in order that you may, if you deem it proper, appoint a Committee of Wool Growers to examine the same, and at the same time the National Association of Wool Manufacturers will also be notified, so that the samples can be inspected by a committee composed of gentlemen connected with the manufacturing interest, when, if they are not satisfactory to both interests, any suggestions that may be offered will be carefully considered by this Department.

I am, very respectfully,
H. MCCULLOCH,
Secretary of the Treasury.

To HENRY S. RANDALL, Esq., President of National Wool Growers' Association, Cortland Village, N. Y.

It will be seen that the Secretary of the Treasury complies, in effect, with the recommendations submitted to him on behalf of the Wool Growers, and that the arrangement thus completed affords every guaranty that the case admits of, that in the final adoption and verification of the samples by the Secretary, the intent of the Act of March 2d, 1867, will be impartially carried out.

A. B. C.'S.

MR. EDITOR:—The very primitive and the very reprehensible practice of feeding sheep on the ground without racks is not, I observe, altogether obsolete. People who travel more than I do tell me that it is quite common in some sections in this year of grace 1867. I do not know, I wish I did, whether those who practice it think it is inside or outside of the civilization of the age.

We are greatly inclined to find reasons for our conduct, whether it is good, or bad, and it would not be strange if some think that an animal's filth imparts a pleasant flavor to its fodder if administered in small doses in cold weather. *Extreme mud* and *dung* is thought by some to be wholesome for *hogs*, but I never heard it prescribed for *sheep*. On the whole, I think few will assume that it is possible to keep fodder too clean, and that most farmers will admit that it is better to keep sheep off from their fodder entirely by placing it in well constructed racks. But the most prevalent error of all is to suffer the rack to be partially filled with the leavings, and then put in the hay carelessly, so that a portion of it comes out readily under foot. The racks should be cleaned every day, and the refuse thrown to horses or cattle, and the hay pressed down compactly in the bottom of the rack, care being taken not to scatter it. A great deal of hay is wasted, even when good racks are provided; but when racks are not provided, the waste, especially in soft weather, is intolerable. The loss of hay is not the worst part of it, however; in the spring when sheep are losing flesh, and their appetites are poor, and the ground soft, the fodder should be the very best and cleanest. If it is where they can run over it, they will eat very little, the least taint spoils it, and they decline rapidly. Let those who have not racks make it their *first business to provide them*, and not wait till another winter, which will have care enough of its own.

I recur to these obvious truths on the principle that as long as there are sinners the Gospel should be preached.—H. T. B.

Condensed Correspondence, Items, &c.

THE LAMB DROP OF 1867.—The drop of lambs is not completed at the time of this writing (Aril 12th.) We have not received very general information on the subject—and very little except from New York and Vermont—but in those States, the very early (February) lambs came strong, and favored by the unusually mild weather of that month, were pretty generally saved. March was very severe, and greater losses were incurred—but, on the whole, the increase has been a good one. Goitre and imperfect development have been less common than for several preceding years, measurably we have no doubt, especially in the case of the latter malady, because our breeders are beginning to learn that high keep and absence of exercise, in pregnant ewes, have a strong tendency to produce weak, unhealthy lambs. We know of a person who wintered portions of the same flock in adjoining enclosures. The best ones—the "show flock"—were fed higher and were so situated that they got less run. This best flock dropped three times as many weak and undeveloped lambs as the other. A neighbor had another portion of the same flock and gave them considerably more exercise still. His lambs were correspondingly stronger and livelier. As the saying is, they "knew more"—i. e., none of them which could stand and help themselves had to be helped and taught to suck, or evinced that stupidity which new-born lambs sometimes, though in apparent health, so curiously exhibit—as if they lacked a share of natural instinct. In both of the first named flocks, there were quite a number which displayed more or less of this stupidity, and would not suck at a week old unless the ewe was held for them and they were placed at the teat.

We would like to receive accounts of their lamb drop from breeders in all parts of the country—the proportion of good-sized, brisk, healthy lambs—the appearance of the others—and the precise treatment, as regards feed, water, exercise and shelter, of the ewes during pregnancy. The truth is, American breeders loose by far too large a proportion of their lambs, and let us by a wise and constant comparison of facts attempt to ascertain the causes of this mortality. But no man's statements on the subject are of the least value, unless he tells the exact truth and the whole truth. He who is not willing to disclose what he suspects may have been wrong in his management, or who is determined to sustain *any* theory of explanation, had better withhold his testimony, for the effects of it will only be to mislead.

WOOL SCOURING OF THE N. Y. S. S. B. & W. G. ASS'N.—H. R. WEEKS, Butlerville, Jennings Co., Ia. The prizes of the Association on scoured wool are continued, and are open to competitors from any part of the world, who exhibit their sheep and have them shorn on the Fair ground, as New York competitors are compelled do—and on no other terms. If you will send your fleeces for scouring to ALTON POPE of Cleveland, Ohio, or to any other manufacturer of reputation, we will very willingly report the results, as you desire, in the columns of the RURAL.

THE ROBINSON SHEEP.—We have received two excellent samples of wool from the stock rams of DARWIN E. ROBINSON of Shoreham, Vt. Mr. R. is the son, and the successor to the old Paular flock, of ERASTUS ROBINSON, from which the "Robinson Sheep" take their name—and who in his short career achieved, and justly achieved, so much celebrity as a breeder. The old stock have been kept pure, and the specimens we have seen of it are superior in compactness of form and density of fleece.

HOW SHEEP HAVE WINTERED.—The winter has been long, and in many regions very severe. But so far as our information now extends, and with some exceptions already noted in Texas, Southern Ohio, etc., sheep have wintered quite as well as usual, and extensively destructive diseases among them have been less prevalent than in many former years.

GOITRE.—J. D. PIERSON, Crystal Lake, Ill. The disease you describe in your lambs is goitre. For supposed causes, and for remedies, consult the back numbers of this paper.

Dairy Department.

DAIRY STOCK—TREATMENT.

THE few weeks intervening between hay and grass are the most critical of the year for dairy stock. It is the general season of maternity, when the animals will require extra feeding and attention—especially will this be the case if the cows have been kept short during the long winter, which even now seems reluctant to vacate "the lap of spring." In any event, whether well or poorly kept, cows should not now be left to prog for a subsistence, but should receive daily till grass time liberal allowances of nourishing roots and mashes in addition to the good hay they can consume. If this is not attainable let them have a liberal allowance of cut straw mixed with mill feed. This attention and care will be well remunerated, through the medium of the milk pail. The desire, to realize at once, in the shape of butter and cheese, induces many, perhaps nearly all dairymen, to take the calves from their dams before they are a week old. This may be profitable, but we doubt it. Certainly it is not quite natural, as the moanings of the cows and their offspring on being thus rudely separated at the moment when nature is most prompt in the assertion of relationship, abundantly prove. The old plan of "going halves" with the calves for a few weeks, is still practiced by some, and, all things considered, we think with advantage to the dam and her offspring.

There is sometimes evinced a great lack of humanity and judgment on the part of those to whom is assigned the duty of "breaking in" heifers. Some of these, from previous caressing and manipulation, come in without trouble, while others, less docile by nature and lacking previous training, are wild and restive when milking is attempted. If they start forward, kick or otherwise evince a repugnance to being milked, it is poor policy to fly into a passion and beat and bruise the brutes till they quiver with fear and agony. Patience, kindliness and perseverance will soon establish pacific and agreeable relations between the parties, and these, once formed, will not be easily disturbed thereafter. Beasts are quick to discern between friends and foes, fearlessly following the one but distrustful of the other, and ready on the slightest provocation, to dart away as a supposed means of avoiding punishment. Gentleness of manner and voice, if steadily persisted in, will subdue any animal that is worthy of belonging to a dairy herd. Those that cannot be thus tamed and ruled ought to be consigned to another fate.

A BUTTER MAKER IN DISTRESS.

MR. EDITOR:—I have a burthen to lay at the feet of some of your readers: it has been an annoying one on my shoulders since cold weather commenced. I am not edifying any one when I say there are a great many families north of Dixie, as fortunate or unfortunate, as the one of which I am one of the heads who have a farrow cow to supply them with milk, and in part with butter, through our long, cold winters. All practical and scientific butter makers are presumed to know how to conduct the performance of converting milk into butter of some kind, in all seasons of the year. I regret the defects of early education in these matters, though the daughter of a farmer, and the best and kindest of mothers, and have to confess that to satisfy—not my husband who is easily satisfied with whatever I may do or attempt—a moderate degree of pride or ambition, I would be exceedingly gratified if I could avoid the vexation I feel, when JIMMIE or BRIDGET, after churning one full hour or more, with no appearance of butter, inquires of me what the difficulty is, in not being able to tell them. I ask if plenty of hot water has been used, if the milk was soured when put in the churn, if the cow has been salted as regularly as last summer, if a little salt has been added to the milk, if it has stood so close to the kitchen stove as to melt the cream, or so far from it as to have been frozen some severe night, and receive a reply in the negative to all these inquiries. I hoped to find some neglect of compliance with the conditions usually observed in fitting, or conducting it to a golden or silvery result: for I would gladly have been satisfied with white, if I could not have yellow butter, but I could get neither.

Several times this winter, after two hours faithful churning, I have been able to get only froth, whether heated with hot water or chilled with cold, or churned rapidly or slowly. Our cow is a good looking one, and in perfect health, I imagine, for she is sleek, and ANDREW says eats heartily, of the same feed he gives the horses, buckwheat, oats and corn, ground together. Her color is red with some white spots. Her size is called medium, and she has long horns ornamented with nine or ten rings around them, and brass knobs on the ends. Will some one of your sympathizing scientific or practical butter-making readers give, through the columns of your valuable paper, the cause of my vexing failures to make butter under the circumstances here given? Yours in cream, MARGARET.

COWS LEAKING THEIR MILK.

WE have received three answers to an inquiry concerning a remedy for cows leaking their milk. P. E., Denmark, writes:—"My remedy is simply this: Take white oak bark, put it into water; boil down as strong as can be made. Then, after every milking, soak the ends of the teats in the solution for a few minutes and you have the preventive." "Farmer DAN, Poughkeepsie: Cut strips of gum elastic of sufficient length to wind several times around the teats, or punch a hole through a small piece and apply in that way; either will do. Continue for two or three days at a time for three or four weeks till the udder expands sufficiently to hold the milk." "Subscriber," Depauville, N. Y: "Farmers, about here, use a rubber ring that fits the teats tight enough to stay on. They can be made of rubber tape, cord, or rings made on purpose."

GARGET IN COWS.—J. BULLIS, an experienced dairyman of Macedon, Wayne Co., N. Y., informs us that he has been always successful in curing garget in cows by administering saltpetre. A common spoonful, dissolved in water, should be given the cow two mornings in succession. Intermit a day and repeat the dose, when a cure will be effected. In the time of flush feed give about a teacupful dissolved in water and mix with salt. This will be ample for from 30 to 40 cows.

Rural Spirit of the Press.

Large Plantations Out of Date.

THE Southern Cultivator says:—"The day of extensive planting has passed away, and we must come now to economical farming." The idea of making a pile at a single throw must be given up, and steady gains and safe returns must be relied upon for the future. To accomplish this, close attention and active personal supervision will be found indispensable.

The "Universal Scratcher."

THE Colonial Farmer, Fredericton, N. B., says that the correspondent of the RURAL NEW-YORKER who recommends the upper part of a hemlock tree full of branches nearly at right angles with the trunk, cut short, as a scratcher for cattle, has infringed on the rights of the late Rev. SYDNEY SMITH, the witty and eccentric canon of St. Paul's. It was he who proposed this mode of relief and comfort for stock and denominated it "a universal scratcher."

Not all Cotton.

THE Southern Cultivator (Ga.,) advises its readers to be careful in planting corn, potatoes and other summer crops ample for farm or home consumption, and not to depend wholly or mainly on cotton and sugar, as has been too often the practice in that region. It advises also a more general cultivation of wheat, thus obviating the necessity of relying upon the West for the article of flour. While the domestic tax on cotton remains, a greater diversity of cropping is deemed essential to successful farming in the South.

Beet Sugar for Export.

A CORRESPONDENT of the Prairie Farmer, alluding to a sugar factory about to be started in New York city, expresses the opinion that within fifteen years the beet sugar manufacturing will become so well developed as to fully meet the home demand and furnish a large surplus for exportation. This is a hopeful view of the subject, but the question naturally presents itself as to where we are to find a market for the surplus, provided we succeed in producing one. The progress of the past fifteen years scarcely justifies the anticipations here referred to.

More About Trichinæ.

THE Springfield Republican (Mass.,) a short time since gave a detailed account of six cases of trichinæ as having occurred in that city—members of three families comprising the victims. The ham eaten, which caused their suffering, was obtained at a grocery store and all belonged to the same lot. One of the parties, a girl, died. A portion of muscle was detached from one of her limbs and made the subject of microscopic examination. A square inch of this disclosed from 30,000 to 80,000 trichinæ. Four of the persons attacked are convalescent, but the fifth is reported to be in a critical condition.

Rural Notes and Items.

THE SEASON—PROSPECTS.—April came in cold and forbidding, but a pleasing and promising change is now perceptible. The hyperborean blasts so long in the ascendant have given place to mellow, southern breezes, waking the farmers to new life and activity. Hitherto but little spring plowing has been done, but with the commencement of the week the fields became alive with teams and plowmen.

The buds of the smaller fruits are swelling fast—the cherry especially—and a few days of continued mild weather will suffice to clothe them in a robe of white. It is too early yet to pronounce, with much positiveness, as to the the chances of other fruits, but the indications are deemed rather favorable than otherwise. Elsewhere, as here, the spring has been backward, and a protracted winter has depleted the barns and put stock on short feed at the very time when most injurious to them. Hay has advanced in price here rapidly within a few days—less, possibly, in consequence of scarcity, than from a want of time, on the part of farmers, to bring what surplus they have to market.

A GOOD APPOINTMENT.—The telegraph announced yesterday that the Commissioner of Agriculture had appointed Hon. T. C. PETERS, late President of the New York State Agricultural Society, an agent to aid in the distribution of seeds in the South, to perfect the list of Southern statistical correspondents, and to co-operate in the reorganization and improvement of Southern agriculture. Mr. PETERS is the Southern corresponding editor of MOORE'S RURAL NEW-YORKER, whose late tour and observations through the South were sketched in a recent letter to that paper which we copied and commented upon. The appointment is a good one, and we congratulate the NEW-YORKER on this merited recognition of the talent and usefulness of one of its editors.—*Roch. Daily Union.*

DODGE'S REAPER AND MOWER.—Those of our readers wishing a good reaper or mower (or the two combined) for the approaching harvest, are referred to the advertisement of the Dodge & Stevenson Man'fg Co., in this paper. We believe the machines furnished by this Company among the very best obtainable, and know from personal observation, that they are manufactured in a careful and substantial manner. Our own opinion of the Dodge Machine may be inferred from the fact that we offer it as a premium to club agents,—and it is not our purpose to name a second-class article in the list of premiums.

TEXAS GEOLOGICAL SURVEY.—We have received from S. B. BUCKLEY, Esq., a pamphlet copy of a "Preliminary Report" on the Geology of Texas, commenced by Dr. MOORE, assisted by the author, and finished by him on the demise of the former. It embraces much valuable information with reference to the country described, showing it to be rich in the treasures of salt, iron and coal, besides other materials essential to the convenience and comfort of man. Did space permit, we should be glad to quote liberally from this report, but the pressure on our columns precludes a more extended notice.

NEW CHEESE FACTORIES.—A company has recently been organized in the town of Walworth, Wayne county, for the manufacture of cheese. The buildings and necessary appendages for factory operations will be completed as soon as possible. The Macedon Company, organized some time since, have their establishment nearly completed. There is a factory already in operation in Newark, Wayne county, and another in process of erection at Perinton, Monroe county. The prospects of these factories are said to be highly flattering.

CORN, WIRE WORMS AND WHITE GRUBS.—A correspondent from Ohio writes thus:—"I have some bottom land on which I wish to plant corn, but the soil is infested with wire worms. Will some of the readers of the RURAL tell me how to prevent them from injuring the young corn?" Another correspondent writes us from Onondaga Valley, N. Y., that the white grub is very troublesome in gardens, and asks if salt or anything else will destroy them. Salt is good; plowing or spading very late in the fall, better.

BEDSTEAD-SPRING BOTTOM.—DANIEL PRENCHER, Plymouth, (Mich.,) has invented a spring bottom for beds, which seems to be all that can be desired for ease and comfort. It can be adjusted to any style of bedstead, attached or detached, and rolled up in two or three minutes. To sick persons, especially, it must prove a welcome attachment to the ordinary bedstead. J. S. TIBBETS of this city, supplies the article.

LARGE EGGS.—Ex Alderman H. F. VAN DAKE of this city, has a penchant for the products of the hen-cry. He has a lot of white-faced Black Spanish fowls which are producing some notable specimens of eggs. Two of a sample shown were measured. One was 7¾ by 6¾ inches and the other 7¾ by 6 inches. He has 19 hens on the *lay* which produced 294 eggs in 21 days.

THE REASON WHY.—The note of "K. W.," Cascade, Michigan, was duly received. The person having charge of the matter referred to in it, is absent. The reasons, influencing him in the case, are unknown to the writer of this. The charge of plagiarism we concede to have been made out against the party implicated. There are many such cases, no doubt, but the means of detection are not always at hand.

CLOVER TO ENRICH LAND.—(R. L., Cataraugus Co., N. Y.) Among practical farmers opinions are divided as to which is the best kind of clover—the medium or large. Not less than 12 or 15 lbs. per acre should be sown. It is well to add to this some timothy seed. When it is in blossom plow it under, to the depth of six or eight inches, if your main purpose is to enrich the land.

N. Y. STATE FAIR.—It is stated that the committee, having charge of the business pertaining to the location of the next State Fair, have decided in favor of Buffalo. This was anticipated, from the liberal offer made by citizens of that place, and will prove generally satisfactory. The Fair will open on Tuesday, the first day of October, and continue four days.

THE FARMERS' JOURNAL.—This useful account-book for farmers, which we noticed at length last week, is published by Mr. A. DE LANCEY BRIGHAM, Rochester, N. Y., to whom agents and others desiring the book should address orders. It is also for sale at this office.

FARMERS' CLUB—CENTRAL KENTUCKY.—The headquarters of this club are at Lexington. *Pres't*—WILLIAM R. ESTELL. *Vice Pres't*—J. J. Haden. *Sec'y*—J. M. Tipton. *Treas.*—D. S. Coleman.

HORTICULTURAL.

FORESTS AND SHADE TREES.

I HAVE always believed that trees were, and were meant to be, prominent features on the face of Nature. Their exquisite beauty, grace and symmetry, their wonderful organism, their large beneficence, stamp their value, and commend them to our profound and grateful regards. A sensitive or sensible nature sickens at the desolation wrought in our forests, without reason and without excuse, during the last fifty years. This vandalism becomes not a *blunder*, but a CRIME, when we think of the poor who shiver over costly embers, in desolate and dilapidated habitations, for the want of the fuel and timber which ought to have been economized as a sacred trust, but which we made it our chief business to destroy.

A narrow strip of native forest bordered with evergreens, besides paying its way by the growth of timber, would in all exposed localities greatly benefit animals and growing crops. There is reason to believe that a country *one-fourth forest*, properly disposed, will in the end produce more than the entire surface cleared of trees. The most essential point in the management of forests is to keep out cattle, and especially sheep, till a thick undergrowth is secured, high enough to escape injury; thin with a bush sythe to the number that can make a healthy growth—after this cattle may be admitted. In about twenty-five years cut it off clean for wood, and let it grow up again, but do not cut it all at the same time.

SHADE TREES.—Let the door-yards, pastures and roads be supplied with them—mostly of the varieties native to the soil. Let them be protected. Let every Christian man consider it his duty to go half a mile rather than hitch his horse to a shade tree, unless it is a very large one. *Unchristian* men perhaps deserve to be sent still further.

What I particularly wish to say is, that shade trees require pruning or shaping during the fall or winter at the different stages of their growth—or, what is still better, pinch back in spring or summer the shoots that are making an overgrowth, and remove those that are out of place. Scarce any one pretends to do this. If a shade tree is symmetrical it is in spite of cattle, and men and the winds let loose upon it, and without any help from skillful hands. A rampant shoot projects unduly, taking the sap, and dwarfing others that ought to be encouraged. The wind sways the top to one side;—by the removal of branches the equilibrium might be restored. In general the branches should be encouraged to come out low, but a vigorous growing tree, capable of sustaining a large top, should occasionally present a long, branchless trunk;—in this way *magnificence* is attained. Where there are two or more leading shoots, the tree becomes crotched, which frequently impairs its beauty, and endangers its existence by splitting. By a timely removal this may be prevented, and one continuous stem or trunk secured with branches all in due proportion. Of course some variety in forms is desirable, but the top should be *balanced*, and if the branches are long and drooping, they contrast admirably with the rugged oak, the precise hickory, and the decorous maple.

Do not forget that the growth of shade trees may be helped by mulching and judicious cultivation. Care for them, for the best specimens are above all price.—H. T. B.

SETTING OUT MAPLE ORCHARDS.

IT may seem strange that any one, at this late day, should advise the setting out of maple orchards with a view of making sugar from them. So people argued thirty or forty years ago about setting out fruit orchards—they should never live to eat the fruit thereof. But many have lived to enjoy the fruits of their labors, and more attention is now given to setting out forest trees than ever before. In like manner a maple orchard may be obtained in from fifteen to twenty years from the time of setting, which will produce sugar enough for any family, and at the same time be an ornament which would be worth a thousand dollars to any homestead.

Now is the proper time to set out such an orchard; or, what would be better, to prepare the trees and ground for setting another year. Go to the forest and select trees, if possible of a second growth, and which have stood out of the shade of the forest. Cut off nearly the entire top at a distance of about ten feet, and with an old ax cut a circle around the roots, of at least eighteen inches from the trunk of the tree. Let them stand in this condition one year, and innumerable fibers will be found to have started from the roots, and many sprouts from the trunk. Two years at least will thus be gained in the growth of the trees. With ground properly prepared, and careful attention to their future growth, you will soon have a grove of which you will be proud, and for which future generations will rise up and bless you. Care should be taken not to set the trees more than two or three inches deeper than they grew in their natural state. J. S. TIBBETS.

Rochester, April, 1867.

CRANBERRY CULTURE.

THE following observations by NATHAN BRIGGS, in the Barnstable (Mass.) Patriot, will be found to answer most of the inquiries which have recently been made of us in regard to the cultivation of this fruit:

The Location.—First, cranberries will grow on high, moist land, and sometimes produce well, but their proper place is low and springy, or wet land. The best place, however, is a peat-bog and swamp muck.

Preparation of the Ground.—First, make the surface of your ground as even as possible, and nearly level, with a slight inclination towards a drain, if you have one, in order that it may be easily flowed, and no ponds remain after drawing off the water. This may be done with any material. There should then be put on this level surface about four inches in thickness of swamp muck or peat, which should be again covered with about three inches in depth of loose sand, free from grass or its fibers, and also from clay or stones. It is not important what the color or quality of the sand, if it be not adhesive, and is free from roots and grass. Clay is not good.

Time of Planting.—From the first of April to the middle of June—on wet ground, continuing through the summer to plant, if convenient, and as it is wished. In dry land those planted in summer sometimes fail on account of dronth and heat. Those set late lose a year's growth, and may as well be set in spring, if the land be not too wet.

Manner of Planting.—The form of planting which has resulted in the most rapid advancement of growth and production, is to scatter whole vines upon a mud or peat surface; then press them into the mud with your foot, and scatter over them light sand, about one inch in depth. Patches planted in this manner seem to be a year ahead of those planted in the ordinary way. The general plan, however, is to set them in hills about eighteen inches apart. Take a pointed stick, say four inches in thickness, through which at eight inches from the point insert a gauge rod eighteen inches long, which serves to govern the distance from one hill to another. With this pointed stick puncture the ground in uniform rows, insert into these holes a small handful of vines, and press the mud around and among them, spreading them about as much as need be.

Quality of Vines.—Vines should be procured from meadows which have borne well, and of good fruit, as the best way of knowing good bearers. There are several species, such as egg-shaped, bell-shaped, and cherry-shaped. The former are most approved, and are said to be four or five weeks earlier.

Cultivation.—The cranberry needs little cultivation. Having your land properly prepared as before stated, and properly ditched, and clear of roots and grass, it may require the first year a little hoeing among the vines. After the first year, it would be likely to do as much injury as benefit, by disturbing the young fibers, which are now thickly set. It is better after this, to pluck the weeds by hand, put them in a basket and carry them off. After the second year, let them alone. The third year you will get a fair crop, the fourth will probably be the best. It is not yet ascertained how many years they may do well. Fair bearing is considered one bushel to a rod; there have been instances of one barrel to the rod. Rushes, and bunches of weeds and grass may at any time be cut out.

Flowing.—Flowing is not absolutely necessary. More than half the meadows which I saw were not flowable. If flowable, the water may remain on all winter, and let off in March. It should be let on about the 20th to 25th of May, and again the 1st of June, for not exceeding thirty-six hours; after this it is not needful. Blossoms are injured by the water remaining on too long, the object of which is to destroy the insects. After the second flowing there is little to fear from them. The grade of the land and the ditching should be so arranged as to easily flood or clear the surface, and the sides of your drains should slope to an angle of forty-five degrees or more, in order to their permanence and utility; the number, arrangement and size being directed by good judgment.

DESIRABLE FLOWERS.

OBELISCARIA.

THESE are showy plants with curious but pleasing flowers with acorn-like centers and drooping petals. They are about eighteen

CANNA.

inches in height, and should be treated as half-hardy annuals.

"CANNAS are stately plants," says VICK, in his Catalogue, "and highly ornamental; will flower the first season if plants are raised early in a hot-bed, so that they are strong at the time of setting out in the garden. The foliage is very beautiful; flowers mostly scarlet. The next autumn the roots may be taken up and kept in the cellar, in sand, to be planted out the following spring. They should be planted in beds or groups, and nothing makes a richer bed or lawn. Unless the plants are strong when set out, they will not produce much effect the first year. Soak the seed well in hot water before planting. They make fine decorations for houses, halls and the like, when grown in pots.

Horticultural Notes and Queries.

HORTICULTURAL SOCIETY, LA PORTE CO., IND.—*Pres't*—DR. GEO. L. ANDREW. *Vice Pres't*—Mark Allen. *Sec'y* and *Treas.*—Geo. S. Seymour.

HOW SHOULD TUBEROSES BE SET?—H. M. L. inquires "Will some one tell me how and when the bulbs of Tuberoses should be set out to have them bloom? Also, what will destroy the small white worms in house plants that come to the top of the ground, and eat off the stalks?"

APPLE TREE WASH.—Will some of the RURAL readers, who have had experience, inform me of a good wash for destroying insects, &c., to apply to the bodies of apple trees that have been well scraped. My orchard is an old one, and I am trying, by thorough pruning, &c., to regenerate it to some extent.—W. I. P.

HOTICULTURAL ESSAYS.—We have received several letters requesting us to publish the Essays which were read at the last meeting of the Western N. Y. Fruit Growers' Society. In reply we state that we have already published those Essays which have been received, and considering the lapse of time since their delivery, and the press of grape matter on our columns, we must decline publishing the others.

ACKNOWLEDGMENTS.—We have received from Mr. VICK, the popular seedsman of this city, a selected package of choice flower seeds. They are already up nicely in the hot-bed where sown.

Also, a first class Salem grape vine from J. S. WARING, Amenia, Dutchess Co., N. Y. This grape is one of the seedlings produced by Mr. ROGERS, and is said to be of great promise. Those wishing particular information regarding it are referred to Mr. WARING'S advertisement in previous numbers of the RURAL.

WHIFFLETREE FOR POWING AMONG TREES.—We have examined a whiffletree left at our office by the patentee, Mr. J. B. RHEIN of Orleans Co., which is designed for use among small orchard or nursery trees. The novel feature consists in the attachment of a wheel to the end of the whiffletree next the row of trees. The rim of this wheel is banded with rubber, and when it comes in contact with a tree the whiffletree is carried by it without any injury to the bark. If it is as good in practice as appearance it will be a useful improvement.

AMERICAN FORESTS.—A pamphlet and circular on "the destruction of American forest trees" has been sent to us. It was prepred by the late Rev. FREDERICK STARK, Jr., of St. Louis, and designed to awaken attention to the importance of forest trees, and to arrest, if possible, the wanton yearly waste of this valuable commodity. These papers contain copious statistics going to show the necessity of propagating forest trees to meet the demands which a rapidly increasing population will make upon them at no remote day. This subject is attracting attention in all directions, and bids fair to become a leading theme for discussion in the future.

AMERICAN POMOLOGICAL SOCIETY.—Circulars of the Society received give notice that the eleventh session of the National Association will begin at St. Louis, Mo., on Wednesday, September 11th, 1867, and will continue several days. All Horticultural, Pomological, Agricultural, and other kindred institutions in the U. S and British Provinces, are invited to send delegations as large as they may deem expedient, and all persons interested in the cultivation of fruits are invited to be present.

Among the prominent objects which will come before the Society at this session, will be that of the revision of the Society's Catalogue of Fruits. The special Committee appointed for this purpose are now, with the various State and Local Committees, actively engaged in collecting such information as will aid in determining what varieties are best adapted to the different sections and districts of our country; and this information, in the form of reports, will be submitted to the action of the Convention. In compliance with a resolution passed at the last session of the Society, several State Pomological and Horticultural Associations are requested to compile lists for their own States or Districts, and forward them, at as early a day as possible, to P. BARRY of Rochester, N. Y., Chairman of the Committee on the revision of the Catalogue. Members and delegates are requested to contribute specimens of the fruits of their respective districts, and to communicate in regard to them whatever may aid in promoting the objects of the Society and the science of American Pomology; and as the fruits of the South and South-West will then have attained their size, it is especially desirable that a grand display from these sections be made. Each contributor is requested to come prepared with a complete list of his collection, and to present the same with his fruits, that a report of all the varieties entered may be submitted to the meeting as soon as practicable. Persons desirous of becoming members can remit the admission fee to THOMAS P. JAMES, Esq., Treasurer, Philadelphia, who will furnish them with Transactions of the Society. Life membership, ten dollars; Biennial, two dollars. Packages of fruits, with the name of the contributor, may be addressed as follows: "American Pomological Society," care of C. M. SAXTON, corner Fifth and Walnut Streets, St. Louis, Mo. MARSHALL P. WILDER, Pres't.
JAMES VICK, Secretary.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

SUPERIOR CAKES.—"Farmer's Daughter," Trumbull County, Ohio, sends us the following recipes for making cakes:

CAROLINA CAKE.—2 cups loaf sugar; 2 cups flour; 2 tablespoons butter; 1 teaspoon cream tartar; ½ teaspoon soda; whites of 5 eggs, beaten fine; and lastly one cup sweet cream.

SURPRISE CAKE.—1 large cup sugar; 1 cup sweet milk; ½ cup butter; 2½ cups flour; 2 teaspoons cream tartar; 1 of soda; 1 egg.

CLOVE CAKE.—1 cup of molasses; ⅔ cup buttermilk; 4 tablespoons butter; 1 teaspoon soda; 1 teaspoon cloves; 1 egg.

CREAM CAKES.—1 pint water; 1 lb. flour; ½ lb. butter; pour the water boiling hot on the butter and set it on to boil; let it boil a few moments, then stir in the flour; when cool add eggs well beaten. Bake in tins in a quick oven 20 minutes.

CUSTARD FOR THE CAKES.—1 pint rich cream; 3 eggs well beaten; a little flour; sweeten and flavor with lemon. When the cakes are baked, open at the side and fill with the custard.

CREAM PIE.—1 pint sweet cream; 1 tablespoon flour; sweeten to the taste; flavor with nutmeg. Line a good-sized pie dish with paste, fill with the cream and bake in a slow oven. *No eggs.*—A. E. H., *Porter, N. Y.*

LIMING EGGS.—"A Subscriber," Chaumont, N. Y., wants to know how to prepare eggs, known in the New York market as limed ones. The customary way is to put a quantity, say a quart of quick lime, in a jar, and pour a gallon or more of water on it, according to size. Let it stand twenty-four hours. Turn off the water and put in the eggs, apex down if convenient, filling the crock nearly full. Turn on the lime-water and cover up. Remove the eggs carefully as wanted for use.

"SUGARING OFF."—City people may enjoy the luxury of warm maple sugar without visiting "the bush." The process is so simple that it scarcely requires explanation. Take any quantity of maple sugar that you please, and water to dissolve it; boil it until it will "wax" in water or on snow, but not long enough for it to "grain." Then pour the syrup on dishes of *ice* or snow, and you will have a delicious treat.—"YANKEE," *at the Rural Office.*

INDELLIBLE INK, &c.—Will some one inform me, through the RURAL, how to make very fine indellible ink; also what kind of a pen is best in writing names on linen?—B. F. H.

TRANSPARENT WINDOW SHADES.—A lady correspondent, Trumbull Co., Ohio, wants to know how to make transparent window shades.

New Advertisements.

WIRE FOR FENCE AND GRAPE VINES. Annealed and galvanized, new and second hand, for sale cheap. Also Woven Wire Fence. GRINFILL BLAKE, 45 Cliff Street, New York.

A FEW THOUSAND CHOICE IONA, ISABELLA and Adirondac Vines, for Spring trade, at $300 ₱ M; $35 ₱ C. Address A. MERRELL, Lewis St. Vineries, Geneva, N. Y.

EARLY GOODRICH POTATOES—FROM seed from D. S. HEFFRON. Warranted unmixed and very fine. Price, including packages, $2 ₱ bushel; $5 ₱ barrel. Address J. W. DOTY, Lockport, N. Y.

PEAR, QUINCE and PLUM Stocks for Sale.
10,000 Pear, imported, per thousand,.....$18
8,000 Quince, Angers, " " 20
10,000 Plum, horse, " " 18
E. C. FROST, Watkins, Schuyler Co., N. Y.

PATENT FRUIT GATHERER.—This is a hand machine, with two circular knives, cutting like shears, intended to gather fruit by severing the stems instead of pulling them out in the ordinary way. The cutter is so arranged as to permit the fruit to pass between the knives when a spring worked by a lever at the bottom closes them and severs the stems. The cutter will have a handle about ten feet long enabling the fruit gatherer to reach most or all on an ordinary apple tree, while standing upon the ground. LEONARD MURRAY, Ithaca, N. Y., is Agent for this implement.

KITATINNY BLACKBERRY, True, now ready—Superb young plants, set as Bedding Plants after spring frosts and well treated—*we warrant to grow and do well*, $2,50 ₱ doz.; 100, $15; 1,000, $120. By mail, samples 25c each, $2,60 ₱ doz.; 100, $15,50; 1,000, $125. Strong old plants, $6,50 ₱ doz. WILSON'S EARLY BLACKBERRY—fine young plants, as above, by mail, 15c; 12 for $1,60; 100 for $31. Strong old plants, packed, 21c each. Fruit Trees, general assortment.
GRAPES—Ives, Iona, Norton's Virginia, &c., &c. *Osage Orange* for hedges, strong, $3 ₱ 1,000; 3 year, $5 ₱ 1,000. *Evergreens*, all sizes, immense stock. *Roses, Dahlias, Green-house* and *Bedding Plants*. Send 3 red stamps for 3 Catalogues. F. K. PHŒNIX, 900-2t Bloomington, McLean Co., Ill.

PRESERVE YOUR FRUIT.
SPENCER'S PATENT
Self-Sealing Fruit Jars,
The Most Reliable.—A Perfect Success.
☞ The Easiest to Open and Close. Will Produce the Greatest and Most Perfect Vacuum, without which Fruit will not Keep. Consult your interests and buy no other. COLEMAN & BARNES, Rochester, N. Y.
☞ Merchants through the West can order from the following Agents:—HALE, ERACKELTON & Co., Milwaukee, Wis.; F. WETMORE & Co., Detroit, Mich.; EATON, MAGUIRE & Co., Chicago, Ill. 900-17t

OSAGE ORANGE SEED.—I HAVE just received direct from Texas a lot of fresh seed which I will send by mail, at $1 ₱ lb, or by Express at $15 ₱ bushel. P. S. MESEROLE, Chicago Agricultural Warehouse and Seed Store, 204 Lake St., Chicago, Ill.

PERRY'S GRAPE VINES.—I can Supply a few thousand splendid Ionas at *very low rates*. Also 10,000 Concord, No. 1 & 2, grown from two and three eye cuttings; a few hundred Adirondac, Israella, Rogers' Hybrids, Hartford Prolific, Diana and Delaware; very fine Dwarf Pears at special rates, by the hundred or thousand. Secure price list and samples before purchasing elsewhere, or come and see the stock. Dr. Parker of Ithaca, sent the following *unsolicited* letter:

"ITHACA, Tompkins Co., N. Y., April 4, 1867.
"F. L. PERRY, Esq.—*Sir*: I received the Adirondac I ordered of you by mail in fine order. I have had vines of a dozen different propagators of late, but none equaled yours in the beautifully fine spreading roots full of nice ripe rootlets, and the large ripe canes—though when I saw your propagation and your propagating box, last season, and the vines in their early vigorous growth, I was convinced that yours was the true way to propagate, yet I was not fully prepared to see them as good as those sent by you prove them to be."
Address F. L. PERRY, Canandaigua, N. Y.

PROFITABLE EMPLOYMENT.—$200 per month and expenses paid, Male or Female Agents, to introduce a *New and Useful Invention*, of absolute utility in every household. Agents preferring to work on Commission can earn from $10 to $20 per day. For full particulars, enclose stamp, and address W. G. WILSON & CO., Cleveland, Ohio. 900-4t

ANDY AND JEFF.—THEIR COMIC lives, "and so forth;" 100 pages, and near 100 "cuts"—"rowring kuts." It's perfectly awful. Half a million sold. Reduced price—only 15c, each, or, as we dislike to seperate them, take 'em both for a "quarter;" $7,50 a hundred, post free—five of each for $1. Last time! Now or never! Address HUNTER & CO., Hinsdale, N. H.

PROF. JOHNSON'S FERTILIZER will more than double your crop 20 to 30 days sooner. Corn at 80 bushels per acre, where five were produced; oats sixty bushels, pumpkins 66 to 170 lbs., one watermelon weighing 55 lbs., 5 weighing 235 lbs.; also all other vegetables, which greatly surpassed anything ever exhibited on poor land, in Saratoga Co. Agents wanted. Send post. stamp for Circular. L. T. JOHNSON, 346 Greenwich St., N. Y.

FOR SALE—A CHOICE FARM OF 384 acres, with nearly 300 acres in a high state of cultivation, and 110 acres of wheat on the ground, lying seven miles south of Battle Creek City; on the premises there is a good house, barn and orchard. Said land is seldom equaled either for white wheat, timothy or clover. Price $50 ₱ acre, with wheat on the ground, or $45 without wheat. The farm can be divided if desired. For particulars inquire of SIMEON BAKER, Battle Creek, Mich.

SOUTHARD'S THOROUGH BASS and Harmony—Designed for the use of Schools, Classes and Conservatories, and as an Aid in Acquiring the Art of Playing Church Music and Extemporizing. By L. H. SOUTHARD. This new work is a short and lucid statement of the Elementary Laws of Harmony, and will be found invaluable to those for whom it has been prepared. Cloth, price 87 cts. Sent post-paid. OLIVER DITSON & CO., Publishers, Boston, Mass.

A SURE CURE FOR FOOT-ROT IN SHEEP. Whittemore's Cure for Foot-Rot in Sheep is a positive and speedy cure. Diploma awarded at New York State Fair. Testimonials as to its reliability from prominent Sheep Raisers are constantly being received. This Cure is also a sure Remedy for FOUL IN CATTLE AND THRUSH IN HORSES. For sale by Druggists at 50 cents and $1 per bottle. If your Druggist has not got the Cure on hand, get him to order it for you of the sole manufacturer, F. W. WHITTEMORE, Chatham 4 Corners, Columbia Co., N. Y.
☞ A liberal discount allowed to Druggists.

GET THE BEST
WEBSTER'S DICTIONARY
UNABRIDGED
NEW ILLUSTRATED
OVER 3,000 FINE ENGRAVINGS.
10,000 *Words and Meanings not in other Dictionaries.*
A necessity to every intelligent family, teacher, student and professional man. What Library is complete without the best English Dictionary?
"Superior, in most respects, to any other English Dictionary known to me."—*Hon. Geo. P. Marsh.*
"THE NEW WEBSTER is glorious—it is perfect—it distances and defies competition—it leaves nothing to be desired."—*J. H. Raymond, LL. D., Prest. of Vassar Coll.*
"All young persons should have a standard Dictionary, at their elbows. And while you are about it GET THE BEST; that Dictionary is NOAH WEBSTER'S—*the great work unabridged*. If you are too poor, save the amount from off your back to put it into your head."—*Phrenological Journal.*
"Every *farmer* should give his sons two or three square rods of ground, well prepared, with the walls of which they may buy it. Every *mechanic* should put a receiving box in some conspicuous place in the house to catch the stray pennies for the like purpose. Lay it upon your table by the side of the Bible; it is a better expounder than many which claim to be expounders. It is a great labor-saver; it has saved us time enough in one year's use to pay for itself; and that must be deemed good property which will clear itself once a year. If you have any doubt about the precise meaning of the word *clear*, in the last sentence, look at Webster's nine definitions of the *v. t.*"—*Massachusetts Life Boat.*
In one vol of 1,840 Royal Quarto Pages.

FLOWER TALK WITH THE GIRLS.

Yes, I know you love flowers, and you would like to cultivate them too, only you think you have no place, and you sigh sadly as you stand with your fresh young cheek close to the window pane, and look upon the lawn before you. You love everything bright and beautiful—you wish you could have flowers like those which you saw smiling in trim little gardens in town last spring. You remember the thrill of enthusiasm with which you looked upon the masses of bright color so soon out of the rich mold.

Papa is very kind, but "he hasn't the time to fuss," and the boys are so busy. Well, you pout your rosy lips a little, and wish the farm would be sold, and a nice little place in town bought; then you could have flowers.

Now, you do not know what a princess you are on the hundred acres of luxuriant meadows and dewy pastures, where the June sunlight seeks ankle deep for the roots of the tender grasses. You do not know what a possession you have in the long belt of woodland, where the sugar fires glow brightly in the March midnight, what wealth of beauty might be wrought from this teeming domain,—and your own little hand can work wonders if you will.

That slope down to the south, just at the right of your doorway, is a splendid spot for flowers. At the left, where the half dozen old trees exclude the sun from the green turf in summer, you could sit in your low chair on sultry afternoons, and hear the low hum of bees from the bright tangles of bloom in full view. But you say, "How am I to work this change?" and the little brown hand does look slender to hold spade and rake and hoe; but it is used to the great heavy dasher of the churn, and it scrubs and cleans and adapts itself to the varied work of the household. The mother favors you, she would give you hours of leisure; and when once the pleasant task was begun, there would be no weariness so long as the light of the autumn mornings opened the blue eyes of the violets, and the breezy winds stirred the tears of night on the tender leaves.

You cannot make the change all at once—you will not be disappointed, because you are a sensible girl, if the perfection of a garden is not reached in years; but you can begin soon, when the rain seeks the roots of the millions of plants which will thrive if naught else is set in their stead. As you stand then by the window, looking out so thoughtfully, just draw with your eye a circle where the future garden shall be—not a large circle; a small one will hold many blossoms, and you have a large work to do, aside from that, in arranging for other things.

A huge pile of chips — the debris of years of wood-chopping lies there, you tell me. Well, it has lain there for years, and the ground will be all the better for its decay of vegetable matter; and the widow's two little boys, who live over on the next street corner, will be glad to carry them away by basketfuls, if you don't choose to give them some pennies, for all the large ones they can pile into the great wood-house, handy to the cook stove.

You are willing to work for your flowers, you do so like them in your hair when you have freshened your toilet for the afternoon's sewing, (your thrifty New England mother taught you to get your housework done in the forenoon,) and you can work faster with the cluster of pansies winking their great purple eyes at you from the green leaves of your bouquet on the window sill.

Put an evergreen tree in the center of your plot. "The boys" can get it from that clump of pines in the field yonder.

In due time have your neat border, your flowers and roses of early and later bloom and varied colors, that may delight the eye from early spring to the nipping frosts of a late autumn, and thus secure the sweetly-changing pageantry of nature's wondrous floral procession, and satisfy that hunger for beauty which is in every soul.

By and by papa will grow interested — he will be as proud as any one of your flowers—he may say they don't amount to anything, but he would as soon see a drove of cattle in his favorite meadow as a stray cow setting her homely foot into the fresh earth of your flower beds. The boys may not say much, but if you are diplomatic you will get many a half-hour's work from them, which will tell in the future of you flower garden.

Papa may enlarge that circle, or have a nicely arranged plot marked out, with walks and clumps of shrubbery, and when the fragrance of the honeyed blossoms steals into the old home, in mornings when the birds sing and the world seems full of sunshine, he will feel amply repaid.

Above all don't try to coax him to move away into town, and let the possession of those hundred acres fall into other hands. When the beauty of your garden attracts the eyes of the passers-by, he will think of the old, brown walls of the house, and some day you will find the painter's ladder leaning up against them, and the carpenters at work throwing out that bay window, for which you have sighed so long,—"you could make the half-circle so lovely with flowers,"—and you will be content to wait in the old home, growing so bright and dear to you.

No home is so unlovely but the hand of an earnest lover of the beautiful can adorn its walks and walls with something lovely for the eye to look upon — no rough, unpainted board but may be changed by the tendrils of a vine creeping over it, and we only wonder that Country Homes are not made what they should be,—the beauty and delight of the land.

Ithica, N. Y. Sylvia Lawson Corey.

"BABY HAS DROPPED ASLEEP."

Now Franky, boy, 'tis time for bed;
Put up those books, I pray:
And Katy, dear, those toys of yours
Must all be cleared away.
The clock struck six some time ago.
Sounding through all the room;
And see it gives us seven, you know.
Father will be at home.

He says there is no place to him
So sweet as this his home;
So sweet that he can never care,
Elsewhere for joy to roam.

So let us make it nice and snug,
That he may not complain,
But feel it e'er his guiding-star
Through all the dark and rain.

Now softly, Frank; don't make a noise—
Baby has dropped asleep:
She's been as good as gold all day;
I want her so to keep.
Off with your boots, and say your prayers;
You must be ready quite
To go to bed when father comes,
And you have said "good-night."

GOSSIPPY PARAGRAPHS.

A Jenkins speaks of "—, who is just emerging into womanhood in white trimmed with blue."

Aunt Polly Heckenwelder, who was the first *white* child born in Ohio, is still living in the Moravian Sisters' House, Bethlehem, Ohio.

A lady in Detroit rubbed a quantity of hair dye on her face, mistaking it for perfumery. Her face assumed a deep olive color, and she will not receive calls for some time to come.

The Princess of Wales has her third baby, a daughter, born on Wednesday, February 20. She has been married not four years, and has three children, which is doing as well as could be expected — as she is doing now.

A second attempt is being made in Paris to introduce the fashion of three-cornered hats for ladies; but it does not succeed very well, apparently, because such a style of hat only suits a very young and very pretty woman, and, in Paris, a large number of the fair sex are neither the one nor the other.

Mrs. Polly Ashfield, a venerable lady of Bullitt Co., Ky., has a living progeny numbering two hundred and thirty-three souls. Mrs. Ashfield is very aged, not far from, if not quite, one hundred, but possesses excellent health and activity for one of her age. She was a woman grown and married at the time of St. Clair's defeat, and gave food and drink to the soldiers as they passed her house.

At a party, on Fifth Avenue, New York, the other evening, a beautiful young lady was complimented, by a gentleman, on the simplicity and good taste of her dress. "I am so glad you like it," the lady replied:—"I made it myself, and it cost just *seven* dollars." Who will follow that fashion? It would help a great many women to husbands, and secure men better wives, if such devices were fashionable.

A certain young and fashionable lady in New York, the Home Journal says, hearing that light hair, from golden to red, was the fashion, was in despair to think she was left out in the cold, her own hair being a very dark brown. What could she do? At last, a bright idea occurred to her. She went to a well-known Broadway wig-maker, Mr. B——, had her hair entirely shaved off, purchased a golden-haired wig, and the next day appeared in all her glory, perfectly happy and perfectly content, for she was "in the fashion," and what more could be desired?

Choice Miscellany.

Written for Moore's Rural New-Yorker.

IDEAS—TO AMERICAN PUBLISHERS.

Dear Friends:—I was once collecting some facts about our early settlers;—a pioneer sent me a note saying that he was interested in what I was doing—when I "*had an idea*" he would like to have me write to him. I have never ventured to write, and the good man is now dead. Since then when I take up my pen with a particularly wise air, my folks (I greatly fear they are rather irreverent) inquire if I am sure that I have "got an idea."

Dropping *my* case, I feel warranted in affirming that during the ten years last past there have been 750,000,000 of instances where men (including women) have written, more or less elaborately, without idea. *I scarcely know what to do about it.* I think the paper and ink wasted would have made a geodical of the Pacific Railroad, &c., &c. The dear, foolish readers' time *wasted*, looms up as the hugest loss, since the advent of fire, flood, and earthquakes. This is to suggest to writers to hold on till they *get an idea*, and to advise publishers not to publish till the ideas are furnished. Yes! I see the difficulty—the printing business will pretty much go by the board: but then there are corn and cotton fields to till.

When "seven-by-nine" supplant the "blanket sheets," and the monthlies appear once a year, people can "read their notes through by course," and find time to lie eloquially on politics to their heart's content, and also destroy the noxious weeds. I am the most mistaken man in this part of the State if there have been 75 newspapers, sermons, or novels published within five years that cannot be compressed into one-fourth of their space, and retain every idea in full force.

What set me to writing this was a cut of "Andy and Seward," just now thrust under my eyes by Ben, while I was reading in a book. You will find it in Harper's Weekly of Feb. 16. The publishers omit to state that they felt a pressing need of an illustration—that their artists, who had severely strained themselves on sundry former occasions, were now very hard up—that it occurred to them that any commonplace blackguard could attract attention by abusing distinguished persons—that they took a hint, &c., &c. Whereupon it occurred to me that a publisher ought, for his own credit, and especially for the public good, to be permitted to leave any part of his sheet blank that he could not fill with decent and instructive matter: that it would be a good thing to make all the books, sermons, magazines and papers smaller to begin with.

MANNERS.

What constitutes manners? This is an important question, for manners are more closely connected with morals than they are generally thought to be—our actions and words coming from some secret motive of the soul, whether good or evil. It is undoubtedly right to make use of a certain amount of politeness, if we only know what true politeness is. The Bible says "be courteous;" though it evidently does not mean that excess of unmeaning compliment and studied complaisance which is affected by some people, and which is frequently deceptive. But there is a certain polite respect due from one person to another in reference to that person's opinion, comfort and general good feeling;—a cordial kindness—a readiness to do anything for his accommodation, even at the sacrifice of some temporary enjoyment—a carefulness not to wound unnecessarily another's feelings, or to slight the most insignificant person. After this politeness or truly good manners—which come from a quick perception of propriety of circumstances and from genuine good feeling—is shown, there is nothing more needed—no excuses for that which needs no excuse, no insinuating flatteries which flow from a selfish desire to be thought pleasing and refined. There are some people who express so much love and admiration for you that it puts you out of countenance, while it gives a sad suspicion that their politeness—if such it may be called—is all a sham, and their whole friendship a mere pretence. People like to know, when they are treated kindly, that it comes from a real goodness in the heart, and not from a mere semblance of it. Politeness is pleasant to everybody; but let it not be overdone or unnatural, for then would we rather meet with the rude but honest-hearted manners of the sturdy backwoodsman. If we only would observe the divine command, "Do unto others as you would have others do unto you," we should be using all the manners we could ask of each other, and all that God ever intended that we should use.

B.

Hopedale, Ohio.

THE MORNING STARS.

I had occasion a few weeks since, to take the early train from Providence to Boston; and for this purpose rose at two o'clock in the morning. Everything around was wrapped in darkness and hushed in silence only by what seemed at that hour the unearthly clank and rush of the train. It was a mild, serene midsummer's night, the sky was without a cloud, the winds were whist. The moon, then in the last quarter, had just risen, and the stars shone with a spectral luster, but little affected by her presence. Jupiter, two hours high, was the herald of the day; the Pleiades, just above the horizon, shed their sweet influence in the east; Lyra sparkled near the zenith; Andromeda, her newly discovered glories from the naked eye of the south; the steady Pointers, far beneath the pole, looked meekly up from the north of their sovereign.

Such was the glorious spectacle as I entered the train. As we proceeded, the timid approach of twilight became perceptible; the intense blue of the sky began to soften; the smaller stars, like little children, went first to rest; the sister beams of the Pleiades soon melted together; but the bright constellations of the west and north remained unchanged. Steadily the wondrous change went on. Hands of angels, hidden from mortal eyes, shifted the scenery of the heavens; the glories of night shifted into the glories of dawn. The blue sky now turned softly gray; the great watch stars shut up their holy eyes; the east began to kindle. Faint streaks of purple soon blushed along the sky; the whole celestial concave was filled with the overflowing tides of the morning light which came pouring down from above in one great radiance till, at length, as we reached the blue hills, a flash of purple fire blazed out from the horizon, and turned the dewy tear drops of flower and leaf into rubies and diamonds. In a few minutes the everlasting gates of the morning were thrown open, and the lord of the city, arrayed in glories too severe for the gaze of man, began his course.—*Edward Everett.*

AMERICA NO PLACE FOR FOOLS.

In a lecture lately delivered before the London Farmers' Club, Mr. James Howard, the well-known manufacturer of implements, of Bedford, England, made the following pointed remarks concerning his experiences in a recent visit to the United States:—He said he had been profoundly impressed with the happiness, prosperity, energy, intelligence and self-government of the American people. He wondered that so many people are willing to remain in the Old World, without a chance to rise, with hardly a chance to exist. If the United States were crowded as England is, the population would be nearly a thousand millions. In reply, however, to the question whether he thought large and opulent English farmers would do well to send out their sons to America, he remarked that one of the first memoranda which he made in his diary after seeing the United States was, that "it was no use to send a fool to America." Mr. Howard hit the nail on the head.

Beautiful Idea.—That was a beautiful idea in the mind of a little girl who on beholding a rosebush, on the topmost stem of which the oldest rose was fading whilst below and around it three beautiful crimson buds were just unfolding their charms at once, and earnestly exclaimed to her brother:—"See, William, these little buds have just awakened in time to kiss their mother before she dies."

Two ears and but a single tongue,
By Nature's laws to man belong;
The lesson she would teach is clear,
"Repeat but half of what you hear."

Sabbath Reading.

"IN TE DOMINE CONFIDO."—CATHOLIC HYMN.

Not in vain I poured my supplication,
Voiced in anguish that was nigh despair;
God—henceforth the Rock of my Salvation—
Hears in pity, and receives my prayer.

On His name from midst the darkness calling,
He my soul hath ransomed from its fears;
By His strength my feet are saved from falling,
And His love hath dried my flowing tears.

Therefore come I to His altars, bringing
Hymns and vows my gratitude would pay;
Hallelujahs and the voice of singing,
But interpret what this voice would say.

Henceforth, with a spirit meek and lowly,
With a faith that nothing can appall,
Hopes serene, and purpose high and holy,
I will meet whatever may befall.

If around me clouds and darkness gather,
Lo! the brighter day that dawns beyond!
Through the gloom the Everlasting Father
Sends a voice that bids me not despond.

THE POETRY OF WORDS.

In Trench's "Study of Words" we find the following history of the New Testament word "tribulation:"

Popular language is full of poetry, of words used in an imaginative sense, of things called—and not merely in transient moments of high passion, and in the transfer which at such moments finds place of the image to the thing imaged, but permanently—by names having immediate reference, not to what they are, but to what they are like.

Let me illustrate my meaning by the word "tribulation." We all know in a general way that this word, which occurs not seldom in Scripture, and in the Liturgy, means affliction, sorrow, anguish; but it is quite worth our while to know *how* it means this, and to question the word a little closer. It is derived from the Latin "tribulum," which was the thrashing instrument or roller, whereby the Roman husbandmen separated the corn from the husks; and "tribulatio" in its primary significance was the act of this separation. But some Latin writer of the Christian Church appropriated the word and image for the setting forth of a higher truth; and sorrow, distress and adversity being the appointed means for the separating in men of whatever in them was light, trivial and poor from the solid and the true, their chaff from their wheat, therefore he called these sorrows and trials "tribulations," thrashings, that is, of the inner spiritual man, without which there could be no fitting him for the heavenly garner. Now, in proof of my assertion that a single word is often a concentrated poem, a little grain of pure gold capable of being beaten out into a broad extent of gold-leaf, I will quote, in reference to this very word "tribulation," a graceful composition by George Wither, an early English poet, which you will at once perceive is all wrapped up in this word, being from first to last only the expanding of the image and thought which this word has implicitly given; these are his lines:

"Till from the straw the flail the corn doth beat,
Until the chaff be purged from the wheat,
Yea, till the mill the grains in pieces tear,
The richness of the flour will scarce appear.
So, till men's persons great afflictions touch,
If worth be found, their worth is not so much,
Because, like wheat in straw, they have not yet
That value which in thrashing they may get.
For till the bruising flails of God's corrections,
Have thrashed out of us our vain affections;
Till those corruptions which do misbecome us
Are by thy sacred Spirit winnowed from us;
Until from us the straw of worldly treasures,
Till all the dusty chaff of empty pleasures,
Yea, till His flail upon us He doth lay,
To thrash the husks of this our flesh away,
And leave the soul uncovered; nay, yet more,
Till God shall make our very spirit poor,
We shall not up to highest wealth aspire:
But then we shall: and that is my desire."

This deeper religious use of the word "tribulation" was unknown to classical, that is, to heathen antiquity, and belongs exclusively to the Christain writers; and the fact that the same deepening and elevating of the use of words recurs in a multitude of other, and many of them far more signal instances, is one well deserving to be followed up. Nothing, I am persuaded, would more strongly bring before us what a new power Christianity was in the world than to compare the meaning wich so many words possessed, and the deeper meaning which they obtained so soon as they were assumed by it as the vehicles of its life, the new thought and feeling enlarging, purifying and ennobling the very words which they employed.

Errors of the World.—The little I have seen of the world teaches me to look upon the errors of others in sorrow, not in anger. When I take the history of one poor heart that has sinned and suffered, and represent to myself the struggles and temptations it has passed through; the brief pulsation of joy, the feverish inquietude of hope and fear, the pressure of want, the desertion of friends, I would fain leave the erring soul of my fellow man with Him from whose hand it came.—*Longfellow.*

Breaking up a Bad Habit.—A minister once prayed in the pulpit that "the Lord would bless the congregation assembled, and that portion of it which was on the way to church, and those who were at home getting ready to come, and that in His infinite patience he would grant the benefit of the benediction to those who reached the house just in time for that." The clergyman succeeded in breaking up a bad habit which had resisted all legitimate appeals.

Educational.

FEMALE EDUCATION.

In a former brief notice of the incidents attending the establishment of public schools in this State and their progress, it was intimated that there were developments of interest that might, in future, receive a passing sketch. It not only appears that through this instrumentality, education has been much more generally diffused among the rising generation—but a greater degree of thoroughness and practicality is everywhere seen in the efforts of teachers. One feature of this advancement deserves particular attention, viz: The position that has been fairly earned by female teachers in our public schools! The increased and rapidly increasing number of the sex employed therein, and with marked acceptance, has been a theme of gratulation among liberal educators, in this as well as in other States. The fact of the enlarged number of female teachers has several times been commented upon by the heads of our School Department, and by the editor of the Pennsylvania School Journal. In all these notices, if I mistake not, it has been observed, that where there has been a change in any school districts of the relative number of male and female teachers, in favor of the latter, there has been a perceptible advancement in the character of the schools of such districts!

It had been long observed that such results ought to be expected, and were uniformly found in primary schools—and observation has shown that in advanced institutions where Philosophy, the Higher Mathematics and the Languages are taught, very successful instruction has been given by female teachers. Several Seminaries, organized on the Union principle in this and adjoining States, and also several select schools, have been visited in which these results were apparent.

In our own State it is believed, that at the present time a very large majority of the teachers are of the female sex, and a visit to any of the Normal Schools will show a large proportion of this class of teachers.

Among the gratifying reports received from institutes in our different counties, a full share of the Class Drills, Essays and other performances, are conducted by young women—and with what ability is known to all.

The employment of such a large proportion of young women in our public schools, it is thought, has been attended with one incidental disadvantage. The custom of awarding to them a less compensation for other employments, has tended to keep down the salaries of female teachers, and even in cases when their duties and responsibilities have been equally onerous with those of the other sex, their compensation has been much below what they have received—often little more than half! This is unjust and illiberal; for where the amount of service rendered, together with the responsibility incurred, is the same, it is believed that no distinction should be made in the wages. In most districts in the country, the disparity to which I have alluded, is not so great, but in all our large cities and in the most celebrated of our public schools, the compensation of the principals of male and female schools exhibits a shameful inequality!

But this important subject, with others connected with the elevation of the sex, is exciting attention in various parts of the world, and, as it is notorious that our lady teachers have to pay an equal amount for their normal instruction, it is believed that a sense of justice will ere long dictate a more liberal course in regard to their remuneration.—*Penn. School Journal.*

SCHOOL TEACHING.

There is too little attention paid in many of our schools to the elementary branches of learning. Although universal opinion seems to uphold Dogberry's dogma that reading and writing came by nature, we must be permitted to differ from the sage axiom.

A boy frequently passes credibly through his Latin Grammar, yet in reading English he balks at every word of four or five syllables. He may have gone to the very roots of the origin of written signs, yet the chirography of his letters home would not be unworthy of the hieroglyphics on the obelisk of Luxor, and their diction bears a family resemblance to the prattle of his little six-year old sister. He may show a marvelous acquaintance with the Nile, the Euphrates, and the Scamander, but the course of the river which flows at his feet, the character of its soil, and its influence upon the growth and prosperity of the surrounding country, are subjects upon which he has never been taught to employ a thought. He may know within a short distance how far the great table lands of Asia extend, but of their impression upon a history of man and his civilization, he is thoroughly ignorant.

Ohio Schools.—The Annual Report of the School Commissioner of Ohio says the expenditure for school purposes the past year exceeds the previous by over half a million of dollars, and that there has been a general increased activity in the educational interests of the State. Notwithstanding, the conclusion is reached that there has been accomplished, during the past year, only three-fifths of the school work annually necessary to secure to the youth of the State the least amount of school attainments hitherto regarded as compatible with public safety.

Meteorites, assuming them to be planetary specimens, show by their analysis that peridot, which is found in some of our lowest rocks, is, as Daubree, the investigator of this subject, describes it, the universal scoria, and that oxygen is also a universal element.

Useful, Scientific, &c.

SCIENCE AND SKILL ON THE FARM.

In this day what activity of thought, what blooming out of inventive genius in mechanism, what mastery of chemical affinities, what fine research into the physiology of plants and animals and even the wondrous psychology of men.

Go to the Patent office at Washington,—four thousand feet of halls and galleries filled with countless models of inventions. Many useless, perhaps; but who can tell what millions are added to our material wealth and to the comfort and enjoyment of life, by the many of great use?

Men are educated for highest attainment in mechanism and science, and it is their joy and pride to improve and invent.

Railroads have first-class engineers, trained in the best schools of the world; masters of theory in the school and of practice in the field, and thus bridges, tunnels and embankments are massive, yet symmetrical.

Iron mills have men of large powers and wondrous skill; masters of the subtle laws which must be obeyed in mine, and furnace, and forge, studying daily the magazines of both continents devoted to the working of metals, standing daily by the fiery molten masses in the mills, to watch color, strength, ductility and all else needed to perfect the product.

Manufacturers of textile fabrics—wool and cotton—have men of similar genius and capacity, often traveling in foreign lands as well as at home to know all that passes in their realm of industry, and vigilantly watching the books and journals of the world to keep up with its onward march in the processes of their own art. If they lag behind, ruin and bankruptcy come. If they happily stride in advance, honor and golden rewards are theirs.

Experiments are often tried. Of course there is common sense and sagacity in all this; the cost of the experiment in due proportion to capital, and to prospect and value of success. For instance, not many months since a company of iron-makers agreed to spend $30,000 in testing some new process. A large sum, yet its loss would not be fatal, and the chance of gain was good. Before they had spent it success came, and the outgo was small beside the prospective results. New mechanism is readily adopted, too, if better results can be gained. We saw a beautiful machine in a sewing silk factory in New England last year, used only for a single process of the work. The overseer said they had one, years before, that was excellent. Another was shown, and the old one flung aside. Then it seemed they had reached perfection, but in a year came another still, and they broke up, as almost useless, what had seemed so excellent, and paid *five thousand dollars* for the use of the latest apparatus, the change being economy, of course.

What abridgment of labor; what added power to cultivate and harvest the farm products, from the use of agricultural implements. The crops of to-day could not be raised by the old processes, with all the work of every strong arm in the country. If raised, they would rot in the fields,—for no host of harvesters and thrashers could be found great enough to fit them for market in the old way. But remember these implements were, many of them, devised not by farmers, but by mechanics. Perhaps it is fair to say that these mechanics had some practical knowledge of farming, in some cases; yet these inventions are largely owing to the active thought, the intuitive genius, the progressive tendencies of the mechanical rather than the agricultural kingdom.

See how indispensable to success in manufactures and science is this high training, in books and work, in theory and practice, this devotion of men of the best culture and powers to these efforts. The farmer has a field, broad as the world, rich as the hidden wealth of mother nature. The magnetic powers of earth and sky, the chemical attractions and repulsions of soils, and gases, and manures, the embryology and germinal forces of plants and trees, the wondrous engineering—putting all human skill to blush—by which the Divine power sends the right atom from the insensate clod to the right place in each root, and trunk, and wheat-head, or topmost twig of tallest oak,—all these and much beside are in his wondrous realm. What scope for study, for thought, for work. What ample verge for largest powers, for best culture, for boldest experiment, for most progressive yet sagacious effort. Let farmers keep up to artizans, inventors and men of science in other departments. They have more to discover and rich rewards to gain. Let them be broad, free and wise, and they can well sing,

"No pent up Utica contracts our powers,
For the whole boundless continents are ours."

SCIENTIFIC GLEANINGS.

In 1820, there were only about 100 dentists in this country; in 1840, 1,000; now there are probably 8,000.

A quick process for getting drying linseed oil is given by Dr. Dullo: boil the raw oil for two hours with binoxide of maganese and hydrochloric acid.

An English inventor proposes to give to telegraphic cables a buoyancy which will prevent their parting from strain in paying out, and facilitate raising them, by means of a coating of ground cork mixed with India rubber.

Puddling is performed in a number of English iron-works, by an automatic machine driven by steam, closely imitating the movements of the puddling tool as worked by hand, and giving, as claimed, an economy of nearly half in the consumption of coal.

Various Topics.

Written for Moore's Rural New-Yorker.

HARD TIMES vs. NEWSPAPERS.

Eds. Rural:—Having business in town a few days since I called in a store, and while waiting a short time my attention was arrested by a seedy looking customer who was grumbling about "hard times," "high prices," "scarcity of money," "want of work;" and *everything* seemed to go wrong with him. He said it was all he could do to live, and could not *half* live at that. He was a regular "croaker." An old farmer present said he wanted some wood chopped and was willing to pay the money for it; he proposed to take him home and set him to work forthwith. Grumbler inquired how much he would pay. The farmer named the price; it did not quite come up to the poor fellow's idea of what *his* services were worth; he had heard of some one who was getting more; said if he couldn't get as much as any one else he wouldn't work, and added that the world owed him a living, and he reckoned he would get it somehow.

Thinks I to myself: Poor fool! I could have told him that one night last summer this same store was broken open by some of those fellows who claim that the world *owes* them a living, and that the chaps had been sent over to Auburn to *work* for their board and clothes. It always makes me feel "gritty" to hear people grumble about things that they can't control, and finding fault when fault-finding can't do any possible good. I had a mind to "pitch in" and give him a piece of my mind; but remembering the proverb, "answer not a fool," &c., I kept quiet until, after listening a few minutes to his railing about the "unholy war" and "bad government," I merely asked him what papers he took. He said he couldn't afford to take papers when flour was fifteen dollars a barrel, and, muttering something about folks minding their own business, he stepped out and went off toward the tavern, where, I am told, he spends half his time and more than half his money. I came home thinking, and this is what I thought:—If that man (?) would take a glass of water instead of "something else" once a fortnight, and put his ten cents in a safe place, at the end of a year he would have enough to pay for the Rural a year; and then I made an estimate of what his "grog money," if rightly used, would do for his family. Allowing him to spend ten cents a day, which would be a very low estimate, in the course of a year he squanders enough to buy (at present "high prices") a barrel of flour, one cwt. pork, twenty-five lbs. sugar, two lbs. tea, a cord of wood and two good weekly newspapers.

Now, Mr. Editor, I profess to be a poor man myself, but if I do sometimes feel the effects of high prices and the inconvenience of a light purse, I have no time to lounge about the market-places to *whine* about it. Having been born of poor parents, I learned early in life that I must depend upon my own hands and head to *carry me through*. True, I have had to work hard and manage close; eschewed whisky and tobacco. Have been able during the war to keep the children from crying for bread, and have saved a little. The neighbors say I am *lucky*. If I am, I give the credit of my *luck* to hard labor, temperance, economy in the house, and three or four good papers. This last phrase was not put in merely as a "cotashun," as Nasby says, but for the truth of it. A few dollars invested in newspapers will pay more than seven per cent. interest—sometimes seven hundred. *Is that too large?* I think not. I frequently see articles in my papers which I know are worth, to me, ten times their cost; *I can't afford to do without them.* A man may do without a paper and prosper; so he *may* buy a lottery ticket and win, but the chances are a hundred to one against him in either case.

There are always plenty of sharpers ready to take advantage of those who do not keep posted. I knew a wealthy farmer who stopped his paper one year because the proprietor had found it necessary to raise the price a little. A speculator from the village came out to buy his wool. The man had not been in town for some time and did not know what the article was worth; the buyer *did;* he made a purchase and thereby *wooled* the old fellow out of nearly two hundred dollars. Some are paid by advertising in the papers. Others by reading advertisements. To illustrate: One spring I wished to get a lot of fruit trees; had formerly bought at a certain place; did not know where I could do better until I saw the advertisement of another man in the Rural. I went to see him, purchased a choice lot of trees and saved fourteen dollars, (enough to pay for the Rural five years.)

There are hundreds of good newspapers, but for a *family paper*, where but one is taken, as far as I am acquainted, I consider the Rural New-Yorker the most useful. G. W. Cone.

Stanley Corners, Feb., 1867.

SYMMETRICAL CHARACTERS.

It is a plausible theory that neither good nor evil is absolute; that each vice is the exaggerated extension of a virtue; each capable of being corrupted into a vice; so that the good and wise man becomes simply the man with acuteness enough to draw the exact line between either, and then to obey the advice—"*In medio tutissimus ibis.*" If this be a sophism, there is yet truth in it. Undoubtedly the best man, the man most useful to his species, is he whose character is most equally balanced; and the most complete life is that which has been lived, so to speak, in perspective. People with enormous faults and gigantic virtues may be very interesting in novels, but they are exceedingly inconvenient in real life. An equal person, with no offensively exaggerated qualities, is far the safest to have to do with, and especially to live with.—*Miss Mulock.*

SPITTING.

Some of our contemporaries are "airing their vocabularies" with denunciations of the practice of spit, spit, spitting, which is so rife in this country among smokers, chewers and snuffers, especially in the West. The subject is not a very dignified one, but we recollect that Henry Ward Beecher did not disdain some years ago to take up the cudgels against the practice, and even to denounce it from the pulpit. Willis Gaylord Clark, too, wrote one of his best essays on "American Ptyalism." We Americans, have often provoked the sarcasms of foreigners by this habit, and spit as we may at the exaggerations of traveling cockneys and cosmopolitan old women, it must be owned that we are notoriously the most salivating nation on the globe. Whether the corporeal juices are more abundant in the Yankee than in other persons we know not, but at any rate the practice is a most filthy one, and we wonder that gentlemen who are scrupulously neat and cleanly in other respects should addict themselves to it. It is perhaps hopeless to look for a reformation so long as the Virginia weed retains its despotism over the nation. It is enough, however, to make Nestor himself "show his teeth i' the way of smile," to hear the many eloquent declamations on woman's influence, especially on the profound homage shown to her in this country, considering that with all her charms, she cannot rescue man from the witchery of tobacco. Think of a man's pretending to love his wife, who compels her, whenever she would kiss him, to bring her chaste, pouting lips, "like two young rose-leaves torn," in contact with what by courtesy is called the mouth of a man, but which, in reality, is nothing better than a damp tobacco-box?—*Chicago Tribune.*

HOW TO TAKE CARE OF A PIANO.

It should be remembered that the pianoforte is susceptible of the change of temperature, and when tuned in one temperature will be out of tune in another. Good and well-made pianofortes will stand in tune if they are tuned at proper periods. Many people, as they wish to avoid expense, will let their instruments remain out of tune, which is a great detriment to them, as they are less likely to stand well after having been so left. We will offer a few hints in reference to the matter. A pianoforte ought justly to be tuned twice a year, at least. First, when you commence with a fire in the room; second, when a fire is discontinued. By following this course, you have the best guarantee that the instrument will remain in tune for the longest period of time.

Again, the instrument should not be suffered to remain below concert pitch; if it is for years tuned below it will never after stand up to the pitch without a great deal of labor, if, indeed, it ever stands at all. Many otherwise beautiful instruments are nearly or quite ruined for want of proper attention to these simple facts. Yet it will not answer for a professional tuner to recommend these things; if he does the people will suspect him immediately of selfish motives, and say that he is planning for his own advantage. Owners of pianofortes, who are not acquainted with the nature of the instrument, ought to bear these facts in mind, when by a yearly outlay of a trifling sum, they might save themselves infinitely more than they expend, by the preservation of the instrument, in which they have invested so much.

RESPECT FOR MONEY.

It may be a most immoral and unpoetical sentiment, but those are always the best people who have a carefulness over, and a wise respect for, money. Not *per se*—not the mere having it or amassing it, but the prudent using of it—making it our servant and not our master. As a test of character, perhaps £. s. d. is one of the sharpest and most sure. A man who is indifferent and inaccurate in money matters, will be rarely found accurate in anything. He may have large benevolence—externally; you will see him throw half a crown to a beggar, and subscribe to every charity list in the Times; but if he forgets to pay you that five shillings he borrowed for cab hire, you may be quite sure that the beggar's half crown and the twenty pounds in the printed subscription will have to come out of somebody's pocket—probably *not* his own; for there is nothing like the meanness of your "generous" people—always robbing Peter to pay Paul. A liberal man is a glorious sight; but then he must be "liberal in *all* his ways"—even-handed as well as open-handed. His expenditure must be, like his character, justly balanced and in due proportion.—*Mrs. Craik.*

Beef Forty Years Old.—A letter from Stockholm says:—"At the last meeting of the Idun Society there was served at supper a curious sort of beef that had been preserved for forty years. In 1827 Captain Parry had placed at School Point, at Spizenbergen, a depot of meat. The flesh was in tin boxes, buried beneath a quantity of stones. The white bears had displaced some of the stones and destroyed several of the boxes, but a few still remained intact, and were brought to Sweden by the Swedish Scientific Expedition. It was one of these boxes that Professor Thoreil of Lund, had given to the Idun Society, who found the meat perfectly eatable and of good flavor."

Substitute for Lint.—The Surgeons of Vienna have lately employed, with much success, the unsized paper, called papier Joseph, for dressing wounds, as an excellent substitute for lint. It does not change in contact with water; it is a bad conductor of heat, and preserves, in consequence, the wounds from atmospheric influence. From its absorbent nature it sucks up the matter, maintains the wounds in a state of dryness favorable to healing, and it may be used in certain circumstances more advantageously even than lint.

Reading for the Young.

THE RABBIT ON THE WALL.

The cottage work is over
The evening meal is done:
Hark! through the starlight stillness
You hear the river run.
The little children whisper,
Then speak out one and all;
Come, father, make for Johnny
The rabbit on the wall.

He smilingly assenting,
They gather round his chair;
"Now, grandma, you hold Johnny—
Don't let the candle flare."
So speaking, from his fingers
He threw a shadow tall,
That seems the moment after
A rabbit on the wall.

The children shout with laughter,
The uproar louder grows;
Even grandma chuckles faintly,
And Johnny chirps and crows.
There ne'er was gilded painting,
Hung up in lordly hall,
Gave half the simple pleasure
Of this rabbit on the wall.

ORIGIN AND SEALS OF THE STATES.

NUMBER FOUR.

VIRGINIA.

The first landing of white men for settlement was at Jamestown in 1609, the famed Captain John Smith among the number. After his return to England, famine and riots had cut off all save 60 of the 500 persons in the Colony, and these had embarked for the mother country, but were induced to stay by Lord Delawar, who came with fresh supplies. For a time they prospered, but many trials marked the career of the early colonists.

One of the original States of the Union, always influential, from the ability of her leading men, her history is familiar to every intelligent person.

SEAL OF VIRGINIA.

The tolling bells of the passing steamboats, as they move by the beautiful Mount Vernon, where rest the remains of Washington, give proofs of the reverence for one still "first in the hearts of his countrymen."

The level range of lands near the coast, the rich valleys of the James, the Shenandoah, and other rivers, the rough sides of her central mountains, and the broken surface of the western part of the State, give variety of soil and productions. West Virginia has iron mines and mills of great extent. Coal abounds in the same region, and the Kenawha salt works send over the West vast quantities of that saving staple. Wheat of great excellence is raised in the eastern valleys. Tobacco is a great staple, and in variety of resources of field, mine and fruit Virginia has great wealth. The area of the State is 65,624 square miles. Its population in 1860, 1,596,318.

SEAL OF MARYLAND.

The territory was granted in 1632 by Charles First to Sir George Calvert, Lord Baltimore, a Roman Catholic, but his son, Cecelius, inherited it, with all his titles, on his death, which occurred very soon, and for forty years directed the affairs of the colony as proprietor. Free toleration of religious opinions was established and in 1776 a Constitution was framed. While wheat of famed excellence is raised. Tobacco, sweet potatoes and fruits thrive well.

Baltimore, named after Lord Baltimore, first Governor and brother of the proprietor, is a city of large trade and manufactures, has many elegant private public buildings, and counts over 200,000 people.

The area of the State is 13,950 square miles, and its population is 687,049.

SEAL OF DELAWARE.

Was settled by Swedes and Finns about 1627, under the auspices of Gustavus Adolphus, the great Swedish King. In 1655 the colony passed into the hands of the Scotch, and in 1664 passed under English sway. Its Constitution was framed in 1776.

There are large manufactories in and near Wilmington, and mills for flouring the excellent wheat raised in the State. Next to Rhode Island, it is the smallest State of the Union. A railroad just opened through its center from north to south gives access to fine lands. Both soil and climate favorable to fruits and grain. Population in 1860, 112,216.

If the world were crumbled to the finest dust, and scattered through the universe, there would not be an atom of the dust for each star.

SPRING CAMPAIGN
OF THE
RURAL BRIGADE!

A NEW QUARTER OF THE RURAL

Began April 6.—a good time for new clubs or additions to old ones to commence, though we can still furnish back numbers from Jan., or subscriptions may date from Feb. or March 1st. March is a good month in which to fill up Premium Clubs already begun, and also to form new ones. There are hundreds of localities in which clubs may yet be organized and Rewards of Merit secured. Our former Premiums are continued, and several new ones added,—(see part in RURAL of 9th, and full list in Supplement.)

ANOTHER SPLENDID PREMIUM!—By request we have added LAMB'S FAMILY KNITTING MACHINE to our list of Premiums. For 65 Yearly Subscribers (at least 50 of them being *new*) at club rate, $2.50 per copy, we will give a Lamb Knitting Machine, the Cash Price of which is $65.00.

MORE YET.—We have also added DOTY'S WASHING MACHINE, price $14, and will give it to every person remitting for 30 subscribers (20 of them *new*,) at club rate;—and the CHAMPION CLOTHES WRINGER, price $9, which we will give for a club of 15 subscribers (10 of them *new*,) at club rate.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., APRIL 20, 1867.

NEWS OF THE WEEK.

Washington.

THE Senate—only Fessenden and Ferry against—have ratified the treaty by which the Russian territory on the Northwest coast will be ceded to this country on payment of $7,200,000, within six months.

Acceptance or rejection of Presidential nominees for office is the chief business.

Mr. Sumner offered a resolution that the President of the United States be requested to furnish the Senate, if in his opinion not incompatible with the public interests, copies of any official opinions which may have been given by the Attorney General, the Solicitor of the Treasury, or by any other officer of the Government, on the interpretation of the act of Congress regulating the tenure of office, and especially with regard to appointments by the President to office during the recess of Congress. The resolution was agreed to.

During the war the corporation of New Orleans sold bonds to citizens of Louisiana for the purpose of raising funds with which to fortify the city against the Federal forces, and after Gen. Butler captured the city he made several assessments, amounting altogether to 75 per cent. of the gross amount for the poor of the department. Several petitions have been filed asking that the amount of these assessments be refunded, but without success, and Robert J. Kerr of New Orleans, has recently arrived, authorized by the interested parties to act as their agent in procuring its return. If he succeeds, Gen. Butler will, in response to the demand of prominent Louisiana Radicals, bring the whole subject before Congress.

A World's special says:—The allotment of Chief Justice Chase by the Supreme Court to the Virginia Circuit in pursuance of the act of Congress providing a new allotment, it is thought here, must lead to the trial of Jeff. Davis.

The Clerk of the House of Representatives, in addition to the announcements heretofore made, selected the following named papers in the Southern States to publish the laws and public advertisements:

In Louisiana—The New Orleans Republican, New Orleans Tribune and the Homer's Illiad.

In Mississippi—The Meridian Chronicle and the Vicksburg Republican.

In Arkansas—The Little Rock Republican.

Papers have been selected in all the Southern States with the exception of two in South Carolina, two in Florida and one in Texas.

The Military Bill in Virginia.

FORTRESS MONROE, April 12.—A case has recently arisen in Norfolk whereby the provisions of the Military Reconstruction bill will be called into operation and probably excite considerable interest in the State. The following is a copy of the military order issued by the commandant of the United States forces in Norfolk:

HEADQUARTERS POST OF NORFOLK, }
NORFOLK, Va., April 7, 1867. }

SIR:—You are hereby ordered to appear at the headquarters on Tuesday, the 9th, at 11 o'clock A. M., for the purpose of giving evidence before a military board in the case of E. W. Whipple, citizen, against John M. Drewry, Justice. By command. MAJ. D. BISSELL.
M. N. HOFFMAN, Lieutenant United States Infantry, Adjutant.
To Justice M. Drewry.

Through the interposition of Mr. Whipple the case was brought before the military authorities and yet awaits the decision of Gen. Schofield.

The board composed of Lieuts. Hoffman and Wagner, merely entered upon a preliminary examination.

The result of the investigation remains a secret and has not yet been disclosed. The case with the proceedings were forwarded to Gen. Schofield and now awaits his action.

The Indian Country.

THE correspondent of the St. Louis Democrat with Gen. Hancock's Indian expedition, writing from Fort Harker, on the 2d inst., says a Council was held at Fort Dodge, on the 24th ult., between Major Dodge and several of the chiefs of the Kiowas.

The latter professed much friendship for the whites, and desired to be at peace with them, but stated that the Blackfeet, Sioux, Cheyennes, Arrapahoes and Cananches, are determined on war and will have it.

The Kiowas also spoke about several northern tribes banding together for war, making overtures to the southern tribes to join them, and predicted that the whites would have their hands full before long.

The indications all favor a grand Indian Confederation and a bloody war.

The Herald's special says:—Gen. Sully, who is on his way to investigate the Fort Phil Kearney massacre, reports that on his passage out from Fort Laramie he has observed decided indications of a hostile gathering among the Indian tribes of that region.

Fenian.

THE Herald's Buffalo special says:—The commander of the military forces at Fort Erie has notified the authorities that a prominent engineer, connected with the Fenian organization, has been taking plans of the frontier below Suspension Bridge, and asks for re-enforcements to be stationed at the village of Niagara and Suspension Bridge. It is feared that the Fenians intend another movement.

Destitution and want are said to prevail to a very painful extent among the people engaged in the late Fenian rising in the south of Ireland.

ST. LOUIS, April 11.—A very enthusiastic Fenian meeting was held here last night. One hundred men joined the 7th Fenian regiment. A considerable amount of money was subscribed to aid the Fenian cause.

DUBLIN, April 11—Evening.—Patrick Condon, otherwise called Gen. Massey, a leader in the late Fenian insurrection, has turned informer and is not indicted.

Mexico.

AFTER a promise to our Government by the Captain-General of Cuba that enlistments in Havana for Maximilian should be stopped, two hundred more enlistments have been made, and our Government has taken the matter up.

The Imperialists at Vera Cruz are very generally arming themselves. Perez, Gomez and Cuevas have resigned, and are coming to Havana. General Scboda is in command. The seige is closely maintained. The water has been cut off, and the last bullock in the city was killed on the 31st of March.

The United States men-of-war Tacuna and Lahoma were at Vera Cruz.

Foreign.

THE Sultan threatens to declare war against Greece because of the encouragement given to insurrections on the Turkish frontier.

The Western Powers do not interfere. Should war occur Russia would probably act for the Greeks, and the old Eastern question be opened in a conflict for the Key to the Bosphorus.

A Paris letter to the Herald says a general organization of Christians in Eastern Turkey and Greece, now completed, makes the destruction of the power of the Turks in Europe inevitable in case of a war.

BERLIN, April 11.—Count Bismarck has sent an energetic note to Paris demanding of the Emperor Napoleon his reasons for arming. He says: Prussia holds France responsible for such a step and asks instant cessation of warlike preparations.

RASTADT, April 11.—The Prussian garrison of this fortress has been re-enforced recently by two regiments.

PARIS, April 11.—The Moniteur this morning contains an editorial on the European situation, the tone which is pacific and tranquilizing.

LONDON, April 11.—The Princess of Wales is at the point of death. A surgical operation upon the bone of the knee is necessary to save her life, but she cannot endure the pain and is too weak to take chloroform.

LONDON, April 15—2 P. M.—Since the opening consols have advanced ¼, and are now quoted at 91 for money.

American securities are quoted at this hour as follows:—Erie, 38¼; Illinois Central, 76½; U. S. 5-20 bonds, 74.

LIVERPOOL, April 15—2 P. M.—Cotton has become considerably firmer since the opening, and an advance of fully one-eight has been established in prices. Middling Uplands are now quoted at 12@12⅛d.

NEWS PARAGRAPHS.

YELLOW FEVER is prevailing in Panama, though it is attempted to conceal the fact. There is none at Aspinwall nor on the vessels in the bay.

LATE news from Montana says mining operations this season will be very much extended, and the estimated yield of precious metal is $36,000,000.

THE Post-office Department has decided to give up the system of contracts for carrying the mail and to have it carried by weight, on the most important routes.

THE New York Annual Conference of the Methodist Episcopal Church was opened on the morning of the 3d inst, in the Bedford Street Church, New York city.

CAPT. JOHN POWELL of Brooklyn, is building a vessel 23 feet long, to be propelled by four sails arranged like the sails of a windmill, in which he intends to cross the Atlantic.

ALL hopes for the safety of Dr. Livingstone, the celebrated African explorer, have been abandoned. Later advices from the Cape of Good Hope confirm, beyond a doubt, the report of his death.

AN explosion in the Clover Hill coal pits, Chesterfield Co., Va., occurred on the 3d; twenty-five white and fifty colored miners were killed. The pits to-day are burning, but the shafts were closed to extinguish the fire, so the bodies cannot be recovered.

HONOLULU advices to March 11th have been received. The corner stone of the proposed Reformed Catholic Cathedral has been laid by His Majesty, assisted by Bishop Satary and the clergy of the Church. It is intended as a memorial to the late king.

THE report from Natchez is that there is much more suffering among the whites than the blacks; and that but few complants are made at the Freedmen's Bureau in that district. The colored schools are flourishing, and the freedmen are doing a great deal themselves to support them.

FULL returns from every town in Connecticut show that the vote is as follows:—English, 45,787; Hawley, 44,808; English's majority 979. The Senate stands eleven Republicans and ten Democrats; the House, one hundred and twenty-seven Republicans and one hundred and eleven Democrats.

AT a meeting of Confederate bond-holders in London, it was resolved to furnish a committee with funds to institute legal proceedings against the United States, and protesting against the United States Congress and the legislatures of Southern States passing any law to prejudice their rights and the contract made with such States.

CONGRESS has just passed a law organizing an association, national in its character, for the purpose of erecting a monument commemorative of the great charter of American freedom. The trustees for the Northern and Northwestern States are as follows:—Representative John T. Wilson of Ohio, Representative Orth of Indiana, Representative Cullen of Illinois, Senator Harlan of Iowa, and Representative Driggs of Michigan.

No little curiosity has been excited by the fact that parties in Washington are making industrious search for nickel pennies of 1858, paying eagerly from 15 to 30 per cent. premium for them. As the coin is of too recent date to be in demand as relics for collections, the theory is that, by some accident at the time of their coinage, these pennies contain a large per centage of gold, which fact has been discovered by the parties engaged in the search.

NATIONAL BANKS.—The actual circulation of the notes of National Banks on the 6th inst. was $298,888,674.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE, }
ROCHESTER, April 10, 1867. }

THE money market here has been affected somewhat by the pressure at the East, but the sound condition of the Rochester banks has enabled them without much difficulty to afford their regular customers such accommodation as was necessary. The preparation for the quarterly statements of the first of April disturbed monetary affairs throughout the country more than was anticipated, for a longer time than was supposed elapsed before financial matters resumed their ordinary course. It seems unfortunate that all the banks in the country should be required to report at the same time, if the quarterly reports cannot be made without creating a serious check upon business interests. There is this advantage, however, in requiring simultaneous returns: weak institutions cannot assist each other in making a temporary showing of soundness, when their condition is really bad. The next quarterly statement, it is hoped, will be made with less derangement to trade than was caused by the last.

The rumor of disturbances abroad, and the decline in American securities in Europe, had its effect upon the market, particularly in keeping up the price of gold. The war rumors are not confirmed, and the English market shows an improvement in consols, as well as in American securities. Money is now fairly easy in New York at 6@7 per cent., with more disposition to lend than for the past two weeks. The Saturday's steamers from New York for Europe took out only $103,800 in specie. United States 5-20s sold in London, April 5, at 75¾; soon after, a decline commenced and they were sold on the 10th as low as 73¼. On Saturday last they had run up to 74¼.

The money markets of Europe are reported to be largely supplied with idle capital, and rates of interest continue exceedingly low. The stock of bullion in the Bank of England is large, and each weekly statement, for some weeks past, shows an increase. The amount held on the 27th of March was £19,627,232, showing an increase of £165,786 since the previous weekly statement. The increase of bullion in the Bank of France is still greater. Total stock in bank at the last statement, £30,957,700. Increase for the week, £512,000.

Trade is not nearly as active in England as last year. This is shown in London by the clearance of checks at the London Clearing House. The amount thus far this year is less by one-fourth than it was for the corresponding time last year.

The Comptroller of the Currency is preparing a statement of the condition of the National Banks, as shown by their returns of April 1st.

In March, the United States Assay Office at New York received deposits of gold amounting to $510,000; of silver, $53,500.

The exports of treasure from California have recently been heavier than in the corresponding season in 1866.

Bills of the Bank of Poultney, (State bills,) Poultney, Vt., are not redeemed in Boston.

The failure of the Bank of Prairie du Chien, Wis., is announced.

The stockholders of the Hudson River Railroad have voted to double its capital stock, making it $18,037,400.

The organization of the new Atlantic & Pacific Telegraph Co. has been completed. Capital $5,000,000.

COTTON.—The market for cotton has been unsettled for some days and is lower. The last Boston quotations for middling, nominal at 28@30c. The Liverpool market is depressed, and there are heavy failures reported among the Liverpool cotton dealers.

WOOL.—The sales in Boston last week were something larger than reported the week previous, and foot up 750,000 lbs., at a range of 50@76c. for fleece, and 35@67c. for the various grades of pulled. Of the latter 7,000 lbs. double extra were sold at 65@67—the outside figure being for Rochester brand. The Boston Bulletin of Saturday says:—"Holders are rather more inclined to press sales than they were last month, and are closing out the least desirable portion of their staple. But there is no discount, nor is there likely to be, on the better grades of either domestic fleece or pulled, which are selling in small lots as wanted for use, and at very full prices."

WHEAT AND FLOUR.—The wheat and flour markets have been excited, both east and west, the past week, and prices have further advanced. The reports from Milwaukee show great excitement at that point. Receipts continue light. This may be accounted for in part by the poor state of the roads, but it is impossible to disguise the fact that the amount of wheat to come forward must be comparatively small this season.

Wheat is being shipped from Milwaukee to Minnesota. The New Hampton, Minn., Courier says:—"Many of our farmers are without wheat for seed, to say nothing of breadstuffs from this till harvest."

The spring is backward in the Western States, and farmers may not in consequence sow the usual amount of spring wheat. It is hoped, however, they may see the importance of devoting an unusual breadth to this crop. All they can raise will be wanted, particularly if there should be a failure, or partial failure, of winter wheat. All accounts from the localities where winter wheat is raised represent the prospects now as exceedingly favorable. But spring wheat growing should by no means be neglected.

CORN.—The market for corn has improved, and there is an active demand. The amount of sound, merchantable corn at the west is comparatively small. The damage this crop sustained by the frost and rains last season was immense.

Rochester Wholesale Prices Current.

Flour, Feed, Grain, Etc.		**Fruits, Vegetables, Etc.**	
Flour, w't wh't	$17,00@17,50	Apples, green,	$0,75@ 1,25

THE UNIVERSAL CLOTHES WRINGER

AND

DOTY'S CLOTHES WASHER.

THE UNIVERSAL CLOTHES WRINGER, with cog-wheels, has taken the First Premium at the State Fair of all the *NORTHERN STATES*, FIRST PREMIUM AT THE last two Fairs of the American Institute; and has been awarded the First Premium by the unanimous vote o the Committee of the Grea' NEW ENGLAND FAIR of 1866, after the most scrutinizing trial of the various machines of numerous competitors.

The UNIVERSAL CLOTHES WRINGER wrings clothes almost dry, without injury to the most delicate garments, and never gets tired or out of order.

Mrs. Cyrus W. Field says: "It saves great labor without injury to the clothes. I therefore most decidedly recommend its use."

DOTY'S WASHING *Machine* has again been awarded the First Premium at the Great New England Fair of 1866. Also at the State Fairs of New Hampshire, New York, Michigan, Wisconsin, Minnesota, Iowa, &c., and took the First Premium (the Silver Medal) at the last Fair of the American Institute.

Doty's Washer using boiling-hot suds, saves three-fourths the labor and time—takes out all the dirt—no sore hands—no fruitful air—no injury to the clothes.

Solon Robinson says:—"Our 'machine,' after a year's use, is thought more of to-day than ever."

On receipt of the price from places where no one is selling, we will send one Washer and one Wringer, either or both, free of freight charges. Family Size Washer, $14; No. 1½ Wringer, $10; No. 2 Wringer, $8,50.

☞ Exclusive right of sale given to the first responsible applicant from each town.

Send for Circulars, giving wholesale and retail terms. C. E. BROWNING, General Agent, No. 32 Courtland St., N. Y., (Opposite Merchants' Hotel.) 900

WANTED—A GOOD, THOROUGH, COMpetent traveling, commission agent, in every county in the U. S. $300 per month guaranteed. Apply at once to C. RICH & CO., Poughkeepsie, N. Y. 900-tf

OF THE
DODGE HARVESTER, OHIO AND BUCKEYE PATENTS.

UNION SPRINGS, Cayuga Co., N. Y.,
4th Month, 9th, 1867.

DODGE & STEVENSON MAN'F'G CO.:

Gentlemen—I have used your machines for a number of years with great satisfaction; cutting over 300 acres a year. They are very fine mowers, and last season I used your machine with the Self-Rake attached, and cannot see how it can be excelled. It was used with perfect success in cutting over 200 acres of Wheat, Barley, Oats, Clover Seed, and 30 acres Corn Fodder, at one-third the expense of hand raking, and without any breakage or detention. I can recommend the Dodge Harvester, Ohio and Buckeye Patents, to those who desire a first-class machine.

THE GREAT AMERICAN TEA COMPANY

Established, 1861.

THE IMMENSE PROFITS OF THE TEA TRADE.

THE PROPRIETORS OF THE GREAT AMERICAN TEA COMPANY became fully convinced, several years ago, that consumers of Tea and Coffee were paying too many and too large profits on these articles of every day consumption, and therefore organized THE GREAT AMERICAN TEA COMPANY, to do away, as far as possible, with these enormous drains upon the Consumers, and to supply them with these necessaries at the smallest possible price.

To give our readers an idea of the profits which have been made in the Tea Trade, we will start with the American Houses, leaving out of the account entirely profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Tea.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same price (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₱ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ₱ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ₱ lb.
GUNPOWDER (Green,) $1,25, best $1,50 ₱ lb.

All goods sold are warranted to give satisfaction.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.

Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,

Post-Office Box, 5643 New York City.
No. 640 BROADWAY, corner Bleecker street.
No. 461 EIGHTH AVE., north corner 31th street.
No. 299 SPRING STREET.
No. 205 FULTON STREET, Brooklyn, cor. Concord St.
No. 133 GRAND STREET, Williamsburg.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by Post-office money orders, or by Express, as may suit the convenience of the club. Or, if the amount ordered exceed thirty dollars, we will, if desired, send the goods by Express, to *"collection delivery."*

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

OLIVET, Mich., Jan. 29, 1867.
To the Great American Tea Company,
Nos. 31 and 33 Vesey street, New York.

Sirs:—The goods which I ordered for Olivet Tea Club No. 1, were received in due time, and have given good satisfaction. Really the exhilarating power seems to be contagious, for most of the fair matrons in our neighborhood are inquiring when I send again. Enclosed I send O. T. C. No. 2. I shall probably send again in a few days. Mrs. Ingersoll, who was principal mover in club No. 1, sends her respects for the complimentary package, and says she drinks her tea with more relish than she has for many years before. Very truly yours,
E. I. INGERSOLL.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to us.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name. The numbers of our Houses are advertised above.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department—direct to

GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.

Post-Office Box, 5643 New York city.

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce throughout the United States the GENUINE COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, bind, braid and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made. Address SECOMB & CO., Cleveland, Ohio.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured. 899-1t

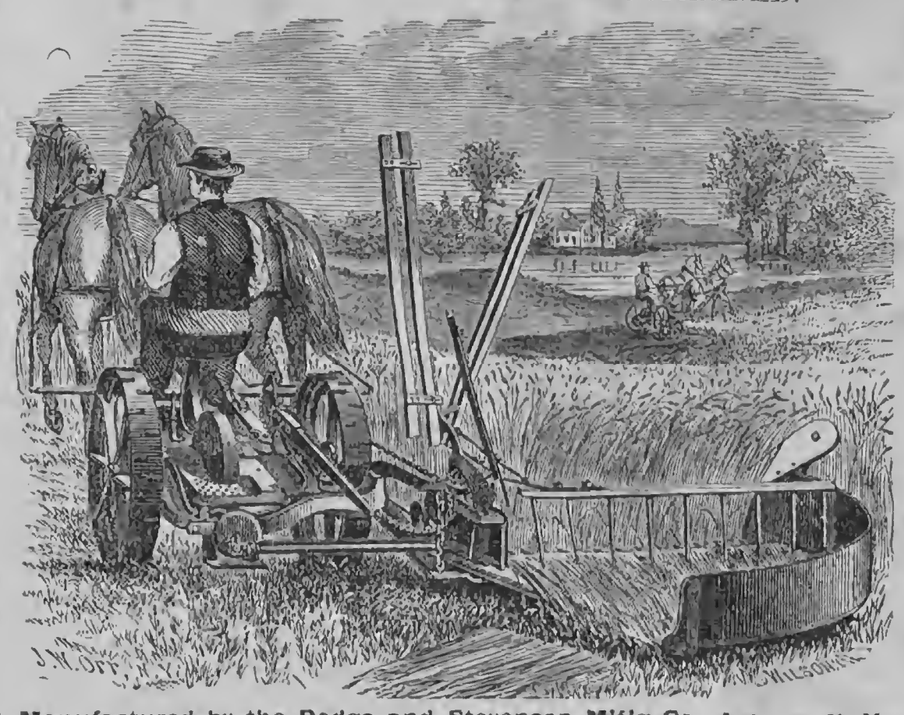
DODGE'S
PATENT REAPER AND MOWER,
AND SELF-RAKER,
OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:
L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a REVOLVING RAKE, and does its own reeling, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED
The Special Diploma and Grand Medal of Honor,
AS THE BEST
COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and FIRST PREMIUMS, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

SILVER PHEASANT'S EGGS FOR SALE, $1 ₱ dozen, by express. Address
C. W. CONE, Stanley Corners, Ont. Co., N. Y.

H. P. WESTCOTT'S ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the larges quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable shile, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (⅔ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (⅓ bbl.,) $10; No. 5, (1-5 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. S. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. Moore, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

A. B. MILLER, PROPRIETOR,
BALTIMORE, MD.

NATURE'S NOBLEMEN.

BY M. H. CORD.

"Who are Nature's noblemen?
In the field and in the mine,
And in dark and grimy workshops
Like Golconda's gems they shine:
Lo! they smite the ringing anvil,
And they dress the yielding soil,
They are on the pathless ocean
Where the raging surges boil!
They are noble—*they who labor*—
Whether with the hand or pen.
If their hearts beat true and kindly
For their suffering fellow men.
And the day is surely coming—
Loveliest since the world began,
When good deeds shall be the patent
Of nobility to man!"

The Story Teller.

AUSTRALIAN LIFE ILLUSTRATED.

SURVEYING and exploring a new district in Queensland is a matter of some hardship and peril. In the evenings, after the day's work is over, when we have finished our "damper," salt beef, and tea, and are smoking our pipes round a blazing log fire, many a strange story is told. My men are old bushmen, and are up to a thing or two, especially my chainman.

He is a harum-scarum, reckless, handsome, genuine Irishman of very respectable family, induced to emigrate many years ago as a hopeless scapegrace. He has knocked about New South Wales and Queensland in all sorts of capacities. I fell in with him by chance. I was fortunate enough to save his life, engaged him, and believe him to be as devoted and fine a fellow as there is in the world.

A few years ago my chainman was journeying in the direction of Sydney from a place in the interior called, I think, Jinballah. Having stopped at several public-houses on the way, he found himself still on his journey, with a ten-pound note, half a sovereign, and a half-crown in his pocket. About a hundred miles from Sydney he found some confusion in a public house which he had entered to obtain refreshment. The landlady was crying bitterly, and the servants were in a great fright.

When he entered, the hostess eagerly exclaimed:

"You are not one of them, are you?"

"What do you mean?"

"Och, its the Bush Rangers I mane. You aren't one of thim?"

"No. Have they been here, then?"

"Yes, half an hour ago, and cleared my house of all I had. Musha! The widdy's curse be upon thim!"

"Have they gone down the road or struck right into the bush?"

"Gone down the road to stick up all they meet wid."

"How many?"

"Three; sorry less."

Now, my chainman *must* go down to Sydney. He could not take the bush for it, for he did not know the country well enough. He might evade the Bush Rangers by some lucky chance, either by the aid of night or other means. He was dressed, of course, in the gear of a thorough bushman, and they might spare him on the old Scotch principle, "Hawks pyke not oot hawks' een." Besides, he might conceal his ten pound note, and it would not break his heart to lose his half-sovereign and half-crown. On the whole, then he saw nothing for it but to resume his journey. He chose his short sock, as the best place for the bank-note, and thrust the note into it without folding it up.

Forth he went, and rode rapidly on for about an hour without seeing the rangers; however, he distinctly saw the fresh tracks of four horses in advance. At an abrupt turn of the road, he was covered by three revolvers, and addressed by three voices:

"Dismount!"

No help for it. He got off his horse and took a survey of the "glorious three." One was a very good natured looking fellow; the second seemed rather backward; the third was an unmistakable ruffian.

"Where have you been? You're a digger."

"I'm just coming from the Wanoorah Diggins."

These gold fields were noted for their poverty.

"How much money have you got?"

"One half-sovereign and one half-crown."

"Is that all?"

"That's all."

It was the good natured man who spoke in this dialogue.

"I think, Jim, we may let him off. The poor devil must be hard up, coming from those wretched diggings."

"We'll have something to say to him first," replied Number Three, whose accent was Irish; and this gave my chainman some hope.

"Well, at all events, he must have a glass of grog." My chainman accordingly drank a bumper that took his fears away.

"Walk before me into the bush," then went Number Three.

"Not a bit of it, Jim; let the poor devil go. Why, he's a countryman of your own. What do you say, Jack?"

"Never mind what Jack says!" replied Number Three. "Don't make an ass of yourself, Dick! I'll have my way in this."

He motioned to my chainman to go on; and on he went until they reached a belt of scrub.

"Halt! Now listen to me. It's my opinion that you are a schemer. If I find one shilling on you more than you have acknowledged to," (he swore a terrific oath,) "I'll blow your brains out on the spot. Strip."

My chainman owned to me that for a moment he felt a mortal terror, but he shook it off, and proceeded to undress.

"Take off your jumper first—now your boots. Now your flannel shirt. Throw them over to me."

He examined thoroughly.

"Take off your boots. Throw them here. Now your trousers."

He found in the pockets the two coins. And my chainman hoped that the search was over. Not yet.

"Take off your socks!"

To hesitate was instant death. The ruffian shook both socks. Let the reader fancy the beating of my chainman's heart, meanwhile! As he had thrust the note into the sock without folding it up, and as the robber had caught the note with the thick sock between his finger and thumb, it was thus prevented from dropping out. To such small things a man may owe dear life itself.

"Now be off."

"What!" said my chainman. "Would you send a man away stark naked, and in this weather too?"

"You ought to be thankful for your life."

Just then up came Dick.

"Haven't you searched him yet. What the devil's the use of keeping him in the cold?"

"You mind your own business, Dick."

"Jim," retorted Dick, "you know I can stand a good deal; but you're not the man to bide a quarrel with me when I'm roused. I won't allow you to do as you did last time. Give this man his boots and trousers; keep his jumper, if you wan't it."

Thus they split the difference, and my chainman was left on a bush-road without a horse and only half clad. He had his ten-pound note, however.

After walking briskly for about twelve miles, he came to a sly grog shop, where he found two men conversing—one evidently the host, the other (he knew as well as if it had been revealed to him) was the fourth bush ranger.

In the endless wilds of Australia, there is not a Bushman whose life does not often depend on "tracking;" and so wonderful do Bushmen become in this respect, that they can tell the date of every mark on the ground. I have heard them debate as to whether a black's track was an hour old or two hours. Now, my chainman had seen the tracks of *four* horses in company, and he had carefully tracked the fourth up to this "humpy," close to which it was standing quietly tied by the bridle.

"If I don't ride that horse away from this to-day," said my chainman to himself, "may I never have the blessing of St. Patrick!"

The host was a little man; the bush ranger was a tall and muscular villain, with long black hair falling down his shoulders—a bad sign, as it showed he had been "long out."

They had been talking on a subject that had excited the bush ranger, and that subject, as far as my chainman could gather from the muttered words he overheard at his entrance was, that the police were on their way up and not very far off.

My chainman gave the masonic sign; it was answered by the host.

"Hallo?" said the bush ranger; "where do you hail from?"

"I have come down the road."

"Haven't you got a horse?"

There was no use shamming here, so my chainman at once replied:

"I was stuck up and robbed twelve miles from this by the bush rangers."

"The devil! Are they so near? Isn't it fortune, Casey, that I know this in time?"

"Why?" said Casey. "You are not going that way; you came from that direction yourself a while ago."

The bush ranger at that moment was lighting his pipe with a burning coal, and his back was turned. My chainman gave a look and made a gesture which was perfectly understood by the shrewd little host.

"I must be going, old man," said the bush ranger, after his pipe has been successfully lighted. "Let's have a glass of grog all round first."

"All right!" said the little man. Three glasses of rum soon stood before the party. My chainman put his hand forward to take up one of the glasses, but Casey, with an awkward apology about helping the gent first, handed the robber that very glass, gave another to my chainman, and drank off the third himself.

My chainman understood all this, and hoped that the stupifying potion would soon take effect. But no. The ruffian's constitution was as sound as the foundation of St. Paul's, and the draught only increased his sharpness and penetration.

"Do you think I don't see through you?" said he, with a diabolical glance at Casey. "I am not sure of *you*," (this was to my chainman;) "if I was, I know what I should do."

"What have I done, sir!" said Casey.

"What have you done, you villain? Everything. I'll have your life!"

Now, although my chainman did not think that the ruffian meant the threat literally, yet he made his little preparations. The fellow was armed to the teeth. He had two revolvers in his side belt, and a double-barrelled gun stood close to him. A large sheath-knife hung on his hip. Every second increased the ruffian's fury. His curses and threats were appalling. Casey, the other side of the fire, sat the picture of dismay.

"Why don't you answer me?" the robber at last shouted.

"Because," gasped Casey, "I have nothing to say."

"Nothing to say?" roared the bush ranger. "Take that."

He drew a revolver, half rose from his seat, and with wonderful quickness, leveling the weapon at Casey. But my chainman was quicker than he. He had quickly picked up an American tomahawk which lay on a block beside him, and just as the bush ranger had given the half turn to fire, down came the tomahawk on the back of the neck. The pistol exploded at the same moment. The wretched man gave hardly a quiver. He was dead in a second. The two survivors looked into each other's faces.

"Of course he was a bush ranger?" inquired Casey, after a long pause.

"Of course he was," said my chainman; and he then told him the whole story. "But even if he were not, I did it in self-defence, for he would have shot me the next minute."

"You saved my life, however," said Casey, "and that is everything to the purpose."

"I thought at first," said my chainman, "that you were in league with the robbers."

"Probably I might have been forced to be so in time," was the reply; "but I have not been here long, and, rely upon it, I shan't be here much longer."

"What is best to be done?" said my chainman. "Shall I ride on and meet the police?"

"For the Lord's sake don't!" exclaimed the other. "His mates are sure to be here in no time, and they'll torture me if they find this out."

"Get up behind me, and we'll both ride off," said my chainman.

"Then I leave everything belonging to me to be plundered."

"Well, then, man, what is it you want? What's your advice?"

"Let us throw the body down that rock into the scrub there, and then clean up. You ride off. I'll pretend that their mate was after you. If you meet the police don't say a word about it."

"But the horse and saddle may be stolen property."

"You must chance that. It's the only plan."

My chainman adopted the only plan, rode down to Sydney, and sold the horse.

"But now, sir," said he, "comes the strangest part of the story, and, if I didn't feel sure that you would believe me, I would never tell it. Years passed, and I happened to be traveling through a town where the assizes were going on. I heard that a great murderer was to be tried, so I went to hear the trial. I did hear the trial. As I live and must die, one of the officials of that court, and not the lowest either, was Jim, the bush ranger, who stripped me!"

"Of course you communicated your discovery to the police?"

My chainman gave a dry cough, and, I rather think, got red in the face.

"I never much cottened to the police, sir, at any time—least of all then. Not so much for my own sake as for others.

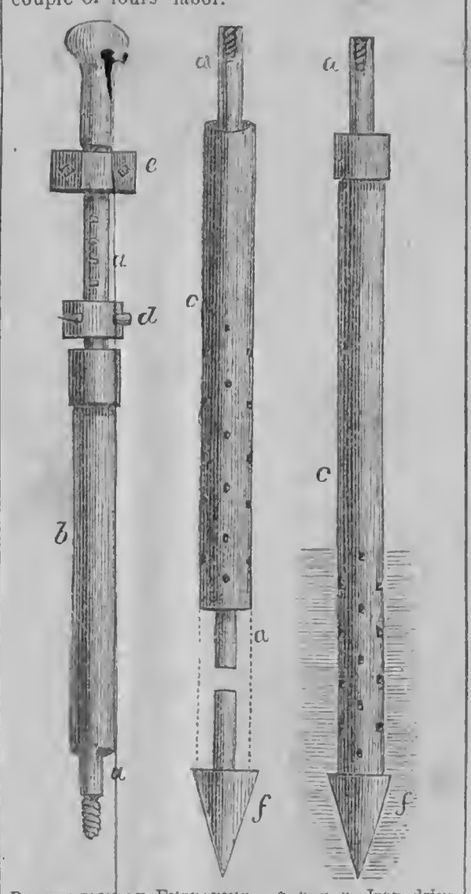
"I see, I see," said I; but I hope that was the only human blood you ever shed?"

"The only drop," said my chainman, in some confusion, "saving and excepting one other case. That's a longer yarn than this."

New Inventions, Etc.

BARNES' PATENT TUBE WELL.

THE design of this invention is to drive an ordinary iron water pipe, of small diameter, to a sufficient depth to ensure an unfailing supply of pure water. This object is accomplished when the lower end of the pipe is embedded in a vein of gravel or strikes a fountain of water. As represented in the engraving the pipe is made in sections of various lengths, which screw together; the lower end of the pipe is perforated with small holes and a point (*f*) inserted. Through the center of the pipe passes the iron drive rod which rests on the iron point; this drive rod is also made in sections, and can be lengthened or shortened to suit circumstances. By driving on the head of the rod the iron point is forced into the ground, and the collar (*d*) compels the tube to follow the way thus made, keeping up the connection between the point and drive rod. By this method of driving, all strain is avoided on the iron tube, and the hardest clays are perforated. In passing through quicksand, this rod, filling the interior of the tube, prevents its entering and causing trouble. When water is reached, which can be readily ascertained by withdrawing the drive rod, a pump is screwed to the top of the pipe and the well is complete. The driving of the pipe is done with an ordinary sledge, and a good well often obtained by a couple of hours' labor.



DESCRIPTION OF ENGRAVING.—*a, a, a, a,* Iron drive rod inside the water pipe; *b,* Section of ordinary iron pipe; *c, c,* Sections of same for bottom of well, perforated with holes; *d,* movable collar; *e,* Clamp to stiffen or support the head; *f, f,* detachable point.

There are already thousands of these tube wells in successful operation. We have examined several made by the above described method, and are convinced that "tube wells" are destined to come into general use in extensive regions and, also, that no cheaper or more effectual way of making them is known than the one we have here illustrated. For further information address J. P. BARNES, Box 3, Watkins, N. Y., or JAMES MCMILLAN, Victor, N. Y., General Agents.

STEEL-PLATED RAILROAD BARS are made at Troy, N. Y., Johnstown, Pa., Wyandotte, Mich., and other places. These rails, at a cost of less than fifty per cent. above those of iron, will last three times as long, and are much stronger and less liable to breakage, thus making railroad travel less perilous to person and property. The steel is made by the "Kelly" or "Potter" process;—so called after the names of the men who have re-discovered and improved the English "Bessimer process,"—at a cost less than by any former method, and of fine quality. This will doubtless work a revolution in railroad matters, and be a great improvement. The steel and iron are so firmly united that we have seen a section of a rail which had been tested under five hundred blows of a heavy trip-hammer without break or flaw.

Corner for the Young.

ANSWERS TO ENIGMAS, &c., IN No. 898.

Answer to Miscellaneous Enigma:—And I heard a voice saying unto me, arise, Peter; slay and eat.

Answer to Riddle:—15 years.

Answer to Anagram:
There's a beautiful land where we wander oft,
In the hush of some star-lit night,
When slumber's seal on the eyes is soft,
And the spirit soars on its wings aloft,
In the maze of a strange delight;
And our life's deep joy in a fullness seems,
That we only know in the land of dreams.

Answer to Problem:—15.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins April 6th, a good time for club or single subscriptions to commence. See head of News page.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

READER,—Please act as Club Agent for the Rural, or induce your Post-Master or some other influential person to become a recruiting officer for the "Rural Brigade."

Notice of Spring Campaign on News page.

A VALUABLE MEDICINE.—Dr. POLAND'S White Pine Compound, advertised in our columns is a successful attempt to combine and apply the medical virtues of the White Pine bark. It has been thoroughly tested by people in this city and vicinity, and the proprietor has testimonials to its value from persons well known to our citizens. We recommend its trial in all those cases of disease to which it is adapted. It is for sale by all our druggists.—*Independent.*

THE GREAT NEW ENGLAND REMEDY!
DR. J. W. POLAND'S
WHITE PINE COMPOUND
Is now offered to the afflicted throughout the country, after having been proved by the test of eleven years, in the New England States, where its merits have become as well known as the tree from which, in part, it derives its virtues.

THE WHITE PINE COMPOUND cures Sore Throat, Colds, Coughs, Diphtheria, Bronchitis, Spitting of Blood, and Pulmonary Affections generally. It is a remarkable remedy for Kidney Complaints, Diabetes, Difficulty of Voiding Urine, Bleeding from the Kidneys and Bladder, Gravel, and other complaints. For Piles and Scurvy, it will be found very valuable. Give it a trial if you would learn the value of a good and tried Medicine. It is pleasant, safe and sure. Sold by Druggists and Dealers in Medicine generally. [S86

They will Restore Impaired Sight, and Preserve it to the Latest Period of Life!
SPECTACLES RENDERED USELESS.

The most eminent Physicians, Oculists, Divines, and the most prominent men of the country, recommend the use of the CORNEA RESTORERS for Presbyopia, or Far or Long-sightedness, or every person who wears spectacles from old age; Dimness of Vision, or Blurring; Overworked Eyes; Asthenopia, or Weak Eyes; Ephiphora, or Watery Eyes; Pain in the Eyeball; Amaurosis, or Obscurity of Vision; Photophobia, or Intolerance of Sight; Weakness of the Retina and Optic Nerve; Myodesopia, or Specks or Moving Bodies before the Eyes; Ophthalmia, or Inflammation of the Eye or Eyelids; Cataract Eyes; Hemiopia, or Partial Blindness; Sinking of the Eyeball, etc.

They can be used by any one with a certainty of success, and without the least fear of injury to the Eye. More than 5,000 certificates of cures are exhibited at our office. Cure guaranteed in every case when applied according to the directions inclosed in each box, or the money will be refunded. Write for a Circular—sent gratis. Address DR. J. STEPHENS & CO., OCULISTS, PRINCIPAL OFFICE, No. 840 BROADWAY, NEW YORK.

P. S.—Dr. J. STEPHENS & CO., have invented and patented, *MYOPIA, or CORNEA FLATTENER,* for the cure of NEAR-SIGHTEDNESS, which has proved a great success. Write for a Circular. 856-26teo.

PERUVIAN GUANO SUBSTITUTE!
BAUGH'S RAW BONE
SUPER-PHOSPHATE OF LIME.

BAUGH & SONS,
SOLE PROPRIETORS & MANUFACTURERS,
DELAWARE RIVER CHEMICAL WORKS, Philadelphia, U. S. A

For Wheat, Rye, Barley, Corn, Oats, Potatoes, Tobacco, Buckwheat, Sorghum, Turnips, Hops, Garden Vegetables, and every Crop and Plant.

Especially recommended to the Growers of
STRAWBERRIES, RASPBERRIES, BLACKBERRIES, AND ALL SMALL FRUITS.

BAUGH'S RAW BONE
SUPER-PHOSPHATE OF LIME,
Is eminently a success as a Substitute for Peruvian Guano and Stable Manure—and is offered to the Agriculturists of the Northern and Eastern States as a fertilizer that will cheaply restore to the Soil, those essentials which have been drained from it by constant cropping and light manuring.

IT is very prompt in its action—is lasting in effect to a degree unattained by any commercial manure in the market, and is afforded at a much less cost than *bought* Stable Manure, or Peruvian Guano. The Labor involved in its use is far less than that of applying stable manure, while there is no risk from the introduction of noxious weeds.

OUR NEW PAMPHLET, "HOW TO MAINTAIN THE FERTILITY OF AMERICAN FARMS."—90 pages, giving full information in regard to the use of manure, &c., will be furnished gratis, on application.
BAUGH BROTHERS & CO.,
GENERAL WHOLESALE AGENTS,
No. 181 PEARL ST. AND 4 CEDAR ST., NEW YORK.
☞ For sale by Local Dealers in all parts of the United States and British Provinces. 862-6teo

MOORE'S RURAL NEW-YORKER.

TERMS, $3.00 PER YEAR.] "PROGRESS AND IMPROVEMENT." [SINGLE NO. TEN CENTS.

VOL. XVIII. NO. 17.] ROCHESTER, N. Y.—FOR THE WEEK ENDING SATURDAY, APRIL 27, 1867. [WHOLE NO. 901.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other Journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

WHERE OUR GRAIN GOES.

SURELY it is well we should know, yet there is great want of correct information. Many suppose that England uses up most that is exported, and many a farmer thinks the greater part of what is sent from his farm goes to some foreign country. The following facts—plain and simple, and from official sources—show how it really is:—When the British corn laws were repealed, the inducement was held out by the English, and the hope entertained by our grain growers, that a large market would open there for products. But in twelve years after the repeal of the corn laws, from 1848 to 1860, our exports of breadstuffs to England had decreased, in proportion to our population, almost thirty per cent. even by English estimate, 27½ per cent.

During the same years the British imports of grain from this country were only one-fifth their imports from other countries.

Take our exports of provisions and breadstuffs to Great Britain, and to all the Western Hemisphere, from 1846 to 1860, and we find our yearly exports to Great Britain the least, and the demand this side the Atlantic much larger the last part of the time. The average of three years' exports of provisions, closing with 1860, was to Great Britain $5,792,268, and on this side the ocean $9,917,838. Our exports of breadstuffs to Great Britain for each of the same three years, averaged 7,542,991 bushels; but to ports of our Western Hemisphere, 16,034,586 bushels.

Chicago alone, often sends off in ten days more grain and flour than England has taken from us each year, on the average, for twenty years past, and the grain export from that city in a single day often exceeds what England has bought of us in a whole year.

In 1860, the total products of our soil were $1,860,000,000 in value; our total exports of those products, $272,282,873, or but one-seventh. Taking out the cotton exports, and our home market and consumption was twenty times as great as our exports to all foreign lands. We may safely estimate to-day the New England market is worth, to the Western grain grower, more than that of England. Our exports of breadstuffs to Great Britain, from 1846 to 1860, averaged 9,302,144 bushels yearly, the highest in 1847—the Famine Year in Ireland—36,494,694 bushels; the lowest, 1,402 bushels in 1857, and so varying from 2,766,059 bushels in 1859 to 28,162,705 bushels in 1864. Our average exports of breadstuffs to Great Britain in five years, from 1853 to 1858, were less than a dollar per head of our population each year. Thus we see the English demand is smaller than that of our own Hemisphere, both are less than many suppose, and the home market is much larger than is generally thought.

Let every farmer remember one important fact. The decrease of our home market makes us more dependent on the changes—often severe and ruinous—in distant foreign markets, and these changes affect and govern now the prices here. If wheat in Liverpool fall six-pence on the bushel, the Western farmer feels it in three weeks. The lesson is plain. Let farm, and mill, and factory, West and East, and South, grow and thrive as neighbors. Let our larger market within ourselves be our first consideration, and then send abroad such surplus as we shall doubtless have, and other countries may need.

RURAL FARMERS' CLUB.

Advice to Farmers Moving West.

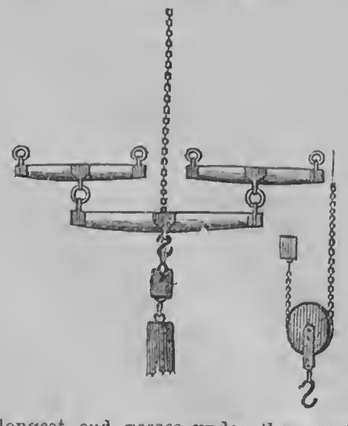
UNDER this title we recently published an article from a correspondent in Iowa, which, as we expected, has elicited a somewhat caustic reply. The "advice" is thus commented on by "S. J. P.," Grinnell, Iowa:

"Judging from the tone of it, I conclude that he would have 'farmers who have lately moved to the West' do in all things as the old settlers do, and lest they might omit, from want of observation, to imitate in every particular, I will mention a few things which he has not. If 'the old settlers' throw their wheat into rail pens or on to the ground, and leave it with a slight covering of straw, in a manner convenient for their's or their neighbor's hogs to root in, do likewise; if they let their corn remain unharvested until spring, let yours remain also; if they wait until several heavy frosts have killed the grass before getting their hay, you should do so too, for you see it *makes quicker and don't turn black.* Should 'the old settlers' leave their reapers in the field where last used, or mowers in the slough where the last load of hay was cut, until wanted the next season, remember that you 'have lately moved to the West,' and to be successful must do as they do. If they burn corn for fuel rather than cut the wood, which is at the door, burn corn too.

And should you move 'to a place in the West where people have no barns' you 'should not be in too much hurry to build,' but tie your horses to the wagon, and feed them out of the bed after throwing the harness under it; so continue until you build a stable of poles and straw, and if before Christmas your cattle, for want of better feed, eat the straw away, leaving nothing but the bare poles, you must not cover it again, for it is necessary for the health of your horses that the stable be well ventilated, and it will be with our Western winds with a vengeance. No matter if the snow does blow in and gather in drifts about the horses feet, or lodge upon their backs, it can all be cleaned out when the storm is over. If you move to a place in the West, where there are no sheds or other shelter for stock, don't by any means build any, for it will be a needless expense, beside, exposure will make your cattle hardy—some of them so extremely hard that nothing but an April sun will thaw them out. One item more this time: if 'the old settlers'—the males I mean—should sit by the fire and see their wives, mothers or daughters go out on a cold winter morning to milk the cows, you must conform to the custom."

Draft Attachment for Double Team.

J. YOUNGLOVE, Ripon, Wis., tells us how he attaches two teams to the plow. A pulley is fastened to the end of the beam, and the chain by which both teams draw passes around this;



the longest end passes under the evener, by which the hindmost team draws, far enough ahead to reach the evener of the team in advance. By this arrangement one team must draw just as much as the other. Our engraving makes it plain.

The Corn Crop—Plowing and Cultivating.

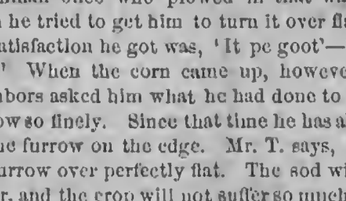
GEORGE EWER, Mendon, N. Y., sends us a communication in which he sums up the opinions and practices of his neighbors regarding the cultivation of the corn crop as follows:

"I believe, Mr. Editor, that if a person, entirely unused to farming, were to ask my brother farmers how to proceed, he would think they were terribly ignorant or perverse, and would find himself nonplused, and yet they all get very good crops. Mr. B. says, 'Set the furrow slice on the edge because the air penetrates better, and plow eight inches deep.' He employed a Dutchman once who plowed in that way and when he tried to get him to turn it over flat, all the satisfaction he got was, 'It pe goot'—'it pe goot.' When the corn came up, however, his neighbors asked him what he had done to make it grow so finely. Since that time he has always set the furrow on the edge. Mr. T. says, 'turn the furrow over perfectly flat. The sod will rot better, and the crop will not suffer so much from drouth if the season is dry.' Mr. B., another neighbor, asks 'if we ever knew Mr. T. to get a very good crop.' Do not know; he is not one of the first farmers. Mr. G. says, 'plow deep,' he wants plenty of earth above the sod to plant and hoe in. Another says, 'corn will not start so quick.' Mr. B. lost his crop of corn one year by plowing too deep. But, says another, 'if the corn does not start quite so quick it will make it up in the latter part of the season.' Well, Mr. Editor, after hearing these conflicting opinions I thought a medium would perhaps be safe, and plow a moderate depth, say, seven inches, do not turn the furrow flat, but so that the sods would not drag up, prepare the ground as well as I can and plant moderately deep.

Those who raise the best crops of corn in this neighborhood one year with another, plow rather shallow, do not turn the furrow very flat, plant in hills three and one-half feet apart each way, four spears in a hill, plow their corn last time with shovel plow and hill up pretty well. No one doubts the propriety of selecting seed corn of the best quality, and with these conditions fulfilled one will seldom fail of a fair crop."

A Good Gate Latch.

C. F. R., Rockford, Ill., sends a sketch of a gate latch which he has used for some time with great satisfaction. A represents the latch; B, B, B, wire hooks which hang the latch to one



board of the gate, and permit it to play back and forth; *c*, guide to keep the latch in place. the dotted lines show the place of the latch through the post of the gate. When drawn back, the latch rises slightly and readily clears obstructions; when the hand is removed it falls again to its place. It is really self shutting.

To Rid Stables of Lice.

S. L., Sharon Center, N. Y., writes us, that "having a stable infested with lice to the great injury of the stock confined in it, I got rid of them by cleaning it very thoroughly, then sprinkling the mangers, floor, stanchions, boxes, &c., with water and immediately dusting them over with dry, unleached wood ashes. It was left in this condition until the following winter, then swept, and the result is not a louse has troubled the stock housed in it since."

Action of Bones.

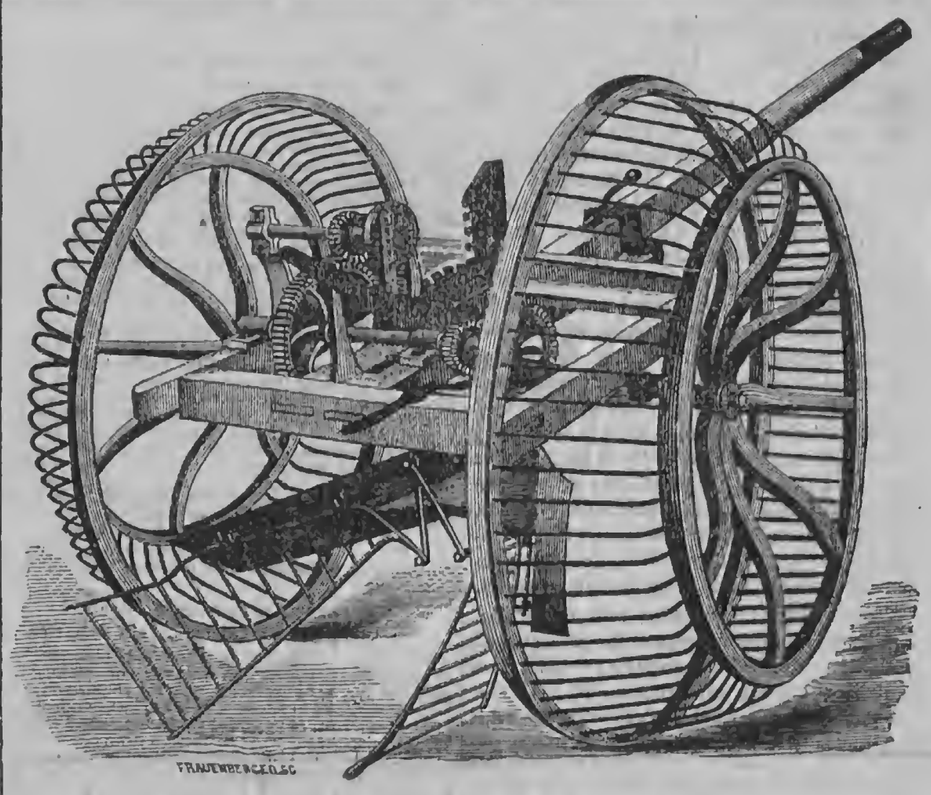
LIEBIG says, "one pound of bones contains as much phosphoric acid as a hundred weight of grain." When the bones are finely ground the nitrogen they contain aids its ammonia to make the bone earth into a soluble superphosphate, thus performing the office, in part, of sulphuric acid in separating the carbonate from the phosphate of lime. Burned bones, having lost their organic matter, are much longer insoluble in the soil. *

Feeding Cows Diseased Potatoes.

"OLD LADY" writes us that she has fed her cow with one peck daily of diseased potatoes boiled in water slightly salted, and that the cow enters the spring in good condition. She queries whether to boil carrots or feed them raw. We should feed raw; mash or slice them and sprinkle on them ground oats and corn.

Horn Ail in Cattle.

H. B. BURRITT, Wauconda, Ill., writes that he believes horn ail to be generally caused by inaction of the liver, and that he has administered sulphate of iron as a remedy with success. One tablespoonful every other day, dissolved in warm water was the amount given. If given in season one or two doses will effect a cure.



MARCELLUS' PATENT POTATO DIGGER.

OUR engraving represents a rear view of a Potato Digger now manufactured and for sale by A. MARCELLUS & Co., Shortsville, N. Y., to whom all inquiries for information should be addressed. This machine has been recently much improved by the inventor, and it is now warranted to dig from four to six acres of potatoes per day in a workmanlike manner. That it has been somewhat extensively used, and has given satisfaction to farmers, may be seen by reference to the testimonials published in our advertising columns. Two horses are sufficient to operate this machine; a double mould-board plow splits the row, and throws the earth and potatoes into the separators which constitute the wheels of the carriage. As the wheels revolve the potatoes are discharged in the rear of the machine in good condition for picking up.

FEEDING BEES.

EDS. RURAL:—H. H., Paris, Oneida Co., N. Y., asks how shall bees be fed, and gives a doleful account of the poor honey year of 1866. Some of his complaints are true, yet my hives, all except one, laid up ample store, and most of them box honey last year, 1866. I am glad to see a writer state his difficulties plainly and manfully, as "H. H." does,—for it enables one to reply kindly and fully. Now for my reply.

First, the best way to feed bees is to put them early—soon after freezing cold commences—in a cellar, dark, dry and still, where the thermometer is steadily about 40°, or 35° to 45°. When taken out in the spring they will have lost only 5 to 10 lbs. stores. Out of doors they will eat 20 to 40 lbs. stores. When in a cellar, each hive needs ventilation equal to two inch holes at the bottom and two such holes at the top of the hive, closed by wire cloth. I have put them in November 10th and taken them out April 10th, when they went to work immediately. Ventilated as just stated, the combs never get very wet with condensed perspiration and breathing of the bees; and they are quiet, if excluded from light and hot air blowing in.

But if a man is silly enough at this late day to let his horses stand out all winter in the cold, and his sheep or bees too, then he must feed. The best feed trough is a hole or space cut in a bottom board and filled with cut straw, and the honey and molasses (boiled together) filled in by a groove. Ample devices are found in any good book on bees, for the top feeding. For top feed on my hives, I like to put a piece of comb (drone cells) filled with syrup ⅔, honey ⅓, boiled together. A tin lamp can makes a good filler to pour out a fine stream of the feed into the cells of the comb.

To prepare the comb in the best manner for feeding, cut off the cells on one side to near the partition, cut a hole through the center about an inch in diameter, leaving a margin of comb three to five inches about the hole cut in the comb. Now bore a hole, if there is room, through the top of the hive. There is no difficulty in this summer or winter. I bore any number at any time. Place the hole in the comb over the hole in the hive, with the uncut cells upwards. If the bees do not come up freely, break away, with a stick, the comb inside the hive, so as to reach two spaces between the inside combs. As the bees rush up, pour in a little feed out of the filler and fill the uncut cells. Cover the comb with a hive cap, and put a piece of old carpet over to keep the cap warm. Repeat the filling of the cells of the feed comb as often as emptied.

The economy of the "cellar feed," as I call it, is seen thus: In the spring of 1865 my bees came out with the average of 16 lbs. surplus each. In the spring of 1866, after better care during the winter, with a surplus average of 20 lbs. This (1867) spring with a surplus of 14 lbs. each. And this surplus is in the brood chamber, just where it is needed. Now, can't the out-of-door old fogies see that they can't get a pound of box honey until the loss of honey by this unnecessary winter exposure is made up, and if I save that I get a remunerative amount of honey by this means alone? S. J. PARKER.

CEMENT GATE AND HITCHING POSTS.

EDS. RURAL:—Gate and hitching posts may be made of a cement composed of five parts of clean gravel and one part of water lime, mixed together in the usual way of making mortar for cisterns. A mould should first be constructed of two-inch plank, made smooth on the inside, and of any desired shape or size. It should be fastened together with clamps so as to be readily taken apart. A mortice should be made through one of the planks large enough to admit the staple for the hitching post, or the hooks for the gate. When all is ready dig a hole to the depth of three feet, and of the required size. Fill this with the mortar, and place the mould over the hole with the hooks or staple in their proper position, with a key to prevent their pulling out. Now fill up the mould with mortar to the top, and round off to suit fancy. Let the mould remain four or five days till it "sets," then remove the clamps and the planks; smooth off, or stucco over as you like, and you have a post that will last for ages, and which is cheaper, all things considered, than wooden ones. Small stones may be put into the mortar as the mould is being filled up, and thus save mortar. These posts should be allowed to stand two or three weeks before being used, so as to be firmly cemented together. They improve by age. J. S. TIBBETS.

Rochester, N. Y.

COST OF RAISING CATTLE.—This subject was lately up for discussion at a meeting of the Little Falls Farmers' Club, and several estimates made as to the cost of rearing stock to the age of two years. These estimates varied little from $50. The increase in value of the animals after this period should be rapid to make stock raising remunerative.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

PRICES OF WOOL.

A VALUED correspondent asks us: "Why do not the prices of wool rise more under the new tariff?" The manufacturer's answer to this question will be found in the following extracts from a letter to us, dated April 1st, from one of the most eminent and candid of their number. He writes:

"In regard to the Tariff Bill passed, it is a matter of congratulation that two great interests should go hand in hand, as did your Wool Growers' and our Wool Manufacturers' Associations, and I trust it is only the beginning of a good work which will result in permanent benefit to our whole country. Still it will be, I fear, a long time before the manufacturer will be in a position to pay a liberal price for American wool, simply because our business is overburdened with such immense surpluses of woolen goods from foreign countries, together with our own large accumulations,—and the sure laws of supply and demand control the prices of each without reference to cost. Many mills are working but from half to three quarters time, and it would be better both for manufacturer and grower to reduce it to one-fourth,—for it would the sooner bring the supply and demand together and give living prices to both branches of industry."

No one acquainted with the facts will doubt that the principal reason why wools did not make that immediate and decided advance in price, anticipated by many growers, on the passage of the wool tariff, is here truthfully set forth. We hope and believe, however, that the "long time" which our correspondent fears will be necessary to bring round "liberal prices," will not extend beyond a few months. It will not, assuredly, unless the manufacturers unwisely continue to keep the woolen market so glutted that both woolen goods and wool must continue low. The curtailment of manufacturing would of course diminish the demand for the raw material, and would compel the producer to accept comparatively low prices, or to hold his wool until the woolen market is drained down to the proportions of the demand. This curtailment on one side, and holding wool on the other, would produce some inconvenience, and discourage some of the weak-kneed brethren, but we entirely agree with our correspondent that it is the best policy for both interests.

It is amusing to witness the evident gratification of the free trade organs at the present state of things. They ask the growers: "What have you gained by the new wool tariff? We told you it would not raise the prices of your wool," &c., &c. Now, are these men, not to put too fine a point on it, fools, or do they imagine the farmers of our country are fools? No intelligent grower who carefully informed himself of the facts, expected immediate and decisive relief from the tariff. He perfectly well knew that no effective tariff bill, discussed through two sessions of Congress, and generally expected to pass, could fail to stimulate a tremendous importation, pending the action of Congress, of the articles on which higher duties were to be imposed. The reasons are too obvious to require mention. This has been the history of all our wool tariffs. Even that of 1828, which so greatly increased the duties of the Act of 1824, and which stimulated production even to an unhealthy extent, did not materially advance the price of wool until more than a year after its passage. Indeed, during the closing quarter of the first year, the price nearly touched the low water mark of prices under the preceding tariff. But during the succeeding years while the Act remained in force, the prices nearly doubled. This is an example, taken almost at random, which illustrates the invariable course of things in such cases. It always takes a year at least, in the case of important staples, for any tariff to exert its legitimate ultimate effects. The very persons who now affect to condole with us because the tariff, which they so fiercely opposed, is not more rapidly raising the price of wool, made it one of their principal arguments against its passage that the growers had not waited sufficiently long to test the real results of the previous duties, which they contended would ultimately be found sufficiently protective!

"What have we gained by the new wool tariff?" Why, gentlemen, we have gained enough already to pay for our share of the labor it cost! The very expectation of it kept up hope, kept multitudes in the Eastern and Middle States from abandoning sheep husbandry, and kept up and stiffened the prices of wool and sheep. The passage of the Act has confirmed these hopes. The *price* of wool *has advanced* in spite of the adverse circumstances we have named. And what is far more important, we now know that we have touched bottom—that our feet are on solid ground, and that there is no "lower deep" for us to sink into. We feel the perfect assurance that all future movements in the market—bating temporary "flurries" produced by speculation or other transient causes—must be upward instead of downward; and that we have only to stand our ground firmly, like men, to obtain a fair remuneration for our industry. Already ship loads of South American woots, destined for our markets, have been ordered off to European ports. And the influx of European woolens is also effectually checked. The tariff is accomplishing the results expected from it, and accomplishing them as rapidly as sensible men, versed in all the facts, anticipated.

A word about the prices of the coming clip and the best time for selling it. We have received many inquiries on these subjects, but knowing as we do from long experience that circumstances which no one can foresee are liable to affect results, and especially temporary results, we never allow ourselves to put forth those positive predictions in such matters which, even when made by the wisest, are so liable to mislead. If the monetary condition of the country remains sound, there can be no danger, as already said, of any unless a very transient fall in present prices, and there is quite as strong a probability that these temporary fluctuations will be favorable as unfavorable. The general tendency must be gradually upward. Prices will be probably better this year than last, and considerably better in 1868 than in 1867. Our advice, then, is to be in no haste to sell and to sell at none but remunerating prices.

THE WOOL SAMPLES UNDER THE TARIFF READY.

We have received the following letter from the Secretary of the Treasury, announcing the preparation of the wool samples provided for by the tariff:

SECRETARY M'CULLOCH TO MR. RANDALL

TREASURY DEPARTMENT, April 11th, 1867.

SIR:—Referring to the letter of this Department, addressed to you under date of the 8th inst., relating to the preparation of certain samples of wool by Mr. GEO. W. BOND of Boston, I have the honor to state that the wool samples therein referred to have been received at this department, and you are respectfully invited to examine the same whenever you may deem it desirable to do so.

I am, very respectfully, H. McCULLOCH, Secretary of the Treasury.

To HENRY S. RANDALL, Esq., President of the Wool Growers' National Association, Cortland Village.

Before receiving this we addressed Secretary McCULLOCH in answer to his letter of April 8th, published in our last issue, and making certain inquiries, as follows:

MR. RANDALL TO SECRETARY M'CULLOCH.

CORTLAND VILLAGE, N. Y., April 12th, 1867.

Hon. HUGH McCULLOCH, Secretary of the Treasury:

SIR:—I have the honor to acknowledge the receipt of your letter of 8th inst. in reference to the selection of wool samples under the provisions of the new wool tariff, and am happy to say that I have no doubt that the course you have determined to adopt in relation thereto will give entire satisfaction to all concerned. I shall this day invite the officers of the National Association of Wool Manufacturers to have their Committe on the samples act in conjunction with the Growers' Committee; and I have every reason to hope that their joint action will be harmonious, and their conclusions unanimous.

Allow me, Sir, respectfully to call your attention to another connected topic. An impression is prevalent, and has found its way into public journals, received by me since this correspondence opened, that Mr. BOND is to spend some time in Europe in the collection of the samples, that further time will be consumed in their preparation, adoption and distribution among the custom houses, and that during the intervening period, the duties on wool prescribed by the previous tariff will alone be levied and collected. I would respectfully ask if this impression is well founded? I have the honor to be, Sir,

Very respectfully your obedient servant, HENRY S. RANDALL, President of National Wool Growers' Association.

SECRETARY M'CULLOCH'S REPLY.

TREASURY DEPARTMENT, April 15th, 1867.

SIR:—I have the honor to acknowledge the receipt of your letter of the 12th, in which you are pleased to say that you have no doubt that the course which I have determined to adopt in relation to the selection of wool samples, as provided for in the Act of March 2d, 1867, will give entire satisfaction to all concerned.

I thank you for calling my attention to an impression which prevails, and which you inform me has found its way into the public journals, that it is my intention to send an agent to Europe to collect samples, and that in the mean time duties will be levied upon imported wools under the Tariff Acts in force prior to the passage of the Act of March 2d, 1867.

It affords me much pleasure to inform you that immediately upon the passage of the Act just mentioned, instructions were issued to the Collectors of Customs at the several ports into which wool is imported, to classify and assess duty according to said Act, to the best of their power, in the absence of samples, but in no case to finally liquidate an entry, but hold them all in abeyance, until the samples could be procured, and then cause a review of the classifications according to the standard samples. In other words, the duty will be assessed on all importations of wool since the Act went into effect, under its provisions.

The samples which are now in the Department awaiting the examination of the duly authorized representatives of the National Wool Growers' and the National Wool Manufacturers' Associations, it is believed represent all, or nearly all, the various descriptions of wool usually imported into the United States, and hence I have not deemed it necessary, and will not, until perfectly satisfied of the necessity for doing so, send an agent abroad to collect additional samples. I am, very respectfully, H. McCULLOCH. Secretary of the Treasury.

To HENRY S. RANDALL, Esq., &c., &c.

It appears from the above, and from the correspondence published last week, 1. That the Secretary of the Treasury has taken the most effectual steps to procure the samples as early as practicable; 2. That pending their selection and adoption he has caused the new tariff on wools to be thoroughly enforced; 3. That in the whole matter he has evinced the utmost readiness to acquiesce in such steps as the wool growers have thought necessary to guard their interests, and to secure an impartial administration of the law; and 4. That the samples are now actually ready for examination.

Pending the organization of the Growers' and Manufacturers' Committees to examine the samples, Secretary McCULLOCH will be be asked to send the samples to New York City to enable the committees to avail themselves of the superior facilities for investigation and comparison to be found there; and in the absence of good reasons to the contrary, which we are not able to foresee, we have no doubt that he will comply with the request.

SPEAKER COLFAX ON THE WOOL TARIFF.

It will be remembered that in speaking (March 20th) of the passage of the wool tariff, we stated that "we had it on high authority that Speaker COLFAX was in warm sympaty" with the friends of the bill. It will doubtless gratify many of the friends of this distinguished gentleman to have this assurance directly from himself, and we therefore publish the following letter:

CHICAGO, April 14, 1867.

MY DEAR SIR:—On my arrival here from a lecturing tour since the adjournment, I find your letter remailed, and have only time to send you this hurried note, thanking you for its interesting enclosure, and adding that what you say of me is exactly true. My position on the wool and woolen question was known to all men there, and none rejoiced more heartily on the passage of the BINGHAM bill than

Yours truly, SCHUYLER COLFAX.

To Hon. HENRY S. RANDALL.

Condensed Correspondence, Items, &c.

SAMPLES.—E. E. GORHAM, Hadley, Ill., sends us superior specimens of American Merino wool. His stock is bred from animals purchased from the flocks of the late REED BURRIT, N. Y., S. ATWOOD, Conn., W. R. SANFORD, Messrs. RICH, and Messrs. CUTTING of Vt. The ewe samples were taken from some of the animals which won the second sweepstakes prize at the last State Fair at Chicago. The 3 first, of 10 mo's and 20 d's growth, are from a ewe that raised a lamb and clipped 11 lbs. 12 oz's; wt. of carcass, 70 lbs. They average over 2¾ in. long. No. 5, 12 lbs.; carcass, 78 lbs. No. 7, 13 lbs.; carcass, 73 lbs.:—both fleeces of a few days less than a year's growth. Ram teg "Progress," wool 2¾ in. long, 12 mo's 8 d's growth; ram teg "Goldfinder," wool 2 in. long, 10 mo's 10 d's old. All the samples are fine for American Merino wool, and of excellent style and quality. The yolk is golden tinted and abundant. Our space compells us to omit many details of the flock. Gentlemen ought not to ask us to judge sheep by a sample, but if the other qualities of the ewe furnishing the 3 samples correspond with her wool, we suspect she is the queen of the flock, and with the same conditions we consider the ram tegs very promising.

CLAYTON B. FISK, Brookfield, ——, sends samples of good style and quality, but that of the ram is too short, and is not so good in style as the ewe samples. The latter are of good length.

WOOL BUYERS' RESOLUTIONS.—SOLOMON HITCHCOCK, Conesus Center, N. Y. The subject of your excellent communication will be fully discussed at the meeting of the N. Y. State Sheep Breeders' and Wool Growers' Association at the coming State Sheep Fair at Auburn. The report of this will probably occupy all the space which can be profitably devoted to the subject at present, and will doubtless cover the same ground. Come and participate in the debate. We make the same remark, and extend the same invitation to J. KNAPP, Plattsburg, N. Y., BENJAMIN CHASE of Macedon, N. Y., and others who have written us on the subject.

DATING LETTERS.—We have repeatedly asked correspondents, in dating their letters, to give the name of their *State* as well as their post-office. It frequently happens that it cannot be made out from the post-office stamp, and therefore the letter cannot be answered, or intelligently answered in reference to local circumstances. We are therefore frequently compelled to consign such letters to the paper-basket without notice.

DOES LIME CAUSE GOITRE?—W. C. SHERWOOD, Dartford, Wis. Water percolating through certain kinds of lime rock, has been thought to occasion goitre in human beings. But the calcareous lands of New York are not more subject to its visitations than others. We do not believe that hay made of cultivated grasses are more likely to produce it than "marsh hay."

Communications, Etc.

THE STATE PLOW TRIAL.

EDITOR RURAL NEW-YORKER:—I see it is announced that there is to be a trial of plows under the auspices of the State Agricultural Society at Utica, May 7th. I presume the public expect that every plow-maker in the State will be there, striving eagerly for the prize. But the following reasons will actuate a good many, and they will keep away.

Within the past thirty years plows have been made the study of a good many practical men, and all the essential fundamental principles of plow making have been searched out and applied. Some of the best shapes and desirable points, as they have been discovered, were patented; but as the patents have expired, they are now the property of the public. Out of about one hundred firms who manufacture plows in this State, west of the meridian of Syracuse, there are only one or two who are protected by patents, and those patents cover some non-essential part. Suppose now that some inventive plow-maker, who was a skilled mechanic and a good deal of a farmer, should, by study and observation, combine all the good qualities of the various plows he had seen and used, and make one that was perfect for the section in which he lived; suppose, further, that he should go to Utica and get the first premium, don't you see it would be but a curse to him? Every plow-maker in the State, and especially those who compete with him or his agents, would send some friend that looked like a farmer to his shop, and buy a plow and cut it into pieces for patterns, and within two months our deserving friend would see advertised for sale by every plow firm within fifty miles the "*Great First Premium Plow.*" The recompense of his ingenuity stolen away from him, and his trade circumscribed to those few farmers who come to his town for their mail matter.

The various reapers and mowers being of recent invention and all covered over with patents, were every one of them on hand at the trial last year, and the first or any other premium there awarded, was worth something to the man who got it; but the case is different with plows. There are, however, some patented plows, (and no doubt every one of them will be at the trial,) but nearly all of them give the impression to the observer that they were simply contrived to be different from anything in use in order to get a monopoly of manufacture.

I hold that the best plow extant is the one that combines the most nearly all the old and well established principles and its different parts so simple that any hired man can adjust them. Can you see wherein the manufacturer of such an implement is to be benefited by going to Utica, and especially in the spring time in the harvest of his business?

PLOW-MAKER.

MORE ABOUT HENS.

VARIETIES.—For twenty years past I have tried the common native breeds, the Chiua, the Brahma, Bantam, Dorkins, Creoles, Dominique, Sumatra and Malacca, Eng. Game, Eng. Pheasants, Black Poland, (White Top-knots,) and Black Spanish, with their various crosses. The best layers I have are the Creoles, but their eggs are small and shells thin for market. Their carcass is small and blue, and the poorest of all varieties for the table. Their chickens are tender, and the birds are short lived anyway. The full bloods seldom set. Their eggs and beauty render them desirable. The Polands are nearly as good layers; their eggs have harder shells, a little larger than the Creoles; they are good for the table, very tame, long-lived, not arriving at full maturity short of three years. They seldom sit; are good, profitable fowls. For only a few of one sort for family use, for eggs, sitting and for the *epicure*, I should prefer the Dorkings. For fighting, the Game.

My fowls consisted the past year of the Creoles, Poland Top-knots, Spanish; and some crosses among those and two bastards. I have now in a warm park, (full-bloods,) four Creoles, two Black Polands, seven Black Spanish, two Dorkings, and three crosses from the last year's stock; pullets, except four yearling Creoles and one Creole Rooster. Some of the pullets have laid for some time; and the old hens laid almost daily until moulting two or three weeks ago. Next year I intend to try a Creeper Rooster with the above crosses and see if they will draw the first premium!

FEED.—Corn, to keep them warm and in good condition; buckwheat to produce eggs, and oats to keep them from *starving*; millet and sunflower seed for a feast. Some feed wheat, and it may pay even at the present prices. Wheat bran, or a provender of corn, buckwheat, barley and a few oats; about three pints a day for twenty hens, or what they will eat clean, twice a week, wet with sour milk or boiling water, with about one tablespoonful of black pepper ground, or one-half as much Cayenne; with a full supply of good water, and plenty of shell or bone lime in a well lighted, warm park, will cause hens to lay almost daily during winter. Burned bones must be pounded. Shells will air-slack sufficiently. One box or old iron dish for lime; one for gravel, sand, or pounded stones; one for dirt, and one for ashes to wallow in.

FEED TROUGHS.—They waste too much grain from shallow dishes. So I now put their grain in boxes or half-barrels, where they cannot throw it out with their feet or bills, and they seldom dirty it. Their puddings put into an old bake-kettle or something they all can have access to, that they cannot capsize.

INCOME.—The fore part of last October we sold of eggs for ten months previous 146⅔ doz. Cash for them $34.23. I wintered only twelve hens. In May bought two to sit. In June last one Creole. Sat three. Raised thirty-three chickens. The sale of eggs as above, the value of the present stock with the meat, after supplying a family of five with eggs will leave a net profit to each hen (including the rooster) of full $2, over and above their cost for a full year. Four hens well kept will yield more profit than twenty in a small place, poorly kept.

Garrattsville, N. Y. Jan., 1867. R. L. GAZLEY.

Rural Spirit of the Press.

Scours in Calves—Remedy.

B. S. FARNHAM, Augusta, (Me.,) writes the Maine Farmer that he has found rennet a sure remedy for scours in calves. A piece about the size of a thimble, soaked in a cupful of water, was given to a calf for this ailment, and proved effective, while all other remedies failed.

Rust in Cotton.

A CORRESPONDENT of the Southern Cultivator says the cause of rust in cotton is to be traced mainly to continuous crossing of the same article without returning to the soil, in the shape of manure, the elements drawn from it by that product. Other causes, such as excessive moisture or aridity, will induce rust, but it is chiefly attributable to the cause first mentioned. The remedy is found in an alternation of cropping, making cotton one of the series in a limited cycle of years. The planter should remember, too, that his land, after having given a crop of cotton, asks compensation in the shape of manure. If this is withheld the return must be correspondingly limited in quantity and poor in quality.

Sawdust—Its Use.

THE N. E. Farmer devotes considerable space to a consideration of sawdust and its uses as a fertilizer, and the manner of treating it preparatory to its application to the land. As a preliminary, it forms a soft and excellent bedding for stock, while it absorbs and retains the larger portion of the urine, which would otherwise run to waste. Besides it forms a more cleanly bed for stock than most other kinds, and to farmers in the vicinity of sawmills is easily attainable. Though slow in decomposing, its retentiveness is such as finally to impart to the land on which it is used increased liveliness and strength if packed down closely and occasionally watered for some time before being applied to the land. Properly prepared before being used, it may be placed in or used as a top-dressing for meadows in the spring, though it is probably most effective when turned under.

Polypod Brakes.

A CORRESPONDENT asks the N. E. Farmer what he shall do with a meadow full of polypod brakes, and is told to drain thoroughly and then plow and manure the ground. This reminds us of a circumstance. A farmer of our acquaintance had a brake meadow—rich in that article and nothing else. A neighbor had an alder swamp which he wished to drain, but could not do it otherwise than by crossing the polypod meadow before mentioned. He asked and obtained permission to cut through the latter. The next season the brake began to die out, and the third year had nearly all disappeared. Seeing this the owner run a ditch through the centre of the meadow, at right angles with the first one and discharging into it. The result was that by deep plowing and proper cultivation this polypod land, worthless before, became the most productive and highly prized portion of the large farm of which it was a part.

I. H. M. COCHRAN, of Craftsbury, Vt., raised 52 bushels of good wheat from two bushels of seed sown on one acre and a quarter of land.

Rural Notes and Items.

FINE MAPLE SUGAR.—M. A. HOADLEY, Avoca Steuben Co., writes us a letter from which we make this extract:—"Enclosed please find specimens of maple sugar of my manufacture. The cakes are taken from large 'batches,' made at different times during the season, and are no better than my entire lot will average. There is no secret in making maple sugar light colored; it only requres perfect cleanliness in every operation. Black sugar invariably has in it dirt, or the effects of dirt; as, for instance, the sirup may have ashes, coals, leaves or rotten wood in it, when boiling, and strained out before sugaring off. Still, the effects are there, causing the sugar to be black and taste disagreeably. The season thus far has been very poor for sugar the product not being over one or one and a half pounds per tree. There has been too much south wind when warm enough for the sap to run." We found the "specimens of maple sugar" very fine and uniform in taste and appearance.

BUTTER AND CHEESE—FIVE COUNTIES.—According to the State Census of 1865 the amounts in pounds of butter and cheese manufactured that year, in the counties named below, were as follows:

	Butter.	Cheese.
Oneida	2,868,749	8,165,640
Herkimer	953,118	18,899,301
St. Lawrence	5,417,779	2,922,001
Jefferson	3,100,244	5,248,615
Lewis	1,663,950	4,755,042
	14,003,821	35,028,000

As compared with 1860, three counties show a falling off in the amount of butter of 5,471,957 pounds, and an increase of cheese of 10,607,974 pounds. In value these results show but little change in dairy products in the counties named, during the five years embraced in the comparison.

PROCEEDINGS OF OREGON STATE FAIR.—We have received a copy of the proceedings at the Oregon State Fair held at Salem in October last, in which are embraced the opening address of the President, J. H. DOUTHIL, and the annual one delivered by C. F. BEATIE, Esq. Both were appropriate to the occasion, giving hopeful utterances as to the industrial future of the most northern of the Occidental States. The list of premiums, awarded on the occasion, would do no discredit to older and more affluent States.

SHEEP SHEARINGS.—The Michigan Sheep Shearing Festival, for the present year, will be held at the city of Jackson, commencing on the 7th of May and continue three days.

— The next Fair of the Wool Growers' Association, Onondaga county, will be held at the village of Skaneateles on the 7th day of May. Shearing to commence at three P. M., and awards made at five o'clock of the same day.

AGRICULTURAL DEPARTMENT—MONTHLY REPORT.—The Commissioner of Agriculture, in his Report for March, states that the indications of the wheat crop are generally favorable. The snow of the past winter, and the general uniformity of cold weather, prevented winter-killing in a great degree. The spring has been late, with less alternate freezing and thawing than usual; and the young shoots, as a result, look green and vigorous.

MANURE AND MUCK.—A correspondent queries whether the effect of manure and muck are better if they are applied separate than mixed. Muck should be used as an absorbent to save the liquid manure. Use it plentifully in the yards and stables and mix it in this way; or mix the manure and muck in a pile and let it ferment and rot. We consider it best to mix before applying them to the land.

FISH IN MAINE.—The Legislature of Maine have passed a resolve looking toward the re-stocking of the rivers of that State with fish. Commissioners are to be appointed for the purpose of carrying the plan into effect as proposed by N. W. FOSTER in what are denominated fishways. By means of these the fish are enabled to ascend the rivers though obstructed, as they are, by numerous dams.

EXTERMINATING CHICKWEED.—(T. E. H., Albion, N. Y.) Chickweed is a troublesome pest in the garden. It makes its growth mainly in the cool weather of autumn and spring, and will blossom under the snow, and mature an incalculable number of seeds. Fall plowing is the best way to exterminate it—or at least to prevent its being troublesome—that we know of.

FEED FOR HOGS.—A correspondent writes:—"I am satisfied ground feed for hogs is preferable to unground. What is best? Is wheat bran or the coarse part of corn meal obtained after bolting good?" Corn, barley, or peas are *best*; bran and coarse corn meal are good for summer feed when the hogs have sour milk and good pasture.

GOURA VICTORIA PIGEONS.—"Hawk-Eye" writes: "I wish to obtain some of the above-named pigeons. Have they ever been brought to this country, and if so, who breeds them for sale, and where does the man live? I wish he would enlighten us on the subject through the RURAL. I shall watch the advertising columns."

THE SCOURED FLEECES.—H. D. L. SWEET, Esq., Sec. N. Y. S. B. & W. G. Assoc'n, desires us to state that "several fleeces of wool await the orders of their owners at the Syracuse Woolen Mills which the Superintendent thereof thinks ought to be taken away, but does not desire to send them until he has orders."

SPECIAL MANURES FOR OATS.—(O. P., South Cairo, N. Y.) As a special manure for oats, good Peruvian guano, superphosphate of lime, or the droppings of poultry are as good as anything. Nitrate of soda is used extensively by English farmers on their wheat in the spring.

IDEAL HEADS OF AMERICAN WOMEN—Noticed and justly commended in the Ladies' Department of this paper, will be sold only by subscription. Apply to C. RICH & Co., Publishers, Poughkeepsie, N. Y., for further information.

BURLINGTON (N. J.) AG. SOCIETY—*Pres't.*—EMMOR ROBERTS. *Vice Pres'ts*—Abraham P. Stackhouse, William R. Hancock, Ridgeway Hancock, James Lippencott. *Rec. Sec'y*—James W. Deacon. *Cor. Sec'y*—George C. Brown. *Treas.*—F. B. Levis.

PAINT FOR OUTBUILDINGS.—Crude petroleum is a cheap and excellent preserver of wood. Mix any of the cheap mineral paints with it to give color and body.

GRASSHOPPERS have destroyed the wheat in Blanco and Kendall counties, Texas.

HORTICULTURAL.

GARDEN TALK.

OUTDOOR work in the garden has but begun in this latitude; the earliest vegetables are just planted, and the earliest flowers are in blossom. Now and then one may see a few peas and some lettuce above ground, and the asparagus stems begin to start up. But peas and lettuce should be sown for a second crop, and potatoes, parsnips, beets, radishes, turnips, carrots and onions planted. Where the season is not sufficiently advanced for corn, beans, melons, cucumbers, squashes, tomatoes, &c., it will pay one desiring a good garden, to forward these in a cold frame. Nail together a few boards so as to make a frame two feet high at the back and fifteen inches at the front; set this in a warm, sunny, protected spot, over some rich earth—woods mold is best—and cover with sash. It is well to whitewash the glass, as the sun shines hot on some days in May. You may cover with oiled cloth or even paper, with nearly as good success. The seed should be planted in hills in boxes, or kegs sawn in two, so they may be removed to the garden without being disturbed. Tomatoes should not be moved when in blossom. They will blast. Move them either before, or wait until the fruit sets. By using hand glasses these vegetables may be started in the open ground, two weeks earlier than without them.

You want good tools for your garden; don't put off the boys, who are ambitious to make a garden, with an old hoe and a rusty spade. You want sharp steel spades, spading forks, a good steel rake to make the surface fine and smooth, trowels for transplanting, a marking rake or line and reel, watering pot, good hoes and a wheel-barrow. Then you want a pretty little tool house in the garden to store them in. A farmer should manage his garden so as to do a great deal of the work with a horse. Let his vegetables be on one side, and his fruit in rows on the other. One horse and a light steel plow will save spading; plant all vegetables in rows, and have but few walks in the garden. But these should be bordered with flowers, and made as attractive as possible.

Don't fail to set out a large strawberry bed, so that you will have plenty of berries, not only to look at but to eat. Spring is the best time in the whole year to set strawberries. We are positive about that. Just now is the time. Plant the kinds that are best liked in your locality, and some new varieties for experiment. For general adoption we think the best plan is to set a new bed each spring, and spade up the bearing one as soon as the berries are gone. The ground may then grow cabbage, celery or turnips. It is less work to set and take care of a bed the first year, than to take care of it properly so as to get two crops. Also set plenty of raspberries and blackberries, currants, gooseberries, &c. These small fruits are tolerably certain, and with plenty of them you can get through the year very well, if all others fail. Settlers in new countries should first plant plenty of berries, and they need never complain of the hardship of living without fruit.

TREE PLANTING—ADVICE.

A. G. TUTTLE of Baraboo, Wis., communicates to the Wisconsin Farmer an article on tree planting, brimming over with satire—more effective, perhaps, than would be a volume of labored argument against the sins of omission and commission chargeable to a great many tree planters. We quote a few paragraphs thus:

"Buy as old trees as you can get, 'age makes them more hardy.' They will be as valuable as cabbage transplanted at the time of heading. Trees seven or eight years old, if properly grown, should be capable of bearing a bushel of apples. It would be better to buy such trees in the fall with the fruit well matured. You will get the worth of your money in fruit. If they have been transplanted a few times, all the better, as there will be no danger of overgrowth the first season, and very little danger of any growth at all.

"When you get your trees, expose them as much as possible to the sun and drying winds. If they live, it will be evidence of their extreme hardiness. If they die, charge the nurserymen with selling you dead trees and claim damages.

"In selecting your ground for an orchard, take that which is heavily sodded; timothy sod will do, but June grass is better. In setting your trees, destroy as little grass as possible; you may be short of hay next winter. Let your cattle and sheep run among them during the winter and you will be able to add your testimony to that of hosts of others of similar experience, that fruit cannot be grown in Wisconsin.

"If you have a grove of forest trees, set your fruit trees among them; they will protect them from the sun and help to evaporate the moisture from the soil; it will save underdraining."

These shafts, at careless and inconsiderate tree planters, are well aimed and timely thrown. Some people plant trees as they would fence posts—making the smallest possible orifice in the ground for the former as well as the latter, from a conviction that the less solid earth there is removed the firmer will the tree stand when put into it. This may be true as to the standing part, but is this all that is wanted? Certainly not. A farmer plants an apple tree for the fruit it is expected to yield, but how can he count on a reward for his labor if the tree is planted like a fence post? The soil about the tree needs preparation so that the roots can freely proceed in search of the aliment essential to growth of wood and the production of fruit when the season of maturity arrives. A fruit orchard is a great blessing, but it is absurd to expect one unless care in the selection of the stock and judgment in the preparation of the ground are exercised by the planter.

THE FATE OF FRUIT COMMITTEES.

FRIEND RURAL:—After much thought I again feel myself obliged to communicate with you. The answer of Mr. MEAD put me in the way of solving former difficulties in part; but there is much remaining, and I have, after much thinking, reached the sight of some conclusions as follows:—We need Professional Committeemen of the right, original build (I think the papers call it "of special aptitude,") for the business, and with the right training, too, which should be very peculiar to fit them for the service. A few examples of the work to be done will explain what I mean.

Some years since a vine called "Northern Muscadine," with some *strong* points, was put before the public, and dragged heavily for a table fruit. Presto! A State Committee awarded a first premium to something made from it that was called *Wine*. The committee died of mortification, having given all their lives to the grape, and no monument has yet been raised to their memory. Later, another grape called "Oporto," also with *remarkable points* and but *little less valuable*, needed and received the same services and the same sacrifice. A golden tablet, *set in brass*, I believe, was gotten up for the occasion, but unaccountably the names of the martyrs were left off. No member survived the dismal doing. The times are better now, but still somewhat "out of joint."

MOTIER and BRAYTON live, but the other three are where? Echo answers "where?" and the sound comes from a sepulchral cavern where bats and night birds flit. There was a committee at Cleveland, a real live one, that "made remarks" seeming to defy their impending fate. Note them. "We have at this exhibition * * * *, Norton's Virginia and Ives' Seedling, ALL of which are *unanimously* reported by your committee of the *highest degree of excellence*." Again: "Some prejudicial foreigners have objected to our native grapes, as deficient in those qualities which characterize the foreign grapes."

The objection has been answered by the *analysis* of many varieties of native grapes by Prof. JACKSON, made by order of our Government in 1859. Now, I had heard that Prof. JACKSON of the "Hub" had died long ago of a threefold attack, namely, "Letheon," "Magnetic Telegraph," and "Grape Analysis." I have an indistinct recollection of Prof. MORSE having been arraigned for "man—something" in the case, and nearly the same of Dr. MORTON. I believe (this in private) he fell into a "decline from breathing the mephitic oder of these same natives when exhibited in full form at Music Hall, soon after the famous analysis. I attempted to enter the room on this occasion—sickened—swooned. A bottle of *Bull's Concord* was brought to restore me. How I escaped from this last horror "I do not care to tell," but I have not been in Boston since. How refreshing a bottle of decent, drinkable wine would be to the memory of that remarkable analysis, if such had ever been made from any of those native analyses. None of fair quality has ever been produced. Common sense would have omitted the analysis, and made the trial direct, and found that the one comprehensive deficiency was, that, however much *fox* there might be, there was no *wine* in them.

The Delaware and Catawba have made true wines, but just try Norton's Virginia (pure and unadulterated) for yourself, Mr. Editor, and excuse me from speaking about it. And the Ives! I beg that no bottle of it, *in its purity*, may be opened within olfactory shot of my memory—faugh! Adulteration could not fail to improve it.

The names of the committee are, MARSHAL P. WILDER, Chairman, J. A. WARDER, WM. GRIFFITH, J. KNOX, C. W. GRANT, GEO. GRAHAM. I shall watch for necrologic reports. I feel sure that one of them, at least, signed with his dying gasp.

There was a very important committee that awarded the "Greeley Prize" to the Iona grape in 1864. If any of the members of the committee are now alive, let them answer to their names. MEAD! PARDEE! BRILL! You said the Iona combined all the high qualities of Mr. GREELEY'S requirements. What say you now? Let us hear from you. Has it borne out your expectations—less or more?

There was another committee—peace to its ashes!—that struggled long, and finally pulled DOWNING and MEAD down with it. One gave signs of life—gulped and died.

Now to save this impending mortality is my desire. In a litigious neighborhood I have heard of the expedient being resorted to of training a band of witnesses that should be ready to "*swear*" on every occasion. I would have Horticultural Committees chosen and kept in training for any emergency. Their Chairman should be always ready, for a suitable compensation, to puff everything into notoriety and sale. If a nursery stock of Baldwin apples or Bartlett pears is too large, let a prize be offered, and call on the *regular standing* Committee. If a great preservatory needs a puff, an extra five hundred dollars is not too much for that, and a thousand is not too much for the Concord grape, under the circumstances. But no committee, *unacclimated*, could stand this trial. To avoid the bungling and jarring among the wheels, and heating of journals by friction that generally occurs and damages the grist, I have also to propose a *new order* "most illustrious and honorable" of *committee makers*; but my idea on that subject I shall open up on another occasion.

Now, my dear RURAL, I have made a long talk, but if any one tries to get at my moral, let him see if he can get at it in fewer words. We want no committee and no company reports. Colonel WILDER has given us *noble addresses*, fit to be engraved on granite pillars—these he spoke alone, feeling his responsibility. The Cleveland report cannot hold up its head by the side of these, and there is not one member of the Committee that would not have blushed to call it his own. C. W. GRANT, standing alone, would not have uttered one of its sentiments, and yet he stultifies himself by endorsing it all, under the divided responsibility of a "*highly respectable*" committee. P. B. MEAD would never have declared the Concord grape the possessor of all high excellencies and void of defects, which in committee he virtually does. M. B. BATEHAM as Secretary is nobody, but standing alone he is an independent man, and at all times worthy of being heard. GRIFFITH, on his manhood, can speak clearly and to the point, and—*pointed truth*. In accurate and extensive knowledge and ability to express his ideas MEAD is not surpassed. Now, communications from any and all of these would enrich your paper and instruct those who are hungering for just the knowledge that they can impart. Let us hear from them. PENN YAN.

GRAPE MATTERS—LAKE ERIE ISLANDS.

EDS. RURAL:—The winter has been quite favorable here; the vines promise well—were never in better condition at this season—the wood being perfectly ripe and of fine, healthy growth. Last season the vines were prepared to withstand more than the usual winter weather experienced here; fortunately we have not had it below zero this winter, and both vines and fruit trees are full of well developed fruit buds. Peaches are all right, and we may reasonably expect a fruitful year. Our islanders are in good spirits with such favorable prospects in view.

Good wine is in demand, and buyers are looking after all the salable wine on hand at fair prices. These are considerably in advance of those of last season. We are still ice bound; the whole of this end of the lake is full of ice strong enough to bear teams from one island to another. So you see we do not expect to hear the welcome sound of the steamer's whistle very soon.

Our grape crop last autumn was quite light compared with the previous year; it was owing to over-bearing. Many vineyards in 1865 bore from five to seven tons per acre, consequently the wood on the vines was not well ripened, and of course could not withstand 16° below zero, as we had it a year ago on the 16th of Feb. Only a small quantity of wine was made here last fall. The great bulk of the fruit was shipped to all the large cities from Philadelphia to Chicago for table purposes. A company on Kelly's Island built a large wine cellar and made upward of 100,000 gallons last season.

We have to send to the Empire State for a nice grape box. We found the round boxes holding 3 to 5 lbs. the most saleable of any in the large cities, although some prefer the 6 lb. square boxes. I will now close, hoping the time may soon come when the fruit of the vine and all other choice fruits may become plentiful and cheap, so that all may enjoy them.

April, 1867. WM. E. SIBLEY.

PLANTING PEAR TREES—LATE vs. EARLY.

EDS. RURAL:—Do you think it is as safe to plant pear trees very early in the spring—say just as soon as the ground is dry—as it is to wait until the trees are beginning to start? Sometimes there is a period in March, or early in April, when the soil becomes quite dry, for a while, and if just as well it would be very convenient to plant the trees then. Mr. MEEHAN, editor of the Gardeners' Monthly, cautions against very early planting, and says "wait until the cold winds have gone." But suppose your trees were heeled in last fall, in the usual way, will they not suffer just as much as though they were planted out? It seems to me that there can be no material difference, whether you plant in April or six weeks later, provided the ground is dry enough to work.

An acquaintance of mine tells me that he finds the Lawrence pear does better upon a sandy soil than it does upon a rather heavy, moist clayey one. What kind of soil usually suits the Lawrence best? W.

Leominster, Miss., 1867.

REMARKS.—The best *rule* is to plant as early as circumstances will permit doing the work well. The more advanced the tree towards coming in leaf or blossom the greater the shock it will sustain by removal. Plant early if you can plant well. Will some of our friends answer the query about the Lawrence pear? In some localities it may prosper best on sandy soil; in *some* it does well on clay.

Horticultural Notes and Queries.

PLEASANT VALLEY GRAPE GROWER'S ASSOCIATION.—The following persons were elected officers of the Association for the ensuing year: *Pres't*—T. M. YOUNGLOVE. *Vice Pres't*—G. W. McDOWELL. *Sec.*—H. D. ROSE. *Treas.*—A. J. SWITZER. *Executive Officer*—E. P. SMITH. *Ex. Com.*—C. D. CHAMPLIN, G. H. WHEELER, H. L. CLARK, H. O. FAIRCHILDS, A. Y. BAKER, E. H. BURGESS, L. D. HASTINGS, M. T. BABCOCK, E. VAN KUREN. The eighth annual fair will be held Oct. 1st, 2d and 3d, 1867.

GRAPES FROM CUTTINGS.—(J. M. C., Niagara Falls.) To grow vines from cuttings in the open air, you have only to make the cuttings long enough to reach down to the moist earth—say three or four joints—and bury them nearly perpendicularly in the ground, leaving only one bud above the surface. If undisturbed, such vines will bear some the third year after setting.

THE AMERICAN FRUIT CULTURIST.—This work, by JOHN J. THOMAS, which we have already noticed at length, we can strongly recommend to those desiring a thorough and complete treatise on fruit culture. We have added it to the RURAL list of books. Price $3, by mail, free of postage.

WEST JERSEY FRUIT GROWERS' ASS'N.—*Pres't*—EMMOR ROBERTS. *Sec'y*—Samuel L. Allen. *Treas.*—Edwin Roberts.

THE grape vine fungus has appeared in the vineyards of France.

Domestic Economy.

ABOUT PIG PORK, TRICHINÆ, &c.

DEAR RURAL:—Will a nice, healthy-looking pig, taken in the spring, and fattened on corn and milk in a pen which is kept in a condition as decently clean as possible, have trichinæ? Do set our hearts at rest, for, since reading the lengthy and interesting description of trichinæ given in your columns, our relish for pork, though unabated, has been *hurt* a little. Why, there are tender ham, juicy spareribs, savory sausages, all ready to be cooked, but with them come the "images" of those disgusting little pests coiled in myriads within, which neither freezing, boiling, nor *eating* can destroy; and, ugh! we fancy we have eaten millions, and dont know but they are the cause of our being so troubled with "nerves" sometimes. Now we don't eat "Western," nor two or three years' old pork, but we *do* like *pig meat*, and if you can say it is all right, you shall have the lasting gratitude of BELL CLINTON.

Chenango Co., N. Y.

REMARKS.—Our correspondent will find in the article referred to (see RURAL of Jan. 5,) all the information we are able to give in relation to the safety of eating pork. Common experience confirms what is therein stated that the infestation of the hog with trichinæ is of *rare occurrence;* but it does happen, and we are at present unable to say how it can be prevented. Those who have become "nervous" on the subject had better either cease eating lean pork, or have it *thoroughly cooked*. If this advice be followed we shall have no fears for the result.

TO KEEP MEAT FRESH.—As farmers generally reside at a distance from regular meat markets, the following directions for keeping meat may be of use to those that try it:—Cut the meat in slices ready to fry; pack it in a jar, in layers, sprinkling with salt and pepper just enough to make it palatable; place on the top a thick paper or cloth, with salt half an inch thick; keep this on all the while. I have kept meat for three weeks in the summer, and the last was as good as the first.

CURING BEEF WITHOUT BRINE.—Take seven lbs. of salt and seven of sugar, three ounces of saltpetre; mix well; pack the beef tight in a cask, and sprinkle the mixture on it as it is packed. The above ingredients are sufficient for 100 lbs. of meat. The packing must be done in a solid manner.

ORANGE PIES AND PUDDINGS.—Will some of the lady readers of the RURAL please give a recipe for making orange pies and puddings. —M. T., *Mt. Morris, N. Y.*

C. KUDER'S PATENT "CLOTHES STICK."—Those interested in having a convenient device for taking clothes out of a boiler on washing-day, will please notice the advertisement in this paper.

ECONOMY IS WEALTH.—Whoever buys the common brown soap throws away a part of his money; those who see that their grocers give them Pyle's O K Soap will save money, time and labor, and have pure white linens.

"HOUSEWIVE'S FAVORITE."—Such has the *Best Chemical Saleratus* proved itself. Being always full weight, and the very best quality.

MOORE'S RURAL NEW-YORKER, D. D. T. Moore, Editor and Proprietor.

THE METHODIST,—Geo. R. Crooks, Editor.

TRIBUNE, New York City. Horace Greeley, Editor.

We call attention to the above list as a positive guaranty of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists in former editions of the leading papers of the country.

THE IMMENSE PROFITS OF THE TEA TRADE.

THE PROPRIETORS OF THE GREAT AMERICAN TEA COMPANY became fully convinced, several years ago, that consumers of Tea and Coffee were paying too many and too large profits on these articles of every day consumption, and therefore organized THE GREAT AMERICAN TEA COMPANY, to do away, as far as possible, with these enormous drains upon the Consumers, and to supply them with these necessaries at the smallest possible price.

To give our readers an idea of the profits which have been made in the Tea Trade, we will start with the American Houses, leaving out of the account entirely profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Tea.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same price (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₱ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,30 ₱ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ₱ lb.
GUNPOWDER (Green,) $1,25, best $1,50 ₱ lb.

All goods sold are warranted to give satisfaction.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.

Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.
No. 640 BROADWAY, corner Bleecker street.
No. 461 EIGHTH AVE., north corner 24th street.
No. 299 SPRING STREET.
No. 205 FULTON STREET, Brooklyn, cor. Concord St.
No. 123 GRAND STREET, Williamsburg.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by Post-office money orders, or by Express, as may suit the convenience of the club. Or, if the amount ordered exceed thirty dollars, we will, if desired, send the goods by Express, to "*collection delivery.*"

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to us.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name. The numbers of our Houses are advertised above.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.
Post-Office Box, 5643 New York city.

DWARF APPLES, on Paradise, two years old; CRAB APPLES, 2 years old; STANDARD PEACH, 1 year; APRICOTS and PLUMS, on Plum; APRICOTS, NECTARINES and ALMONDS, on Peach; VAN BUREN'S GOLDEN DWARF PEACH, CONCORD and CLINTON VINES, and WILSON'S ALBANY and TRIOMPH DE GAND, of first quality, are offered TO THE TRADE at reasonable rates. Prices on application.
EDWARD J. EVANS & CO., York, Pa.

PERRY'S GRAPE VINES.—I can Supply a few thousand splendid Ionas at *very low rates*. Also 10,000 Concord, No. 1 & 2, grown from two and three eye cuttings; a few hundred Adirondac, Israella, Rogers' Hybrids, Hartford Prolific, Diana and Delaware; very fine Dwarf Pears at special rates, by the hundred or thousand. Secure price list and samples before purchasing elsewhere, or come and see the stock. Dr. Parker of Ithaca, sent the following *unsolicited* letter:

"ITHACA, Tompkins Co., N. Y., April 4, 1867.
"F. L. PERRY, Esq.—*Sir:* I received the Adirondac I ordered of you by mail in fine order. I have had vines of a dozen different propagators of late, but none equaled yours in the beautifully fine spreading roots full of nice ripe rootlets, and the large ripe canes—though when I saw your propagation and your propagating box, last season, and the vines in their early vigorous growth, I was convinced that yours was the true way to propagate, yet I was not fully prepared to see them as good as those sent by you prove them to be."
Address F. L. PERRY, Canandalgua, N. Y.

Ladies' Department.

MY WIFE.

BY JOSEPH BRENAN.

THIS poem—of rare beauty in sentiment and expression—is by one of the gifted poets of the "Emerald Isle," now passed to another life.

COME to me, dearest—I'm lonely without thee—
Day time and night time I'm thinking about thee.
Night time and day time in dreams I behold thee—
Unwelcome the waking which ceases to fold thee;
Come to me, darling, my sorrows to lighten,
Come in thy beauty to bless and to brighten,
Come in thy womanhood, meekly and lowly,
Come in thy lovingness, queenly and holy!

Swallows will flit round the desolate ruin,
Telling of Spring and its joyous renewing;
And thoughts of thy love and its manifold treasure,
Are circling my heart with a promise of pleasure;
O, Spring of my spirit, O, May of my bosom,
Shine out on my soul till it bourgeon and blossom;
The waste of my life has a rose root within it,
And thy fondness alone to the sunshine can win it.

Figure—that moves like a song thro' the even—
Features—lit up by a reflex of heaven—
Eyes like the skies of poor Erin, our mother,
Where sunshine and shadow are chasing each other;
Smiles coming seldom, but childlike and simple,
And opening their eyes from the heart of a dimple—
O, thanks to the Savior, that even by seeming
Is left to the exile to brighten his dreaming.

You have been glad when you knew I was gladdened;
Dear, are you sad now, to hear I am saddened?
Our hearts ever answer in tune and in time, love,
As octave to octave and rhyme unto rhyme, love;
I cannot weep but your tears will be flowing,
You cannot smile but my cheeks will be glowing—
I would not die without you at my side, love,
You would not linger when I will have died, love.

Come to me, dear, ere I die of my sorrow,
Rise on my gloom like the sun of to-morrow,
Strong, swift and fond as the words which I speak, love.
With a song at your lip, and a smile on your cheek, love,
Come, for my heart in your absence is weary—
Haste, for my spirit is sickened and dreary;
Come to the arms which alone should caress thee,
Come to the heart which is throbbing to press thee.

Written for Moore's Rural New-Yorker.

"DOMESTIC BLISS."

DEAR RURAL:—In your columns of March 23d appears an article on "Domestic Bliss," in which the writer seems to be advocating the plan of making marriage the exception and not the general rule. To induce all young men to come to his standard, he appeals to their selfishness by picturing to them the happiness of being free, not bound to the "place he calls home."

This is a most pernicious idea. Man will be bound to something. If it is to home and family, then to make the one pleasant and the other happy will be the grand object of life. If not, he will be bound to his selfish pleasures, it may be to the wine-cup and gaming table. And which bonds, think you, will tend to make himself and humanity the happier and better? Our friend would not have men marry until they have an abundant supply of this world's goods. He thinks that a "young man, leading a quiet, temperate life" might manage to subsist on three hundred dollars a year, but if a wife were added this would be impossible. Look at all the wealthy men around us. Nine-tenths of them began poor, married poor, and with the help of their wives, have worked their way up to wealth, and not a few of them give their wives due praise. I well remember an old man,—a friend of my father's when both were young,—who had married his wife when neither had a dollar in the world. At the time I knew them, they had earned wealth themselves and brought up a family of children. He was talking over old times, when my father said, "Well, ——, you have got along well since you commenced life."

"Yes," said the old man, "but I tell you SYLVIA has done her part."

And we knew it was so. Of all the families I ever knew, where the men depended on their daily labor to support their familes, most of the women did as much or more than the men. Not always by labor outside of her own household, bringing in money direct,—but by careful use of the means brought by her husband. With a prudent, industrious wife, the money which would support a single man—pay for his board, washing, ironing and mending—will support two, by careful economy even three, giving him, too, a pleasanter home than a boarding-house and making him a nobler and happier man. All these men and women must live, and it is much easier for a man and woman to support themselves together, than each alone, and they are certainly happier.

If our friend is a bachelor, he isn't a competent judge. If he is a married man, we know well to what class he belongs. It is to that class who in early life imbibed the idea that a wife is a burden, and have always treated her as such, till the poor wife has come to feel that she is a burden to him, to herself and the world, and with no encouraging word from the one who above all others should be ready to cheer,—she has no heart to be otherwise. Young men, marry! and if you are good husbands you may be morally certain of having good wives. But the chances are against your being good men if you live single. MAY.

Wheatland, Iowa, March, 1867.

"It's all very pretty talk," said a recently married old bachelor, who had just finished reading an essay on the "Culture of Women," just as a heavy milliner's bill was presented to him,—"it's all very pretty, this cultivation of women; but such a charge as this for bonnets is rather a heavy top-dressing—in my judgment."

Written for Moore's Rural New-Yorker.

MATRIMONIAL COGITATIONS.

IN the RURAL of March 16th F. S. J. gets off a terrible burden of "sorrow and regret" at "the encroachments of city notions and ideas upon the wholesome customs and habits of the country," and says that the "country girls are among the first to yield to these pernicious influences," and deplores in hopeless style the lamentable consequence thereof, which is—bachelorhood. I beg leave to tell him that he is mistaken, to say the least, in supposing us to be the first to yield to and adopt these styles, as candid observation would soon teach him.

What young man is there who makes any pretensions to the claims of "society," but apes mustache and cigar, or even the barbaric meerschaum, with his glass of "ale, wine or beer," and something stronger? And in the more "refined circles" a boy is no gentleman unless he is skilled in the use of a pack of cards, and spends as many as one or two evenings in the week at the club room. And all this before they are out of their teens.

Knowing that these things are so, and that young ladies—beg pardon! country girls—know them to be so, I seriously suspect that your correspondent is one of them when he asserts that "the undisguised pleasure of their fair companions is miserably marred by the sorrowful conviction that 'nothing serious is intended.'" Few sensible women are willing to trust the happiness or misery of their future lives in such hands; though they may, for want of a "better one at hand," be glad to accept their attendance to singing-schools, picnics, sleigh-rides, &c., for society forbids that they should appear at such places without escorts.

As for dropping the mop and running, I think she may be excused when she knows that her caller is so cityfied in his notions that it would be his last call if he *should* catch her in that *vulgar* "plight;" and that would be a terrible thing, for then she must needs stay at home from "the various entertainments of the country," to say nothing of her matrimonial prospects being all spoiled. And as matrimony has been made the chief end of woman,—we will not stop now to ask *who* made it so,—when these prospects are ruined, she has nothing before her but old-maidism, which, according to present public opinion, is *almost* as bad, if not worse than being unequally yoked together with a young man of the present day.

Albion, Pa. ELSIE.

IDEAL HEADS.

WE have before us five ideal heads of American Women, drawn by Mr. CHARLES A. BARRY of Boston, and lithographed under his special direction in Paris by LAFOSSE and FUHRE, the most renowned lithographers living. They are intended to illustrate the various spheres of action in which the women of our land bore a prominent part during the late rebellion. He has so admirably deliniated the character of each that they tell their own story of anxiety, hope, patience and undaunted courage—and speak more than volumes could do of the devotion, sympathy and fortitude of American women. They are "The Angel of the Hospital," "At the Front," "The Color Bearer," "Before the Battle," "Army News," all five ideals of nobly beautiful characters, and ornaments, choicely fit, for American homes. As specimens of lithographic art they can hardly be equaled.

OUR SPICE BOX.

PRECARIOUS style of life—dwelling in other people's memory.

MISERY loves company, and so does a marriageable young lady.

THE course of true love is a race-course where there is often a false start.

MICE and women—one harms the cheese, and the other charms the he's.

THE man who courts a young lady in the starlight, probably expects to get a wife in a twinkling.

A WOMAN took a second husband to keep herself from fretting to death over the loss of the first one.

THE last case of jealousy is that of a lady who discarded her lover, a sea captain, because he hugged the shore.

NATURE, when she makes a beautiful head, is so absorbed with admiration of her work, that she forgets the brains; let homely girls take courage.

A GERMAN paper says that a young man recently married a widow twice his age, and he ascertained subsequently that his wife had been his wet-nurse.

IT has been objected that if women voted husbands and wives might vote against each other. We think that the wives may be trusted to prevent that.

AN Indianian who lost four wives—two by death, one by elopement, and one by divorce—has just married again, in spite of his melancholy experience.

THE young lady who was discharged from a pickle factory because she was so sweet that the vinegar would not act, has found employment in a candy store.

WEAK doses of washboard are now recommended to ladies who complain of dyspepsia. Young men troubled in the same way may be cured by a strong preparation of wood-saw.

WHEN a young lady sits in the parlor during the day, with her lily-white fingers covered with rings, I wonder if her mother doesn't wash the dishes and do the work in the kitchen.

SNOOKS says the words "No Cards" are affixed to marriage-notices, because the parties played all their cards before marriage. This is a new theory, and will be generally accepted.

Choice Miscellany.

COST OF CONQUEST.

OPENING and closing stanzas of a poem—by JENNIE COLEMAN—read at Corinthian Hall, at the Exhibition of "Rochester Free Academy."

To strive for renown is an instinct, I think.
So many hearts pant for its pleasure,
While pressing dry lips to the chalice, to drink
Of the dizzying draught, without measure.

But the glittering throng which history brings
Is as mournful a sight as ever I've seen;
The faces so pale, and eyes that are dim
With the tear-mists of sorrow, I ween.

Oh! keenly they suffered to wear the bright crown;
And the joy of the conquest was smothered in pain,
Save when some brave soul, ere the life-flame went down,
Struggled hard for the right, caring naught for the gain.

* * * * * * *

Not every one may a conqueror be,
For some have not patience to win,
Nor strength to thrust back what evils they see,
The foes less without than within.

An aim we must have, for an aimless life truly
Is a failure from first to the last;
Next a will that ne'or falters, though slowly, still surely,
Beating back every withering blast.

If alone for reward we are spending our life,
Half the pleasure thereof we shall lose.
Though we here may not meet it, true hearts will revive,
By the deeds that we do, and the words that we use.

Shall we faint and repine, then, because we must suffer,
When to this, much of strength we all owe?
Complaining to Heaven in ignorant murmur,
When the depths of His love none can know?

He is effeminate, forceless and weak,
Whose life not a sorrow or care ever brings,
Like the iron his soul, that, the harder 'tis struck,
The louder with echoes still rings.

Written for Moore's Rural New-Yorker.

WHAT SHALL WE READ?

I MIGHT enumerate a dozen names of wise men who tell us what to eat and how to cook it; but what one of them will tell us what to read? By "us" I mean plain, practical men and women, who, knowing perhaps "little Latin and less Greek," want to select wisely from the mass of books.

One of old said wisely "of making many books there is no end;" but of buying them there surely is an end, if not of books, at least of money. History, biography, essays and scientific researches are desirable for the winter evenings; but now, as the busy season is coming on, farmers' families want something that shall rest, recreate and instruct.

IK MARVEL did the world good service when he wrote "My Farm of Edgewood." Every spring, when the snow-drops begin to blossom and the crocuses push their modest heads from their winter covering, we read it like a new poem; and through all the year its memory haunts us like the faint perfume of violets. It would be very strange if this reading is of no practical use. Through its influence the little raised beds in the garden have stretched away into long rows, and the cultivator and hoe do in a few hours the work of cleaning the weeds from the garden vegetables. The currants have marched away from the north side of the fence to a stately row in the center of the garden, where they receive their share of sunshine and rain; and the meadows that, in the days of the fathers, were cut up by unsightly fences, have blended their traditional "lots" into a broad, unbroken field, that stretches away, undisfigured by fence or wall, to the river bank. When grapes ripen on some sunny slope, and the sumac hangs out its scarlet banners in autumn, and the tangled copses grow into wildernesses of beauty, we know to whose suggestions we owe these things.

COPELAND'S "Country Life," is a charming book that makes the townsman sigh for the pure air and sweet influences of the country, and to "dream dreams and see visions" of the farm that is to be. It is a book to read when the bees hang over the clover blossoms, or earlier yet when the lilacs begin to bud, and the enthusiasm of gardening is just awakening. Delicious strawberries, luscious pears, and clusters of grapes that "make glad the heart of man," will mingle in your dream with a whole train of floral beauties. Better than all, it is no mere book of directions, but a record of what has been done, heard and enjoyed in the life it describes. It is what it purports to be, country life. The author evidently loves his work, and writes with all the enthusiasm of youth, instead of the staid propriety of middle age; and the reader is sure to share that enthusiasm.

Another excellent book is ROBINSON'S "Facts for Farmers." Don't try to read it by course; for, if you do, you will be appalled by the task. But lay it on the shelf by the dictionary, and when you particularly want to know something about your gardening or farming, and can't wait to search through a whole library, the chances are that among the thousand and one topics of which it treats you will find what you seek. It contains the wisdom of SOLON on almost all subjects, from the setting of a hen to the setting of an orchard, and much learned discourse on living creatures, from the sleek short-horn down to "the wicked flea." If some of its directions have been followed since the days of ADAM, who was the "Head Center" of all gardeners, down to the present time, others are new and suggestive; and whoever will may grow exceeding wise by their study. These are only a few of the books essential to a farmer's library. Instead of telling what to read, my wayward pen has only gossiped of this and that; but I promise, if you will only bear with me this time, that next time I will perhaps gossip more.

Benson, Vt. S. A. G.

Written for Moore's Rural New-Yorker.

A LESSON FROM ACORNS.

OFTEN has that suggestive line been quoted: "Tall oaks from little acorns grow." Here is another lesson from acorns:

Late in the autumn of 1865, in Alexandria Co., Va., I saw a colored woman and her little daughter gathering acorns. As I understood that she was thus saving food for the swine, for the approaching winter, I commended her forethought and industry. With cheerful earnestness, and strong emphasis, she replied:—"The good Lord gives sunshine and rain, and makes the acorns grow: and by His wind He shakes the oaks, and the acorns fall for us, and if we are too lazy to pick them up—*it's a shame!*"

This is practical philosophy. If we can so abundantly raise corn, as not to need the acorns, very well. But the lesson is—we must gratefully secure all the facilities which are granted us for obtaining blessings. In agriculture, science, mental progress, and moral culture, acorns fall: we must joyfully avail ourselves of all the good which they can bestow upon us.

Loudon Co., Va., 1867. J. R. J.

COURAGE IN EVERY-DAY LIFE.

HAVE the courage to discharge a debt while you have the money in your pocket.

Have the courage to do without that you do not need, however much your eyes may covet it.

Have the courage to speak your mind when it is necessary you should do so, and to hold your tongue when it is prudent you should do so.

Have the courage to speak to a friend in a "seedy coat," even though you are in company with a rich one, and richly attired.

Have the courage to make a will, and a just one.

Have the courage to tell a man why you will not lend him your money.

Have the courage to "cut" the most agreeable acquaintance you have when you are convinced that he lacks principle. "A friend should bear with a friend's infirmities," but not with his vices.

Have the courage to show your respect for honesty, in whatever guise it appears; and your contempt for dishonest duplicity, by whomsoever exhibited.

Have the courage to wear your old clothes until you pay for your new ones.

Have the courage to obey your Maker at the risk of being ridiculed by man.

Have the courage to prefer comfort and prosperity to fashion in all things.

Have the courage to acknowledge your ignorance, rather than to seek credit for knowledge under false pretences.

Have the courage to provide entertainment for your friends with your means—not beyond.

JOUBERT'S THOUGHTS.

NEVER cut what you can untie.

Be gentle and indulgent to all: be not so to yourself.

Without duty, and its idea, there is no solidity in virtue.

Good impulses are naught, unless they become actions.

Without a model, and without an ideal model, no one can do well.

The heart should walk before the intellect, and charity before truth.

Ambition is pitiless; every merit that it cannot use is contemptible in its eyes.

We should make ourselves loved, for men are only just toward those whom they love.

We should do good whenever we can, and do kindness at all times, for at all times we can.

Good sense accommodates itself to the world: wisdom endeavors to conform itself to Heaven.

Often our fine qualities are loved and praised only because our defects temper their luster. It often happens that we are loved rather for our defects than for our high qualities.

A man who shows no defect is a fool or a hypocrite, whom we should mistrust. There are defects so bound to fine qualities that they announce them, defects which it is not well to correct.

No one is good, cannot be useful, deserves not to be loved, if he has not something heavenly, either in his intellect through thoughts, or in his will through affections directed upwards.

HOMES IN THE WEST.—Theodore Tilton, the editor of the Independent, in writing a letter to his journal from the prairies of Iowa, uses the following language in regard to young men of the East seeking homes and fortunes in the West:—"If a brave and brawny young man, who cannot get along at the East because he can find no open door, will go to the West, put his hand to the plow, and look not back, he will find himself at the end of ten years a man of property, a chief citizen of his neighborhood, an esteemed member of society, and the architect of a successful career. I know that many other writers have said all this over and over again; but I believe the testimony needs constant repetition, in the hope that they may lead the feet of many disappointed throngers of city streets to make a pilgrimage to green fields. This is the path to fortune."

POPULAR ERRORS.—That editors keep public reading-rooms. That they have plenty of time to talk to everybody. That they are delighted to get anything to fill up the paper with. That every man's own special ax is a matter of "public interest." That it doesn't make much difference whether copy be written on both sides. That editors return rejected manuscripts.

Sabbath Reading.

THE DEATH OF THE RIGHTEOUS.

BY REV. W. B. O. PEABODY.

BEHOLD the western evening light!
It melts in deeper gloom:
So calm the righteous sink away
Descending to the tomb.

The winds breathe low—the yellow leaf
Scarce whispers from the tree!
So gently flows the parting breath,
When good men cease to be.

How beautiful on all the hills
The crimson light is shed!
'Tis like the peace the dying gives
To mourners round his bed.

How mildly on the wandering cloud
The sunset beam is cast!
So sweet the memory left behind,
When loved ones breathe their last.

And lo! above the dews of night
The vesper star appears!
So faith lights up the mourner's heart,
Whose eyes are dim with tears.

Night falls, but soon the morning light
Its glories shall restore;
And thus, the eyes that sleep in death,
Shall wake to close no more.

Written for Moore's Rural New-Yorker.

A REFLECTION.

VANITY is written on all earthly things; it is found in the fulfillment of every earthly hope; it is the sum of all earthly experience. And what does it prove? Is it not this: that the energies of the soul are fitted to act for—as the desires of the soul should tend to—immortality? The beast seems content when the demands of sense are satisfied. But when all the reasonable wishes of man are fulfilled, when every means of pleasure is at his command, when the calls of sense are answered, a voice still makes itself heard within him, saying:—"Arise—this is not thy rest!" This dissatisfaction, this longing for something better and unchangeable, is surely the aspiration of the soul for eternity. Heed, O man, the heavenly instinct! Look upon this life as the soil in which is nourished the germ of thy immortal being. "Let faith have its perfect work." Believe that thou art sown by a wise, a merciful hand; and that, in proper season, thou shalt be brought forth to the light and warmth of a glorious existence.

RASHA RUDWOOF.

JESUS THE FRIEND OF SINNERS.

YOU do not find him standing at a distance, issuing his mandates to sinners to make themselves better; but you find him coming among them, like a good workman who stands over his work. He takes his place where the sin is, personally to deal with it. Some people appear to have a philanthropic love for the fallen, but would not touch them with a pair of tongs. Not so the Saviour. Up to the very elbow he seems to thrust that gracious arm into the mire, to pull up the lost one out of the horrible pit. He comes into contact with sin, without being contaminated. He eats and drinks with sinners. He sits at the Pharisee's table and does not rise because there is a crowd of people no better than they should be. Another day he goes to the publican's house, who had, no doubt, been a great extortioner; but JESUS sits there, and that day does salvation come to that house. This is a sweet trait about CHRIST, and proves how real and true was his love.

He sought that which was lost till he found it. Once, on a journey, Samaria was a little out of his way; but there lived, in a city a woman—ah! the less said of her the better. She was a disgrace to that city. But JESUS, who has a keen eye for sinners and a heart beating high for them, means to save that woman. He sits down by a well to rest. A special providence brings the woman there. He breaks through conventionalisms, and the narrow bigotry of caste. The disciples may wonder when they come and find him talking with her. He begins to open the Word of Life to her understanding, and that woman became the first Christian missionary we ever hear of; for she ran back to the city, leaving her water-pot and crying, "Come see a man who told me all things that ever I did. Is not this the CHRIST?"—*Spurgeon.*

RELIGION.

As religion has its ground in the imperishable nature of man, and its support in the continual activity of GOD, both directly in the Holy Spirit, and immediately through nature, so religion is a fact of human consciousness, inseparable from human natures, and appearing at all periods of history. But the phenomena of its development must depend on the general development of mankind. Nothing is done *per saltem* in human history more than in material nature. Mount Washington does not rise sheer up from the sea, perpendicular, seven thousand feet; there is an upward slope, though irregular, all the way, else the ascent were impossible, except to the eagle. Poets, like MILTON or GOETHE, men of science, like ACKARD and NEWTON, do not spring up among the Mandans or the Lestrygonians. If we bring together two extremes of religion, all the difference of civilization appears in the religions thus wide asunder. Supply the links intermediate, and the transition is not abrupt. History slips all the way from the rude representation of the Bushman to the free spiritual religion of the Christian.—*Parker.*

VICE and ignorance are the necessary companions of each other; and we can no more reverse it than we can reverse the stars in their course.

The Traveler.

LOS CASCARILLEROS;

OR, BARK GATHERERS OF PERU AND BOLIVIA.

BY LARDNER GIBBON.

[These Notes are based on the practical experience of the author, who was an officer in the "Exploration of the Valley of the Amazon," in 1852-3.—Ed. Rural.]

Los Cascarilleros—bark gatherers of Peru and Bolivia—are men of European descent. In the middle of May, at the commencement of the dry season, they supply themselves with hatchet, knife, short club, dried meat, parched corn and medicine, and descend the Andes into the Amazon basin in search of bark. They follow the spurs of the mountains, and from the upper branches of tall forest trees they look out and survey the surrounding wilderness. With practiced eye they distinguish the large bright green and yellow shining leaf of the cinchona tree from the ordinary foliage.

The tree is felled, and the bark stripped off, dried, and made into small bundles, ready to be carried on their backs to the nearest point to which a mule may be brought. That taken from the trunk of the tree is the best, that from the larger branches the second in quality, and that from the smaller, or upper branches, the least valuable. Two quintals of bark will make one quintal (one hundred pounds) when dried. The process of gathering the bark is destructive, the tree being entirely killed. The value of the forest has been injured. The trees are found with difficulty.

The belt of country in which the cinchona tree is found is the boisterous region of the earth. The east winds pass over the low lands of Brazil. When they reach the Andes, twenty thousand feet in height, the way is disputed by stupendous odds in favor of rock. The winds seem to double themselves, and battle with great fury. Clouds rise up on the broad Atlantic, and are brought as if to assist the winds. They roll against the mountains with increased atmospheric pressure, electrical flashes of fire, and thundering. Trees are torn up by the roots; the earth is disturbed; rocks are loosened, fall, and roll over the precipice, as in an earthquake. Yet these mountains stand, and bear it with wonderful composure. The winds and clouds weepingly give way. Some go down where it is very hot, and rains fall over the valley. Some go up where the last drop of rain falls amidst the crowned heads of the Andes, in pyramids of perpetual snow, where there is formed an atmospheric veil for the animal and vegetable kingdoms of Lima—on the shore of the Pacific Ocean—where it never rains.

The Cascarillero roams through the wilderness of huge trees, tangled briars, creeping vines, and thickets. When he meets a tiger or lion, he walks up to him with short club in hand. As the animal springs upon him, he suddenly steps aside, and strikes to break the back. Should he miss his aim, there is danger; for when the animal renews the attack he goes in with much anger, and sometimes kills his man. When he meets a troublesome serpent, he runs or calls for help.

Thin, sallow complexioned and worn down, he may be seen slowly walking after an old horse or mule, loaded with bark, on his way up the mountains in November, to escape the rainy season in the valley of the Amazon.

By law the bark is taken to a government agent who pays a fixed price in merchandise or specie. It is then put up in cotton bales, and covered with rawhide, each weighing one hundred and fifty pounds—two bales, or three hundred pounds, being a mule-load over the Cordilleras to the seaport of Arica, where it arrives in ten days from La Paz, paying a freight of twelve dollars per mule load. The price at Arica varies according to the demand for quinine in fever and ague countries. It is carried to the chemists in the United States and Europe, where it is manufactured and bottled, and some of it is reshipped and sold, in the apothecary stores of the towns of these mountains, to those who enter the cinchona region, where the disease for which it is intended as a specific frequently prevails. Cascarilleros have paid for one ounce of quinine what they are willing to sell one hundred pounds of bark for at the foot of the tree.

The forest is common to all persons who choose to employ themselves in gathering bark. All men men enter the territory, live in it, and are at liberty to take away with them their property, paying duties to the Treasury, according to the laws of police and custom-house.

The home of the Cascarillero is among the Andes. His house is built of stone and thatched with mountain grasses. A few faggots and a little fire produce a dense smoke, which fills the dwelling with an atmosphere which protects him from the cold mountain blasts of rain and snow. The fire is placed in the middle of the ground floor. The smoke has no escape but through the doorway, which at night and in cold, stormy weather is closed by suspending a raw-hide in the passage. The inmates cook, eat, rest and sleep by the fire. Guinea pigs are great favorites in the house. They burrow under the ground-floor near the wall. Dogs crawl in and form a circle. Fowls have their roost in the upper part near the roof, along with the pet parrot, who feels thankful for the fire below, but chatters his objection to being smoked in Spanish. A sow with pigs may crowd under the raw-hide, while the others sleep. The quantity and activity of fleas is startling to a stranger.

Potatoes, onions, garlic and pepper, boiled with dried or fresh mutton, furnish a meal for the day, which is called "chupe,"—a national dish of Peru. It is turned into a wooden platter and one large wooden spoon serves the whole family. The father is relieved by the mother, and so on, when the father in turn is handed the spoon by the youngest child. The dogs sit up behind, looking on, quiet, respectful and good natured, until a bone is cast that way—then a fight takes place in the rear.

A jar which occupies a retired position in the darkest part of the house is kept supplied with a stimulating drink called "chicha," of which they all partake. Chicha is made of corn. The process of manufacture is rather peculiar, but the mode is very popular among these people. The women seat themselves by the side of a wooden trough, each supplied with a lap full of corn, which they masticate by the mouthful, and spit it into the trough. Where there is a deficiency of a sound and complete set of grinders, the work is both laborious and tedious. The occupation is somewhat stimulating, however, and the oldest inhabitants are among the most active millers. The time being occupied with laughing and gossip, the interval is made gay. The glow brought to the cheeks of the young girls attracts their admirers, who usually stand looking on in pleasant anticipation. When the trough contains a goodly supply, a little water is added. The composition is deposited in earthen vessels, and after it has undergone the necessary fermentation, the liquor is placed in jars ready for use as an intoxicating drink.

Greenville District, N. C., 1867.

Various Topics.

WHAT MEMBERS OF CONGRESS DO.

"Eight dollars a day and roast beef," used to be the political cry in my boyhood about members of Congress—conveying an idea of a set of jolly good livers, much at their ease, and on large pay. Such pay, in these days, does not seem so vast as in the simpler times when the cry was raised, but the impression still remains that these honorable gentlemen have an easy time—little work, with glory and pay still greater than of old. I confess to have somewhat shared this; but a six months' stay in Washington in daily contact with these men has convinced me that they *work*, and *must work*. A lazy man has a poor chance there. He may go once possibly, but again never.

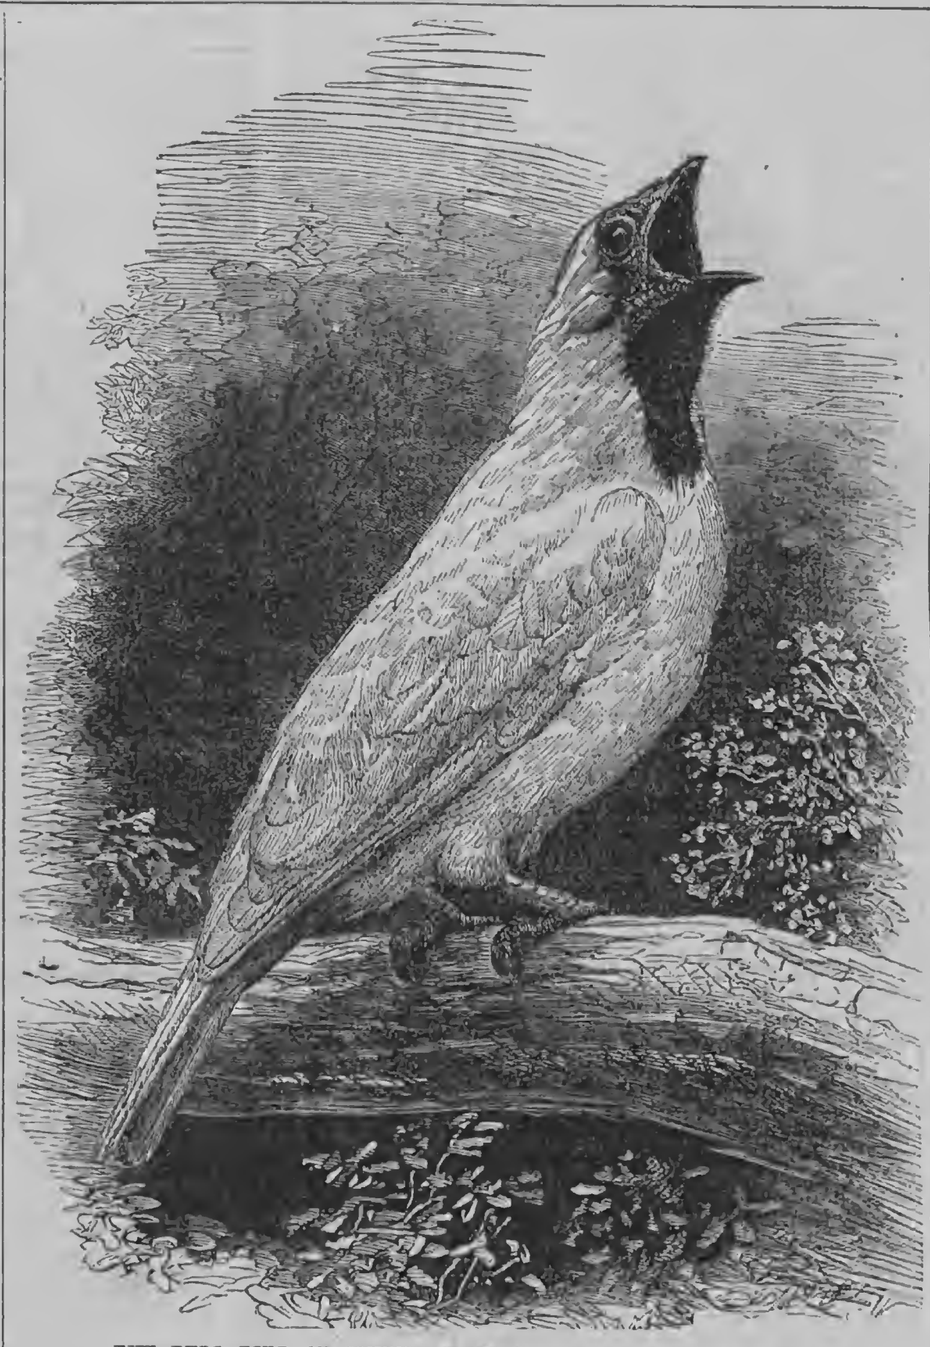
A glimpse at the calls on their time and strength may be of interest; for the people should know how their servants are occupied. Breakfast, at private boarding houses, is at eight o'clock; at hotels from seven to eleven. A Congressman of course must be up and dressed for his morning meal. He finds his mail at his door or beside his breakfast plate; a score of letters from constituents, politicians and private friends,—all to be read, answered, and the many errands asked for to be done. These errands may fill hours of time, and carry him all over the city. They must be done; for his constituents are his friends and supporters, and their affairs have special and imperative claims. His meal finished he goes to his room, which may be under the same roof or in some other house, and may find from one to a score of persons waiting to see him, all urging public business, or pressing for help in private claims. Some of these bring advice and suggestions of value; others are *bores* who never know when to get through and go away. Possibly he may have an hour alone, but with letters and public matters it is full. Often he is compelled to go to the Patent Office or the State or Treasury Departments, absurdly at a mile's distance or more from the Capitol.

Most members belong to some committee of the House or Senate, sometimes to several. Some of these do a vast amount of work, and meet often. Thus when ten o'clock comes he may have a committee meeting to attend, held in some of the beautiful rooms of the Capitol. At twelve o'clock both Houses meet, and usually sit until between four and five—sometimes holding evening sessions. Members write and read some, but must keep a run of what is passing, be ready for votes on whatever is up, and hear what they can in the "noise and confusion" of the House, where not one speech in fifty is quietly heard. The Senate, with fewer members, is stiller. Dinner, *at noon*, is unknown in Washington. In spacious rooms beneath the halls of the House and Senate, are refreshment tables where members and others lunch on luxuries if time and purse allow, or on simpler fare, more readily disposed of. Very interesting it is to meet these dignitaries in the passage ways with cake and pie in hand, like big boys after a visit to the pantry. No liquors are sold or used, and all is civil and orderly. Outsiders are not allowed—save in special cases—on the floor of either House; but, from the half-dozen doors, messages are constantly sent in, and members called out, or asked to do whatever is needed by those outside. As each mail comes in, it is sent to their desks from post-offices in either wing of the Capitol, and again at evening to their rooms.

At adjournment all leave, sharp-set for *the* meal of the day, and cars and sidewalks are thronged often by a thousand persons hastening to their dinner. At four o'clock the *four thousand five hundred* clerks and officials in the Departments leave, so that tides of life meet and cross and mingle on the broad sidewalks, at full flood, for an hour or more. After dinner a member is likely to find still more callers at his room, or perhaps a committee meeting, or an evening session at the Capitol. Then comes, to fill up the corners of spare time, the franking of speeches and documents to his friends in his district—a labor sometimes so great that clerks are employed at night to direct the thousands of these sent off, which are gathered up by wagons which traverse the city for that purpose. Of course there are frequent private meetings to discuss and decide on public affairs. Then come evening "receptions" at the residences of Cabinet Ministers and Senators, *levees* at the White House, and many other places of resort, high or low, until a late hour comes before sleep visits the weary eyes of these men of many occupations.

In the past few years, with the rapid growth of the country, the varied labors of Congressmen have greatly increased, and this glimpse will show that they have enough to do. An honest man, wishing to discharge his duties, will find his strength fully taxed, while a selfish politician *must* perform a great deal of work to keep his position.

A word on the franking privilege. Public Documents, Reports on Agriculture, &c., &c., are paid for by Government, but speeches are paid for by the members, and the only cost to the Government is the wrapping and sending by mail. Thus, information on all sides of all public questions goes far and wide, at small public cost, which would not otherwise be the case, and the privilege, liable to abuse as it may be, is well, on the whole. S.



THE BELL-BIRD OF SOUTH AMERICA—(Chasmorhynchus nudicollis.)

Our illustration of this remarkable bird is from life. It is very like, but not the same, as that described by Charles Waterton; the absence of a singular wattle over the upper bill, being almost the sole difference.

The difference in vocal powers is remarkable, however. It is generally in the early part of the day that this bird sends forth its loud and wonderful notes. The first note is a loud, harsh, and somewhat grating noise; this is followed by six or eight fine, clear, metallic-ringing notes, with an interval of about a second between each note. The resemblance of these to the sound of an anvil is most extraordinary, and has given rise to its local native name of the Anvil-bird, though it is called by Europeans the Bell-bird.

It is a native of Brazil, and lives almost wholly on fruit. But little larger than a misel-thrush, its plumage is perfectly white; the eyes pale gray; the naked throat, and skin round the eyes a fine, bright green. Its wondrous note, loud and clear, like the tone of a bell, or the ring of an anvil, may be heard three miles, astonishing the hearer.

CONSUMPTION OF POSTAGE STAMPS.

Twenty tons, or, by superficial measurement, forty-eight and one-half square acres of postage stamps, have been used during the year; enough to roof a large township, with all its houses, churches, barns, gardens, forests and farms; or, if you choose to make ribbon of them, enough to reach nearly from the equator to either pole, or twice the length of the Mississippi River. So that, if everybody would be obliging enough to use the government stamp on the envelope itself, the mere omission of these little extra bits of paper would lighten the mail bags, by more than forty thousand pounds, and save in paper fifteen or twenty thousand dollars. The Post-Master-General does not impart this information in so many words, but he assures us that nearly three hundred and fifty millions of stamps have been sold in the year past, besides nearly forty millions of stamped envelopes; and a simple calculation reduces the story to the more tangible form we have given it.—*Scientific American.*

What Industry will Do.—Under this head the Waco (Texas) Register has the following, which boys and young men in the country should read and heed:—"Last year a young man living near this place, Albert Sears, rented a piece of good land, hired one good old freedman, and with his own hands went to work to cultivate the soil. He worked manfully and well. And now for the fruits of his industry:—He has gathered twenty-four bales of cotton, two thousand bushels of corn, and made four hundred gallons of molasses from sorghum. He also has some pork to spare. He has sold sixteen hundred bushels of corn for $1,200 in gold, obtained $300 for his molasses, and his cotton is good for $1,800 more—making in all $3,300. He was at some trifling extra expense during cotton picking time."

THE OLDEST REPUBLIC IN EXISTENCE.

The oldest republic in existence is that of San Marino, in Italy, between the Appenines, the Po and the Adriatic. The territory of this State is only forty miles in circumference, and its present population about 7,000. The republic was founded more than 1,400 years ago on moral principles, industry and equity, and has preserved its liberty and independence amid all the wars and discord which have raged around it. Bonaparte respected it and sent an embassy to express his sentiments of friendship and fraternity. It is governed by a Captain-Regent, who is chosen every six months by the representatives of the people, (sixty-six in number,) who are chosen every six months by the people. The taxes are light, the farm houses are neat, the fields well cultivated, and on all sides are seen comfort and plenty, the happy effect of morality, simplicity and frugality.

ANTIQUITY OF "YANKEE DOODLE."

Mr. William C. Bryant, lately traveling in Spain, relates that some time since, when Mr. Perry, Secretary of the American Legation at Madrid, was in one of the Basque provinces, he heard a band playing their old national airs. The Basques have preserved whatever is peculiar to them, their language, their customs, and many of their political rights, from the earliest period in which they are known in history; their national music is claimed to be of the same antiquity. After the band had played several other airs, it struck up Yankee Doodle, the very tune, in every note, which is so familiar to American ears. Mr. Perry immediately claimed it as our national air. "It is one of our old tunes," said a gentleman to whom he spoke, "and I can convince you of the fact. For hundreds of years it has been a popular air among us." The gentleman afterwards made good his assertion by showing Mr. Perry a manuscript of great antiquity which contained the identical musical notes of "Yankee Doodle."

Mount Hood, Oregon, is reported 17,600 feet in height, the loftiest peak in the United States, and a volcano. Prof. Alphonso Wood, of Oregon, who measured the altitudes by observing the boiling point of water, found the summit of the Cascade Range and foot of Mount Hood proper, at an elevation of 4,400 feet: limit of forest trees, 9,000 feet; highest limit of vegetation, 11,000 feet. On the flanks of the mountain are glaceries, and on the north side a precipice of a vertical mile of bare columnar rock. The crater is of great extent, with an original depression estimated not less than 1,000 feet deep, and an open abyss vomiting sulphurous smoke, on the west side. The area of the mountain summit is crescent-shaped, half a mile long, and from three to fifty feet wide.

Reading for the Young.

THE BAREFOOT BOY.

Blessings on thee, little man,
Barefoot boy, with cheeks of tan!
With upturned pantaloons,
And thy merry whistled tunes—
With thy red lip, redder still
Kissed by strawberries on the hill—
With the sunshine on thy face,
Through thy torn brim's jaunty grace;
From my heart I give thee joy,
I was once a barefoot boy.

Oh! for boyhood's painless play,
Sleep that wakes in laughing day,
Health that mocks the doctor's rules,
Knowledge never learned at schools
Of the wild bee's morning chase,
Of the wild flower's time and place,
Flight of fowls and habitude
Of the tenants of the wood,
How the tortoise bears his shell,
How the woodchuck digs his cell,
And the ground mole sinks his well,
How the robin feeds her young,
How the oriole's nest is hung;
Where the whitest lilies blow,
Where the freshest berries grow,
Where the ground nut trails its vine,
Where the wood-grape clusters shine;
Of the black wasp's cunning way,
Mason of his walls of clay,
And the architectural plans
Of gray-hornet artizans!
For, eschewing books and tasks,
Nature answers all he asks;
Hand in hand with her he walks,
Face to face with her he talks,
Part and parcel of her joy—
Blessings on the barefoot boy!

Cheerily, then, my little man,
Live and laugh, as boyhood can,
Though the flinty slopes be hard,
Stubble-spread the new-mown sward,
Every morn shall lead thee through
Fresher baptism of the dew;
Every evening from thy feet
Shall the cool wind kiss the heat;
And too soon those feet shall hide
In the prison cells of pride,
Lose the freedom of the sod,
Like a colt for work be shod,
Made to tread the mills of toil,
Up and down in ceaseless moil—
Happy if thy track be found
Never on forbidden ground—
Happy if they sink not in
Quick and treacherous sands of sin.
Ah! that thee may know thy joy,
Ere it passes, barefoot boy!

A TALK WITH BOYS AND GIRLS.

Boys and Girls, may I have a little talk with you? I want to tell about the little old school house where I used to go, when a boy. It was "away down East," in Massachusetts. Just a brown, unpainted house with no yard or trees around it, but standing close by the road-side. Yet the road was very pleasant; not narrow, but a wide, grassy street, with farm-houses scattered along every few rods, and great elm trees spreading their branches high over the chimney tops.

The trees were very old; for an elm wants a hundred years to grow in, and then it is very large, its great limbs spread wide, and its branches have *ever so many* nice places for bird's nests. How I used to love to lie in the grass in the shade of the old elms and watch the birds going to their nests and hear their songs!

Down the road a little way was "Mill River," a clear stream, perhaps fifty feet wide, with a wooden bridge over it, brown and old. Just below the bridge was a ledge of rocks reaching across the river, over which the water waved and foamed, and flashed in the sunlight, and then ran on still and quiet to the "deep hole," down under the shade of some tall oaks, where it was *so deep*—away over the top of the head of a man. Such a nice place as that was for the "big boys" to dive from the trees into the deep water, and stay under so long we little fellows thought they might not come up again. Far away spread the green meadows and fields, and the blue mountains rose up beyond, grandly beautiful. Those farm-houses were very old—some built more than a hundred years ago, with great chimneys, and little windows, and carved door-posts and fire-places, *ever so large*. The school house was so low that the teacher, if he was a tall man, had to stoop his head as he went under the stove pipe, and the seats and benches were all cut up by the knives of roguish whittlers. We had no blackboards, no singing, fewer books, and not so good as you have now. *You ought to know more than we do.* Now, the boys and girls who used to be in that old school house, are grown up men and women, and live far apart—some in California, some in England and France, some in New York and in the West. I remember just how they looked on those old seats, and thinking about them as I write, makes me feel as though I was a boy again in the old brown school house.

MEN ONE WOULD RATHER NOT MEET.

Men who tell stories that run into one another, so that you find it very difficult to get away at the end of any of them.

Men who have quarrelled with all their relations.

Men who have been betrayed and abandoned in the most heartless manner by all their friends.

Men who have been persecuted and swindled by a general conspiracy of everybody.

Men who imitate popular actors.

Men who are always asking, "Don't you think so?"

Men who are always "putting a case."

Men who agree with you too much.

Men "who feel inclined to join issue with you there."

As long as a miser lives his money-chest is very sure to be heir-tight.

SPRING CAMPAIGN
OF THE
RURAL BRIGADE!

A NEW QUARTER OF THE RURAL

Began April 6,—a good time for new clubs or additions to old ones to commence, though we can still furnish back numbers from Jan., or subscriptions may date from Feb. or March 1st. March is a good month in which to fill up Premium Clubs already begun, and also to form new ones. There are hundreds of localities in which clubs may yet be organized and Rewards of Merit secured. Our former Premiums are continued, and several new ones added,—(see part in RURAL of 9th, and full list in Supplement.)

ANOTHER SPLENDID PREMIUM!—By request we have added LAMB'S FAMILY KNITTING MACHINE to our list of Premiums. For 65 Yearly Subscribers (at least 50 of them being *new*) at club rate, $2.50 per copy, we will give a Lamb Knitting Machine, the Cash Price of which is $65.00.

MORE YET.—We have also added DOTY'S WASHING MACHINE, price $11, and will give it to every person remitting for 30 subscribers (20 of them *new*,) at club rate;—and the CHAMPION CLOTHES WRINGER, price $9, which we will give for a club of 15 subscribers (10 of them *new*,) at club rate.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., APRIL 27, 1867.

NEWS OF THE WEEK.

From Washington.

A DISPATCH to the Evening Post says (April 17th) a motion will be made in the Supreme Court to-morrow to bring up the Georgia injunction case (involving the legal aspects of the military power, &c., in the Reconstruction Bill) immediately, by waiving the usual sixty days' rule.

The President has replied to a resolution of the Senate asking for copies of any opinions of the Attorney General or any Government official, in regard to the power of the President to appoint officers during the recess of Congress, and the Tenure of Office Bill.

It seems no opinions have been given, officially, except Edward Jourdan, Treasury Solicitor, wrote Secretary McCulloch in March, that in certain cases he judged the Secretary had power to appoint revenue officers.

Appointments and rejections of officers are the main business.

The Senate adjourned Saturday, the 20th inst., until July.

The Anniversary of Emancipation in the District was observed by the colored people, in large numbers with order and enthusiasm, procession, speeches, &c.

The 15th—the day of President Lincoln's death—flags on public buildings and offices, and the hotels, were at half mast, and several buildings draped in mourning.

The Washington Chronicle says the impression prevails that there will be no quorum for a session of Congress in July, as the feeling between the Senate and Executive is better, and there is more confidence that the South will accept the terms of reconstruction.

Some appointments to office are not filled.

From Albany.

THE Senate, 8 to 24, refused to pass the bill increasing the fare on the N. Y. Central Railroad.

They also sustain the Governor's veto of a charter for a railroad in Broadway, N. Y. city.

The eight hour labor bill has passed the Senate, 22 to 5.

The House has passed an act allowing husband and wife, in certain cases, to testify for or against each other.

A bill to make the schools of the State *wholly free* is signed by Gov. FENTON. It increases the tax from three-quarters to one and a quarter mills on a dollar.

GEORGE DAWSON, Esq., retires from the editorship of the Albany Evening Journal, transferring a part of his interest to Geo. W. Demers, who takes his place as editor. Mr. Dawson has many friends in this vicinity who will remember his residence here and connection with the Democrat. His ability, courtesy and character are worthy of the enjoyment of that rest and quiet which he seeks. In his farewell editorial, he says:—"Forty-two years in a printing office, under a constant pressure of labor and responsibility, has rendered the relief which this arrangement will secure, exceedingly desirable. And I deem myself fortunate that I can leave in my place a gentleman fully qualified for the position."

The State Senate and Assembly at Albany adjourned the 20th instant.

From the South.

GENERAL SICKLES has issued orders from Charleston, S. C., the 11th, stating that general destitution among the people in North and South Carolina, renders necessary extra measures for relief.

No person shall be imprisoned for debt except in case of fraud—that judgments for debt be suspended for a time—that all suits for money for the sale of negroes, be suspended. Property of absent debtors shall not be taken, and in all cases a reserve of goods and implements worth $500, shall be allowed to debtors.

The carrying of deadly weapons by civilians is forbidden.

Gen. Sickles makes wages for labor a lien on the crops.

A large meeting of foreign residents and adopted citizens of South Carolina was held in Charleston last week to hear the report of Gen. John A. Wagner, Commissioner of the European immigration movement. A resolution was adopted approving of the report and inviting emigrants to settle in South Carolina.

NASHVILLE, April 16.—The Conservative Union State Convention met at the Capitol to-day, and Hon. Elijah Walker was chosen President. A large number of delegates are present representing three-fourths of the counties of the State. A number of colored delegates are present. A Conservative platform was adopted, and Emerson Ethridge was nominated for Governor.

A large meeting of Freedmen was held at Augusta, Ga., on Saturday. Gov. Johnson made a speech, advising the blacks to be sober and industrious, and to exercise the right of franchise judiciously.

The grain crop in the Shenandoah Valley, it is said, will be larger the present season than ever before.

The Southern Press Convention is in session at Atlanta, Ga.

Russian U. S. Purchase in England.

THE leading London journals seem to "accept the situation" of our purchase with good sense and good grace:

The London News (Liberal) of the 2d, says that "Russian America has been acquired by its natural purchaser—the great progressive power of whose advances we cannot complain so long as they are achieved by legitimate means." The Times says, that "without sharing the excitement said to have been produced among British diplomatists in Washington, we cannot but recognize it as an event of considerable importance, attesting, as it does, the mysterious sympathy which has long existed between Russia and the United States, and establishing as it does a Republican instead of a Cossack power on the northwestern frontier of the new Confederation. It is probable that it has been purchased with a view of asserting the claim of the United States to supremacy on the American continent. Since we have no right to protest, let us not place ourselves in a false position by vain remonstances."

Mexico.

VERA CRUZ was still closely besieged, on the 5th inst., by the Liberals. The water is cut off and vegetables, fruit and flour gone. Salt provisions, from the vessels, are used. The Imperial Prefect expatriates all who are suspected of adhering to Juarez. Some private persons reached Vera Cruz from Mexico, and report Puebla taken from the Imperialists on the 2d instant.

The forces in the city are about 13,000; the besiegers some 30,000.

It is reported that Maximilian, at Mexico, has proposed capitulation, and it has been referred to Juarez at Potosi. It appears, by intercepted correspondence, that Santa Anna has proposed first to Juarez and then to Maximilian, to fight—*for* or *against* the Republic—and was refused by both sides.

Foreign Intelligence.

IT was understood, in London, the 17th, that the Spanish Government had acceded to a good part of the demands of the English, and the ship Victoria would be released.

The Daily News says in the city article owing to prospects of rupture of relations with Spain, a few transactions have occurred at Lloyds in war risks.

The British Government propose to extinguish 24,000,000 of national debt before 1885, by means of terminable annuities.

The London Times says it is a disgrace to French statesmen that the Luxemburg scheme should ever have been entertained. France will show her deference for European opinion by abandoning this ill-omened negotiation, which would not only unite all Germany against her, but break off the intimate friendship which prevails between her and other European powers. Both sides talk fairly, but are making great military preparations. Admiral Persino, who commanded the Italian fleet at Lissa, has been cashiered for his bad conduct.

Prussia is firm on the cession of Luxembourg. South Germans naturalized as citizens here are in danger of being held to military service, if they revisit certain German States.

The Herald's Irish correspondent tells of an extensive proposed Fenian uprising in the island.

HIGH WATER.—A special dispatch from Des Moines, Ia., the 18th, says the Des Moines River is rising rapidly and doing great damage. A large portion of the city is under water.

The bridge over Court Avenue was carried away this morning with two men who were on the piers.

It is reported that a great rise from melting snow far to the north has not yet reached that point. If so there will be great destruction of property in that section, as the water is now within a few inches of high water mark.

ROCHESTER FREE ACADEMY EXHIBITION.—The exhibition of this excellent school, the highest grade of our city free schools, took place at Corinthian Hall on the evening of the 11th, before an audience of some 1,500 persons. The original productions, delivered by the young men, and read by the ladies, were excellent, and the whole gave proofs of good scholarship, and the thoughtful care of the Principal and Teachers. Sixteen persons, the majority ladies, took part. We give, in another column, part of the Poem by Miss JENNIE COLEMAN, which was highly appreciated.

A "KANSAS STATE IMPARTIAL SUFFRAGE SOCIETY" was organized at Topeka the 2d inst., with Governor Crawford, President, Lieut.-Governor Green, Vice-President, Hon. S. N. Wood and Miss M. Otis, Secretaries, and a list of influential gentlemen as Committee. The meeting was large and spirited. Speeches were made by ex-Gov. Robinson, Judge Wood, Lucy Stone and others, and measures taken for a canvass of the State for suffrage for all—women as well as men.

NEWS PARAGRAPHS.

THE Honolulu (Sandwich Islands) Chamber of Commerce is discussing a Reciprocity Treaty with the United States. Last year they imported more from us than from any other country.

GOV. GEARY has appointed Col. George F. McFarland, at present a clerk in the School Department, and who lost a leg at Gettysburg, Superintendent of the Soldiers' and Orphans' Schools under the new law.

FURTHER investigation concerning the coin and bullion captured on the downfall of the Confederacy, shows conclusively that it belonged to the rebel government, notwithstanding that it was claimed by the Richmond and New Orleans banks.

THE reception extended to Senator Wilson in the Tremont Temple, Boston, last week, by the leading men in the temperance movement, was a grand affair. Mr. Wilson, in his address, took decided grounds in favor of a prohibitory law, and against licensing.

THREE hundred tons of iron have arrived at Council Bluffs for the use of the Union Pacific Railway, and eight hundred tons more are on the way. This road—following the Platte route—is expected to reach a distance of six hundred miles from the Missouri before the season closes.

THE corporation of Brown University, Providence, R. I., accepted the resignation of Dr. Sears as President, and elected President Anderson of Rochester University, as his successor. It is not known whether he accepts. Surely his many friends will regret the loss of his valuable services and genial presence here.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, April 23, 1867.

THERE is greater ease in our local money market than for a few weeks past. Money is more abundant at the east, and rates of interest are lower. Loans on call are made at 5@6 per cent., with government collaterals. Gold is higher, mainly in consequence of renewed war rumors in Europe. Stocks at the Paris Bourse declined at the close of the week, which was taken as an indication on this side that some trouble was anticipated between France and Prussia. If there should be war in Europe, American stocks, which just now are somewhat depressed abroad, will soon be in active demand at improved rates.

The general business of the country does not improve. Eastern jobbers have now given up the idea of a large business this spring, and are pressing goods upon their customers at rates that leave no profit. Under the present state of things the manufacturing interests cannot prosper.

WHEAT AND FLOUR.—The prices of wheat and flour are firm. The advance in New York has been somewhat checked by the liberal arrivals of wheat from California. The receipts from the Pacific State are likely to be considerable for some time to come.

A farmer in this region, a few days since, made application to borrow money at a banking institution, desiring the loan until the price of wheat, of which he had considerable for sale, should reach $3.50 per bushel. The present rate—$3.15 per bushel—was not satisfactory. We would suggest to holders of wheat that they may hold on for higher prices too long. The prospects for an abundant crop of winter wheat were never better, at this season of the year, than at present. If the present fair promise continues until the middle of May, it will have a great effect in bringing out the wheat now held back by the producer.

WOOL.—Manufactured goods continue dull, and as a consequence manufacturers are close buyers of the raw material. The sales in Boston last week were very fair, amounting to about 925,000 lbs. The range for fleece was 50@75c., and 35@67c. for pulled.

Rochester Wholesale Prices Current.

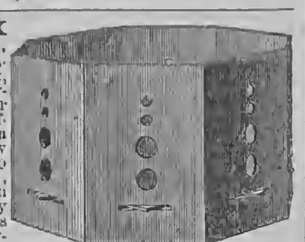
A FRUIT BOX To Give Away.



The Gothic or Octagon Tree Fruit Box, for marketing berries and all other Small Fruits, is offered at so low a price that fruit growers can afford to give them away, while they are in no way inferior to any in the market. This will furnish the buyers a neat and convenient package for taking fruit home; avoid the necessity of handling the fruit until ready for the table, and also the trouble and expense of collecting and return freight. This box was exhibited at the American Institute Farmers' Club, April 2d, and pronounced a "perfect success" by prominent fruit growers present. It is also especially commended by all the leading Hotel Keepers in the principal cities of the United States. Price for pints and quarts $10 ₩ 100. Send for Circular. Address F. H. LUMMUS & CO., 82 John St., New York.

OSAGE ORANGE SEED.—I HAVE just received direct from Texas a lot of fresh seed which I will send by mail, at $1 ₩ lb, or by Express at $15 ₩ bushel. P. S. MESEROLE, Chicago Agricultural Warehouse and Seed Store, 204 Lake St., Chicago, Ill.

CROQUET.—THE INTEREST IN THIS delightful Game is doubled by using Bradley's Patented Implements. Inquire for

Bradley's Patent Croquet,

or send Stamp for Illustrated Catalogue.
LATEST MANUAL OF CROQUET, *Illustrated*, sent by mail for Twenty-five Cents.
901-2t) MILTON BRADLEY & CO., Springfield, Mass.

For $3, by express, 100 Jucunda, or No. 700; 12 Metcalf's Early; 12 Great Agriculturist; 12 Brooklyn Scarlet; 12 New Jersey Scarlet. For $5, 200 Jucunda, or No. 700; 20 Metcalf's Early; 20 Great Agriculturist; 20 Brooklyn Scarlet; 20 New Jersey Scarlet. All first-class plants, packed so as not to damage in carrying 3,000 miles. Address C. L. HOAG & CO., Lockport, N. Y.

THE BEST IN AMERICA!—J. BRISKERHOFF'S CORN SHELLER, SEPARATOR AND CLEANER. Patented April 12, 1864 and February 28, 1865. This Machine has been selected, by the Advisory Committee, for J. C. Derby, U. S. Agent, as the best in America, and sent to Paris to the Universal Exposition. Has also taken the first premium at the New York State Fair in 1866—the Committee pronouncing it the *best Corn Sheller they ever saw*. It shells, separates and cleanses, rapidly and easily, at one operation, as fast as the ears can be put in the hopper. For territory or agencies in Pennsylvania and Maryland, address 901-4t WM. WIBLE, Box 246, Gettysburg, Pa.

FOR SALE.—A FRUIT FARM of 286 acres in Anne Arundel Co., Md., especially adapted to Peaches, Melons, Strawberries, &c. Has 60 acres of the best Watermelon land in Maryland, very early, brings the best Melons, the profits on which are great. Has now planted 1,800 Peach, 300 Apple, 250 Pear, and 175 Cherry Trees of the choicest varieties; 4 acres Strawberries and 500 Grapes of the most approved kinds; 70 acres in wood, balance nearly all arable land, easily fertilized. Fine large frame dwelling with piazza, bay-window, hall and 15 rooms, just erected at a cost of over $5,000, tenant house, &c. Landing on the farm, where wood, fruits and vegetables can be shipped during season, every day. Price, $60 per acre. Apply to HENRY W. COOKE, No. 9 Law Buildings, St. Paul St., Baltimore, Md.

A NEW FERTILIZER—POSSESSING the most astonishing fertilizing properties, and giving actual results far surpassing any fertilizer yet known; a single seed of wheat producing 57 stalks with 1,972 grains of seed! Has received numerous testimonials and medels from Agricultural Societies in France. Seed of any kind can be immersed in this fertilizer which imparts to them the most active growth and wonderful development. One quart is sufficient for an acre of wheat. Its application to Farm Crops, Fruit Trees, Plants, Vegetables, Flowers, &c., produces a vigor as remarkable as it is wonderful. Circulars with testimonials of its value sent free, on the receipt of a stamp. The fertilizer is put up in stone jugs of 1 quart at $2,50 each. HOVEY & CO., 53 North Market St., Boston, Sole Agents for the United States.
Also by the following dealers:—A. H. HOVEY, Chicago; I. S. BELL, New Albany, Ind.; R. H. ALLEN & Co., New York; SAM'L T. THORBURN, Albany, N. Y.; SAMUEL SUNDER, Philadelphia, and WASHBURN & Co., Boston.

IMPORTANT TO OWNERS OF HORSES.

Advice and Prescriptions for Sick or Injured Horses Given Free.

The Editor of WILKES' SPIRIT OF THE TIMES desires to inform the owners of horses throughout the United States that he has regularly engaged upon his paper one of the ablest and most experienced professional veterinarians in the United States, whose special duty it shall be to answer, gratis, all questions relative to sick or injured horses which may be addressed to the SPIRIT, *whether by subscribers or not*. These answers will in all cases contain a prescription for the injury described, and will be printed, in connection with the question asked, in the following number of the SPIRIT. No answers, however, will be given by mail, it being a part of the object of the editor to submit the ability of the professor who has assumed this department of the SPIRIT to the keenest criticism of the general public. By adding this useful department to the SPIRIT, the editor contributes to those of his readers and subscribers who own horses, a horse-doctor free, and not only to his subscribers, *but to every horse-owner in the United States who may choose to direct an inquiry to the* SPIRIT *by mail*. The subscription price of the SPIRIT is $5 a year; but single copies may be bought from news agents from week to week by those who desire to use it temporarily only, for veterinarian questions, at fifteen cents per copy. The SPIRIT OF THE TIMES is a high-toned gentleman's paper which (with the old SPIRIT, whose business and title it inherits) is of forty years' standing, and is devoted to Hunting, Fishing, Racing, Field Sports, Literature and the Stage. GEORGE WILKES, Editor and Proprietor, 201 William-st., New York.
☞ Dealers will continue to procure their supplies as heretofore.

MARCELLUS' POTATO DIGGER.—We present a few extracts from letters received of the many recommendations given us by those who have used the Machine:

A. MARCELLUS, Esq., Pittsford:—I used your Potato Digger last year. It worked to my satisfaction; I could dig as fast with it as a team could walk. I dug fifteen acres in three days. A. CANFIELD.
Pittsford, July 30, 1866.

I have used your Potato Digger this fall. I take pleasure in stating, that the machine is a perfect success; it saves so much hard labor. I most cheerfully recommend this machine to potato growers throughout the country. Brockport, N. Y., Nov. 4, 1866. HIRL BROCKWAY.

PITTSFORD, Nov. 7, 1866.
Mr. A. MARCELLUS—Sir: I have used your Patent Potato Digger, to dig 14 acres of potatoes, and find that it does its work well. It saves from ten to twelve dollars per day, when worked to its full capacity. I have used it on a variety of soils—sand, clay, and where there are stones, it performs its work equally well—if anything, a little better on stony land. E. W. HEATH.

PITTSFORD, Nov. 7, 1866.
Mr. A. MARCELLUS—Dear Sir: I have used your Machine to dig my potatoes, and find it a success. I have tried many machines before this, for this purpose, but find that yours excels them all; and confidently recommend it to farmers, as a great labor saving machine. BENJAMIN HUNTINGTON.

CHARLOTTE, Nov. 12, 1866.
Mr. A. MARCELLUS—Sir: I received your Potato Digger too late in the season to dig all my potatoes; but finished digging my crops with it. It does its work well and easy, and as fast as a team can travel with a plow. J. S. STONE.

PERINTON, Oct. 25, 1866.
Mr. A. MARCELLUS—Sir: We have just finished digging 40 acres of potatoes with your machine, a part of it on very uneven land, and of a variety of soil. Its successful work has more than met our expectations—a saving of at least one half of the expense of digging. J. C. EATON & SON.

ADAMS' BASIN, April 5, 1867.
Mr. A. MARCELLUS—Dear Sir: I used your Potato Digger last fall with great satisfaction. It saved from $10 to $12 per day. I lent it to Mr. Wynnas, my neighbor, for one day; and he dug 6 acres with it, and returned it at night, and expresses great satisfaction with its operation. R. B. CLARK.

We warrant our Potato Digger to dig from four to six acres per day, in a workmanlike manner, or no sale. Price $125. Should it fail you may return it to us at our expense. If you wish to secure a machine, send your order soon. A. MARCELLUS & CO.
Shortsville, N. Y., April 20, 1867.

Special Notices.

REMINGTON'S FOOT-ROT REMEDY.

1,000 TESTS—NOT ONE FAILURE.

Two months ago I applied Remington's Foot-Rot medicine to a flock of sheep and they have kept perfectly sound since, and I have no doubt that if properly applied that it will make a sure cure.
Geneva, N. Y., Feb. 16, 1867. JOHN JOHNSTON.

One thorough application is generally sufficient; rarely the second may be needed. The best Remedy we have ever used. T. C. MAXWELL & BROS.
Nurseries, Geneva, N. Y., April, 16, 1867.

The best cure I have ever used.—
Geneva, April, 16, 1867. ROB'T J. SWAN.

I cured 50 sheep for 50 cents. If taken in time one application is sufficient. In the worst cases two applications are sufficient. H. D. BENNETT.
Geneva, April 6, 1867.

I took 100 maggots from one foot and cured with one application. JOHN E. BOOTHE.
Canandaigua, April 1, 1867.

Warranted if used according to directions. For sale by Druggists. Price, $1,00. C. REMINGTON, Ag't,

WHAT A MOHAWK VALLEY FARMER THINKS.

GEORGE WOGLEMOURTH, who lives 7 miles south of Fort Plain, N. Y., states that "*Dodge's Self-Raking Harvester*," which he purchased last season, performed more than it was recommended to do. Besides reaping perfectly in Wheat, Oats and Barley, he cut 25 acres heavy Timothy Seed Grass, the Self-Rake delivering the gavels in perfect order.

THE "ORONO" POTATO.

THIS fine and very productive seedling, tested at the Experimental Farm at Washington, and declared superior to all Scotch, German or American potatoes, except the Early Goodrich and Samaritan, may be had pure at New London, N. H., at $1.50 per bushel, delivered at the depot. Address
J. H. TODD.

Bad Breath is often one of the attendants of a disordered stomach, and may be speedily obviated by the use of COE'S DYSPEPSIA CURE. By removing the cause the effect is removed. Our druggists all sell it.

Silver Tips For Children's Shoes.—They protect the toe from wear, and are highly ornamental. Applied to the most genteel shoes made. Buy no others. 900-13t

The Best and Cheapest Horse and Cattle Medicine in the World!

WALTER B. SLOAN'S IMPROVED CONDITION POWDER

THE GREAT STANDARD MEDICINE
For Horses and Cattle,

Used throughout the United States and Canadas during the last 23 years.

For the cure of the various Diseases to which Horses and Cattle are subject; such as Founder, Distemper, Hide-Bound, Loss of Appetite, Inward Strains, Yellow Water, Fistula, Poll Evil, Scratches or Grease, Mange, Inflammation of the Eyes, and Fatigue from Hard Labor; also, Rheumatism, (commonly called Stiff complaint), which proves fatal to so many valuable horses in this country.

SLOAN'S CONDITION POWDER

Has the largest sale of any Horse and Cattle Medicine in this country. It is composed of herbs and roots, and for mildness, safety, certainty and thoroughness, stands pre-eminently at the head of the list of *Horse and Cattle Medicines*.

It carries off all gross humors, prevents horses from becoming stiff or foundering, purifies the blood, loosens the skin, and gives it a smooth and glossy appearance cleanses the water and strengthens every part of the body. It is also a safe and certain remedy for coughs and colds, which generate so many fatal diseases.

The Cow requires to be supplied with an abundance of food—not to make her fat—this is not desirable, but to keep up a regular secretion of milk, and all owners of cows will find by giving them

SLOAN'S CONDITION POWDERS

twice a week, a large increase in quantity and quality of milk and cream. It carries off all fever and impurities of the blood. The effect is seen throughout the season by a rich and abundant flow of milk.

The farmer is beginning to be aware of the valuable properties of **Sloan's Condition Powder**, in promoting the condition of his sheep and preventing many of the diseases of all the domesticated animals.

☞ A fifty cent package of **Sloan's Condition Powder** put into a barrel of swill is better than a bushel of corn to fatten a hog, and is a certain preventive of Hog Cholera, Blind Staggers, and other diseases common among hogs.

CAUTION.—To protect ourselves and the public from being imposed upon by worthless imitations, the genuine will bear the *fac simile* signature of the proprietors on the wrapper.

PRICE 25 & 50 CTS. PER PACKAGE.

For sale by Druggists and Merchants everywhere.

Walker & Taylor.

Sole Proprietors, Chicago, Ill

P. O. Drawer 5826.

Address GEO. S. HARRIS, Land Commissioner, Hannibal, Mo. 899-4t

THE UNIVERSAL CLOTHES WRINGER

AND

DOTY'S CLOTHES WASHER.

THE UNIVERSAL CLOTHES WRINGER, with cog-wheels, has taken the First Premium at the State Fair of all the *NORTHERN STATES*, FIRST PREMIUM AT THE last two Fairs of the American Institute; and has been awarded the First Premium by the unanimous vote of the Committee of the Great NEW ENGLAND FAIR of 1866, after the most scrutinizing trial of the various machines of numerous competitors.

The UNIVERSAL CLOTHES WRINGER wrings clothes almost dry, without injury to the most delicate garments, and never gets tired or out of order.

Mrs. Cyrus W. Field says: "It saves great labor without injury to the clothes. I therefore most decidedly recommend its use."

DOTY'S WASHING *Machine* has again been awarded the First Premium at the Great New England Fair of 1866. Also at the State Fairs of New Hampshire, New York, Michigan, Wisconsin, Minnesota, Iowa, &c., and took the First Premium (the Silver Medal) at the last Fair of the American Institute.

Doty's Washer using boiling-hot suds, saves three-fourths the labor and time—takes out all the dirt—no sore hands—no fœtid air—no injury to the clothes.

Solon Robinson says:—"Our 'machine,' after a year's use, is thought more of to-day than ever."

On receipt of the price from places where no one is selling, we will send one Washer and one Wringer, either or both, free of freight charges. Family Size Washer, $14; No. 1½ Wringer, $10; No. 2 Wringer, $8,50.

☞ Exclusive right of sale given to the first responsible applicant from each town.
Send for Circulars, giving wholesale and retail terms. C. R. BROWNING, General Agent, No. 32 Courtland St., N. Y., (Opposite Merchants' Hotel.) 900

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce throughout the United States the GENUINE COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, bind, braid and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made. Address SECOMB & CO., Cleveland, Ohio.
CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured. 899-1t

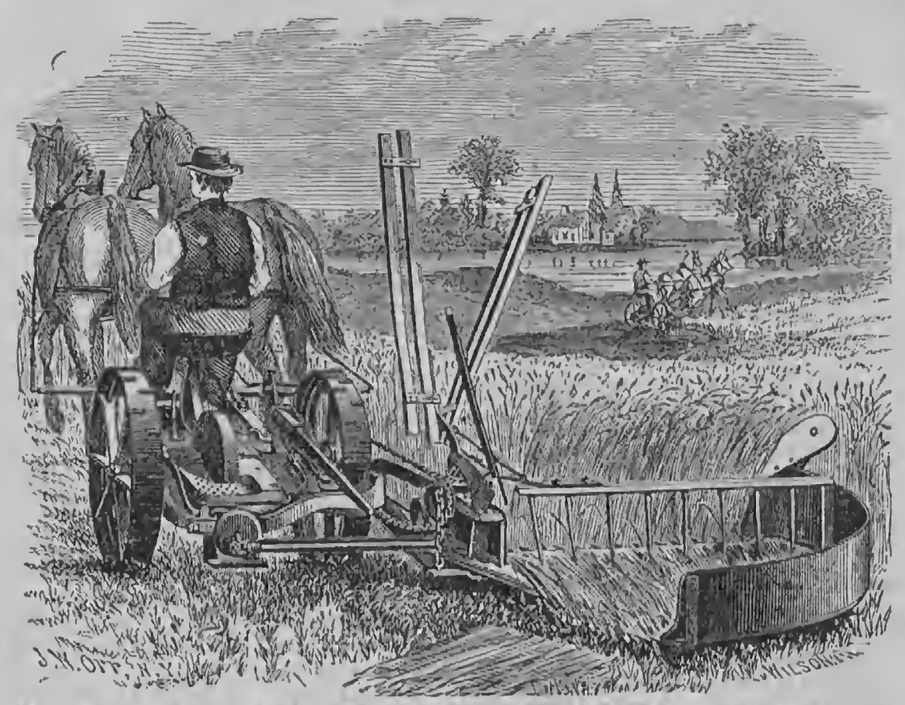
ALDEN'S PATENT THILL HORSE-HOE IMPROVED—Selected by the Government Agent as the best in the U. S., and sent by him to the Paris Universal Exposition, can be packed in small compass for shipping. For full description address
893-tt ALDEN & CO., Auburn, N. Y.

CANCERS CURED OR NO CHARGE—BY Dr. KINGSLEY of Rome, N. Y. Circulars sent free.

DODGE'S PATENT REAPER AND MOWER,

AND SELF-RAKER,

OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:

L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered in the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a REVOLVING RAKE, and does its own reeling, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED

The Special Diploma and Grand Medal of Honor,

AS THE BEST

COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and FIRST PREMIUMS, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the larges quantity of butter with the least labor*. The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker*.
"The best form of Churn ever invented."—SOLON ROBINSON, *Ag't Ed. N. Y. Tribune*.
Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.
"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City*.
"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag't Ed. N. Y. Times*.
"The very best Churn extant."—*Prairie Farmer*.
"It is perfectly common sense in its structure."—*Ohio Farmer*.
"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator*.
☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.
☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

THE BOOK OF WONDERS tells how to make all kinds of Patent Medicines, Perfumery, Toilet Articles, Cosmetics, Candies, Wines, Cordials, Soaps, Dyes, and hundreds of other articles in daily demand. Easily made and sold at large profits. Sent post-paid for 25 cents, by O. A. ROORBACH, No. 122 Nassau street, N. Y. 897-tf

MARYLAND AND SOUTHERN FARMS. Farms and Plantations, Coal, Timber and Oil Lands, Fruit, Dairy, Grain and Grazing Farms in Maryland, Virginia and other Southern States. Also, Country Seats near, and Dwellings and Warehouses in Baltimore, Washington and Richmond, for sale low. Accurate descriptions furnished gratis. JOHN GLENN & CO., 59 Second Street, Baltimore, Md. 886-tf

$25 A DAY!—FIFTEEN New Articles for Agents. O. T. GAGEY, Biddeford, Maine.

PORTABLE STEAM ENGINES—Combining the maximum of efficiency, durability and economy with the minimum of weight and price. They are widely and favorably known, more than 600 being in use. All warranted satisfactory, or no sale. Descriptive circulars sent on application. Address
891-13t J. C. HOADLEY & CO., Lawrence, Mass.

MALTBY HOUSE,
A. B. MILLER, PROPRIETOR,
BALTIMORE, MD.

THE BROOK.

BY GEORGE S. BURLEIGH.

THE brooklet dancing through the glen,
With willows bending over,
Has blessings for the sons of men,
A boon for every lover:
Of her the poet learns to sing
His tenderest canzonetta:
Here maidens come such love to bring
As makes all love its debtor.

The dusty lad in tattered frock,
The rough and sturdy farmer,
The traveler leaning on the rock,
Have here an equal charmer.
The frolic boys from school and mill,
The gay and rosy misses,
Drink health and pleasure from the rill
In all her rippled kisses.

The violet on the mossy brink,
The bluebirds in the hazels,
Repay with song and sweets the drink
That stings not though it dazzles.
And oh! forgiving every slight
Of wretched souls who leave her,
She bathes away the stains of night
And cools their burning fever.

The whiteness of the simple soul
She welcomes and enhances,
And shames the votaries of the bowl
With pure, inviting glances.
Ho! fill your beakers from the brook—
The white urn of the Naiads;
And life shall take as fresh a look
As to the turf their play adds.

The Story Teller.

THE DUTCH DYKES.

THE STORY OF A LITTLE HERO.

THE kingdom of the Netherlands, or, as it is more commonly known, Holland, owes its existence as much to the skill and energy of its people, as to anything else. The surface of a large part of the country is several feet below the level of the sea; and, but for the ingenuity and unceasing vigilance of the government and people, the ocean would soon be sweeping over that thriving country, and it would be blotted from the face of the earth. But by the aid of science and constant labor, dyes, or huge embankments, have been erected along the low, flat coast, by means of which the waves are kept at bay, and the country saved from ruin. These dykes are often sixty feet in height, especially along the shores of the German Ocean on the west, and those of the Znyder Zee on the east. The Dutch, taught by experience, are ever on the watch to take advantage of every circumstance to resist the encroachments of the sea. Holland was originally a series of banks of sand or mud, exposed to inundation from the Rhine, and other rivers, as well as from the sea; and thus exhibited a succession of slimy and barren sands. But patient industry, by raising dykes against the sea and rivers, has converted the waste into a smiling garden.

These dams or dykes form the characteristic and most remarkable feature of the Dutch landscape. They are sometimes planted with rows of trees, between which run the canals and roads of the country. At frequent intervals the dykes are surmounted with wind-mills, the object of which is to pump the water from the enclosed land, or polder, into the canal.

The most constant care is necessary to keep the dykes in repair; and a sleepless watch is maintained over them at all points. The slightest crevice or crack is at once reported, and workmen are set to repairing it. Not a moment is lost, for every second gained by the water increases the leak until it sometimes sweeps away the dam, causing a frightful destruction to life and property.

At the present day the dyke system has been brought to such a state of perfection that overflows are of rare occurrence, save during seasons of unusually violent and protracted storms. But a hundred years ago, the low country was at the mercy of the sea; for the dams were vastly inferior to those of to-day, and the system of drainage was but imperfectly understood. Then overflows were both frequent and terrible. Sometimes miles of country were laid under water, and thousands of human beings drowned. The greatest of all these disasters occurred nearly six hundred years ago, when the ocean swept away nearly as much land as is contained in Wales, and destroyed many towns and several thousand human beings and cattle.

At the time of which we write, more than a century ago, the low country was in constant danger, and the season of storms was always a period of dread and anxiety to the people. Many were the tales which were told at winter firesides by the old folk, of dangers incurred and lucky escapes made in moments of peril from the waters, until even the little children came to think of the sea with a feeling of horror and dread, and to regard it as their mortal enemy. Indeed, we may say that the people were in a state of constant suspense, which may have done much to give them the patient courage which they have transmitted to their descendants. Mothers would clasp their little ones to their breast, and wonder if they would ever grow to manhood and womanhood, or how long it would be before the cruel sea would rise in its wrath, and sweep them all into one common grave. Every one, therefore, watched the dykes; and the government always felt assured, that whether the agents were faithful or not, the vigilance of the people never slept, and that any danger would be detected at once.

In the year 1759, there lived on the shore of the German Ocean, in the province of North Holland, a poor fisherman by the name of Dirk Dauneker. He had a family of young children, the usual accompaniment of a poor man's lot; but he was lucky in having a wife who made the best of their humble condition, and spared no effort to brighten and cheer her good man in his labors. The Dauneker were honest, God-fearing people, and were respected by all the community. Yet they were very poor, and it was with difficulty that they could procure their daily store of bread and cheese. The sea supplied them with fish; but of meat they had none.

Dirk Dauneker's ancestors had been fishermen before him, and some had found a last resting place in the blue waters which had supplied their daily wants in life. His father had perished in an inundation twenty years before and he himself had narrowly escaped being drowned. It had left a vivid impression upon his mind, and he shuddered to think of it, though a score of years had elapsed since then. He had six children, four boys and two girls, all as pale-faced and moon-eyed as the most ardent Hollander could have desired. They were remarkably good, sensible children—the oldest being just sixteen, and the youngest about seven—and their parents were as proud as they were fond of them.

The fourth child, Hans by name, was the mother's pet. He was just ten years old, and had a sweet, wistful face, such as any painter would have been eager to transfer to canvas. He was a quiet, thoughtful child, and, though warm-hearted, was undemonstrative. At the first glance you would have thought him effeminate, but, upon a closer examination of the features, you could not but think that the grave, firm lips, which were strongly marked in one so young, were true indices of determination and courage of the highest order.

Little Hans loved to listen to the stories which his father would tell of the dangers of a fisherman's life; but the best of all to those which related to the terrible inroads of the sea upon his native land. He pondered over them gravely, and often spoke to his parents of them. Sometimes his father, smiling at his wise remarks, would say:

"My little Hans, when you are a big man like me you will be a fisherman and sail my boat."

But Hans would reply, gravely:

"No; when I am a man I shall ask the king to let me watch the dykes, and I will keep back the sea, and save my country from suffering and sorrow."

Young as he was, Hans watched his dykes. Every day and every night before he said his prayers and went to bed he would go out to the dyke in front of his father's hut and examine it carefully; and as soon as he was up in the morning he would repeat the search. His mother watched him wistfully, but said nothing; yet she never ceased to fear that the sea would take him from her.

The winter that brought little Hans' tenth birth-day was a wild and stormy season. Such a constant and unbroken succession of gales had not been known in the German Ocean for a century. The king sent orders to the low countries to watch the dams with ceaseless care; and an increased force was stationed along the coast, with orders to be in readiness to repair any sluice at a moment's warning. Night and day a watch was kept all along the coast.

But the best watchman there was little Hans Dauneker. He went his rounds regularly, and his eyes never passed over a square inch of the embankment without ascertaining thoroughly its condition.

One night, about mid-winter, a wild storm was passing along the coast. It was a fearful storm, and had been raging with unabated violence for three days.

"It's a bad time," said Dirk Dauneker, gloomily. "If the dykes can stand this, we need fear nothing else."

The mother looked on little Hans, but he said nothing; and sat with his eyes fixed dreamily on the fire. Presently he arose and went into the outer room. There he wrapped himself in his warm coat and lit his father's lantern. He was leaving the house, when his mother, who had followed him silently, laid her hand on his shoulder.

"Where are you going, child?" she said.

"To look at my dyke, mother," he replied.

"On such a night as this?"

"I could not sleep, mother, unless I did so. I must do my little work for home and fatherland."

The mother could not refuse him; so she laid her hand on his head and said tenderly, "May heaven bless thee and keep thee, child."

The little Hans went out into the storm. He soon reached what he called his post; and found everything safe and secure. Something, he knew not what, urged him to go beyond his usual walk, and he kept on toward the north, flashing his lantern along the side of the dyke, and examining the earth wall with anxious eyes. He was very cool; but he could not turn back. Something kept urging him onward—onward.

He had been walking on for more than an hour when he suddenly paused, and bent down toward the ground with a cry of alarm. The water was flowing in through a small opening, scarce half an inch in diameter, but as the child watched he could see that it was gradually growing larger.

His first impulse was to return home, and give the alarm; but he reflected that the opening in the dyke would grow larger every moment, and that it would be too late to check the water when his father arrived. Something must be done at once, and he must do it.

He put down his lantern, and with his little hands tried to scrape together earth enough to stop the leak. The cold was so intense, and the ground so hard, that he made little or no progress; and the terrible opening in the dyke grew larger every moment. Little Hans shuddered, and then paused in perplexity and distress. Then, without hesitating longer, he tore off his warm coat, and rolling it up like a wad, pressed it against the crevice. The water forced it away, however, and the boy found that in order to stop the current he must hold it there with all his strength.

He had a brave heart, but it sank when he saw this; for he knew that it would compel him to remain all night, unless assistance came to him, and he was afraid that he would freeze to death in the storm. He hoped, however, that his mother would miss him and search for him. Yet he knew if aid did not come soon his strength would not be equal to the task of sustaining his life through the night. Still he was determined to make the effort, for he knew that if the sea broke through his parents and brothers and sisters would be drowned, and all the country round about destroyed.

So the child seated himself on the ground, and pressed with all his might against the opening with his thick coat. Soon he felt that the water ceased to flow through. Yet it took all his strength of will and body, all his courage to sustain him, for he was growing numb with the cold and suffering greatly. His pain increased every moment, and then it ceased, and he felt a dreamy, pleasant languor steal over him.

He seemed to hear strains of sweet music, and voices crying, "Blessed child! God has blessed the little Hans!" It was very sweet, and he wondered what had become of the cold and storm, but he never relaxed his grasp on the opening. * * * * *

When the morning dawned it found Dirk Dauncker and his wife searching wearily for their child along the dyke, for the storm was dying away and the sun was coming out again.

"Alas!" sobbed the mother, "he has perished in the storm; and when he left me, I asked heaven to bless him!"

The father paused, and a great cry escaped his lips.

"Look, wife!" he cried. "Has not heaven blessed our boy? See! He has made him the saviour of our country."

Yes, there lay little Hans, his form stiff and rigid, and his face pinched and pale, but with his hands pressed tightly against his coat, which was now frozen to the dyke. Even in death the child had not relaxed his grasp upon the coat; and, as he had fallen upon it in dying, his weight had kept it pressed against the opening until it froze there.

Heaven had indeed blessed him, for He had made the child the means of saving the province from destruction.

Wit and Humor.

MISS A. TRAIN.

I do not love Miss-Fortune—
To her arts I bid defiance,
And I never should importune
To a marriage Miss-Alliance.

I've hated Miss-Construction
Whenever I have seen her,
So I should not, by induction,
Much care for Miss-Demeanor.

But of all the misses various—
That are of horrid pain
The cause, like grinders curious—
The worst is "Miss A. Train!"

VEGETABLE POEM.—A poetical young gardener, somewhere in the South, while despondent from the effects of the late unseasonable weather, gets off the following mellifluous strains:

"Onion garden bed reclining
Beets a youth his aching head;
'Cauliflowers! Lo, weeds confront me:
Lettuce hence,' he sadly said.
Carrots out the stoutest manhood,
Peas my wearied soul doth need:
Bean O! strife for me hereafter,
Else my heart will go to seed."

THOSE two observing men, one of whom said that he had always noticed when he lived through the month of May he lived through the year, and the other of whom said at a wedding, that he had remarked that more women than men had been married that year, were neither of them Irishmen.

AN old hotel keeper in Washington once posted on his dining-room door the following notice: "Members of Congress will go to the table first, and then the gentlemen. Rowdies and blackguards must not mix with Congressmen, as it is hard to tell one from 'tother."

ON some railroads it is customary to have a lock on the stove to prevent passengers from meddling with the fire. A wag being asked why they locked the stove, coolly replied that "it was to prevent the fire from going out?"

A CELEBRATED concert vocalist, upon applying for board in a house that was full, upon being shown a room on the top story, replied, very innocently, that he had no disposition to become an upper-attic (operatic) singer.

EGGS-ACTLY.—A man boasted yesterday of having eaten forty-nine hard boiled eggs. "Why did you not eat one and make even fifty?" asked old Sounds. "Humph, you want a man to make a —— hog of himself for one egg."

A GRIM, hard-headed old judge, after hearing a flowery discourse from a pretentious young barrister, advised him to pluck out the feathers from the wings of his imagination and stick them in the tail of his judgment.

DIOGENES being asked why it was that philosophers sought the society of the rich much more than the latter sought theirs, replied:—"Because philosophers know what they want, and the others do not."

AN Irishman was once asked to define an Irish bull; to which he replied, "Whenever you see two cows lying down in a field, the one that's standing up is a bull." This very lucid explanation will do.

SCENE:—Young lovers on the balcony, Time, evening. Mr. Billin—"Oh, how calm, how sweet and peaceful the moon looks!" Miss Cooen—"Yes; but don't you think it looks very conspicuous?"

Corner for the Young.

A little dark-e in bed and nothing over him.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, In Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins April 6th, a good time for club or single subscriptions to commence. See head of News page.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

READER,—Please act as Club Agent for the Rural, or induce your Post-Master or some other influential person to become a recruiting officer for the "Rural Brigade."

Notice of Spring Campaign on News page.

BARKER'S CORN SHOCKER was Patented Dec. 19, 1865.—It works to entire satisfaction, saving much time. The corn is set around the Shocker and held in position by the springs, as seen above. When the shock is completed it is easily removed, the springs yielding as it passes from the shock. The legs are movable, consequently are not liable to be obstructed by fallen corn or vines. It is durable and cheap; can be sold at retail at $2; when not in use, may be shut up like a knife, and occupies but little space. Read what one neighborhood think and say of it:

We, the undersigned farmers of Jefferson, Hillsdale Co., Mich., hereby say that we consider L. S. BARKER'S PATENT CORN SHOCKER a useful invention, and cheerfully recommend it to the public.—Elisha Hubbard, J. W. Coffin, J. H. Bailey, W. L. Johnson, H. J. Cole, Joseph Chesney, James A. Cole, R. J. King, S. F. Fuller, John W. Tiffany, Jonathan Green, Geo. W. Ramsey, Wm. Way, M. Rumsey, Zeln Hadley, Willett Green, Henry E. Crane, H. H. Herring.

For Farm, Town, County or State Rights, apply to the undersigned, at Pittsford, Hillsdale Co., Michigan.

ANSON BACKUS.

AGENTS WANTED—To canvass for the HOME AND TOMB OF LINCOLN. Pure Line Engravings. By subscription only. Apply to C. RICH & CO., Poughkeepsie, N. Y. 883-tf

SHEEP AND WOOL ARE GREAT AND paying institutions. If you wish to know all about the breeding, management and diseases of the former, and how best and cheapest to produce the latter, get and read **Randall's Practical Shepherd,** the best and latest work on American Sheep Husbandry. Large 12mo.—454 pages, illustrated. Price $2—sent post-paid.

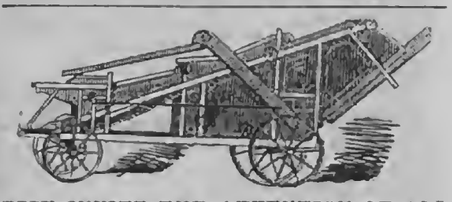
☞ Any of the above named works will be forwarded by mail, post-paid, on receipt of the price specified.

Address D. D. T. MOORE, Rochester, N. Y.



WE INVITE THE ATTENTION OF ALL interested, to our improved Thrashing Machines, *both Steam and Horse Power.* Long experience in the business enables us to offer the very best of machinery. We build all sizes of Thrashers, Portable Engines, Horse Powers, &c. Send for our Circulars. Write to JONAS W. YEO, Robinson Machine Works, Richmond, Ind.

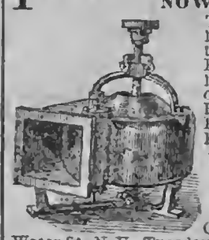
MAKE YOUR OWN SOAP WITH Saponifier

OR CONCENTRATED LYE!

By saving and using your waste grease. No lime necessary. 12 POUNDS of excellent Hard Soap, or 25 GALLONS of the very best Soft Soap, for only about 30 CENTS. Directions on each Box. ☞ For sale at all Drug and Grocery Stores.

Beware of Counterfeits,
Be Particular in Asking for PENN'A SALT M'FG. CO.'S SAPONIFIER.

PRESSURE TURBINE WATER WHEEL NOW READY.



The best Wheel in market, using less water and selling for less than any other first-class Wheel. Every Wheel warranted. Send for a descriptive Circular. Also, our Improved Brick Machine and Brick Machinery, Engines and Boilers, Cane Mills, Portable Forges, and all other machinery.

PEEKSKILL MANUFACTURING COMPANY,
PEEKSKILL, N. Y.

D. L. SEYMOUR will be at the Office of Packard & Hill, No. 126 Water St., N. Y., Tuesdays, Thursdays, and Fridays, from 11 to 1 o'clock, to receive specifications and make contracts for Machinery and Castings of all kinds. [886-13teo

FLAX AND HEMP CULTURE.

Now Ready, the Sixth Edition of

A Manual of Flax Culture and Manufacture:

Embracing full directions for *Preparing the Ground, Sowing, Harvesting, &c.* Also, an Essay by a Western man, on HEMP AND FLAX IN THE WEST: Modes of Culture, Preparation for Market, &c., with Botanical descriptions and Illustrations. Published by D. D. T. MOORE, Editor of Moore's Rural New-Yorker, Rochester, N. Y. Price, Twenty-Five Cents.

☞ Those who wish PRACTICAL INFORMATION on the subjects named above should send for the work, which is sent, post-paid, for 25 cents.

D. D. T. MOORE, Rochester, N. Y.

MOORE'S RURAL NEW-YORKER.

TERMS, $3.00 PER YEAR.] "PROGRESS AND IMPROVEMENT." [SINGLE NO. TEN CENTS.

VOL. XVIII. NO. 18.] ROCHESTER, N. Y.—FOR THE WEEK ENDING SATURDAY, MAY 4, 1867. [WHOLE NO. 902.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

HINTS FOR THE MONTH.

IN this latitude May is the month of planting; it is also the month of bursting bud and unfolding leaf. Stock is changed from hay to grass, and we may consider it, in reality, the first spring month—the one that betokens the return of prolific Summer.

Spring Grain.—Barley, oats and wheat are yet to be sown on many farms. It is late in the season, however, and the whole energy of the farmer should be used to get them in the ground. Every day that shines on the uncovered seed diminishes the chance of a good yield of grain. Spring grains need the cool, wet weather of early spring, to enable them to make an "underground growth," and thus store up a supply of nutriment to meet the demands of the plant when it is maturing the grain. Some farmers resort to soaking the seed, when sowing late, to hasten the germination. But if a dronth follows the sowing, it is a dangerous practice. Roll the ground after seeding.

Grass Lands.—Sow plaster on those lately seeded if the work has not already been done. It is to be presumed that meadows have been attended to. If not, they should be prepared at once. If the meadow is newly seeded and the ground somewhat stony, let the surface be carefully examined and the stone removed, leaving a clean run for the scythe or the mower. Neglect, in this regard, causes injury to mowing implements, and a loss of time at a season when it is most valuable to the farmer. If cattle have been suffered to roam over the meadows, see that their droppings are scattered over the ground. Left in lumps, they hinder vegetation, and retard the cutting of the grass.

Fertilizers.—There are many nooks and corners about farm buildings and yards where repose valuable stimulants for the soil, overlooked too often because of the hurry of the season, or the supposed insignificance of each separate deposit. These should be carefully gathered and applied, and the result will be a ten-fold recompense when the harvesting season arrives. A man does not usually discard his pennies because he finds them in company with dimes, neither should he overlook small deposits of manure because singly they do not constitute a full load. Save and apply all, should be the motto of the farmer on this subject.

Planting.—Potatoes first, corn later. The great aim of the farmer, after providing for a good crop, should be to do as much of the work with horse labor and machinery as possible. A hoe need hardly be touched to a potato crop if it is rightly managed. Plow well; harrow thoroughly; mark straight rows, and then use the cultivator. Young potato plants are not tender like corn. You may cover them up with fresh dirt after they have risen two or three inches above the surface—thus completely cultivating them—and they will grow the better for it. We want to get rid of the hoe in our husbandry, and the term hoeing in our vocabulary. Cultivators and cultivating are better. Corn should be planted shallow and on top of the ground; potatoes in a slight furrow and deeply covered. First get the loose stone from your cornfield, make the rows straight, and put in the horse and cultivator as soon as you can see the green corn. We have given frequent hints about scare-crows, &c., but the great enemy to corn is the cut-worm. Who will tell us the best way to destroy or circumvent it?

Stock.—Of course you will not turn your cattle on the flush grass without previously inuring them to it. Give them short range two or three hours daily some time previous to withdrawing hay and grain. If the cattle bloat on the grass, give one ounce of sulphuric ether or the same quantity of chloride of lime in a pint of water. These remedies should be kept on hand by the farmer, and will usually save resorting to the knife. Put the pigs and calves in "good clover," and feed both skimmed milk and meal. Horses should hardly be turned out this month.

Repairs.—Not much time for these can the farmer find in the month of May, unless it be in the "resting spell" after planting, when the boys are wont to "go a fishing." Some fences will need looking after to ensure safety to the growing crops. If new buildings are to be made or old ones remodeled, begin early; by all means get the haying and harvesting implements in order. Not only get all tools in order, but have them orderly arranged and kept from the weather.

Root Crops.—Prepare the ground and sow liberally of these; carrots for the horses, sugar beets for the cows, and turnips for the sheep.

Weeds.—Pull red-root and cockle from the wheat, and begin a warfare on all others that have a foot-hold on the farm.

The Barn Yard.—Make the compost heap for fall wheat early. Clean out the barn yard and pig pens.

ABOUT INDIAN CORN.

LET it be our aim in this paper to show the American Agriculturist that it is for his interest to bestow a greater share of labor and attention to the growth and increase of the crop of maize or Indian corn. This grain was found among the natives when the white man first landed on this continent. From that time to the present it has flourished under the culture of the white settlers. No grain so useful is more tenacious of country and climate than Indian corn. In England it does not ripen well, and on the continent of Europe it fails to become what it continues to be in the United States of America. As an article of commerce, it is destined to lead all cereal products.

Wheat and rye exhaust the soil more and fail to be as reliable or remunerative, being subject to destruction by insects, climate, and casualties. Although rye ranges about with corn in price, yet in yield, variety of use, or extent of soil in culture, it is far less remunerative than corn. The foreign demand will continue to increase as this native grain becomes more generally known as a reliable and healthful article of food, where grain and root crops are deficient. Corn is conceded by the chemist, commissary, and physician, to possess more largely all the qualities essential to sustain and nourish the physical nature of man than any other one of the grains which can be made prolific as an article of commerce. We are, therefore, induced from motives of economy and thrift to give more thorough attention to the cultivation of this native grain of America.

As bulk is essential to healthy food, so nature has equally diffused bulk and nutriment in this article. It must become a more extensive article of commerce and export, as its qualities and uses are more known to the dense consumers of Europe. It was almost exclusively an article of home consumption until the late famine in England and Ireland, when necessity compelled its use as an article of food for man, now become desirable and palatable, and we expect a certain increase of demand for our surplus.

For this increased foreign demand we are much indebted to our gifted countryman, ELIHU BURRITT, the philanthropist and scholar, who, while traveling in Europe, made it a condition in his acceptance of invitations to meals at farm-houses, that a part of the meal should be of warm corn bread or Johnny cake, also making a free distribution of recipes of the various modes of bread making from Indian corn meal. This practical, common sense procedure of that American traveler, has probably advanced the interests of this country more at least than will the acquisition of the vast non-corn growing region of Russian-America,—for the various ways in which maize is now used will make it a source of wealth to this nation, and of supply to the wants of the world. Deprive us of this article and as a nation we would be poor indeed. On it we depend mainly for our beef, pork, and the most healthy food of the table. Our wheat is often shrunken and defective, our potatoes diseased and unpalatable, but corn, our native plant, remains sound and unchanged,—the grain for bread, the husk, stalk, and leaf for fodder; and as our pastures and meadows become exhausted, we fall back upon a late sowing of corn for fodder. On many farms are moist muck lands, too late for planting, but dry in time to sow corn in broadcast or drills for fodder, giving a return of from three to six tons to the acre of choice fodder for stock.

Some of the "Fair" reports of our country show that we may manure this crop without stint, and in proportion as we manure and till we increase the crop until more than double the ordinary yield will be realized, giving from 40 to 125 bushels to the acre.

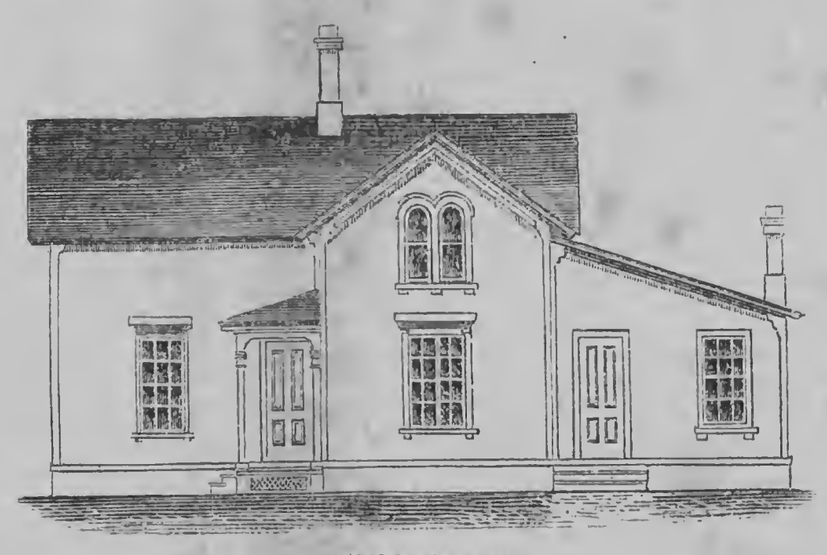
In this climate of 42° and 43° N., where the *corn season* is not certain to exceed ninety days, great attention should be given to the selection of the choicest seed of early varieties; so essential is it to a good crop that all the ears mature and ripen. It is well, therefore, often to procure seed from the best kinds of a higher latitude. If you take good seed from 43° N. and plant it in 42° N., your corn will ripen two weeks earlier than from seed long used in 42° N. The former will be out of danger of frost, while the latter may suffer 25 per cent. from frost. We have known a crop, the seed of which was taken from the latitude of Burlington, Vt., and planted 100 miles south, which ripened two weeks earlier than the Dutton, planted in the same field, with the same chances. The former was all sound, while the latter yielded 25 per cent. of soft corn. From that more northern seed some was planted in Monroe Co., N. Y. On the 2d day of July, and in 84 days, seed corn was picked therefrom. Such facts show that too much care cannot be bestowed on the quality and kinds of grain for planting,—for late planting is often unavoidable. Deep and shallow planting are things to be considered in getting a crop in New York. Shallow planting, not to exceed one inch in depth of soil, is the safer course. The germinating seed comes up in six to eight days, and if a partial dronth occurs, still the seed does not soon rot or ferment, and, in a climate so subject to showers, will be likely to come at last.

A late estimate of the corn crop for 1870, based on the estimate of the two preceding decades, will show the aggregate in quantity and value as follows:

1,258,189,110 of the grain at 60c	$754,913,466
60,000,000 tons of stover at $5	300,000,000

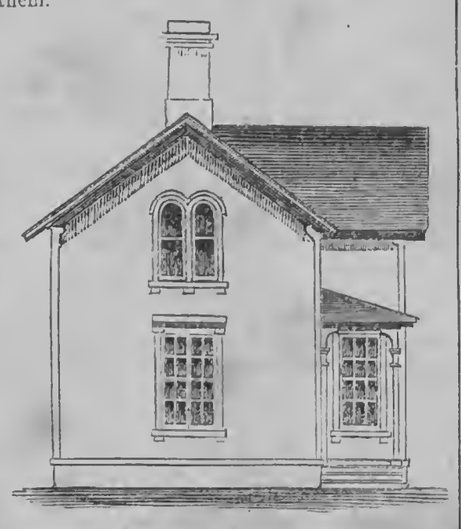
The rate of export is less than one per cent. of the whole crop. H.

DESIGN FOR A DWELLING HOUSE.



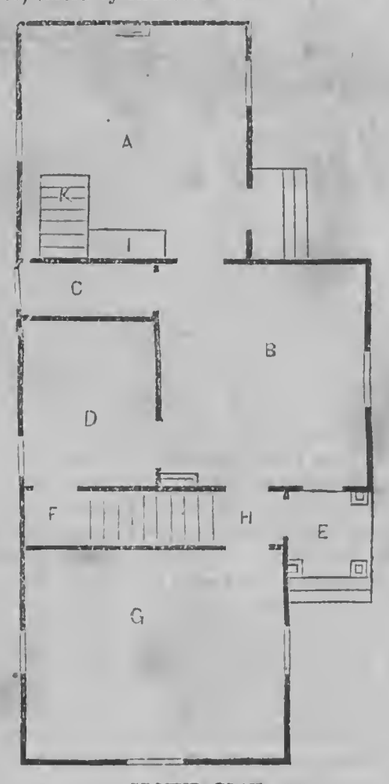
ELEVATION—SIDE VIEW.

WE are in the habit of giving our readers occasionally a plan for a dwelling house, and as this is the season when buildings are generally begun in the country and in villages, we present the elevations and ground plan of house of moderate dimensions and cost, drawn by A. J. WARNER, Rochester N. Y. We have preferred to give the elevations instead of a perspective, so that any one wishing to profit by it will be in possession of all the information necessary for an architect to give the builder, in order for him to carry out the plan. This course may save readers the trouble of writing letters of inquiry, and others the much greater trouble of answering them.



ELEVATION—FRONT VIEW.

The house is intended to be a small frame cottage, one and a half stories high. The larger elevation is a view of one side, the smaller of the front of the dwelling. They are plain geometrical views, drawn to a scale of 12 feet to the inch, and by applying the rule any height and dimension can be readily ascertained. The posts for main part are 16 feet high; the first story to finish 9 feet and 6 inches high, and the second story is finished upon the rafters so as to give the chambers a height of 8 feet. We have not given a plan of the upper story, as that may readily be divided into more or less apartments, with closets, &c., as may be desired. The cost of a house from this plan will be from $1,000 to $1,200, varied by circumstances.



GROUND PLAN.

A, Kitchen, 15+15½. B, Living-Room, 12+13. C, Pantry. D, Bed-Room, 8+10. E, Porch. F, Closet. G, Parlor, 12+15. H, Up-Stairs Hall. I, Sink. K, Stairs to Cellar.

FARMING IN GEORGIA.

I GOT a letter to-day from a Georgia farmer, inquiring after the large variety of clover seed. He is sanguine that red clover may be grown there with great success. He says he has a patch of "yellow California clover that has made splendid pasture since February." He has "another of crimson clover, the English trefoil, equally luxuriant, and it is preferred to red clover by stock." At one of his neighbors he measured clover 24 inches high, and California clover 19 inches, on the 11th day of this month, (April.) The latter grew more in the winter, but after the first of April the red clover outgrew the yellow. The yellow clover makes a thick mat on the ground and capital pasturage. He says, "If our planters would only use their guano and superphosphate to establish clover and lucern, fit their fields for stock growing, making cotton the market crop, we would have one of the nicest countries in the world!"

Only to think, while in Georgia they have the best of fall and early winter pasturage, again the best pasture after Feb. 6, and red clover fit to cut on the 10th of April, here in Western New York, after October, we have no pasturage worth naming until the middle of May: then in the grain growing region we have a summer dronth which puts an end to white clover pasture, and pinches the other grass so that the fall rains only create a short lived growth, corresponding with the short days and cool nights, and soon ended by frost. It is true that even clover and lucern will not grow on the sandy loams of Georgia in summer, as it will on the stiff soil of our cool, moist, dairy regions proper; but there they have seven months winter and cold weather, when cattle must be foddered, while at the South very little winter fodder is needed, as grass grows there nearly all the year round. The writer well says, "put the guano on the clover, and let the atmospheric fed plants make a manuring crop for the corn and cotton."

It seems that the cotton planters find it to their interest to use salt and plaster on the land liberally, and to pay large sums for guano, bone dust, superphosphate of lime, &c., exclusively for the cotton crop. Like the English farmers, they understand the value and importance of commercial manures.

The cotton crop has a great manurial advantage over the tobacco crop; it takes off nothing from the soil but the cotton wool, the haulm being returned, and the seed which contains the most of the nitrogen and phosphates, is also returned to it in the manure of the animals fed on it, or on the expressed cake, the oil itself being of little manurial value, as carbon is richly supplied from the atmosphere. S. W.

WHEAT GROWING ON THE PRAIRIES.

HERE is a farmer who sows from one hundred to two hundred acres of spring wheat yearly on a prairie farm in South Wisconsin. He grows wheat after wheat, with little alternation, but finds it necessary to change the variety often. The club, he says, has run out. To get rid of his straw he has occasionally burned it as soon as it was thrashed, applying the ashes to the land, to the manifest benefit of two or three crops afterwards. This clearly shows that rich as his soil is, it has already begun to fail in the mineral elements of plant food.

It is proved that 25 bushels of wheat and its straw abstract 175 lbs. of mineral matter from the soil on which it grew; potash, soda, phosphorus, lime, sulphur, magnesia, chlorine, iron and silica. As none of these elements can be supplied from the atmosphere, if the whole crop of straw and grain is removed from the soil, it will become rapidly impoverished. But as 150 lbs. of these mineral matters is contained in the straw, which is generally returned to the soil enriched with animal manures, both the mineral and organic fertility of the soil is often kept up; and a rotation of crops or green manuring with clover, with the aid of plaster, bone dust, &c., will keep the soil perpetually fertile.

But what would be suicidal farming on the long worn farms of Western New York, may well be tolerated on the prairies at this time of very high prices for wheat. It is even better to burn the straw and apply the ashes to the soil than to waste and lose it entirely. When the soil begins to need manure more, the price of wheat will probably be lower, and then the prairie farmer will find it to his interest to grow less wheat, keep more stock, and make, save and apply more manures to his soil. *

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

To CORRESPONDENTS.—Mr. RANDALL'S address is Cortland Village, Cortland Co., N. Y. All communications intended for this Department, and all inquiries relating to sheep, should be addressed to him as above.

THE N. Y. STATE SHEEP FAIR.

THE New York State Sheep Fair, we trust our readers bear in mind, takes place at Auburn on the 8th, 9th and 10th of May—commencing four days from the date of this paper. The premium list has been published and widely distributed. The arrangements for the convenience of exhibitors and visitors at Auburn—ample we believe them to be—have been alluded to, and we have no reason to doubt that they will be fully carried out. The liberal agreement of the N. Y. Central Railroad to carry exhibition sheep to and from the Fair free of charge, has been stated, and the precise mode in which this business will be conducted has been clearly announced by the Superintendent of the road—so that no exhibitor will be at a loss how to proceed*.

In a word, we believe that every practicable step which can be taken to render the Fair successful, has been taken. But two indispensable things remain. These are a great exhibition of sheep, and a great assemblage of people.

Without the former, the Fair would be the play of Hamlet with the part of Hamlet left out! Several thousand men gazing round on a "beggarly account of empty" sheep pens, would be a farcical sight. At our two previous State Sheep Fairs no such humiliating spectacle has been witnessed. We think it has been generally conceded that in numbers and excellence, the exhibitions of Merinos at Canandaigua and Rochester have never been equalled in our country; and we have not the remotest idea that, judged by American standards, they were ever equalled in any other country. There is no reason why there should not be an equal display of choice sheep, in all the different classes, at Auburn. The premiums are equal with those of previous years. The facilities are greater. Emulation among breeders continues as rife. And there are not only more good sheep in the country than there were three years ago, but there are, with a few special exceptions, better ones. The breeder who has not manifestly and considerably improved his flock within three years is but a *fossil* in his art, and is drifting behind!

Besides sheep, we want troops of spectators at the Fair. The Association receives no Legislative aid. It depends entirely upon its receipts to pay its expenses; and these receipts, besides the bonus paid by Auburn, consist wholly of admission fees. Its officers do all the work, incur all the responsibility,—and *they* receive no pay. They, therefore, should receive the countenance and assistance of a generous public. We trust that the solid farmers of Cayuga and the surrounding counties, whether specially interested in sheep husbandry or not, will come *en masse* to the Fair,—and that they will do this even if the weather should not chance to be as favorable as could be desired. A rainy day does not prevent multitudes from attending a horse-trot. Why should it prevent able-bodied farmers from standing by their cause or their brethren? We trust that the citizens of Auburn, without respect to profession or avocation, will feel it incumbent on them to attend an exhibition brought to their doors, and intended to promote a useful and important object. And we hope the ladies of Auburn and of Cayuga Co. will grace and gladden us with their presence, as the ladies of other localities have graced and gladdened many a similar exhibition which we have attended. Flashing eyes and fluttering draperies are the prime zest of such an occasion. (And we hereby officially stipulate that no exceptions shall be taken to the smallest possible sized bonnets!)

The attendance of distinguished sheep breeders from out the State is expected to be large. Our farmers will be happy to meet these men and form their acquaintance. Indeed, one of the chief pleasures and benefits of all agricultural festivals is the meeting together of old friends and the forming of new ones, at a time and place when people assemble to enjoy themselves and not to fight over political or other platforms. These occasional play-spells of the farmer are well-spent episodes in the habitual moil of daily life. They enlarge his views. They open his heart. They teach him to look beyond that narrow horizon of self, which so often shuts in around the man who does nothing but toil, toil, toil,—and who can find no time to mingle socially with his fellow men.

TO BREEDERS OF ENGLISH SHEEP.

IN the departments of Long and Middle wool sheep (Leicesters, Lincolns, Cotswolds, South Downs, Shropshire Downs, etc.,) our previous State Sheep Fairs have always collected a few choice animals,—but the competition has been comparatively feeble. Why is this? Eminent breeders of English sheep joined in the call to organize the Association. They were fully represented in the nominating committee which presented the names of its original officers. From that day to this, they *never have been voted down* where they, or any person representing them, has asked for the election of an officer or officers, or for any right or privilege whatever. Their sheep receive equal premiums as far as their premiums go; and as great, or a greater, aggregate amount of premiums is offered on them than is offered on Merinos, in proportion to their relative numbers in the country, or in proportion to the amount of capital invested in them. The latter reasons, we feel authorized to say, however, would weigh nothing, if the owners of the English breeds *would exhibit their sheep*. But can it be expected that an Association, supported only by its receipts, will constitute numerous classes, and pay the highest premiums known in our country in those classes, when it is perfectly understood that, with here and there an exception, no first-rate sheep will be exhibited in those classes, and that there will be nothing like a reasonable degree of competition in them? It has repeatedly happened that even in the existing classes, no sheep have been exhibited, or that third or fourth rate animals have been *run in* from the immediate neighborhood to secure prizes otherwise uncompeted for.

Has any fault ever been found with the selection of the viewing committees in the Long and Middle wool classes? We have never heard of such a thing. They have uniformly been selected from well known and experienced breeders of those varieties, and from persons known to be their especial advocates. If those persons have not attended, the most competent substitutes known to the Executive Committee of the Association to be found on the ground, have been appointed to fill their places. No respectable man will deny these statements.

If we have repeatedly seen persons at our Fairs who came expressly to examine and purchase some of the different varieties of English sheep, unable to find prime or any specimens of the particular variety they wanted, who is to blame for it? Not the Association, certainly.

The New York Sheep Breeders' and Wool Growers' Association was not founded or intended for a mere Association of Merino breeders. Its aims were larger. The men who have been most active in it, full well know the great value to the country of the mutton breeds of sheep—their superiority to the Merino in various situations. They were willing, and are still willing, to go hand in hand with the breeders of the latter in all efforts to encourage improvement. They earnestly desire and invite such fraternal co-operation. If there are a vast majority of Merino breeders in the State and in the Association, let the breeders of English sheep nevertheless *ask what they want* of the Association, and *see how much is refused*, before they complain that they are overborne or underestimated by an interested or prejudiced majority.

We cordially and earnestly invite the Long and Middle wool growers to make an imposing display of all the different varieties of their sheep at Auburn. We believe they will find their account in it. We invite the Canadian breeders and importers to exhibit the best stock of this kind they have for sale. We know of a company now forming to buy in this country, or import from England, choice specimens or flocks of English sheep. The agents of that company will be at Auburn "to see what can be seen." There is now an extensive call for such sheep to meet the new and increasing demands of our worsted manufactories. And there is no time so suitable to exhibit or examine the wool of these or any other kind of sheep, as in the spring when their fleeces are out at full length.

PEDIGREES AT THE FAIR.

"A CONSTANT READER," at Manlius, N. Y., asks "if it is necessary to establish full pedigrees of sheep, to enable them to compete in any class at the State Sheep Fair?" It is not. Pedigrees, if given, will be made matters of record, and in some points of view it is very well to give them. But after a full examination of the pros and cons of the subject, the State Association arrived at the conclusion, which has been uniformly acted on, that it is inexpedient to require pedigrees as a condition of competition. We heartily subscribe to this view. A full-blood that can be beaten by a mongrel, in individual qualities, is not worthy of or worth a premium.

MR. BENEDICT'S INFANTADO EWE "PAULINE."

BRED by CHARLES J. BENEDICT, Arlington, Vt., got by Hammonds' Gold Drop, dam a ewe bred by Mr. HAMMOND. Mr. BENEDICT writes us that he purchased twenty-five ewes of Mr. HAMMOND in 1855; four ewes and one ram in 1863, and in company with Mr. BOTTUM of Shaftsbury, two ewes; and Mr. HAMMOND'S Queen 4th (dam of Mr. HAMMOND'S "Profit") in 1864. They have all been bred uniformly to rams of the same stock.

Condensed Correspondence, Items, &c.

RECIPE TO CLEANSE WOOL.—HUNT Brothers of the "North Bloomfield Custom Woolen Mill," N. Y., send the following recipe for cleansing wool:—"To two pailsful of water add a quart of soft soap and half a pint of common salt. Heat from 150 deg. to 180 deg. or a little warmer than the hand can bear. Put in all the wool that will stir conveniently, and let it remain fifteen minutes, moving it in the kettle occasionally. Then take it out, let it drain, return the drained liquor to the kettle and add all the water needed. Repeat the process, and occasionally add a little soap and salt. After the wool is sufficiently drained, simply rinse it out well in cold water and you will then have it white and soft. Never let wool boil in the liquor as that will fix the gum, render the fiber stiff and gray and unfit it to make soft, flexible yarn. Fine wool needs more time in the kettle than coarse. Tarrings may be cleansed in the same manner, by clipping off all the hard matter that cannot readily be compressed between the thumb and finger."

DISEASED RAM.—M. M. HILLMAN, Fentonville, Mich., writes:—"I have a valuable ram which eats hay and chews his cud, but refuses grain or roots. His eyes do not look well. He is stiff and very weak and stands most of the time on his feet. What is the matter with him, and what can I do for him?" He was probably overfed last fall and in the beginning of winter—and perhaps worked too hard. Thousands of pampered rams die annually with somewhat similar symptoms. Some persons administer mild tonics and stimulants, but rarely with much avail. Others nurse well, keep the bowels and urinary discharges regular, and trust the rest to nature. Such rams are apt to die before coming to grass, but if they survive that period and get well on green feed, they usually recover.

Dairy Department.

COWS IN MILK—FOOD.

THERE is considerable variance in the practice of farmers in the management of dairy stock. This results less, probably, from conflicting views as to the best food for cows in milk, than from a consideration of the use to be made of the milk obtained. If it is to be sold in its original state, quantity will most probably govern the feeding, and that will be supplied to the cows which will produce the greatest flow at the least expense. Hence it is that many farmers, having ready access to breweries, feed freely of the grains obtainable there, or, in the absence of these, substitute bran mashes if attainable. For a time the product of milk is large, but what is gained thus is most generally at the expense of the animal's health, which must be impaired in a few months by this system of feeding. The animals grow weak and dispirited, the flow of milk decreases, and what is obtained is of a quality which no experienced and prudent mother would place before her children. It would be a much better plan to vary the food of cows; to mix with the more invigorating kinds of meal a liberal supply of roots and other green food, keeping up the health of the cows; improving the quality of the milk, and producing an equable flow of it during a more prolonged season. If continuous feeding of bran and brewer's grains, with little or no other aliment, is injurious to the animals, and we believe this to be the case, so would be a like course with the more invigorating grains. Corn meal, cooked or otherwise, fed principally and continuously, will put flesh on the cows and impart vigor to their bodies, but this will be at the expense of their milk-producing powers. It will make beef, but diminish the quantity of butter and cheese and thus in two ways detract from the expected dairy profits. All things considered, then, the true course would seem to be to mix and vary the food as the seasons shall supply the necessary means, thereby rendering richer and prolonging the flow of milk, while adding to the comfort and preserving the health of the dairy stock.

COWS—TREATMENT.

THE treatment of cows just before and after calving is a matter of so much importance that a few suggestions in relation thereto may not be untimely nor out of place. Keep them in good condition and in warm and separate apartments.

If their bags be not filled so as to show any signs of inflamation, feed potatoes and roots which will tend to a flow of milk and produce a lax state of the system, strengthen the animal and deter inflammation from locating at the head, or starting paint of the placenta and prevent that end from turning in and coming away as it should do. This should follow close on the heels of the calf. If it does not, some say take it away in five minutes; others in one hour or in less than twelve hours any way. Some say never apply force to take it away, but rather let it rot and take its own time and manner.

As soon as the calf comes milk the cow clean, and before if the bag inclines to cake. Bathe the loins with it and let the cow drink the ballance. [Some authors object to this.] Then give a pailfull of warm drink, spiced with one-half pint of soot, the same of flax seed, with two quarts of rye meal—no corn—three quarts potatoes, red pepper or boneset together. Some would say either article would be a specific if their cow happened to do well when using it. Others say no such thing will do any good, for it cannot reach the place where the difficulty lies. This may be true, but the intention of such messes is not so much to act surgically as to fill up that cavity and press upon that which should come away, to keep up a lax state of the system, aiding and strengthening nature in performing her work. If these fail and you have to resort to the hand to take it away be sure to get a competent operator who will loosen and remove it from each knob or haunch without tearing them off. Be sure to finish and not leave the cow to strain the more and make a bad matter worse. The Farrier who can reach the starting point and turn the placenta in and fetch it out according to the course of nature, we will call a good practical surgeon in this department.

In January, 1860, I had a cow that did not clean until twelve days after calving. Two years after, in March, the same cow had it taken away. Did poorly on both occasions. A heifer, well fed, calved on Tuesday morning, but no afterbirth appeared till Thursday morning of the following week, and then came in mass. Teats filled one day before calving; milk clear the second day and she is doing well. I state these particulars because some dairymen say they are singular, and also to induce communications from others on the subject here adverted to.

Garrattsville, N. Y., 1867. R. L. GAZLEY.

DAIRY ITEMS.

Cheese Market.—The Utica Herald publishes reports from Liverpool to April 8. MARQUIS, BRISCO & Co. say:—"There has been very little doing in American cheese for the week ending April 5th, and that factors complain that the high rates ruling are interfering with the consumption. They put the imports from October 1st, 1866 to April 5th, 1867, at 296,068 boxes, and for the same time last year 90,236. They quote extra fine, per cwt., 67s. to 72s., and good 60s. to 65s. We may remark that cheese shipped at New York at 19c., costs in Liverpool, after paying freight, a trifle over 71s. Our advices from London and the west of England state that cheese is very scarce, and importations are looked for with interest."

Butter from a Farrow Cow in Winter.—Tell your lady correspondent, "MARGARET," who is sorely tried in making butter from a farrow cow in winter, that the following method, strictly pursued, will relieve her. Let the milk be strained into a clean tin pail, and the pail placed in a kettle of boiling water, and the milk heated nearly to the boiling point, taking care not to let it boil, then set it in pans for the cream to rise. This treatment will cause the cream to rise much sooner, and it may be churned, generally, in less than ten minutes—the butter being compact and of a good flavor. In spring, the milk should be set in a cool place.—MARION.

Placenta—Retention.—Sometimes cows cause trouble to their owners, occasionally loss also, by the retention of the placenta after calving. It was the custom among Yankee farmers in old times, and is now among dairymen in Herkimer Co., as we learn from Mr. WILLARD, through the Utica Herald, to feed cows a mash of bran and water as warm as they will take it, as a means of removing the obstruction. This usually proves effective without aid from anything else. Another cure is mentioned, consisting of sharp cider vinegar, heated nearly to the boiling point, and poured upon bran and fed warm to the cow.

Feeding Calves.—Mr. LEWIS, a prominent dairyman, Herkimer Co., N. Y., says the Utica Herald, feeds his calves milk for the first four weeks, when a reduction in quantity is made, and whey supplied mixed with oil meal. For morning feed, dip the whey from the vat when the curd is being scalded, and when the heat has reached about 90 degrees, carry directly to the calves and feed. For night's mess put a pound of oil cake in a tub for each calf, scald the whey and turn upon the oil cake at boiling heat, this will form a mucilage that will keep sweet during the day. Calves fed in this way made very thrifty growth.

Abortion in Cows—Preventive.—Some time since a man named ROSE appeared before the Trenton Union Ag'l Soc'y, in Oneida Co., and stated that he had discovered a certain preventive to abortion in cows, and offered his secret to the Club for $10,000. The Club thanked him for the proffer, and gave assurance that if he would make good his pretensions within two years, the money asked for should be forthcoming. The proposition is a safe one for the Society, whether the man succeeds or fails.

Cheese and Butter—Little Falls.—There is some new cheese in this market, though the quantity is not very large nor the quality very good—being mostly of the skimmed-milk kind. The cheese season is not fairly opened yet, and that made now is for the home market. Sales were made on the 25th ult. at from 12c. to 18c. per pound. The butter trade was rather dull, and sales were made of small lots at about 25c. as an average.

Preparing Rennet.—A very fine preparation for rennet may be made in this way:—To say six rennets, add six lemons, ½ lb. sago, ¼ lb. cinnamon, and eight gallons of water. Put away in a covered jar for use when wanted.

Rural Notes and Items.

THE SEASON, WEATHER, CROPS, &c.—The present week has witnessed but little improvement in the weather, though the snow has disappeared, except in places shielded from the sun and where the drifts were very deep. As a consequence of continued raw winds vegetation is backward—later generally by two or three weeks than is customary in this latitude on the first of May. But this may prove a gain in the end as fruit will be less likely to be injured by frosts by a late than by an early putting forth of blossoms. The season has been backward at the South also, as we learn from a note from the Editor-in-Chief who is "taking notes" in that section of country. Under date of Washington, April 25th, he writes:—"In Philadelphia, Baltimore and here the fruit trees are in full bloom, and fields and gardens looking beautiful—green and umbrageous, like the middle or last of May in our section. The season, however, is fully two weeks later than common in the localities named. The winter has been unusually severe, yet winter grain—wheat, rye, &c.—is looking remarkably well. The prospect is very favorable for an immense peach crop in Delaware, Maryland, &c. The reports received at the Department of Agriculture, from all parts of the country, speak favorably of the prospects of the wheat crop."

STUMP MACHINE.—An *attache* of our office, in company with several other mechanical *experts*, attended a trial of WILLIS' Stump Machine at Wayland, Livingston county, on the 24th inst., at which the largest pine stumps (supposed to be the most difficult to extract,) were in every case drawn from their positions with the greatest facility and in very short time, with only the motive power of a small yoke of steers and three men.

This machine combines great power, strength, simplicity and efficiency, without wheel, cog, screw or pulley, and is simply the Archimedian compound lever, having in its construction no one article, which if broken or worn, but what can be renewed by any blacksmith and wheelwright in every neighborhood. Its management is so plain and simple that the commonest capacity can apply and control its movements with perfect success. The machine can be taken apart and loaded on a wagon in ten minutes, and unloaded ready for work in the same time. It could not fail of being a profitable investment as a traveling operation to remove stumps by contract. The self-evident importance of freeing the fields of stumps, especially those recently cleared and those containing pine, chestnut and oak, will recommend it to the favorable notice of every farmer who is annoyed by those unsightly nuisances and absolute obstructions to good husbandry. It has also proved itself a superior machine for moving buildings, large rocks and boulders in fields, and for replacing any of the rolling stock displaced from rail tracks.

PERSONAL.—The Commissioner of Agriculture has appointed S. EDWARDS TODD of the New York Times, who also conducts the Agricultural Department of the Independent, to attend the great Paris Exposition for the purpose of examining the best and most useful labor-saving farm implements, and report a description of the same to the Commissioner for publication in the next volume issued by the Agricultural Department. His only daughter, NAOMI M., who is now teaching in Brooklyn, will go with him. They will sail about the first of June in the Great Eastern. No gentleman more capable for this work could have been selected. We wish the party a safe and pleasant journey.

SORGHUM IN CONNECTICUT.—The farmers in the vicinity of Hartford are said to have done well in the sorghum business the past season. The Hartford company have exhibited sugars, slrups and jellies of their manufacture pronounced to be of a very superior quality, and which sold at a fair profit. It is said to be as easy to grow an acre of cane as one of corn, and that 200 gallons is a fair yield. The manufacturing will cost considerably more than the preparation of corn for market, but the returns from the sorghum will still have a comfortable balance in its favor.

AN INDIANA STATE CONVENTION OF WOOL MANUFACTURERS—Was held at Indianapolis the 17th. Some fifty factories were represented. The samples shown were from the finest cassimeres to the most substantial fabrics—and it was thought that the *four hundred factories* of the State could well supply the people with all their woolen goods—*except shoddy*. Several of the factories have a capital of over $200,000 each, while ten years ago there were but thirty factories in the State. J. C. GRISENDORFF was President and GEORGE MERRITT Secretary.

THE SOUTHERN FARMER.—Several numbers of a new agricultural journal with the above title, published at Memphis, Tenn., have been received. It is owned and conducted by M. W. PHILLIPS, Esq., an experienced writer and planter. It promises to be an acquisition to the farming community, and we hope it may prove remunerative to the publisher. It commences with the reconstruction of the labor system in the State whence it emanates, and will seek to aid in securing the best possible results.

SWEET CORN—PLANTING.—Sweet corn takes high rank among the vegetables produced from the garden. Commence planting about the first of May and every two weeks thereafter till the commencement of July. By this process a succession of sweet corn will mature sufficiently for cooking till the advent of frost in November. It is a healthful product, and in palatableness is not excelled by any other field or garden product.

OHIO STATE FAIR.—The Executive Board of the Ohio State Agricultural Society have published the premiums and regulations for the eighteenth annual Fair of that State. It will be held in the city of Dayton, commencing on Monday, September 23d, and ending on Friday following. There are six departments in the classification, and liberal premiums offered in each.

SEEDS FOR THE SOUTH.—At the suggestion of Hon T. C. PETERS, the Southern Agent of the Agricultural Department, Gen. SCHOFIELD, has issued an order requiring the registering officers of the several counties and districts of Virginia to become Agents of the Agricultural Bureau to aid in the distribution of the $50,000 worth of seeds which Congress supplies to the South.

TO CORRESPONDENTS.—Mr. MOORE has been absent some weeks on his Southern journey, and is hardly expected to return for several weeks to come. This fact will explain to numerous correspondents why they do not hear from communications that require his personal attention.

---

* We re-publish this agreement for the benefit of those who have not already seen it, or properly noted its contents:

NEW YORK CENTRAL RAILROAD,
General Superintendent's Office,
ALBANY, March 19th, 1867.

HENRY S. RANDALL, ESQ., *Pres't N. Y. S. S. B. & W. G. Association:*

DEAR SIR:—In relation to the transportation of *sheep* to and from your Annual Fair to be held at Auburn on the 8th, 9th and 10th days of May next, I beg to say that the sheep intended for exhibition at that Fair will be shipped by this Company at the regular freight rates—the charges to be paid at Auburn. On the return of the sheep, the owners or persons in charge shall exhibit to the Freight Agent at that place (to whom the charges were paid) a certificate from the Secretary of the Society that the sheep have been on exhibition, and have not changed ownership. Then the charges previously paid will be refunded by the said Freight Agent; and the sheep will be billed free to the place of shipment, at the owner's risk of loss or damage from any and every cause. No claims for refunding will be allowed unless made within ten days after the close of the Fair.

Respectfully yours, JULIUS A. SPENCER,
Ass't Superintendent.

HORTICULTURAL.

LANDSCAPE GARDENING.—No. VI.

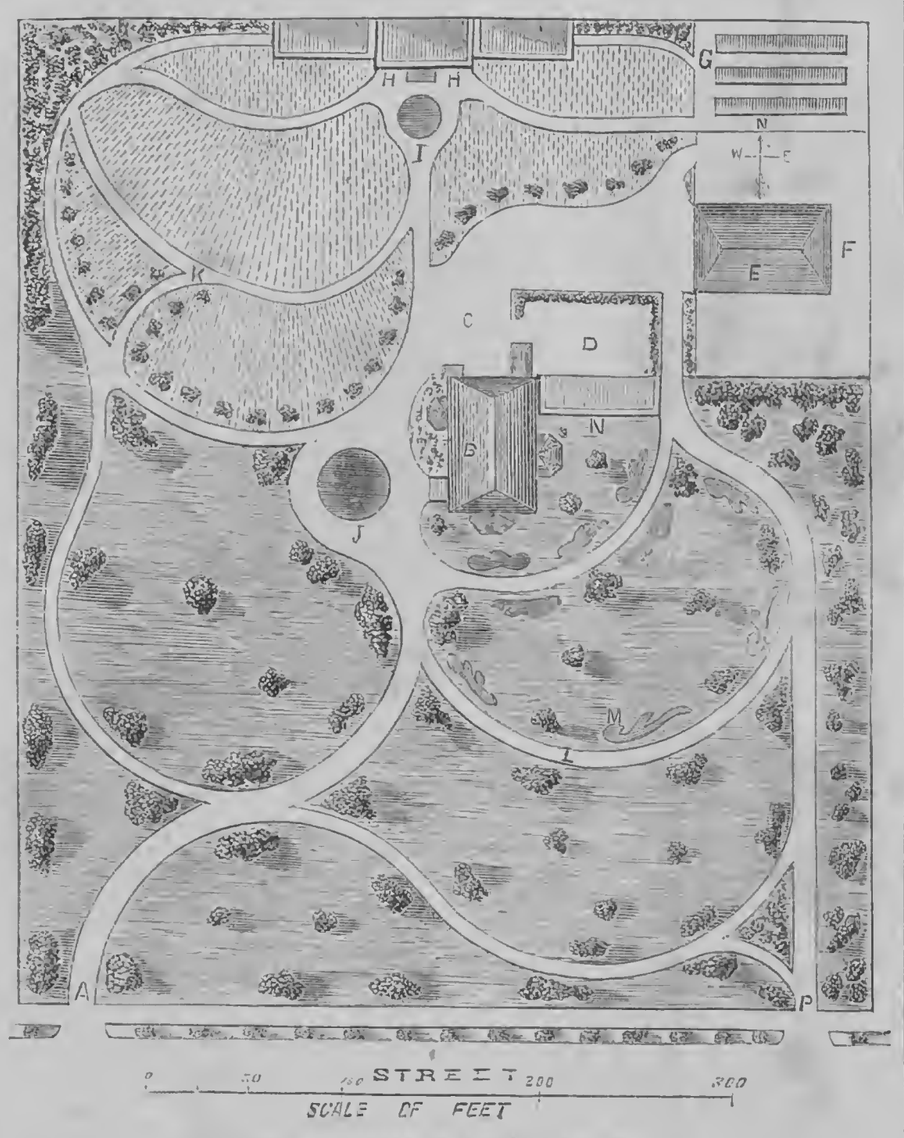
[This article concludes a series from the pen of Mr. Webster, on the above subject, which, with the accompanying designs, will assist residents of the town or farm in maturing plans to adorn their homes. They are designed more for studies—as teachers and prompters in the beautiful art of Landscape Gardening—than as plans to be literally adopted, for the surroundings and specialities of each individual place must necessarily modify and shape the features of its artificial landscape.—Eds.]

This style is admirably adapted to any section of country where the surface of the ground presents a partially broken or slightly undulating appearance. It will be noticed that in this Design the curves assimilate themselves to each other in an easy, graceful manner.

The term *gardenesque* is mostly applied in Europe to such places as present a highly finished exterior, or some peculiar arrangement. In this country with our grand and ever varied scenery, we are frequently at a loss for some term that shall adequately express the particular style of landscape gardening adopted. I propose, therefore, for my own part, to apply the term *gardenesque* to all such places as partake somewhat of the characteristics of the beautiful and the picturesque, yet the outlines of which are not sufficiently marked to be classed with either. As the picturesque is a type of everything wild and uncultivated in nature, so is the beautiful a type of everything lovely in a landscape, and it becomes apparent that we need a term that shall express a medium, when speaking of a style of gardening that will best assimilate itself with the surrounding scenery. As all curves ought to present a prominent object for deviating from a straight line, it becomes necessary for these curves in passing such object, whether it be around the base of some knoll or slight elevation, to assume an easy and graceful outline. In this style of landscape gardening evergreen shrubs should bear a prominent part.

The Design represents a place of five acres, the scale 100 feet to the inch, and like No. 5, shrubs are abundantly used. In continuation of my list of evergreen shrubs I will now mention a few more adapted to this style:—*Mahonia*, or Holly Leaved Ashberry; *Buxus*, or Tree Box; *Euonymus*, or Strawberry Tree; *Pyracantha*, or Evergreen Thorn.

As the list of evergreen shrubs adapted to general cultivation in this climate is rather limited, I have selected those only which will produce the best results.



PLAN OF LANDSCAPE GARDEN—NO. VI.

A, Principal Entrance. B, Dwelling. C, House-Yard. D, Laundry-Ground. E, Stables. F, Stable-Yard. G, Hot-Beds. H, H, Cold Graperies and Forcing Grapery. I, Basin of Water or Fountain. J, Carriage Circle. K, Kitchen Garden. L, Lawn. M, Flower Beds. N, Green House. O, Dwarf Pears. P, Entrance to House-Yard and Stables.

CULTIVATING THE MUSKMELON.

A correspondent of the Country Gentleman has had several years' experience in the following novel way of growing melons, cucumbers, &c. "Manure is the first consideration. I use none but horse manure; having had it laid up to ferment, I turn it over several times until the strong heat has passed off. I then dig my holes twelve inches square, eight or ten inches deep. I then fill up with manure to the level of the surface of the ground. On this I put two inches of soil. I then take a four-inch flower pot; set this in the center; then draw the remainder of the soil around the pot, pressing it rather firmly around it, until you have the soil about four inches deep; then, giving your pot a twist round, withdraw it. This leaves a hole four inches deep by four wide. In this I drop five or six seeds, and cover to the depth of three-quarters of an inch. Over this I place a light of six-by-eight glass, pressing it lightly to fit close. I then give no more attention till the plants are touching the glass. I then go though them, taking a small lump of earth or small stone, raise up one end of the glass and place this under it; this admits of a circulation of air over the plants and hardens them off. In about three days more I remove the glass entirely. By this time they will be in the rough leaf. I thin out to three plants in a hill. I draw a little fine soil around them, up as high as the seed leaf, and the work is done. The advantages of this system are, the protection of the young and tender plants from cold winds and rains, and last, though not least, it is the only effectual way of protection that I have found for that arch enemy of all this class of plants, the striped yellow bug. Cucumbers, watermelons and squashes can be raised in the same way."

FEVERS vs. FRUITS.—GREENLAND TO HINDOSTAN.

Let's have a little talk about orchards and gardens, as life-preservers. Many a farmer thinks he "can't fuss about a garden" with vegetables and small fruits in ample variety, hardly about an orchard, especially beyond apple trees. So he goes on to weightier matters of grain, or stock, or dairy, and eats potatoes, wheat bread, pork and salt beef, all summer long. No fine variety of vegetables, no grateful berries, no luscious peaches or juicy cherries. By October fever comes, or bowel complaints of some kind, or some congestive troubles most likely. He is laid up, work stops a month, the doctor comes, and he "drags round" all winter, and the doctor's bill drags, too. The poor wife, meanwhile, gets dyspeptic, constipated, has fever, too, perhaps, and she "just crawls round." What's the matter? They don't know, poor souls. Would they build a hot fire in July and shut the doors? Of course not—in their rooms; but they have done just that in their poor stomachs. How so? They have been eating, all summer, the heat-producing food, fit for a cold season, but not for a warm one. A Greenlander can eat candles and whale fat, because they create heat. In January we are up toward Greenland—in climate.

A Hindoo lives on rice, juicy fruits and tropic vegetables, cooling and opening to the system. In July we move toward Hindostan, in a heat almost tropical. Diet must change, too.

Have apples, pears, cherries, &c., from the orchard, every day, of early and late kinds. Let there be plenty of good vegetables, raspberries, strawberries, &c. It takes a little time and trouble, *but it's the cheapest way to pay the doctor's bills.* And, bless your dear souls, *these things taste good!*

You study what feed is good for pigs and cattle. All right; but wife and children are of higher consequence; and it's a shame if, with all our great gifts of intellect and intuition, we do not obey the Divine Laws in our own physical being so well that the doctor shall visit the house less than the horse-doctor goes to the barn. Don't fail of vegetables, berries and fruits. Try it, and you'll say we haven't told half the truth.—s.

TRELLIS FOR PEA VINES.

Procure some durable timber, sawed into strips two or two and a half inches square, cut it into proper lengths according to the height of the vines, allowing from a foot to eighteen inches to go into the ground. Bore a hole half an inch in diameter, an inch or two from one end, another about eight or ten inches from that, and so on down within a few inches from the surface of the ground. Sharpen the other end, and it is ready for driving. A set of these made alike and driven between the rows of peas at suitable distances, say eight or ten feet, forms a very good support for twine which may be strung through each hole, and then wound around, or half way around, and strung through again. Tarred twine would last a number of seasons. Hoop skirt springs would answer the same purpose, but instead of winding around the stakes they could be keyed in by wooden pins tightly driven by the side of the springs. A set of these stakes made of the right kind of timber would last for many years with proper care in driving, and housing when not in use. Where sawed stuff could not be procured, poles would answer just as well as long as they last.

Any device of the kind would be much better than brush for many reasons. It would be more easily set, less in the way when hoeing, and when picking, more easily gathered out of the way to make room for late vegetables, worth storing and easily stored. J. Doolittle.

POMOLOGICAL GOSSIP.

The Stuyvesant Pear Tree.—This pear tree, of which we gave an engraving in our last volume, recently blew down in a storm. It was a famous tree in New York city, being over two hundred years old.

Three Choice Standard Trees.—The Horticulturist, in reply to a correspondent, names Clapp's Favorite, Beurre d' Anjou and Josephine de Malines as three hard, healthy, productive varieties adapted to market purposes.

Figs in the South.—"Warwick," in the Southern Cultivator, says if young he would plant five acres of fig trees, and learn how to dry, preserve and pack the fruit for market. After a few years the profits would be a thousand dollars annually. The Editor adds that fortunes will yet be made in the South by the preparation of fig preserves and pickles for Northern markets.

Red Cedar and Mildew.—Col. D. S. Dewey, Hartford, Conn., gives his observations in the Horticulturist on the tendency of red cedar to prevent mildew and the attacks of insects on grape vines when it is used for posts and trellises to support the vines. The posts in his own vineyard are of red cedar, connected by strips of white pine; his vines have never been troubled with mildew or insects, and those nearest the posts have surpassed the others in health and bearing. He gives several instances which seem to show that red cedar employed in the trellis tends to give immunity against mildew and insects.

Fighting the Curculio.—One western fruit grower successfully uses what he terms a curculio trap, which is a large piece of canvas stretched on a frame resembling an inverted umbrella, and mounted on a wheel-barrow. It is run under a tree; a slit in the canvas admits the trunk of the tree to the center of the canvas, and the "animals" in the tree are jarred down into it. Another gardener says the following has been tested and found to be a sure preventive of the attack of the curculio on plum trees. It is simple and easily tried:—Take a quantity of corn cobs, wind a wire around them, terminating in a hook at the end of the cobs; then dip them into gas tar until they are saturated. Hang a dozen or more on a tree, and no curculio will disturb the tree. Try it.

Horticultural Notes and Queries.

American Pomology—Apples.—By Dr. J. A. Warder; 200 illustrations; O. Judd & Co., 41 Park Row, New York, publishers. For sale at Rural New-Yorker office. A solid volume of 740 pages, by an experienced, able and skillful man. It is the compendium of long study, thought work and observation on an important matter; the best varieties and culture of the most useful, abundant and wide-spread of our fruits—the apple. All over the land, most especially in the Northwest, the author is known. The introductory chapters are made up of directions for preparing orchards, land-culture, propagation, grafting, &c. Then insects that infest apples, their causes and cure, have place. A chapter on "Classification" is *his own*, in which he aims to regulate and simplify the many varieties, by classes, orders, &c. For instance, Class 1, Flat Apples. Order 1, Regular in Form. Section 1, Sweet. Sub-Section 1, Self-Colored, not striped, would locate the Canack sweet—a Georgia apple, of which a plate is given. Botanists it is well known classify, and thus easily recognize and describe the numberless kinds of flowers, and our apples are many in kind and quality. Lists of apples best fitted for many different sections of the country are given, and an index of apples, copious and clear. The book must commend itself to all interested—(and what farmer is not?)—in this matter. We shall make extracts from it.

Horticultural Instruction.—The Lecture at the Tracy Female Institute by William Webster on Thursday, Ap'l 11, was a success. The subject, Horticulture, was selected, in its particular relation to Flora-culture and ornamental gardening, which now interests so many ladies of our city and finds so much success. Mr. Webster has the reputation of fine knowledge and practical application of the subject, and his hearers appeared to be greatly interested and gratified. It is proposed to continue his instruction at the Seminary, and to make it appropriate, not merely to the older pupils of the school, but to young ladies and all who desire to increase their knowledge and enjoyment of Flora-culture. The teaching is to be illustrated by a practical example in the garden of the Seminary.—C. D.

Illinois Hort. Society Transactions.—We are indebted to W. C. Flagg, Esq., Corresponding Secretary of the Illinois Horticultural Society for a copy of its transactions during the last year. It contains much valuable matter in reference to the subject of Horticulture, presented in good style.

Remedy for Curculio.—A few years ago we copied a statement that elder branches hung up in fruit trees had kept off the curculio. We understand that some of our readers have tried it with success.

Domestic Economy.

A GREAT WANT FOR THE TABLE.

Ladies, Women, Girls!—one and all. Please read and consider. This is the department of "domestic *economy*." Recipes for cakes, pies, jellies, pickles, &c., &c., are all well enough and right enough. They go to make up the variety of diet the composite tastes of that many-sided being man (and woman also) demand. Some doubtless on trial would be toothsome and nourishing; others we fear would give a rhinoceros the dyspepsia. But bread, the "staff of life," is what is needed;—of best quality, light, sweet, *so* good—alas so rare! "A loaf! a loaf! my kingdom for a loaf!" (Shakspeare modernized) is the cry.

We've heard college students *bloviate* in Greek and Latin who could not spell common English words correctly. We once, in company with a professor in a great university, walked past a cart-wheel lying on the grass by the road-side. The learned pundit stopped with great interest to look at the wheel, and asked, "Is'nt that the new water-wheel they are to use in the mill?" Don't even smile, good woman, unless you *can* make good bread; for the housekeeper who is an adept in fancy cooking and ignorant of the great primary and important art, is just as ridiculous as these gentlemen.

Daughters, *begin* with bread-making and other useful branches. Learn that part *first* and *well*. Be *proud* of your beautiful and healthful loaves,—white and brown, wheat, bolted and unbolted, Indian, rye, &c. Learn it all.

Send in your directions and recipes. We'll publish all we can in our little corner. Have premiums and a bread-table *full* at your fairs. The great want of our cookery is bread *as is bread*.

A BATCH OF VALUABLE RECIPES.

M. N. P. wishes a recipe for Orange Marmalade, and here is mine; also various others which I trust may benefit Rural readers:

Orange Marmalade.—Rasp the oranges, cut out the pulp, then boil the rind tender, and beat fine in a mortar. Boil three lbs. of loaf sugar in a pint of water; skim it and add a pound of the rind; boil fast till the strup is very thick, but stir it carefully; then put in a pint of the pulp and juice, the seeds being removed, and a pint of apple liquor; boil all gently until jellied. Put into small pots. Do Lemon Marmalade the same way.

Cocoanut Pudding.—Take a good-sized cocoanut, pare off the rind carefully, grate and stir into one quart of milk, flavored with one tablespoonful of rose water, and two do. of fine, white sugar, and a couple of slices of stale bread, grated fine. Bake half an hour in a moderate oven. When nearly cool serve with cream.

Another Way.—Half lb. butter; do. of sugar; five eggs; one cocoanut grated; handful of flour. Lay into paste and bake.

Fruit Cake.—One lb. of raisins; do of butter; do. of sugar; one cup sour milk; one pint flour; four eggs; one teaspoon of soda; half a nutmeg.

Cup Cake.—Half lb. of sugar; do. of butter; two lbs. flour; one glass of rosewater, currants and yeast.

Peppermint Drops.—One lb. of loaf sugar, powdered fine; the whites of two eggs beaten stiff; two drops of the oil of peppermint. Drop on paper and dry in a moderate oven.

Soda Griddle Cakes.—One pint of milk; two teaspoons cream tartar; one do. soda; flour to make a thin batter.—J. M. 1.

How to Make Large Bread.—Use Pyle's Saleratus, and you will have a large loaf from a little flour; not only light and pleasant, but free from all noxious qualities. Try it! Sold by grocers everywhere. See that the name is on the package.

Good Cooks.—Ladies, if you would be known as good cooks, and would avoid the mortification of having poor biscuit for tea when you have company, use D. B. De Land & Co.'s *Best Chemical Saleratus*, and that only.

New Advertisements.

THE

GREAT AMERICAN

TEA COMPANY

Established, 1861,

Is endorsed by the leading newspapers, religious and secular, in this and other cities, viz:

AMERICAN AGRICULTURIST, Orange Judd, Editor.

CHRISTIAN ADVOCATE, New York, City, Daniel Curry, D.D., Editor.

CHRISTIAN ADVOCATE, Cincinnati, Ohio. J. M. Reid, D.D., Editor.

CHRISTIAN ADVOCATE, Chicago, Ill. Thomas M. Eddy, D.D., Editor.

CHRISTIAN INTELLIGENCER, E. S. Porter, D.D., Editor.

EVANGELIST, New York City. Dr. H. M. Field & J. G. Craighead, Editors.

EXAMINER and CHRONICLE, New York City. Edward Bright, Editor.

INDEPENDENT, New York City. Wm. C. Bowen, Publisher.

MOORE'S RURAL NEW-YORKER, D. D. T. Moore, Editor and Proprietor.

THE METHODIST,—Geo. R. Crooks, Editor.

TRIBUNE, New York City. Horace Greeley, Editor.

We call attention to the above list as a positive guaranty of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists in former editions of the leading papers of the country.

THE IMMENSE PROFITS OF THE TEA TRADE.

THE PROPRIETORS OF THE GREAT AMERICAN TEA COMPANY became fully convinced, several years ago, that consumers of Tea and Coffee were paying too many and too large profits on these articles of every day consumption, and therefore organized THE GREAT AMERICAN TEA COMPANY, to do away, as far as possible, with these enormous drains upon the Consumers, and to supply them with these necessaries at the smallest possible price.

To give our readers an idea of the profits which have been made in the Tea Trade, we will start with the American Houses, leaving out of the account entirely profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Tea.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 15 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same price (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₩ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₩ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ₩ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ₩ lb.
GUNPOWDER (Green,) $1,25, best $1,50 ₩ lb.

All goods sold are warranted to give satisfaction.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.

Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,

Nos. 31 and 33 Vesey St.,

Post-Office Box, 5643 New York City.

No. 640 BROADWAY, corner Bleecker street.
No. 161 EIGHTH AVE., north corner 18th street.
No. 290 SPRING STREET.
No. 205 FULTON STREET, Brooklyn, cor. Concord St.
No. 123 GRAND STREET, Williamsburg.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by Post-office money orders, or by Express, as may suit the convenience of the club. Or, if the amount ordered exceed thirty dollars, we will, if desired, send the goods by Express, to "*collection delivery.*"

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to us.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name. The numbers of our Houses are advertised above.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

GREAT AMERICAN TEA COMPANY,

31 and 33 Vesey Street.

Post-Office Box, 5643 New York city.

PRESERVE YOUR GARDENS—BY sending fifty cents to J. W. Knapp, Box 668, Davenport, Iowa, you will get a recipe for preparing a compound that will preserve your cabbage and turnip plants against the ravages of the cabbage or turnip flea; your melon, cucumber, squash and pumpkin vines from the yellow or striped bug, and your potatoes from the potato bug. Twenty years experience has proved the infallibility of the remedy. The compound is cheap, stimulates the growth of the plants and adds 10 to 25 per cent. to its products. Don't wait until your plants are up, but send at once and be prepared to expel the little destroyers at their first appearance. Satisfaction guaranteed in every case or money returned.

Ladies' Department.

A FRAGMENT.

FAIRER than morn upon the eastern hills,
A vision dawneth on my sight to-day—
A bright-haired child, whose name I will not breathe,
But in my heart, 'tis christened, only—May;
Sweet May! that broke the winter's icy chain
And brought the sunshine to my heart again.

Ah, could I paint the glimmer of that hair
Circling thy forehead like a crown of light,
Ah could I tell the sweetness of that face
Where beauty, purity and love unite,
My fame would ring through ages yet to come;
But when I gaze on thee, my lips are dumb.

I fear for thee! The future sure must bring
To such as thee more than a common fate;
But in GOD's hands I'll leave thy destiny;
Trusting in Him, my patient soul can wait.
I only pray—GOD keep her undefiled,
Through all the coming years be with my child.

Porter, March, 25th. A. E. H.

Written for Moore's Rural New-Yorker.

COMMON SENSE ON FASHIONS, &c.

MY attention being called to the rhymes entitled "The Past and Present," published a few weeks ago in the RURAL, I cannot forbear a few comments for the consideration of the author, and all others taking a similar view of things, hoping that "a word to the wise is sufficient." I see that the same cry is still raised that was moaned forth *over* thirty years ago, "when my good mother was a girl," and took "Atkinson's Casket." It was an old book when I was large enough to read it. It must have been published as early as 1833. It contained that very piece, telling what the girls used to do, and what they don't do now. I wish it was still in existence, that I might send you a few of its fashions, for sure I am that they would compare favorably, in point of ridiculousness, with the present style. I remember one, which I will describe as correctly as possible from memory:—A pea-green, watered silk dress, open down the front, displaying a petticoat (excuse the word—they used to wear them) of white satin, the edge of the dress being turned back, from the waist down, rolled over around the bottom, and confined with strings of pearl beads, displaying an ankle and foot of the smallest dimensions, squeezed into a tiny slipper, pointed at the toe, with a heel as high as the highest that are now worn on boots; the corsage a little lower than the ultra-low dresses of the present day. But the sleeves! which "would just hold their arms." Alas! it was a small portion of their arms which could be contained in them. Howbeit as much cloth was required to make one as is now used for a neat, fashionable sleeve, which will cover the arm. Just imagine a circle three-fourths of a yard in diameter, three inches from the side, a hole cut just large enough to admit the arm; said hole, being bound and trimmed with beads, formed the bottom of the sleeve; the outside of the circle gathered into the arm-hole, making a sleeve three inches in length, on the under side, and distended, by means of a stiff lining, into a huge pair of horns on the shoulders. The *hair* would frighten the most awkward waterfall into insignificance: combed up and tied upon the top of the head, and twisted around a comb four or five inches in height, surmounted by two long ostrich feathers, made to stand as nearly upright as possible. The front hair, puffed over an indefinite number of cushions, nearly concealed the forehead, while a bunch of false curls hung against the cheeks; the whole finished with a bandeau of beads to match the dress. The accompanying figure represented a morning dress, with surplice waist and bishop sleeves, which would require more time to lay the plaits than will now suffice to make and trim a whole dress. The bonnets were as indescribable as those which are now worn, and quite as ridiculous in their appearance.

Now, when we consider that "The Past and Present" was written over thirty years ago, does it not prove that human nature was the same then that it is now, and will be thirty years hence. There is no use in the "lords of creation" complaining of the ladies, for they will dress and conduct themselves in the way which they find to be most pleasing to the opposite sex. Until a woman can engage in sensible conversation without incurring the danger of being dubbed a *blue* by her lover, or dress as her conscience and purse dictate, without being shunned for her stingy, methodical principles, nor keep house properly without being "an old maid," you need not expect us to do differently, *for we shan't*. Men may talk about a wife that will help her mother. I'd like to know who of you, when calling upon a lady, would submit to be entertained by mamma, because her daughter was in the kitchen, baking, ironing, or getting dinner, or perhaps doing all three, that mother may have a chance to rest? I venture to say that your call would be short, and wo be to the unlucky dog that gets in too close proximity to your rattan as you wend your way homeward. I've seen this tried, and know it is so.

Now, I'll tell you what you want. You want the lady of your choice to be as pretty, idle, and useless as a butterfly; would esteem it the height of ill-manners were she to employ herself with knitting or sewing, while you are spending an evening with her. She must be always ready with smiles and "fixings" to receive company, and then when you are married you want her to be a tip-top housekeeper. But, let me tell you, you will not find such a woman; for we must learn beforehand, and we can't while we have to spend so much time in making ourselves beautiful, or run the risk of losing our chance in the matrimonial lottery.

Maple Ridge, Pa. MARY LOYD.

HEPWORTH DIXON ON WOMEN AT SARATOGA.

THIS eminent Englishman's book of travel in this country is remarkably fair and candid, as well as full of interest, from its vividness, ease and fidelity of description. Some mistakes he makes in his views of our customs and modes of thought, but they do not arise from narrow prejudice. There is a good lesson in this conversation. Although the Yankee speaks with emphasis, behind his exaggerations is a sad truth:

"What do you say now to our ladies?" said to me a bluff Yankee, as we sat last night under the verandah, here in the hotel at Saratoga. "Charming," of course I answered, "pale, delicate, bewitching; dashing, too, and radiant." "Hoo!" cried he, putting up his hands; "they are just not worth a d——n. They can't walk, they can't ride, they can't nurse." "Ah, you have no wife," said I, in a soothing tone. "A wife!" he shouted; "I should kill her." "With kindness?" "Ugh!" he answered, "with a poker." "Look at these chits here, dawdling by the fountain. What are they doing now, what have they been doing all day? Fed and dressed. They have changed their clothes three times, and had their hair washed, combed and curled three times. That is their life. Have they been out for a walk, or a ride? Have they read a book, have they sewn a seam? Not a bit of it. How do your ladies spend their time?" "They put on good boots, they tuck up their skirts, and walk away through the country lanes. I was in Hampshire once; my host was a duke; his wife was out before breakfast with clogs on her feet and roses on her cheeks; she rode to the hunt; she walked to the copse; a ditch would not frighten her; a hedge would not turn her back." "Why, our women, poor, pale—." "Come," I said, "they are very lovely." "Ugh!" said the saucy fellow, "they have no bone, no fiber, no juice; they have only nerves; but what can you expect? They eat pearl-ash for bread; they drink ice-water for wine; they wear tight stays, thin shoes, and barrel skirts. Such things are not fit to live, and, thank God, in a hundred years not one of their descendants will be left alive."

AN ENGLISHMAN'S OPINION OF AMERICAN WOMEN.

IN Hepworth Dixon's new book about America, he devotes a chapter to the ladies, generally complimentary. The following is his opinion:

In the sweet New England girls, he thinks there must be a lack of vital power. At present you can hardly speak to them without fearing lest they should vanish from before your face. Among the higher classes in America the traditions of English beauty have not declined; the oval face, the delicate lip, the transparent nostril, the pearl-like flesh, the tiny hand, which mark in May Fair the lady of high descent, may be seen in all the best houses of Virginia and Massachusetts. The proudest London belle, the fairest Lancashire witch, would find in Boston and Richmond rivals in grace and beauty whom she could not feign even to despise.

Again, New York beauty has more dash and color, Boston beauty more sparkle and delicacy. Some men prefer the more open and audacious loveliness of New York, with the Rubens-like rosiness and fullness of the flesh: but an English eye will find more charm in the soft and shy expression of the elder type.

Among the lower grades of women, there is no such wide and plentiful crop of rustic loveliness as an artist finds in England; the bright eyes, the curly locks, the rosy complexions, everywhere laughing you into pleasant thoughts among our Devonshire lanes and Lancashire streets. But then comes the balance of accounts. With her gifts of nature, our English rustic must close her book in presence of her keen and natty American sister.

"RIGHT DRESS."—The New York Tribune thus refers to the inartistic character of the present fashion of female dress:—Very many dresses are trimmed up every seam with a contrasting color. They look like panels set in motion, and are as tasteful. As usual, excessive trimming is the offense of all our new modes. It seems to be a part of the penalty of Eve that that capability of good dressing which she bequeathed to us should rust in us unused, by reason of the wiles of the adversary who beguiles us with beads and wampum, and glass, and trinkets, and glittering generalities in the way of jets. Trimming no longer ornaments the dress, but the dress is a scaffolding for trimmings. Geometry is exhausted to furnish figures for fringes and gimps to describe. Architecture contributes studies in cornices, columns, and capitals. Nineveh and Babylon are repeated in hieroglyphs.

A GOOD EDUCATION.—Mrs. Sigourney says: A good education is a fortune itself. I do not mean that it will always secure wealth. But it brings something better than the gold that perishes, for this may be suddenly lost. Fire may consume it; the thief take it away; but that knowledge which enriches the mind, which moderates its desires, which teaches to make a righteous use of time, and promote the happiness of others, is superior to the elements. Fire, air, earth and water have no power over it. It can use them as servants. It walks with us into the vale of years, and does not leave us till we die.

QUESTIONS FOR WOMEN BY A WOMAN.—Can we not—since, while the power of the world is with men, the influence lies with women—can we not bring up our girls more usefully and less showily—less dependent on luxury and wealth? Can we not teach them from babyhood that to labor is a higher thing than merely to enjoy; that even enjoyment itself is never so sweet as when it has been earned?

Choice Miscellany.

THE VOICE.

BY FORCYTHE WILSON.

[THE following lines possess a melancholy interest, as the young poet, author of "The Old Sergeant," and other poems, evincing no ordinary genius, lately died suddenly.]

A SAINTLY voice fell on my ear
Out of the dewy atmosphere;
"O hush, dear Bird of Night, be mute;
Be still, O throbbing heart and lute!"
The Night-Bird shook the sparkling dew
Upon me as he ruffed and flew;
My heart was still, almost as soon,
My lute as silent as the moon;
I hushed my heart, and held my breath,
And would have died the death of death,
To hear—but just once more—to hear
That voice within the atmosphere.

Again the voice fell on my ear,
Out of the dewy atmosphere!
The same words, but half heard at first—
I listened with a quenchless thirst;
And drank as of that heavenly balm,
The silence that succeeds a psalm:
My soul to ecstasy was stirred;
It was a voice that I had heard
A thousand blissful times before,
But deemed that I should hear no more
Till I should have a spirit's ear,
And breathe another atmosphere!

Then there was silence in my ear,
And silence in the atmosphere;
And silent moonshine on the mart,
And peace and silence in my heart;
But suddenly a dark doubt said:
"The fancy of a fevered head!"
A wild, quick whirlwind of desire
Then wrapt me as in folds of fire;
I ran the strange words o'er and o'er,
And listened breathlessly once more;
And lo! the third time, I did hear
The same words in the atmosphere!

They fell and died upon my ear
As dew dies on the atmosphere;
And then an intense yearning thrilled
My soul, that all might be fulfilled:
"Where art thou, Blessed Spirit, where?
Whose voice is dew upon the air?"
I looked around me, and above,
And cried aloud: "Where art thou, Love?
O let me see thy living eye.
And clasp thy living hand, or die!"
Again, upon the atmosphere,
The self-same words fell: "*I am here.*"

"Here? Thou art here Love!" "I *am here.*"
The echo died upon my ear:
I looked around me—everywhere;
But, ah! there was no mortal there!
The moonlight was upon the mart,
And awe and wonder in my heart!
I saw no form!—I only felt
Heaven's peace upon me as I knelt!
And knew a soul beatified
Was at that moment by my side!
And there was silence in my ear,
And silence in the atmosphere!

TO YOUNG MEN ON THE FARM.

HAVE a high and true standard of manhood. Is it manly to be rude in manners, vulgar in thought, and of course in speech? Is it manly to pollute body and soul, and become filthy in person by adopting the bad habits to which others may be slaves?

That good old word, gentleman—albeit it is often badly used in our day—had a noble and true meaning in an earlier time, and still has to those who comprehend it. It meant gentle yet manly,—pure and true, tender and brave, kindly yet strong. There is no noise or pretence in truly fine manners; they are quiet, unpretending. A true man lets his performance go beyond his promise, and so disappoints you in the right way;—serves you better than you hoped.

How cheering to see a pure young man! Vices of the body cannot be hid. The dull eye, the lifeless complexion, or the flushed face, reveal all; and hidden things become known to discerning eyes. But that clear and honest eye, that fine flush on the cheek, seen even through the bronze of exposure to a blazing sun; the bloom of health, delicate as the peach-bloom: blessed signs of a pure soul that *will* keep the body pure.

Be pure as the blue sky that bends over your daily labors; broad in views as the wide landscape, it is your daily privilege to gaze over, faithful as the sun, that comes ever to its work of warmth and beneficent life. Nature, so motherly and tender yet so able and strong to do its daily and yearly work, is full of highest lessons for manhood.

In these days of travel with cars, and daily journals, and magazines, you need not lack some knowledge of the world, some mingling in varied society. Pity it is that so many young men from their farms, when they visit town or city for business or pleasure, seek and know the worse and not the better side, mingle with vice and polished meanness, not with the noble life that can be found in every city. Shun this as you would pestilence. Find elevating associates, go to see works of art, visit libraries, churches, lectures, and amusements of the better sort, and thus go back to the farm with finer taste and higher life quickened into nobler activity.

With men, use such language as your mother or sister might hear without shame. For all this, and much more which this may suggest, your reward will come, for the path wherein lies real happiness goes *up*, never down.

HAVE you traced the cause and consequence of that under-current of opinion which is slowly, but surely, sapping the foundation of empires? Have you heard the low booming of that mighty ocean which approaches, wave after wave, to break up the dykes and boundaries of ancient power.—*Mrs. Jameson.*

Written for Moore's Rural New-Yorker.

ITEMS OF WISDOM.

BRAINS nor education can give success to the lawyer or the merchant if he eschews labor? On the other hand, a farmer is a mere drudge and a botch whose labor is not lightened and enlightened by both education and brains. Every farmer should be an expert in Nature's laboratory—the farm.

OUR LEGISLATORS in State and Congress, voting for gratuitous appropriations by millions, and prodigal incidental expenditures, when the nation is so heavily taxed and in debt, and paying usurous interest on three thousand millions of dollars, must necessarily depress the national credit, and postpone a return to lower prices and taxation, and prosperous industry, to an indefinite period. England borrows at three per cent., and Russia borrows of Englishmen at four, while the United States has to pay eight per cent. and more.

WHEN DOCTOR ZIMMERMAN went to attend FREDERICK The Great in his last illness, the king said to him, "Doctor, you have helped many men into the other world." "Not so many," replied ZIMMERMAN, "as your Majesty, nor with as much honor to myself."

JOHN STUART MILLS says, "Men may be competent lawyers without general education, but it depends on general education to make them philosophic lawyers—who demand and are capable of apprehending principles, instead of cramming their memory with details." Do not these remarks apply as aptly to the farmer? If a superficial lawyer in legislation supplants a farmer it is only because he is better practiced in details.

A SCIENTIFIC EDUCATION teaches us to think, and literary education to express our thoughts; hence we require both? LXXVI.

A BEAUTIFUL LEGEND.

THERE is a delightful tradition connected with the site on which the temple was erected. It is said to have been owned in common by two brothers, one of whom had a family; the other had none. On the spot was sown a field of wheat. On the evening succeeding the harvest, the wheat having been gathered in separate shocks, the elder brother said to his wife:—"My younger brother is unable to bear the burden and heat of the day; I will arise, take off my shocks, and place them with his without his knowledge." Judge of their mutual astonishment, when on the following morning they found their respective shocks undiminished. This course of events transpired for several nights, when each resolved, in his own mind, to stand guard and solve the mystery. They did so, when on the following night, they met each other half way between their respective shocks with their armsful. Upon grounds hallowed with such associations as these was the temple of Solomon erected—so spacious and magnificent, the admiration of the world. Alas! in these days how many would sooner steal their brother's whole shock than add to it a single sheaf!

HUMAN LIFE.—The true scholar will feel that the richest romance, the noblest fiction ever woven, the heart and soul of beauty, lie enclosed in *human life*. It is the richest material for his creations. * * * He must bear his share of the common load. He must work with men in houses, and not with their names in books. His needs, appetites, talents, affections, accomplishments, are keys that open to him the beautiful museum of human life. Why should he read it as an Arabian tale, and not know its sweet and smart in his own beating bosom? Out of love and hatred, earnings, borrowings and lendings; out of pain and wooing and worshiping; out of traveling and voting and care, and even disgrace and contempt, comes our tuition in the serene and beautiful laws. Let him not shirk his lesson, but learn it by heart. Let him try exactly, bravely and cheerfully to solve the problem of life, and this by *practical action* and not by promises and dreams.—*Literary Lionism.*

A POET'S TRIBUTE.—W. D. Howell pays a poet's tribute to Mr. Longfellow. We give a single quotation;—"It is certainly one of the great privileges of a beloved poet to have his thoughts so interwoven with his readers' days that, looking back, they seem not so much to have read his work as to have lived it, and that they largely recall themselves, remembering what and where they were, and how they fared when they first read such and such a poem of his." The essay concludes by saying of Mr. Longfellow that his "greatness has tended to the goodness and happiness of men in so potent and fine a degree that he has not only made the world wiser and pleasanter, but has not added a word's weight to the bitterness or evil of my soul in it."

THERE is a marked likeness between the virtue of man and the enlightenment of the globe he inhabits—the same diminishing graduation in vigor up to the limits of their domains, the same twilight at the meeting of the two; a something wider belt than the line where the world rolls into night, that strange twilight of the virtues; that dusky, debatable land, wherein zeal becomes impatience, and temperance becomes cruelty; and faith, superstition; and each and all vanish into gloom.—*Ruskin.*

TRUTHS.—A merry heart maketh a cheerful countenance.
He that would thrive must rise at five.
He that has thriven may lie till seven.
Hope is a pleasant companion but unsafe guide.
Memory should be a store-house, not a lumber-room.
Good health is above wealth.
He preaches well that lives well.
A thing of beauty is a joy forever.

Sabbath Reading.

Written for Moore's Rural New-Yorker.

ABRAHAM AND HIS GUESTS.

WHEN the fiery noon was beating
Fiercely on the Orient plain,
In his tent-door's scanty shadow
Sat the patriarchal man;
And his snowy flocks fled bleating
To the neighboring groves amain.

All around him, balmy zephyrs
Lightly shook their viewless wings,
As they came from out the southland
Over Yemen's cooling springs;
And his heart was filled with rapture,
Unto GOD and all His things.

Then, entranced in holy vision,
To his calm prophetic eye,
There appeared the Lord of Glory,
Bending from His throne, the sky;
And his soul dwelt in Elysium,
For he felt that Heaven was nigh.

Looking over beauteous Mamre,
Gazing with his feeble ken,
He beheld, surprised with wonder,
Standing near him, three strange men,
Quick he rose, and ran to meet them,
And he bowed him to the plain.

They were bright and fair creations,
As not made of common clay;
So he knew they were Celestials,
Whom he entertained that day—
And they followed to his tent-home,
Where they ate and went their way.

It is so through all our earth-course,
Wandering on life's desert shore,
From the cradle to the grave-pit
There are angels hovering o'er;
Oh, how blest, if we but know it,
Ere they leave to come no more!

MARAH.

WANT OF THE TIMES.

ANOTHER want of the age is pure upright and incorruptible men—men who cannot be awed intimidated, or purchased. Men who know their duty and are not afraid to discharge it, regardless of what their unprincipled fellows may say. "Men," as another expresses it, "who are not for sale. Men who are honest, sound from the center to the circumference, and true to the heart's core. Men who fear the Lord and hate covetousness. Men who condemn wrong in friend or foe, in themselves as well as in others. Men whose consciences are steady as the needle to the pole. Men who will stand for the right if the heavens totter and the earth reels. Men who can tell the truth and look the world and the devil in the eye. Men that neither brag nor run. Men that neither swagger nor flinch. Men who can have courage without whistling for it, and joy without shouting to bring it. Men in whom the current of everlasting life runs still, and deep, and strong. Men careful of God's honor and careless of men's applause. Men who do not strive, nor cry, nor cause their voices to be heard in the street, but who will not fail, nor be discouraged, till judgment be set in the earth. Men who know their message and tell it. Men who know their duty and do it. Men who know their place and fill it. Men who mind their own business. Men who will not lie. Men who are not too lazy to work, nor too proud to be poor. Men who are willing to eat what they have earned, and wear what they have paid for. Men who know in whom they have believed. Men whose feet are on the everlasting rock. Men who are not ashamed of their hope. Men who are strong with Divine strength, wise with the wisdom that cometh from above, and loving with the love of Christ. Men of GOD!" —*United Presbyterian.*

RELIGION.

RELIGION gives life, strength, elevation to the mind, by connecting it with the Infinite Mind; by teaching it to regard itself as the offspring and care of the Infinite Father, who created it that he might communicate to it of his own spirit and perfections, who framed it for truth and virtue, who subjects it to sore trials, that by conflict and endurance it may grow strong, and who sent his Son to purify it from sin, and clothe it with immortality. It is religion alone which nourishes patient resolute hopes and efforts for our own souls. Without it we can hardly escape self-contempt, and the contempt of our race.

Without GOD our existence has no support, our life no aim, our improvements no permanence, our best labors no sure and enduring results, our spiritual weakness no power to lean on, and our noblest aspirations and desires no pledge of being realized in a better state.

I am accustomed to speak of the greatness of human nature; but it is great only through its parentage, because connected with a goodness and power from which it is to be enriched forever; and nothing but the consciousness of this connection, can give that hope of elevation, through which alone the mind is to rise to true strength and liberty.—*Channing.*

A PRACTICAL CHRISTIAN.—He is the best speaker of the English tongue who speaks it so that we cannot discover whether he was born in London, Edinburgh or Dublin. Every city, London, Edinburgh and Dublin, has its own peculiarities, but he speaks the language most purely who speaks in such a way that no man can say of what city he is a native. That man illustrates Christianity most thoroughly who so loves it and lives it, that one cannot discover whether he be an Episcopalian, a Presbyterian or an independent.—*Dr. Cumming.*

THEY are indeed long shadows, and their evening sunshine lies cold on the earth, but they all point toward the morning.—*Jean Paul.*

The Reviewer.

LITERARY LIFE OF JAMES K. PAULDING. By his Son, W. K. PAULDING. 1 Vol., 400 pages.

AN appreciative book, and such as a son should write of a father; largely made up of extracts from PAULDING'S writings, with such thread of narrative as gives good view of his life as a literary man, as a friend and parent. PAULDING was one of the pioneers of American literature, helping it out of that feebleness during which an English essayist asked "Who reads an American book?" to its present higher culture and power, which leads English publishers to give their readers thousands of the works of our authors. The correspondence of Mr. PAULDING with IRVING, HALLECK, KEMBLE, VAN BUREN and others is of special interest, while the varied powers and graceful ease of his fugitive articles help to give vivid glimpses of a generation now well nigh gone. The book is well worth reading. Sold by DARROW & Co.

THE MARKET ASSISTANT. A brief description of every article of human food sold in the public markets of New York, Boston, Philadelphia, &c; including the various domestic and wild animals, poultry, game, fish, vegetables, fruits, with curious incidents and anecdotes. By THOMAS F. DE VOE, author of "Market Book," &c., &c. New York: Hurd & Houghton.

A BOOK of over four hundred pages by a successful and sagacious man *who knows what he says*, for he keeps a stall in Jefferson Market. It is full of valuable directions, and suggestions as to economy and quality of food of all kinds, and the best purchases for daily use. Its clear and interesting style, and its spicy "curious incidents" show that Mr. DE VOE can handle the pen as well as the cleaver. The last chapter on cookery is specially well worth reading. For sale by DEWEY.

POEMS. By AMANDA T. JONES.

SIXTY pages of "Atlantis,"—a poetic rendering of an old Greek Story of the wars of the gods, gracefully told, but far removed from the thoughts and life of to-day; as much more of poems on topics connected with the late rebellion; words tender and brave in memory of the fallen, rejoicings for peace, and high hopes that justice may make it real; and a third part of miscellaneous topics, make up this first volume offered to the people by a young woman who dedicates her work "To the Members of the Nameless Club."—a choice company of *literati* in Buffalo. Delicately sweet descriptions of natural scenery, ease of rhythm and language almost to exuberance, are here. It is a tasteful volume. For sale at DEWEY'S.

THE AMERICAN NATURALIST. A popular Magazine of Illustrated Natural History.

A HANDSOME monthly of 56 pages, issued by the "Essex Institute," Salem, Mass., with a list of eminent naturalists for contributors.—GRAY of Harvard University, BAIRD of Smithsonian Institute, WINCHELL of Michigan University, and a score or more equally competent. Botany, Zoology, Geology, &c., have due share of attention in its somewhat varied scope. The illustrations are good, the articles clear yet scientific. "The Moss Animals," "The Fertilization of Flowering Plants," "Insects and their Allies," are among the contributions in this second number of this new and promising work. Its price is $3.00 yearly.

"OUR MUTUAL FRIEND." Diamond Edition. Illustrated by S. EYTINGE, Jr. Boston: Ticknor & Fields.

ONE of the last and best of DICKENS' stories; a beautiful volume, portable in size and shape, small yet very legible type, and with illustrations in which one sees *the very persons* told of in the story—Mr. Wegg, Mr. Venus, Mr. & Mrs. Boffin, Podsnappery, &c.—*just like life*. One of a uniform edition of his works, the tasteful finish of which shows that the "Diamond Editions" of these noted publishers will be as acceptable as have been, and are, their "blue and gold" books.

"THE BLACK SHEEP." A Novel. By EDMUND YATES.

THE author is a young man, rising in literary repute in England; not an imitator, but fresh and original, a good observer and striking narrator. Here is a story of some two hundred closely printed pages—somewhat "sensational," yet with a depth and power, and a higher moral tone and truer purpose than belongs to the *trash* of that class. It is English in persons and places, English in its tone and ideal, and its vivid and truthful pictures of life, which are not like DICKENS, yet call him to mind. For sale by STEELE & AVERY.

RECORD OF HORTICULTURE. Edited by A. S. FULLER. New York: G. E. & F. W. Woodward.

A NEAT book of 100 pages, the scope and intent of which is best told in the preface, "We propose to publish, each year, a volume in which we shall endeavor to show the actual state of Horticulture, the principal Horticultural events of the year preceding, and any new developments in regard to more common fruits and flowers." For this useful purpose they ask the aid of all Horticulturists, to make future "Records" even better than this, if possible.

"CHRISTIE'S FAITH." By the author of "Mattie—A Stray," &c. [500 pp.] New York: Harper & Brothers.

A STORY of toil and struggle, of vicissitude and conquest, of the victory of faith and love in the lives of a family in London; the scene extending to other towns and to the continent. The *moral* pure, the whole tone healthful, the style natural, simple, and rising to graphic power when occasion demands; a record, very like real life, of what true hearts and firm wills can endeavor and perform. Sold by STEELE & AVERY.

THE UNITED STATES BANKRUPT LAW OF 1867. With Notes of American and English decisions on the Principles and Practice of the Law of Bankruptcy, for the use of the Lawyer and Merchant. By EDWIN JAMES of New York, one of the framers of the recent English Bankrupt Act. [300 pp.] New York: Harper & Brothers.

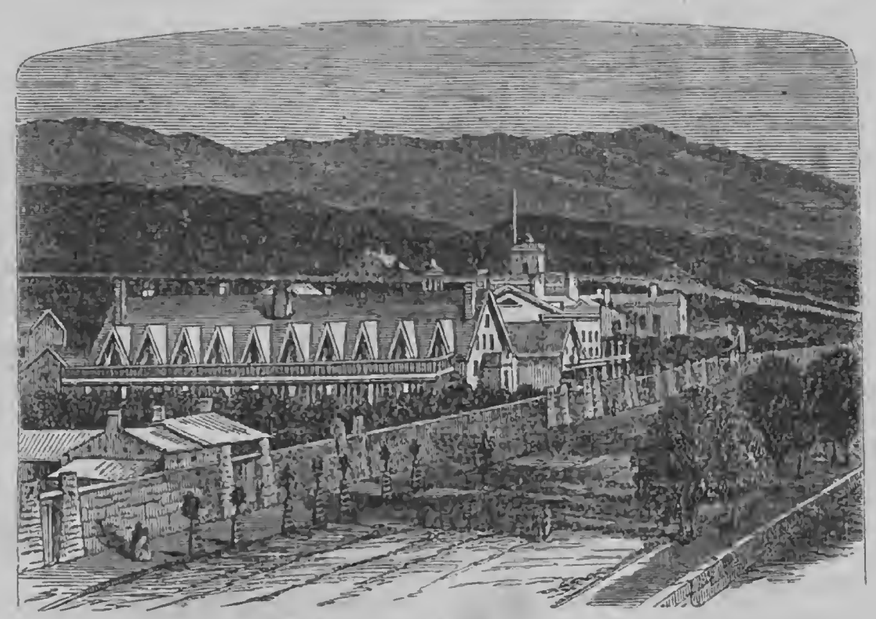
THIS thoroughly prepared treatise and valuable collection of facts on an important matter, by a competent and able lawyer, must be of value.

SUGGESTIONS FOR HOUSEHOLD LIBRARIES of Essential and Standard Works. (Exclusive of Scientific and Religious Works.) A Pamphlet. New York: G. P. Putnam & Son.

THIS is a valuable aid to book buyers, especially those far removed from cities; as it gives accurate information of the forms and prices of standard works, with hints as to the most desirable editions. For sale at DEWEY'S.

THE PEOPLES' MAGAZINE.—A re-issue—from POTT & AMERY, No.'s 5 and 12 Cooper Union, New York—of an English work from the "Society for the Diffusion of Christian Knowledge." Sixty pages of Stories, History, Poetry, Science, Education for the People, &c. Original matter well written, useful, well illustrated, and of value; yet offered monthly at $3.00 per year.

BRIGHAM YOUNG AND HIS RESIDENCE.



THE RESIDENCE OF BRIGHAM YOUNG.

WE herewith give the portrait of BRIGHAM YOUNG, the Mormon ruler, and a view of the place where his *harem* of thirty wives, with fifty children, find such poor substitute for *home*, as is possible in their pitiable condition.

YOUNG is a native of Vermont, six feet high, portly, weighs two hundred pounds, is sixty-five years old, with features yet smooth, step agile and elastic, and auburn hair and whiskers untinged with gray. He uses no tea, coffee, spirits or tobacco. Is a man of firm will, power over men, rare business talent, just in dealings, great knowledge of human nature, and said to be personally popular. No common man could have the influence he wields.

In the heart of Salt Lake City, within some acres enclosed by a stone wall, are the Zion House and the Bee-House, and a School-House, where some thirty of his children are taught. These are bright and promising scholars, but in the ward schools of the city, the average intelligence is low. Tuition costs from $4 to $10 a quarter, and *there are no free schools in Utah*.

BRIGHAM'S ample and well-shaded grounds contain an abundance of fruits and flowers, results of that industry so universal among the Mormons. The great sway of this remarkable man over "the Saints" is one of the singular proofs of the power of strong character resolutely bent on a single end.

BRIGHAM YOUNG.

Various Topics.

CHECKED PERSPIRATION—DANGERS.

"FOREWARNED, forearmed," is a good old motto. As warm weather comes on, and spring work in the field begins;—yes, and work in the kitchen too, with the hot stove on one side and the open window, with its draught of chill air, on the other—remember the motto, and practice it in this vital matter.

In the glow of active exercise the life-forces are in full play and positive action, little affected by winds or chill; but when that exercise ceases those forces retire, to rest and recuperate, and the skin and external organs are not positive, but negative, and receptive of all atmospheric variations. The ruddy boy, the strong man, the healthy woman, are thoughtless of danger, and a few moments' exposure to a chill draught smites a blow, and creates derangement and weakening of the vital forces, more serious than years of toil would produce.

Meeting an old man once, among the hills of New England, who had never known a day's sickness, and could do a day's work at seventy, we asked how he had kept so well. He said: "I had a good constitution—that was a good start. I was taken decent care of as a boy; and since then I have worked hard, but been careful not to overdo. I have been temperate and regular, and *I always took care never to get chilled*. If I had to stand still ten minutes or less, I put on my coat and *faced the wind*. This has helped me greatly." Wise old man!

DR. HALL says:—"If, while perspiring, or while something warmer than usual, from exercise or a heated room, there is a sudden exposure in stillness to a still, cold air, or to a raw, damp atmosphere, or to a draft, whether at an open window or door or street-corner, an inevitable result is a violent and instantaneous closing of the pores of the skin, by which waste and impure matters, which were making their way out of the system, are compelled to seek an exit through some other channel, and break through some weaker part, not the natural one, and harm to that part is the result. The idea is presented by saying that the cold has settled in that part."

Good readers, remember this, and it will save you many of the sorest ills that "flesh is heir to" if followed.

Fussiness about health is folly, but rational care is wisdom; and such care would banish half our sickness, lengthen our days, and add to our power of usefulness and enjoyment. Far easier to *keep* well than to get well.

SOUTHERN EDITORIAL CORRESPONDENCE.

MY DEAR RURAL:—I did not intend to write you any more letters at present, for this Southern mission takes a heap of time, and a heap more of writing. I have been aided very much by Gen. GRANT and P. M. Gen. RANDALL, who have taken great interest in this movement. Indeed, the highest officials are willing to aid it to the full extent of their power. The military thus far have aided me with right hearty goodwill. I think I shall be able to have one of the most perfect systems of communication between the Department of Agriculture and the people of the late rebel States, that can well be desired. I mean to have the States all agriculturally "reconstructed" before they are so politically. The manner in which I have been aided, through the kindness of Maj.-Gen. SCHOFIELD, will be seen by the newspapers in a few days.

The Freedmen had a commemoration of "Father LINCOLN'S" death to-day over on the hill some two miles east of the city, at their hospital. Through the kindness of Gen. BROWN, I was introduced to Rev. Mr. MANLY, the Superintendent of Schools, and rode over from headquarters, with an ambulance load of young ladies who are here as school teachers in the Freedmen Schools. They are from Northern States, and are each and all a credit to the land of their birth. The old RURAL readers may not be as glad as I was to know that their old friend "MINNIE MINTWOOD" was of the number. I am sure they won't blame me if my heart warmed to her even before I knew that she and I had met so often in the pages of the RURAL. When I knew that the talented and interesting young lady before me was the Miss MINNIE of old times, and that we now met under such peculiar circumstances, I hope nobody will wonder that I could not help feeling unusual regard for her.

While we were waiting in a room of the hospital for the crowd to assemble, she introduced me to a Mrs. VAN LEW, who resided here with her daughter during all the war, and was unflinching for Union. While listening to her very interesting recitals of her many trials, I handed my note-book to Miss MINNIE, who sat between us, who wrote, among other things, "Miss ELIZA VAN LEW, authoress, has a book in press, titled "Inside View of Rebel Capitol." If the daughter be any way like her mother, the work must be interesting. If Miss MINNIE will expand her diary into a book, say a "Teacher's Experience among Freedmen's Schools," it ought to be a great success. At any rate, if she see this, she may put me down for one copy, and any amount of *bloviating*, though that would be unnecessary.

There were a very good number assembled; some hundreds, most orderly, and as well behaved as any similar collection of white people I ever saw North. They had singing and speaking, but as I was compelled to leave early I did not see the proceedings through. Mr. MANLY promised to give me some statistics, but I could not wait for them. There are some 3,000 children in the schools here, and about 18,000 in the State, and constantly increasing.

SAMBO having the power to vote is making a wonderful change in his *status*. It's no longer SAMBO, but "Mr. BROWN," and a cordial nod from his white neighbor, especially if of the unreconstructed persuasion.

But, after all, I have nearly used up my space and told you nothing. Perhaps it is as well to end with the information that I no longer live at "West Friendship, Howard Co., Md.," and do not expect to live there again.

Petersburg, Va., April 15, 1867. T. C. P.

QUEER NOMENCLATURE OF DAUGHTERS.—A gentleman has told the Buffalo Advertiser that on a recent trip from San Francisco he had some fellow passengers by the name of Brown. This family came originally from California, but had resided at different times in Nebraska and Nevada. Besides the old gentleman and his wife there were three daughters named respectively Nebraska Brown, California Brown, and Nevada Brown. Mrs. Brown would frequently say to her eldest daughter:—"Come here, Nebraska, and bring California and Nevada with you"—at which the other passengers chose to be amused.

THE RUSSIAN AMERICAN COUNTRY.

THE following is the substance of the information derived from Professor Baird of the Smithsonian Institute, with regard to Russian America:

Means of Information.—The Professor has had two explorers in that field between one and two years, who returned last autumn, bringing a complete collection of specimens of natural history from the entire region extending from the British possessions to the shores of the Polar Sea. The climate and temperature of the coast from Prince of Wales Island to Behring Straits, during the winter months, is about the same as at the city of Washington. There is little snow and much rain. During the summer months heavy fogs prevail.

Timber.—The whole country, well up to the northern coast, is heavily timbered—chiefly hard pine forests, the small trees extending down to the very shores. Some of the islands are heavily timbered with pine forests and dense undergrowth; others of them are destitute of timber, but covered with grass of luxuriant growth.

The Soil.—On the west coast the soil produces excellent barley and roots, such as radishes and turnips, and esculents, such as lettuce, cabbage, &c.

Animals.—Furred animals, such as sea otter, river otter, sable, furred seal, mink, black, silver and red foxes are found in great numbers; red deer on the south and reindeer on the north.

Fish.—Herring, salmon, halibut and codfish abound in exhaustless numbers. In Behring Straits and to the northward great whales are very numerous.

Minerals.—Surface washings of gold have been discovered on the head waters of streams on the east side of the coast range of mountains. The geographical developments are the same on the western slopes. Native copper has been discovered in various places on the coast and in the vicinity of Copper River. Iron ore of excellent quality, and believed to exist in exhaustless quantity, is now being smelted and worked by Russian artisans in repairing ships, &c. Coal is found in large quantities and is used by the Russians for naval purposes. In quality it is similar to New Brunswick coal, but not equal to Cumberland coal. Recent discoveries have been made of what is believed to be a better quality of coal, though it has not yet been tested.

The Inhabitants.—The population consists of five or six thousand Russians and fifty or sixty thousand Indians and Esquimaux. The Esquimaux inhabit the coast on the northern sea, and are industrious, peaceable and teachable. They live by hunting and fishing. The Indians inhabit the interior. They are peaceable, and live by hunting, fishing and trapping.

WHAT THE JAPANESE JUGGLERS DO.

ONE of the feats of the Japanese jugglers now in San Francisco on their way to the Paris Exposition is thus described:—An old man lies upon his back with his feet in the air; a little boy mounts and stands upon them. An oval tub is passed to the boy, which he places under his feet and upon the man's; another is given to him, which is added to the first, and so on until the little fellow's head touches the proscenium from the top of the tottering pile, which is all the time supported by the strong and muscular chap below.

The little fellow makes his salaam to the audience from his dizzy height, coolly fans himself as he surveys the situation, and appears as unconcerned as if reposing on terra firma. Suddenly one of the performers utters an exclamation in Japanese which is responded to by another. The old man, the foundation of the pile, takes up the chorus, the little fellow at the top jerks it out like the snapper of a whip, the "foundation" gives his feet a kick—things look squally for little Tommy—the audience fear that he will fall and break his neck or be terribly bruised among the boxes; the old man beneath appears in imminent danger also from the falling tubs; but no, he gives his feet a kick, throws the tubs entirely from him, and Tommy drops like a cat, alighting with his feet upon the old man's, and in an upright position.

A GOOD WORD FOR FLORIDA.

IT is estimated that the twenty-five thousand strangers have visited Florida this season. The number will be doubled next winter. Many northerners are looking out for places which they will buy and improve, and on which they will escape the piercing cold and trying changes of our northern winters. Florida has evidently a great future. There is no Southern State which has such a fertile soil, such a genial climate, and such facilities for internal and external communication. Railroads can be built with but little grading, timber is abundant, and canals will need few locks. A company has lately been chartered to open an inland route by water from Fernandina to Jupiter Inlet—a distance of about four hundred miles along the coast. Not more than ten miles of excavation is necessary to make a safe and unbroken highway of civilization out of the marshes, creeks and rivers which skirt the peninsula on the east. Fish and game are so plentiful that the emigrant who has a gun and a hook can live like a prince. The "hummocks" are rich enough to reward industry with large crops of corn and potatoes, while the lower lands are well adapted for cotton. All that is needed to make Florida our Eden is an intelligent, industrious, loyal and virtuous population.—*Cor. N. Y. Post.*

A ROYAL BETROTHAL.—The betrothal of King Louis II. of Bavaria, to the Archduchess Sophia, sister of the Empress of Austria, is to take place on the 15th of May.

Reading for the Young.

ORIGIN AND SEALS OF THE STATES.

NUMBER FIVE.

NORTH CAROLINA.

IN 1586 the first English attempt was made to colonize North America. Under a patent issued to Sir FRANCIS DRAKE, a company of emigrants was landed on the Roanoke in 1587, *but were never found or heard of!* Emigrants from Virginia settled in 1650; others came from Massachusetts in 1661. In 1669 a Constitution framed by the philosopher JOHN LOCKE, was introduced, but found better in theory than practice, and soon abandoned. In 1720, the two Carolinas were divided.

The present Constitution of North Carolina was adopted in 1776.

For sixty miles from the sea it is generally a dead level, with rich land on the rivers, and pine plains elsewhere.

On the central mountains and beyond, soil good, and products like those of the North, with healthy climate. The tar and turpentine of the pine woods is valuable. Iron ore abounds, and gold has been found. Square miles, 50,000; population in 1860, 992,622.

The Seal is emblematic of the products and industry of the State, and has the "*cornucopia*" or horn of plenty of Greek mythology, in its center.

SOUTH CAROLINA

WAS first settled at Port Royal about 1670, but in 1680 was the first permanent beginning at Oyster Point, where Charleston now stands.

CHARLES II. had granted Lord CLARENDON and others all the zone of North America from north latitude 31° to 36°, and thus troubles as to jurisdiction arose, and in 1719 a royal government. Rice was cultivated in 1695. Cotton came after. The share of this State in the early revolution is well known.

Its present government was organized in 1790, and has since been amended.

A level plain, with rich soil and marshes, stretches 100 miles from the sea. Barren sand hills, clad sparsely with pine trees, reach 60 miles beyond, and west of these a varied region of hills and dales productive and pleasant, rich in undeveloped wealth. Square miles, 30,000; in 1860, population, 703,308.

The famed "Palmetto" and the cotton field are on the Seal.

GEORGIA.

Georgia was first settled in 1733 by General OGLETHORPE, its first Governor. Its coast is lined with a range of islands, and for some miles inland is mostly a salt marsh. The islands yield the famed sea island cotton.

In low lands along the rivers rice is raised, as in South Carolina. The pine barrens extend back some 70 miles, and beyond is a rolling and productive region, with valuable forests, crops of cotton, corn and tobacco, and excellent fruits. Gold has been found among the hills. Square miles, 53,000; in 1860, population 1,057,286.

The Seal has masonic emblems, as well as glimpses of scenery and occupations.

STRIKE THE KNOT.

"STRIKE the knot!" said a gentleman one day to his son, who, tired and weary, was leaning on his ax over a log which he had in vain been trying to cleave. Then, looking at the log, the gentleman saw how the boy had hacked and chipped all round the knot without hitting it. Taking the ax, he struck a few sharp blows on the knot, and split the log without difficulty. Smiling, he returned the ax to his son, saying:

"Always strike the knot!"

That was good advice. It is good for you, my children, as it was for the boy to whom it was first given. It is a capital maxim to follow when you are in trouble. Have you a hard sum to do at school? Have you got to face a difficulty? Are you leaving home to live for the first time among strangers? Strike the knot! Look your trouble in the eye, as the bold lion hunter looks in the face of a lion. Never shrink from a painful duty, but step right up to it and do it. Yes, strike the knot! Strike the knot, boys and girls, and you will always conquer your difficulties.

BE always frank and true; spurn every sort of affection and disguise. Have the courage to confess your ignorance and awkwardness. Confide your faults and follies to but few.

KEEP good principles, and they will keep you.

SPRING CAMPAIGN
OF THE
RURAL BRIGADE!

A NEW QUARTER OF THE RURAL

Began April 6,—a good time for new clubs or additions to old ones to commence, though we can still furnish back numbers from Jan., or subscriptions may date from Feb. or March 1st. March is a good month in which to fill up Premium Clubs already begun, and also to form new ones. There are hundreds of localities in which clubs may yet be organized and Rewards of Merit secured. Our former Premiums are continued, and several new ones added,—(see part in RURAL of 9th, and full list in Supplement.)

ANOTHER SEWING MACHINE PREMIUM!—*Take Your Choice!*—Since our Spring Campaign Premium List was issued we have made an arrangement by which we can give the celebrated HOWE SEWING MACHINE (Cash price $60) for Fifty-Five yearly Subscribers to the RURAL (40 of them being *new*) at our club rate—$2.50 per copy. This offer extends to July 1st, and subscriptions can commence Jan. 1st or July 1st, or any time between those dates. Our offer of the Wheeler & Wilson Machine (price $55) for Fifty Subscribers (40 of them *new*) is still continued.

ANOTHER SPLENDID PREMIUM!—By request we have added LAMB'S FAMILY KNITTING MACHINE to our list of Premiums. For 65 Yearly Subscribers (at least 50 of them being *new*) at club rate, $2.50 per copy, we will give a Lamb Knitting Machine, the Cash Price of which is $65.00.

MORE YET.—We have also added DOTY'S WASHING MACHINE, price $14, and will give it to every person remitting for 30 subscribers (20 of them *new*,) at club rate;—and the CHAMPION CLOTHES WRINGER, price $9, which we will give for a club of 15 subscribers (10 of them *new*,) at club rate.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., MAY 4, 1867.

NEWS OF THE WEEK.

Washington.

THE Herald's correspondent says Jeff. Davis declines to apply for pardon, as it might seem a confession of guilt. He thinks his trial near at hand.

Secretary Seward has gone home to Auburn, New York.

The Postmaster-General will appoint special agents under the law to fill vacant post-offices.

The Attorney-General is preparing an elaborate opinion on the Reconstruction Law.

A Herald special thinks Surratt's trial will not come off, the impression prevailing that his mother was innocent.

Numerous applications have been received at the office of the Surgeon General from discharged soldiers for commutation for artificial limbs, the applicants being under the impression that the recent law of Congress for furnishing these limbs to soldiers who are in need of them, will allow the value thereof to be given to the applicant in money if such is his preference. This is not the case.

The Treasury Report for the last month shows a good reduction of the National Debt. Secretary McCulloch hopes, in his next statement, to get it down to $2,500,000,000, where it must stand so long as present receipts and expenditures exist. The Indian war expected will draw on the Treasury this summer.

George Peabody has visited the city.

South and West.

GRAIN CROPS in Sacramento Valley, San Joaquin and Tallare fine, and great breadth sown to wheat.

California steamers up to May 30th have full freights of flour for New York. It has advanced a dollar per barrel since shipping by Panama began.

Freedmen in Kentucky are improving in condition and treatment. In the Edgfield District, S. C., they are mostly employed. Much suffering prevails among them and other poor there, and in other districts.

The levee fund in Louisiana is exhausted; the loss by one crevasse is $1,000,000. Water still very high. A planter lost 50 head of stock in one day at Commerce, and destruction of cattle on the river is great.

A Republican meeting was held at Newbern, N. C., the 24th, some 2,500 colored men were present.

St. Louis dispatches tell of a Government train lost on the Colorado desert, and two men drowned by rain and flood.

Travel west is coming on to the Kansas (or Southern) branch of the Pacific Railroad, as floods have damaged the Omaha branch.

General Sully, at Fort Sedgwick, has had a satisfactory Council with Sioux Indians representing 400 lodges.

The Kansas branch of the Pacific Railroad is finished to Selma, 50 miles north of Fort Riley.

The straits of Mackinaw were open the 22d, and the propeller Montgomery passed from Chicago and reached Sarnia the 23d.

Indian Affairs.

A deputation of Dacotah Indians who have been in Washington three months, were complimented by Commissioner Taylor on their sobriety and manly deportment in the Capital.

Gen. Sherman is at Leavenworth. Gen. Augur moves west, from Fort Kearney, with 6,000 men. Between Forts Kearney and Smith are 11,000 Indians camped, and waiting for grass to grow.

Some 2,500 Indians stampeded 500 cattle from Fort Mitchell, and were beaten back from the fort itself.

A large party of Sioux are said to be near Fort Laramie with peaceable desires.

There is a rumor of hostilities with the Cheyennes, South. Lookout Station has been destroyed by them, and three men of the United States Express Company killed and scalped. Sixty express horses have been stolen.

Mexico and South America.

VERA CRUZ is still closely besieged by 7,000 Liberals, and all intercourse cut off, so that starvation seems imminent.

The capture of Puebla by the Liberals is confirmed.

Maximilian is still in Queretaro with 14,000 troops, closely watched by 32,000 Liberals. The Imperial General Marquez managed to get out and reach Mexico with 150 cavalry, and forced $600,000 from wealthy men there, by putting them in prison, and then left for Queretaro with 400 men. At Puebla he was defeated in a fight. The Imperialists hold but a part of Queretaro, and are hard pressed.

Latest European News.

THE London Stock Exchange is disturbed by warlike aspects on the continent.

Prussia refuses the compromise proposed by the neutral powers of Europe; the official press at Berlin the 2d, saying, "This Government did not find it necessary to appeal to the powers for the protection of her rights, and she will not leave Luxemburg."

The *Constitutionel* (French official) says France does not wish war, and will use all means consistent with national honor to avoid it. Meanwhile both sides are arming with great vigor.

It is said Napoleon will send to this country for arms.

A monitor for the Russian navy is to be built in New York.

The Paris journals say there will be no war on the Luxemburg question.

It is said Bismarck wishes peace, but Count Moltke wants war, for which Prussia is well prepared.

The *Weeser Gazette* (Berlin) intimates that Prussia may evacuate Luxemburg, and the Dutch Government officially denies any offer to sell that place to Napoleon.

Queen Victoria has sent a letter to the King of Prussia urging some settlement, and Napoleon has expressed satisfaction in the efforts for arrangement.

Cable dispatches of the 28th state that Prussia has signified acceptance of Victoria's proposal of a Conference of the leading powers of Europe in London to make Luxemburg a neutral territory, guaranteed by all the powers represented in the Conference. This Conference will meet in London, in May, and the fortress of Luxemburg is meanwhile to be dismantled.

NEW YORK LEGISLATURE.—There was more business before the Legislature at its recent session than ever before, but the number of bills passed is about the average for two or three years past. The number of bills introduced in the Senate was 597; in the Assembly, 1,375—a total of 1,972. The Senate passed of House bills, 682; the Assembly passed of Senate bills, 355. The number of bills passed by both Houses was 1,037. The greater part of the bills passed were private and local in their character.

NEWS PARAGRAPHS.

UNIVERSAL SUFFRAGE—irrespective of race or sex—has been referred to the people of Wisconsin, by the Legislature. The New Jersey Legislature has voted down negro suffrage.

THE new steamer Daniel Drew, of the People's Line of New York and Albany line of steamers is 380 feet long, 80 feet wide, and 2,500 tons' burden. Her captain is Stephen J. Roe.

WE see it stated that a public meeting of citizens of Cayuga and Seneca counties in favor of constructing a railroad on the lake shore, connecting Cayuga with Ithaca and the coal beds of Pennsylvania, has been held at Union Springs.

A PARIS correspondent of the New York Express says Head Center Stephens is flourishing there as luxuriantly as an Emperor. He is the observed of all observers on the Grand Boulevards and on the fashionable drives of the Bois du Boulogne.

THE largest "piece of paper" ever discounted by the Bank of England was a bill for £800,000; the largest amount in one day was £2,500,000. This was during the panic of May, 1866, when the whole city of London was rushing to the bank for relief.

THE Common Council of San Francisco extended a welcome to Capt. Worden, the hero of the Monitor and Merrimac fight, now in command of the Pensacola, and tendered him the Chambers of the Board on any day he should appoint for the reception of the citizens of San Francisco.

THERE is a prospect that the cotton crop of the present year will be much larger than that of 1866, and not much below the average crop raised previous to the war. Thousands of planters in the South have already discovered that slavery was a curse to the master as well as to the bondman, and that freedom promotes prosperity as well as justice.

TWENTY years ago there were no newspapers in California. To-day there are twelve dailies, one tri-weekly and forty-one weeklies in San Francisco alone. In the remainder of the State there are twelve dailies, one tri-weekly and seventy-three weeklies. Californians are a reading people, and the State press is quite up to the average of our best papers.

THE strike in the Lehigh coal region, that has so long existed, has at last terminated, the men acceding to the reduction of wages, and active operations will at once be commenced. In the Schuylkill region new strikes have occurred at some colleries, during the past week, while at others that have been idle for some time past, operations have been recommenced.

A TRIBUNE dispatch says the Secretary of State has instructed Mr. Motley to deliver his official papers, documents, etc., to the Consul or Vice-Consul at Vienna, Mr. Motley thereupon to be relieved from duty. The official order was forwarded to Vienna several days ago.

THE Hartford Times of April 8, says:—"The woolen factory at Windsorville (Ketch Mills) stops works this week. It is said that the woolen works at Broad Brook contemplate a similar course. The condition of the market for the last six months has been unfavorable to the woolen manufacturers, and the new tariff enacted for their especial benefit, fails to give confidence. In Rhode Island the woolen mills have largely curtailed their business, and some have shut up shop."

NEW RIMMED BLACK.—This is the title of a new, neat and most beautiful type, just the thing for a fancy line, which has recently been patented by Messrs. Farmer, Little & Co., Type Founders, New York city. See advertisement.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, April 30, 1867.

THE money market is easy just now at the great commercial points east, and there is also an improvement at the west. In New York capital is abundant, and temporary loans are easily obtained on acceptable collaterals at 5@6 per cent., and occasionally large sums are loaned on Government securities at 4 per cent. The best commercial paper sells at 6¼@7¼ per cent. per annum. Government bonds have been in demand during the week. Gold is lower, notwithstanding the rumors of trouble abroad. The near approach of the May dividend on the 5-20s has had an influence on the market. To-morrow (Wednesday, May 1st,) about $35,000,000 in gold will be disbursed on account of interest. Gold sold in New York yesterday at 135¾. The amount shipped from New York last week was $752,529.

The general business of the country has hardly improved as much as was anticipated a week or ten days since. The Journal of Commerce, speaking of the Dry Goods trade, says:—"Buyers cannot be tempted into large purchases at any price; the promise for an increase in activity is not very encouraging, and many are expecting a long interval of inaction, with a heavy market."

WOOL.—The Journal of Commerce of Saturday notices thus:

The market presents no new feature. The auction sale, though small, attracted a goodly number of manufacturers, many thinking that a forced sale would determine the price to a considerable degree. After the sale (which consisted of only a part of the wool advertised) the buyers went about the market and picked up different small lots at about the prices which were current last week, although in some instances concessions were made. Foreign wool is quiet, but is steadily held. The sales are 370,000 lbs. fleece at 34½@40c. for unwashed, 45@67c. for washed, including State, Western and XX Ohio; 100,000 lbs. California at 18@36c.; 230 bales Mestiza at 30@32c, and 15 bales East India at 16@20½c.

The Boston sales for the week foot up 575,000 lbs., at a range of 50@73c. for fleece, and 32@67c. for the various grades of pulled.

COTTON.—Cotton has now reached a very low point, unequaled since the fall of Fort Donelson. The following figures are interesting at this time:

MOVEMENT IN COTTON AT ALL THE SHIPPING PORTS.

Receipts at all the shipping ports of the United States from the close of the war, May 1, 1865, to Sept. 1, 1866	2,571,040
Receipts at all the ports from Sept. 1, 1866, to the latest mail date	1,618,000
Exports from all the ports since Sept. 1, 1866	1,995,000
Estimated stock on hand at all the ports at latest mail dates	150,000

WHEAT AND FLOUR.—The wheat and flour trade just now attracts considerable attention. The high prices paid by every purchaser, naturally leads him to inquire if there is any immediate prospect of a reduction. We have taken some pains to get at the facts in regard to the amount of wheat in store at the various shipping points, also the probable amount now in the hands of producers, and we are unable to figure up any surplus; on the contrary, it is now evident the country is short of good wheat, and must be until the next harvest. The Winona, Minn., Republican estimates the stock of wheat in store in Winona, and the country tributary thereto, at 650,585 bushels, against the corresponding time last year of 2,644,900 bushels, and says:

Here is a decrease of wheat in store, comparing the present spring with that a year ago, of 1,994,315 bushels! But even these figures do not exhibit the true relative decrease—for last year, at the date of the opening of navigation, a very large quantity of wheat remained in the hands of farmers, and was subsequently forwarded to market for exportation. Now, on the contrary, there is not enough, or certainly not more than enough, in first hands to meet the demand for home consumption until next harvest. We therefore estimate that the quantity of wheat now in Minnesota, held for export, is from 3,500,000 to 4,000,000 bushels less than it was at the corresponding period of last year.

The telegraph report on Saturday stated that 40,000 bushels of California wheat had been shipped from Liverpool to New York. This announcement has attracted considerable attention. It is evident the sharpest operators are convinced there is a short supply of wheat in the country, or a large amount would not be ordered from England.

Rochester Wholesale Prices Current.

REMINGTON'S FOOT-ROT REMEDY. 1,000 TESTS—NOT ONE FAILURE.
Two months ago I applied Remington's Foot-Rot medicine to a flock of sheep and they have kept perfectly sound since, and I have no doubt that if properly applied that it will make a sure cure.
Geneva, N. Y., Feb. 16, 1867. JOHN JOHNSTON.
One thorough application is generally sufficient; rarely the second may be needed. The best Remedy we have ever used. T. C. MAXWELL & BONS, Nurseries, Geneva, N. Y., April 16, 1867.
The best cure I have ever used. ROB'T J. SWAN. Geneva, April 16, 1867.
I cured 50 sheep for 50 cents. If taken in time one application is sufficient. In the worst cases two applications are sufficient. H. D. BENNETT. Geneva, April 6, 1867.
I took 100 maggots from one foot and cured with one application. JOHN E. BOOTHS. Canandaigua, April 1, 1867.
Warranted if used according to directions. For sale by Druggists. Price, $1. C. REMINGTON, Agent, 902-9t Manufacturer, Geneva, N. Y.

THE PREMIUM MACHINE!
BUCKEYE MOWER & REAPER
Was the only Machine which received the HIGHEST MARK FOR PERFECT WORK in all kinds of grass and on every variety of surface at the
GREAT NATIONAL FIELD TRIAL,
held at Auburn in July last, and was declared by the Judges, to surpass all competitors in perfection of mechanical construction, portability, facility of management, strength and durability. Farmers are cautioned against allowing themselves to be deceived by inferior machines, which are represented as *improvements on the Buckeye*, or *the Buckeye and something else*. Read the Report of the Auburn Committee on these mongrel machines. Descriptive Circulars and Synopsis of Official Report of Auburn Trial forwarded by mail.

COOPER, Watertown, Jefferson Co., N. Y.; G. SWEET & CO., Dansville, Livingston Co., N. Y.; GEO. P. YORK, Westfield, Chautauqua Co., N. Y. 902-mi-jel

SPECIAL NOTICE.—A VALUABLE NEW BOOK JUST PUBLISHED.
THE AMERICAN FRUIT CULTURIST.
BY JOHN J. THOMAS,
Associate Editor of "Cultivator & Country Gentleman."
In one handsome Post Octavo Volume of over FIVE HUNDRED pages, illustrated by FOUR HUNDRED AND EIGHTY accurate engravings. Strongly and beautifully bound in extra muslin. Price, $3, by mail, free of postage.
☞ This is the most thorough and complete work on the subject published in this country. It covers the whole ground of Fruit Culture—containing in a clear, practical, and systematic manner the simplest detail as well as the more difficult methods of cultivation. It seems as if nothing had escaped the attention of its experienced author. The criticisms of the Press are, without exception, of the most flattering and favorable character. A few will show the opinion expressed by all:
Possesses sterling value.—*N. Y. Daily Tribune.*
Superior to any Fruit book yet published.—*Illinois Journal, Springfield.*
It has *an honest look about it*; we advise all who feel an interest in Fruit culture to put themselves in possession of it at once.—*Moore's Rural New-Yorker.*
A book of great value.—*Farm and Fireside, Phila., Pa.*
The most complete and practical work on the subject published.—*Rochester Daily Democrat.*
We commend it both to experienced practitioners and to new beginners with entire confidence.—*Cultivator and Country Gentleman.*
No Agriculturist or Horticulturist ought to be without it—we recommend it unhesitatingly.—*Practical Farmer, Philadelphia, Pa.*
A safe and reliable guide, on the various subjects of which it treats.—*Worcester Gazette.*
The book is one of great value.—*New Haven Register.*
The best and most comprehensive horticultural treatise for general use it has ever been our fortune to read.—*New Bedford Mercury.*
The work is a practical one.—*Philadelphia Inquirer.*
WM. WOOD & CO., Publishers, New York.
☞ For Sale by Booksellers Everywhere. [902-eo

THE "WEED" SEWING MACHINE, OR "FAMILY FAVORITE."

It never grumbles at its labor,
Nor gossips with a talking neighbor;
It idles not away its time;
It disregards all change of clime;
In heat, or cold, or wet, or dry,
It works without a pause or sigh:
'Tis neither rude nor obstinate,
Nor ever in a sulky state:
Nor does it ever join in "strikes,"
But does whate'er its owner likes.
If oft you give and suited thread,
Its onward course is surely sped.
In cleanliness it much delights,
For this its progress expedites.
Without a change of "tension" sews
Thin muslin or thick leather shoes.
It works with beauty and precision,
Unmoved by praises or derision;
It flies along the whole day through,
And, if you wish, the whole night too,
And still next morning ready stands
To answer your renewed demands.
It does the piles of work you bring
Just like a sentient, living thing.
Yet asks no fee, requires no drink,
And never a known to balk or shrink;
A child may guide this household fairy.
It is so simple, light and airy.
Its worth to tell a book would need,
For though its modest name is "WEED,"
'Tis better far than fruit or flower
For those who wish its housewife power.
This WEED machine, of wide renown,
Is now for sale in every town
And country village, where the people
Can boast a tavern and a steeple:
Where local agents, (never doubt it,)
Will show and tell you all about it.
Headquarters in Connecticut.
The land of brave old General Put,
In Hartford city—famed for much
Of genius, talent, wealth, and such,
But bound to be still more, I ween,
For this triumphant WEED machine! [902-2t

THE HYDROPULT WILL, BY THE power of one hand throw water at the rate of six to eight gallons per minute, a distance of fifty feet. A hose of any desired length can be attached to the Hydropult to draw water from a cistern. — Strawberries from Boston hothouses have sold in New York for $10 per two quart box.
— 10,500,000 letters passed through the Chicago Post Office last year. Receipts $422,000.

Special Notices.

STUMP MACHINE.

An Invitation.—In consequence of the unfavorable state of the weather, and the want of proper publicity of the trial held at Wayland, on the 24th inst., Mr. Willis understanding that there are four or five machines now in operation in that region, and at the request of a delegation of farmers from that town, proposes a trial of his Machine in competition with as many as choose to accept this invitation, to test their respective merits, at the town of Wayland, on Monday, May 6, at 11 o'clock, A. M.

From the great importance attached to the clearing of land from stumps, particularly in a pine country, renders the knowledge of the best machine to perform that office of the first importance, and ought to induce every farmer who has any interest in this branch of good husbandry, to attend this trial.

April 26th, 1867. W. W. Willis.

Stump Machine Trial.—The trial of stump machines took place at Wayland, Wednesday, between Willis' patent and the Parrish machine. The Willis' patent pulled seven stumps in fifty-five minutes, and distanced its rival. The Parrish pulled two and stuck on the third. Another trial is proposed for next week.

"Delay not till to-morrow what should be done to-day." Cure that cough before it is forever too late. One bottle of Coe's Cough Balsam will cure It is agreeable, cheap and effectual. Delays are dangerous. A word to the wise is sufficient.

Silver Tips For Children's Shoes.—They protect the toe from wear, and are highly ornamental. Applied to the most genteel shoes made. Buy no others. 900-13t

Itch, Salt Rheum.—Wheaton's Ointment will cure the itch in 48 hours,—also cures Salt Rheum, Ulcers, Chilblains and all Eruptions of the Skin. Price 50 cents. Free by mail by sending 60 cents to Weeks & Potter, Boston, Mass.

For sale by all druggists. 855-52t

New Advertisements.

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.

For Families and Manufacturers.

THESE SEWING MACHINES

Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES

Do not now require the endorsement of Societies or Fairs—they are

WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch invented by Mr. Howe, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

WANTED—50,000 RURAL NEW-YORKERS, alias, **Farmers, Mechanics, Manufacturers** and others, to come to North Missouri, and then buy and settle upon our rich and cheap lands. In order to learn the full and good reasons for moving to Missouri let the reader for himself and his friends, send for a package of the Hannibal & St. Joseph Railroad Co's gratuitous Advertising Circulars. *A Sectional Map* showing the exact location of over 4,000,000 acres of best Prairie, Timber and Coal Lands for Sale, is sold for thirty cents. Address GEO. S. HARRIS, Land Commissioner, Hannibal, Mo. 899-1t

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce throughout the United States the Genuine Common Sense Family Sewing Machine. This machine will stitch, hem, fell, tuck, quilt, bind, braid and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made.
Address SECOMB & CO., Cleveland, Ohio.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured. 899-1t

MISSOURI FARM FOR SALE—Situated in Cooper Co., Mo., containing 400 acres prairie and timber; 280 acres under fence; dwelling house with 8 rooms, stone dairy house, Swiss barn, 48 by 32, with other outbuildings. Orchard of 100 young bearing fruit trees, and several never failing springs. This is one of the finest winter wheat, tobacco and grazing farms in the State. Land has been found on several parts of this farm. For terms address D. McMillan, York, Livingston Co., N. Y., or D. A. McMillan, Boonville, Mo.

RHEUMATISM CURED UPON A new principle. The "INDUTO MEDICARI," discovered by J. A. Campbell, M. D., acts upon the absorbents, and its success in the cure of this painful disease is without a parallel.

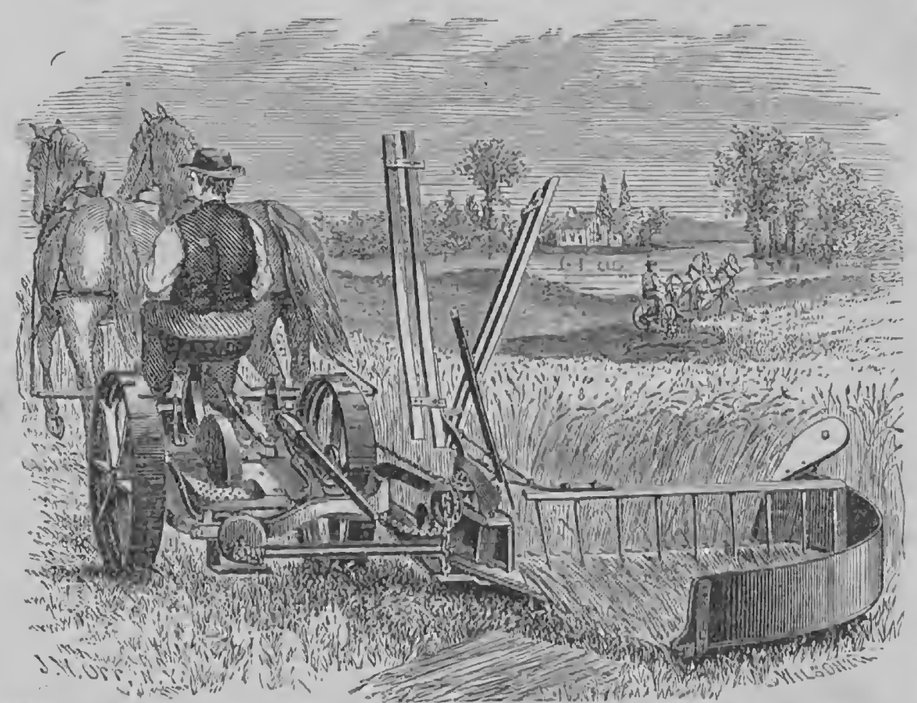
DODGE'S
PATENT REAPER AND MOWER,
AND SELF-RAKER,
OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:
L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

This Machine embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a Revolving Rake, and does its own reeling, saving the expense and trouble of a Reel. It makes a Perfect Separation, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED
The Special Diploma and Grand Medal of Honor,
AS THE BEST
COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the Saint Louis Agricultural and Mechanical Association, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a Gold Medal as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and First Premiums, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some Great Improvements for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.

H. P. WESTCOTT'S ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Cover, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $11; No. 3, (½ bbl.,) $12; No. 4, (⅜ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. Moore, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—Solon Robinson, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it first and commended it highest of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. Edwards Todd, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The Seneca Falls Churn Manufacturing Co. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. Moore, Editor Rural New-Yorker.

☞ The Michigan Churn Man'f'g Co., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

A VALUABLE MEDICINE.—Dr. POLAND'S White Pine Compound, advertised in our columns is a successful attempt to combine and apply the medical virtues of the White Pine bark. It has been thoroughly tested by people in this city and vicinity, and the proprietor has testimonials to its value from persons well known to our citizens. We recommend its trial in all those cases of disease to which it is adapted. It is for sale by all our druggists.—*Independent.*

THE GREAT NEW ENGLAND REMEDY!
DR. J. W. POLAND'S
WHITE PINE COMPOUND

Is now offered to the afflicted throughout the country, after having been proved by the test of eleven years, in the New England States, where its merits have become as well known as the tree from which, in part, it derives its virtues.

THE WHITE PINE COMPOUND cures Sore Throat, Colds, Coughs, Diphtheria, Bronchitis, Spitting of Blood, and Pulmonary Affections generally. It is a remarkable remedy for Kidney Complaints, Diabetes, Difficulty of Voiding Urine, Bleeding from the Kidneys and Bladder, Gravel, and other complaints. For Piles and Scurvy, it will be found very valuable. Give it a trial if you would learn the value of a good and tried Medicine. It is pleasant, safe and sure. Sold by Druggists and Dealers in Medicine generally. 1836

BARKER'S CORN SHOCKER was Patented Dec. 19, 1865.—It works to entire satisfaction, saving much time. The corn is set around the Shocker and held in position by the springs, as seen above. When the shock is completed it is easily removed, the springs yielding as it passes from the shock. The legs are movable, consequently are not liable to be obstructed by fallen corn or vines. It is durable and cheap; can be sold at retail at $2; when not in use, may be shut up like a knife, and occupies but little space. Read what one neighborhood think and say of it:

We, the undersigned farmers of Jefferson, Hillsdale Co., Mich., hereby say that we consider L. S. Barker's Patent Corn Shocker a useful invention, and cheerfully recommend it to the public.—Elisha Hubbard, J. W. Coffin, J. H. Bailey, W. L. Johnson, H. J. Cole, Joseph Cheeney, James A. Cole, E. J. King, S. F. Fuller, John W. Tiffany, Jonathan Green, Geo. W. Ramsey, Wm. Way, M. Ramsey, Zela Hadley, Willett Green, Henry E. Crane, H. H. Herring.

For Farm, Town, County or State Rights, apply to the undersigned, at Pittsford, Hillsdale Co., Michigan.

THE FARMER'S HOME.

BY SHENSTONE.

My banks they are furni-hed with bees
Whose murmur invites one to sleep;
My grottoes are shaded with trees.
My hills whitened over with sheep.
I seldom have met with a loss,
Such health do my fountains bestow,
My fountains all bordered with moss,
Where the harebells and violets grow.

Not a pine in the grove can be seen
But with tendrils of woodbine is bound:
Not a beech's more beautiful green
But a sweetbrier twines it around.
Not my fields in the prime of the year
More charms than my cattle unfold:
Not a brook that is limpid and clear
But it glitters with fishes of gold.

I have found out a gift for my fair,
I have found where the wood-pigeons breed,
But let me such plunder forbear,
She will say, 'tis a barbarous deed.
For he ne'er could be true, she averred,
Who could rob a poor bird of its young;
And I loved her the more when I heard
Such tenderness fall from her tongue.

The Story Teller.

Written for Moore's Rural New-Yorker.

AMY LESTER'S MISTAKE.

BY CLIO STANLEY.

AMY LESTER was a slight girl, with wavy brown hair and eyes of the same color, large, dreamy, and sometimes hiding in their depths the look of a startled fawn. Perhaps you would not have called her face beautiful, for the features were irregular, and her complexion browned with the sun; but that look of trust and unselfishness made it lovely to all who knew her.

It had been a bright June day, fresh and radiant as these first summer days always are; the air had been full of the breath of sweet roses and sunlight and songs of happy birds, but just now the full, golden light was fading to a soft twilight, and the early stars were coming out, silently, one by one, making golden ladders up through the blue archway, on which young thoughts might climb from earth to heaven.

AMY sighed as she laid down the quaint pattern of embroidery on which she had been so patiently at work all the afternoon, and folded her hands idly in her lap. It was not often that she allowed herself an idle moment; not but that she was child enough yet to have been eager for holidays; to have been glad if she might have roamed through those fields plucking red clovers the livelong day; but such pastimes were not for her, and so she did cheerfully what her hands found to do, keeping holiday in her heart all the same.

As she sat so quietly, leaning back against the window frame, the door opened, and she looked up to meet her mother's warm smile, and feel her fond kiss on her cheek.

"You are tired, child. How I wish you would lay aside this work for a day and enjoy yourself."

"Enjoy myself, mother!" exclaimed AMY, "why I am enjoying myself all the time."

"I don't see how, AMY."

"Why, over this dainty work. Don't you see what a beautiful pattern I have chosen? Miss HOWARD left it all to my taste; so I've pleased myself while trying to please her," and she paused while a bright smile played over her face.

"Yes, but where is the pleasure, child?" said her mother, gently.
